# CHRONIQUE DE LA DÉFENSE

## Des forces canadiennes déployées dans le golfe Persique

Le 10 août, au cours d'une conférence de presse, le premier ministre, M. Mulroney, a annoncé que le gouvernement avait décidé d'envoyer trois navires dans le golfe Persique, où ils « vont participer à l'effort collectif de dissuasion » en réponse à l'encontre de l'Irak. Ces navires sont le NCSM *Athabaskan*, un destroyer de type *Tribal* armé en 1972 et équipé de torpilles, de canons, de deux hélicoptères, de systèmes de défense anti-aérienne passive et de missiles anti-aériens de type *Sea Sparrow*; le NCSM *Terra Nova*, une frégate de type *Restigouche* armée, et des torpilles et de systèmes de défense anti-aérienne passive, mais par d'armes de défense anti-aérienne; et le NCSM *Protec*, un navire de ravitaillement, d'entretien, sans armes. Ces bâtiments, qui compte en tout 800 hommes d'équipage, arriveront dans la région à la mi-septembre, a déclaré le premier ministre.

Au début du mois de juillet, les dirigeants de l'OTAN se sont réunis à Londres pour réfléchir à la façon de réagir aux changements politiques survenus en Europe. Avant cette réunion, le président Bush avait envoyé une lettre aux chefs des États membres de l'OTAN pour

## Le communiqué de l'OTAN

Le 6 juillet, à la fin de la réunion de Londres, un long communiqué a été publié. Entre autres choses, les alliés y proposaient d'affirmer le Pacte de Varsovie l'assentiment à une clarification de non-agression affirmant leur intention de « ne pas menacer d'employer la force ni de l'employer contre l'intégrité territoriale ou l'indépendance politique de tout État... » Le communiqué insistait sur la nécessité « d'empêcher tout pays d'entretenir sur le continent une puissance disproportionnée ». Le communiqué abordait aussi la question des forces de l'OTAN en Europe. Il faisait remarquer que, suite au retrait des forces soviétiques d'Europe de l'Est, la structure de force intégrée de l'OTAN serait modifiée de la façon suivante : elle comporterait des forces actives moins nombreuses, multinationales, mobiles et souples, pour donner le maximum de latitude aux dirigeants politiques dans les situations de crise; on réduirait l'état de préparation des unités actives, qui feraient moins d'exercices et d'entraînement; et, le cas échéant, on recourrait à la mobilisation pour constituer des forces importantes.

Faisant écho à la lettre du président Bush, le communiqué parlait des armes nucléaires comme de « véritables armes de dernier recours », mais affirmait la nécessité de conserver « dans un avenir prévisible » un mélange de forces nucléaires et de forces classiques. Cependant, il proposait de négocier l'élimination des obus d'artillerie nucléaire en Europe et de s'éloigner de la stratégie militaire de défense soviétique en Europe et de s'éloigner de la stratégie des changements doctrinaux de « décisions » et il a qualifié les engagements menés satisfait par le communiqué de la place de l'Allemagne unifiée dans l'OTAN. En vertu d'un accord que devront négocier l'Allemagne unifiée et l'Union soviétique, les 350 000 soldats stationnés en Allemagne de l'Est seront retirés sur une période de trois ou quatre ans. L'Union soviétique a accepté qu'une Allemagne unifiée soit membre du Pacte de Varsovie, le 16 juillet, MM. Gorbachev et Kohl ont trouvé un terrain d'entente sur la question de la place de l'Allemagne unifiée dans l'OTAN. En vertu d'un accord que devront négocier l'Allemagne unifiée et l'Union soviétique, les 350 000 soldats stationnés en Allemagne de l'Est seront retirés sur une période de trois ou quatre ans.

## Mikhail Gorbachev reçoit Helmut Kohl

Lors d'un tête-à-tête à Mineral-nye Vody (URSS), le 16 juillet,

les rempassements, mais qu'aucune force étrangère n'y serait acceptée. Les deux dirigeants ont aussi décidé qu'une Allemagne unifiée remon-terait à fabriquer et à posséder des armes chimiques et qu'elle signerait le traité sur la non-prolifération des armes nucléaires.

**Grande-Bretagne :**

Les bénéfices de la paix

Au mois de mai, un document du ministère de la Défense britannique a été divulgué dans l'*Economist* de Londres. L'étude en question portait sur la non-prolifération des armes nucléaires.

posait de réduire l'armée britannique de cinquante-cinq bataillons à trente-deux, et de ramener le nombre de frégates de la Marine royale de cinquante-huit à trente-deux également, ce qui permettrait d'économiser pour ainsi dire 40 milliards de dollars en dix ans. À la fin juin, le ministre de la Défense, M. Tom King, a annoncé à la Chambre des communes britannique des coupures moins radicales mais très controversées. Il a affirmé devant un comité parlementaire que le Pacte de Varsovie « avait virtuellement cessé d'exister ». Après avoir annoncé une réduction de 1,2 milliard de dollars du budget de la défense (soit quelque 3 p. 100 avant inflation), le ministre a annulé une commande de trente-trois avions *Tornado* et confirmé que la Grande-Bretagne envisageait de réduire considérablement ses unités terrestres et aériennes affectées à l'OTAN. Ces réductions des effectifs stationnés en Allemagne semblent plus importantes que celles dans le cadre des pourparlers sur les forces conventionnelles.

Depuis le 3 février 1961, l'armée de l'air américaine entretenait une flotte aérienne qui garantissait la maîtrise et le contrôle des forces nucléaires des États-Unis même après la destruction des installations terrestres. Un des avions, sommairement baptisé « Looking Glass », a volé de manière constante, piloté par un général d'aviation. Le mardi 24 juillet, l'alerte en vol continue a pris fin au moment où le général John Charn, commandant de commandement aérien stratégique, a atterri sur la base d'Offutt. Le passage à « l'attente terrestre » résulte à la fois des pressions budgétaires et de la quasi-certitude qu'une alerte nucléaire suffisamment tôt pour prendre des mesures de précaution. Les Soviétiques y sont également pour quelque chose. Un rapport du sénat américain sur les services armés, publié à la fin juillet, faisait remarquer que les Soviétiques n'envoient plus de sous-marins patrouiller le long des côtes américaines ni de bombardiers *Bears* survoler la frontière septentrionale canadienne.

## CONDENSÉ SUR LA LIMITATION DES ARMEMENTS

### Pourparlers sur la réduction des armements stratégiques (START)

Au sommet de Washington, les présidents Bush et Gorbatchev ont signé une «déclaration conjointe» précisant que leurs pays

s'étaient entendus sur les «dispositions fondamentales» d'un traité START, et réaffirmant leur détermination de conclure et de signer ce

Tout d'abord, les États-Unis ont accepté de n'assujettir aux limites

édictées dans le Traité que les missiles de croisière air-sol (ALCM)

donc la portée dépasserait 600 km; en retour, les Soviétiques ont convenu d'exclure du Traité les ALCM

armes de munitions conventionnelles (y compris le missile antiaérien *Tachikawa*), qui se distinguent des ALCM à tête nucléaire. En ce qui

concerne les missiles de croisière mer-sol nucléaires (SLCM) ayant une portée supérieure à 600 km, les deux camps ont convenu d'en limiter le nombre à 880. Il s'agit là d'un «en-gagement politique», et il vaudra pendant toute la durée du Traité (quinze ans); cependant, cet élément fera l'objet d'une déclaration connexe au lieu d'être intégré au Traité même.

D'autres progrès ont été accomplis au sommet, quand les deux blocs se sont entendus sur une «limite seconde» de 100 ogives montées sur les ICBM mobiles; c'était là un compromis initial, qui fixait ce nombre à 1 600, et celle des Américains, qui l'établissait à 800. Les deux présidents ont également signé une déclaration conjointe dans laquelle ils s'engageaient à amorcer des pourparlers START II dès que possible après la signature du traité START I.

### Régime de sécurité dans le Pacifique

Dans un discours prononcé à Victoria le 17 juillet, le ministre des Affaires extérieures, M. Joe Clark, a réclame un nouveau dialogue sur la coopération dans le Pacifique Nord afin d'étudier la possibilité d'adopter dans la région des mesures à l'appui d'un renforcement de la confiance et de la sécurité. Particulièrement en ce qui concerne les

peraient à la nouvelle tribune les États-Unis, l'URSS, les deux Corées, le Japon, la Chine et le Canada; ces pays chercheraient à circonscrire les propositions présentant un intérêt certain et à formuler des contre-propositions valables. M. Clark a expressément mentionné des échanges de renseignements, la notification des manœuvres militaires et l'établissement de régimes d'ouverture des espaces aériens. Abordant la très délicate question de la limitation des armements navals, il a poursuivi en disant que, si le dialogue sur les forces conventionnelles en Europe finit par inclure aussi les forces navales, il faudra de toute évidence se préoccuper de l'océan Pacifique. M. Clark a réitéré sa proposition dans des entretiens avec des dirigeants gouvernementaux à Tokyo une semaine plus tard, mais on ne semble pas lui avoir prêté une oreille très attentive, bien que les Japonais fussent, disait-on, en train d'étudier des idées semblables.

### Accord sur les armes chimiques

À leur sommet de Washington le 1<sup>er</sup> juin, les présidents Bush et Gorbatchev ont signé un accord bilatéral de haut niveau par lequel leurs pays se sont engagés à détruire au moins 80 p. 100 de leurs arsenaux chimiques, quelle que pût être l'évolution des négociations sur l'interdiction mondiale de ces engins. Aux termes de l'accord, au moins la moitié des quantités déclarées par chaque pays devra avoir été détruite d'ici la fin du siècle, à partir de 1992; par ailleurs, les stocks doivent passer à 5 000 tonnes de part et d'autre (ce qui représente une réduction de 80 p. 100 du côté américain) d'ici l'an 2002.

Les États-Unis souhaitaient conserver 2 p. 100 de leur arsenal (500 tonnes) même après l'entrée en vigueur d'une convention mondiale sur les armes chimiques, tant que tous les pays capables de se procurer de tels engins n'auraient pas adhéré à une telle entente, et ils voulaient obtenir la sanction de l'URSS à cet égard. L'accord bilatéral du 1<sup>er</sup> juin oblige les parties à réduire leurs arsenaux encore davantage, en le ramenant à 500 tonnes de part et d'autre avant la fin de la huitième année après l'entrée en vigueur d'une convention mondiale; à ce moment-là, les États-Unis et l'URSS tiendraient une conférence

spéciale pour établir si l'adhésion totale des armes chimiques au cours tirait pour garantir l'élimination des divers pays à la convention sur-ferait pour garantir l'élimination des deux années suivantes.

### Forces conventionnelles en Europe (CFE)

Peu de progrès ont été accomplis aux négociations sur les CFE avant la fin de juin, moment où les participants ont réussi à s'entendre sur une proposition franco-polonaise concernant les définitions et les limites à employer pour les chars et d'autres véhicules blindés de combat. Dans la Déclaration publiée à l'issue du sommet de l'OTAN, au début de juillet, les signataires exhortaient les participants à poursuivre leurs pourparlers jusqu'à l'obtention d'un accord et à entreprendre ensuite d'autres entretiens (CFE II). Aspect fort important aux yeux des Soviétiques, la Déclaration stipule qu'un engagement serait pris, au moment de la signature d'un traité sur les CFE, au sujet des effets militaires d'une Allemagne unifiée.

Dans divers milieux, on pense que l'URSS a «bloqué» les pourparlers FCE parce qu'elle tenait à limiter les effectifs des forces allemandes, avant d'accepter un accord FCE.

Cet obstacle de taille est finalement tombé quand le chancelier ouest-allemand Kohl et le président Gorbatchev ont annoncé le 16 juillet que les forces militaires d'une Allemagne unifiée ne complèteraient pas plus de 370 000 membres et que des réductions seraient amorcées dès l'entrée en vigueur du traité FCE I.

Le seul autre grand obstacle à la conclusion d'un traité concerne les atteronnements de combat, et notamment le désir des Soviétiques d'exclure de l'accord les appareils de l'aviation basée à terre. Vu l'entente intervenue entre MM. Kohl et Gorbatchev, la plupart des observateurs s'accordent à penser qu'un traité serait conclu d'ici la fin de l'année.

Au début de mai, le président Bush a annulé les programmes de modernisation visant l'artillerie nucléaire américaine et les missiles nucléaires soviétiques à 1 500 kilotonnes. Les États-Unis exigeaient le renforcement des clauses sur la vérification avant de ratifier ces documents, qui seront maintenant soumis au Sénat américain. □

### — RON PURVER

commencent peu après la signature d'un traité sur les CFE, sans que l'on attende la mise en oeuvre de ce dernier comme l'Occident l'avait exigé antérieurement.

Au début de juin, le ministre soviétique des Affaires étrangères, M. Chavardnadze, a annoncé le retrait unilatéral d'Europe centrale de soixante des 1 400 lance-missiles nucléaires tactiques soviétiques, ainsi que celui de 250 pièces d'artillerie à capacité nucléaire et de 1 500 ogives stockées dans cette région.

Le secrétaire d'État américain, M. James Baker, s'est dit heureux d'apprendre la nouvelle; c'était, a-t-il dit, une concession que Washington essayait d'obtenir depuis longtemps, car l'URSS possédait un avantage marqué dans ce domaine de l'armement nucléaire. Quelques jours plus tard, Washington a rejeté une proposition soviétique voulant une réduction de 50 p. 100 des forces militaires tactiques soviétiques en Europe, une fois amorcées les négociations sur les CFE.

Pendant leur sommet du début de juillet, les membres de l'OTAN ont convenu de proposer au Pacte de Varsovie d'éliminer tous les obs-

d'artillerie nucléaire en Europe, une fois amorcées les négociations sur les CFE.

La session de Budapest sur l'ouverture des espaces aériens s'est achevée le 10 mai sans qu'il y ait eu entente. Selon le chef de la délégation canadienne, M. John Noble, l'URSS a continué de refuser que des atteronnements étrangers survolent son territoire, ce qui a constitué le principal obstacle au progrès des pourparlers. Ceux-ci pourraient reprendre plus tard cette année.

Pendant les présidents Bush et Gorbatchev ont signé des protocoles de vérification qui seront annexés au Traité de 1974 sur la limitation par-tielle des essais nucléaires et au Traité de 1976 sur les explosions nucléaires à buts pacifiques; les protocoles limitent la puissance des explosions nucléaires soviétiques à 150 kilotonnes. Les États-Unis exigeaient le renforcement des clauses sur la vérification avant de ratifier ces documents, qui seront maintenant soumis au Sénat américain. □

# RÉPERTOIRE DES PUBLICATIONS DE L'INSTITUT

L'Institut produit plusieurs genres différents de publications, chaque catégorie répondant à un besoin particulier.

## CAHIER DE L'INSTITUT

Ces monographies visent à l'excellence dans l'étudition et la pertinence dans le contexte politique.

## EXPOSÉS

Ils sont rédigés dans un style courant et présentent des analyses opportunes sur de grands événements et des questions d'actualité.

## DOCUMENTS DE TRAVAIL

Congus pour être distribués rapidement. Ils résument les résultats de recherches en cours ou les délibérations de conférences.

## FICHES D'INFORMATION

Principalement destinées aux écoles secondaires. Elles présentent un précis sur des questions d'actualité et leur contexte historique.

## GUIDE

Ouvrage de référence annuel sur les politiques du Canada en matière de paix et de sécurité. Il situe les grandes questions de l'année dans leur contexte et présente sur elles les observations du gouvernement et du parlement.

## ANALYSE DE LA CONJONCTURE

Fait le point sur les grands événements et tendances de l'année écoulée. Mentis et tendances de l'année écoulée, en ce qui regarde la paix et la sécurité, et examine leurs conséquences pour la politique canadienne.

## RAPPORT ANNUEL

Exposé, pour le parlement et la population canadienne, l'ensemble des activités menées par l'Institut au cours de l'exercice précédent et les états financiers de la période correspondante.

## RÉFÉRENCES BIBLIOGRAPHIQUES

Ces bibliographies et d'autres documents semblables rendent les titres et les sujets attréens à la paix et à la sécurité plus facilement accessibles aux chercheurs.

## PAIX ET SÉCURITÉ

Magazine trimestriel où paraissent une vaste gamme d'analyses et de points de vue émanant de sources canadiennes et étrangères.

(Toutes les publications, sauf les Documents de travail, paraissent en anglais et en français.)

Les publications sont énumérées sous catégories, l'ouvrage le plus récent est cité en premier :

## CONFLITS RÉGIONAUX ET LA SÉCURITÉ

### LIMITATION DES ARMEMENTS NUCLEAIRES

Limita des armements nucléaires

### RÈGLEMENT DES CONFLITS — THÉORIE ET PRATIQUE

Limita des armements nucléaires

### OUVRAGES DE RÉFÉRENCE

### MANÈGES EN CONFLIT

«East-West Relations in Transition: Towards a New European Order»

La deuxième partie du contrat consiste à créer des mécanismes qui permettent aux pays en développement de poursuivre des formes plus durables de développement (qui apportent emplois et revenus aux pauvres sans accroître massivement les émissions de gaz provoquant l'effet de serre. Il s'agit, entre autres, de faciliter les transferts de technologie pour les techniques non polluantes; d'alléger l'endettement; peut-être en trouvant des idées contre des mesures écologiques, ce qui débloquent des sommes considérables pour des programmes de reboisement visant à absorber une partie du carbone de l'atmosphère; et, finalement, de créer le type même de fonds que le gouvernement de M. Bush redoutait se voir demander en acceptant la création du fonds pour les CFC, à Londres.

Ce nouveau fonds devrait être assez important au regard des normes internationales habituelles (entre 20 et 40 milliards de dollars américains par an, selon des estimations néerlandaises), mais insignifiant comparé aux dépenses mondiales, d'armement. Il semble que l'on ait proposé, à Houson, un fonds initial de 2,5 milliards de dollars, mais que le chancelier allemand Kohl, son principal détracteur, n'ait pu vaincre les objections de son hôte américain.

Michael McFadine

tion dans l'atmosphère. Pour cela, il faudrait diminuer de moitié au moins la consommation actuelle des combustibles fossiles. Même si les pays industrialisés développés prenaient des mesures draconiennes pour réduire leurs émissions de gaz provoquant l'effet de serre, les projets de l'Inde et de la Chine, qui comptent multiplier le nombre de leurs centrales électriques alimentées au charbon, annuleraient ces gains. À elle seule, la Chine prévoit de construire 200 de ces centrales. Voilà qui donne une grande force aux pays en développement dans la formulation du contrat dit mondial ou, plus précisément, comme M. Jim MacNeill, d'une série de petits contrats conduisant à un contrat plus vaste. Or, comme le montrent les préparatifs de la Conférence des Nations-Unies sur l'environnement et le développement, le monde entend se servir de cet atout pour attirer l'attention sur les problèmes prioritaires que sont pour lui le commerce, la dette et le besoin d'une croissance économique, en échange de mesures pour lutter contre les changements climatiques.

Le CALENDRIER DE NÉGOCIATION DE CETTE SÉRIE d'accords est maintenant bien défini. Il revient au monde développé de faire les premiers pas et de prendre un ensemble de décisions unilatérales visant à réduire les émissions de gaz entrainant l'effet de serre. Certains pays ont déjà pris de tels engagements. La République fédérale d'Allemagne a récemment déclaré que, d'ici 2005, elle réduirait les émissions ouest-allemandes de CO<sub>2</sub> de 25 p. 100 par rapport aux quantités de 1987. Le Royaume-Uni a promis un gel de ses émissions dans les mêmes délais et les Japonais, d'ici la fin du siècle. Bien que la politique canadienne soit confuse sur ce point, M. de Cotter, le ministre de l'Environnement par intérim, a lui aussi promis un gel des quantités émises d'ici la fin du siècle. Tous ces pays ont conclu que non seulement ces politiques sont techniquement applicables, mais que, dans la plupart des cas, elles accroîtront la compétitivité internationale et feront réaliser de grosses économies dans les dépenses énergétiques. L'exception vient des États-Unis où le président Bush a déclaré dans une conférence de presse qui suivait le sommet de Houson que l'inter contre les émissions équivalait à supprimer quantité d'emplois. Aucun des autres dirigeants ne partageait son avis.

Il se peut fort que le dénouement de cette affaire survienne au Brésil, à la Conférence de 1992, au cours de laquelle les optimistes espèrent qu'une convention sera soumise à la signature des États. La portée de cette convention dépendra probablement des retombées du sommet de Houson, dont on saura alors s'il a déclenché le changement attendu de longue date dans les rapports de puissance économique. Le chancelier Kohl et, dans une moindre mesure, les autres dirigeants européens, semblent déterminés à aboutir dans un proche avenir à des progrès réels en matière de changement climatique. Il serait intéressant de voir ce qui arriverait si six participants au sommet, peut-être entrainés par le Canada en tant que plus proche voisin des États-Unis, décidaient de créer seuls le fonds initial de 2,5 milliards de dollars. Après tout, il ne s'agit pas d'une grosse somme si l'on songe que c'est peut-être l'avenir de la planète qui est en jeu. □

Dans un élan écologiste, Mme Margaret Thatcher décida donc d'organiser deux rencontres à Londres afin de renforcer le protocole de Montréal. À la première, qui s'est tenue au mois de février, l'an dernier, on a convenu de la nécessité d'accélérer le calendrier. Cette rencontre a été suivie d'une conférence à Helsinki, où l'on s'est rendu compte qu'il était indispensable de partager le fardeau, si l'on voulait que de grands pays en développement, comme l'Inde et la Chine, signent le document. Ces deux pays entendent répandre l'utilisation de réfrigérateurs, pour qu'au moins tous les villages puissent conserver convenablement des fournitures médicales. Pourquoil devaient-ils revoir leurs plans à cause d'un appauvrissement de l'ozone causé presque entièrement par les pays industrialisés? Pourquoi devaient-ils payer cinq ou six fois plus cher des produits de remplacement des CFC moins efficaces que ceux-ci?

Ils se le demandaient.

En juin de cette année, à la seconde rencontre londonienne, on est donc arrivé à une proposition portant sur la création d'un fonds destiné à aider le monde en développement à se passer des CFC. La Maison-Blanche a commencé par rejeter l'idée, par crainte de créer un précédent pour un fonds bien plus important destiné à lutter contre le réchauffement planétaire. Après les forces pressions exercées par les autres puissances industrialisées, les États-Unis ont accepté l'ouverture d'un fonds doté de 240 millions de dollars américains pour les trois premières années. Si la Chine et l'Inde signaient le protocole, comme elles le feront certainement, cette somme passerait à environ 320 millions de dollars.

Les TROIS PREMIÈRES ANNÉES, LE FONDS SERVIRA principalement à évaluer les besoins des pays en développement. Après cette période, il aidera à financer l'acquisition des techniques d'emploi (et peut-être de production) des produits de remplacement des CFC, les HCFC (halochlorofluorocarbones), dont l'utilisation semble moins dangereuse pour la couche d'ozone, bien qu'ils restent des gaz à effet de serre intenses. Certaines personnes ont critiqué cet arrangement en faisant valoir que les experts techniques qui ont participé aux discussions sont en grande majorité des spécialistes de la chimie et non de la réfrigération et qu'ils ont donc négligé la possibilité de recourir à d'autres produits réfrigérants potentiels comme le propane ou le butane, qui ne contribuent pas au réchauffement de la planète. Néanmoins, la rente de Londres constitue un immense pas en avant pour ce qui est de répondre aux besoins particuliers des pays en développement.

Le succès des négociations sur la couche d'ozone ouvre la porte à des progrès sur la question bien plus difficile du réchauffement planétaire. À la Conférence de Toronto, on a recommandé de réduire les émissions de CO<sub>2</sub> dans l'atmosphère de 20 p. 100 d'ici l'an 2005, pour arriver, on l'espère, à en stabiliser la proportion.

# SAUVONS L'ATMOSPHÈRE TERRESTRE

Rapport intégrative sur la stratégie complexe et les jeux d'influence politiques que cache l'effort international entrepris pour sauver l'atmosphère.

PAR DAVID RUNNALLS

LES POLLUANTS RÉSULTANT D'ACTIVITÉS HUMAINES, DE L'UTILISATION INEFFICACE ET EXCESSIVE DE COMBUSTIBLES FOSSILES ET DES EFFETS DE LA CROISSANCE DÉMOGRAPHIQUE RAPIDE SONT EN TRAIN DE TRANSFORMER L'ATMOSPHÈRE TERRESTRE À UNE VITESSE INOUIE. CES CHANGEMENTS FONT PESSER UNE LOURDE MENACE SUR LA SÉCURITÉ INTERNATIONALE ET ILS ONT DÉJÀ DES RÉPÉRCUSSIONS NOCIVES DANS BEAUCOUP D'ENDROITS DE LA PLANÈTE.

ES PAROLES ALARMANTES. LE LECTEUR S'EN souvient peut-être, ont été prononcées dans la déclaration de la Conférence sur les changements atmosphériques, organisée à Toronto par le gouvernement canadien aussitôt après le sommet économique de 1988. Quelque 300 éminents scientifiques, hommes et femmes politiques réunis pour parler sérieusement des incidences de changements dans le climat terrestre ont décidé de «damner le pion» à *Grenpeace*. Mais le remarquable consensus qui s'est dessiné à la Conférence de Toronto n'est-il pas en train de s'effiloche? Il se passe à peine une journée sans qu'un nouveau groupe de chercheurs affirme que la planète ne s'est pas réchauffée, ou qu'une étude exotique des glaces antarctiques ou des données recueillies par télédétection remet en question les hypothèses de base. Les politiciens qui souhaitent ne rien faire, ou pas grand-chose, du moins pas tant que l'échecane des élections prévues en 1992 dans plusieurs pays occidentaux industrialisés ne sera pas passée, tirent partie de ces controverses.

Le vieux slogan américain qui veut qu'on ne bouge pas tant que la recherche n'en dit pas plus long sur le problème et qui a rendu si vaines les actions contre les pluies acides s'est de nouveau fait entendre, cette fois dans la bouche de M. John Sununu, chef de Cabinet de la Maison-Blanche. À l'une des réunions d'information qui accompagnaient le sommet économique de Houston, il a même repris une autre des blagues écoulées de la présidence Reagan, celle que, dans le service de presse de la Maison-Blanche, on appelle la théorie de «l'arbre tué», d'après la fameuse idée de Reagan selon laquelle ce sont les arbres qui polluent.

Mais lorsque le rideau retombe sur les débats scientifiques, une observation essentielle reste incontestée. Selon les propres termes du climatologue américain Stephen Schneider, qui témoigna au début de l'année devant huit commissions parlementaires réunies pour la toute première fois

en session mixte : «... alors qu'il demeure une incertitude légitime, qui persistera des dizaines d'années encore, quant aux lieux et aux moments où les changements se produiront, la grande majorité des spécialistes responsables pensent que la probabilité de changement est importante.» Cette opinion a été renforcée par le rapport récent du Groupe intergouvernemental sur le changement climatique (GICC). Le GICC représente un consensus de quelques-unes des sommités scientifiques mondiales, qui ont conclu que les gaz à effet dit de serre, si l'on n'y fait rien, entraîneront de là fin du siècle prochain une hausse moyenne de la température terrestre pouvant atteindre trois degrés Celsius et une montée du niveau des océans de soixante-quinze centimètres.

LES ENVIRONNEMENTALISTES NOUS ONT DEPUIS longtemps habitués à qualifier les problèmes de «planétaires», parfois avec une exactitude dont il est permis de douter. Mais le changement climatique est une question qui regarde vraiment le monde entier. Causé par nous tous et nous touchant tous, il présente deux aspects. D'abord, la mince couche d'ozone qui nous protège des rayons solaires ultra-violetes les plus dangereux est détruite par l'émission de chlorofluorocarbones (CFC), que l'on prenait jadis pour des produits chimiques inoffensifs utilisés pour la réfrigération, pour gonfler les mousses isolantes et comme solvants dans l'industrie électronique. Si l'on ne la maintient pas rapidement, cette dégradation de la couche d'ozone conduira à une forte augmentation du nombre des cancers de la peau (augmentation à laquelle on assiste déjà) et à une baisse des rendements agricoles, et elle aura des incidences sur le système immunitaire humain, ce qui est sans doute plus inquiétant.

Ensuite, l'émission de gaz carbonique (CO<sub>2</sub>) et d'autres gaz responsables de l'effet de serre risque de bouleverser le climat terrestre de manières que l'on ne peut prédire précisément. Néanmoins, à en croire les participants de la Conférence de Toronto : «Ces changements clima-

producteurs.

ON S'ACCORDE À DIRE QUE, DANS UNE PREMIÈRE étape, la lutte contre le changement climatique doit consister à éliminer la production et l'utilisation de CFC. Non seulement ils endommagent la couche d'ozone, mais ils comptent aussi parmi les plus puissants des gaz de l'effet de serre et, pour les pays industrialisés, ils représentent le tiers des émissions de ces gaz. On a déjà bien progressé dans ce domaine; c'est d'ailleurs le Canada qui a ouvert le débat sur cette question en 1987, en organisant la réunion qui a abouti au Protocole de Montréal. Cet accord demandait que l'on cesse de produire des CFC d'ici la fin du siècle. Avant même que l'encre en soit sèche, il apparaît déjà qu'il était insuffisant. Le trou dans

et cinquième rangs dans le peloton de tête des occupants respectivement les troisième, quatrième et cinquième rangs dans le peloton de tête des producteurs.

un certain poids par le passé, c'était en raison de la conjoncture mondiale d'après la Seconde Guerre mondiale, et non pas parce que la puissance du Canada avait fondamentalement changé. En d'autres termes, une fois ré-placé ordinairement, au centre du troisième rang. Seul un pays qui aurait presque eu le statut de grande puissance aurait eu une chance de faire aboutir une initiative unilatérale avait inévitablement été concoctée à la hâte. Un certain nombre de ses idées, en particulier celle de réunir les cinq puissances, étaient absolument irréalisables — «l'une des plus mauvaises idées jamais formulées à notre époque en matière de limitation des armements», avait déclaré un ambassadeur canadien de haut rang. Et rien n'avait été fait pour faire approuver l'initiative grâce à de patientes discussions diplomatiques en coulisses. Or, sans de pareils efforts, il était presque impossible que l'initiative réussisse. Par conséquent, Trudeau semblait parfois s'illuminer le monde, essayant désespérément de se faire recevoir par les dirigeants des pays qu'il visitait. S'il arrivait à obtenir une audience, on l'écoutait assez poliment, mais son message, dont un fonctionnaire canadien s'était moqué en disant que Trudeau recommandait aux dirigeants de «aimer les uns les autres», n'éveillait absolument aucun intérêt dans le regard de ses interlocuteurs. Tout compte fait, avait conclu ce responsable, l'initiative avait eu pour effet d'amoindrir Trudeau — et son pays — aux yeux du monde.

POURANT, TRUDEAU AVAIT EU RAISON D'ESSAYER, ET PAS SEULEMENT PARCE que le public canadien avait unanimement souscrit à ses efforts (sans pour autant se faire trop d'illusions quant aux résultats possibles). Le monde traversait une période de crise, et les relations américano-soviétiques étaient si mal en point qu'on allait même jusqu'à envisager l'éventualité d'une guerre. Il fallait que quelqu'un parle, et c'est Trudeau qui s'est lancé. Que ce soit ou non grâce aux efforts du premier ministre, l'escalade de la tension à quelque peu ralenti. Des chefs d'Etat ou de gouvernement comme Kohl, en Allemagne de l'Ouest, et Craxi, en Italie, ont commencé à faire pression sur leurs alliés pour qu'ils se mettent à la recherche d'un compromis. En Grande-Bretagne, Mme Thatcher a assoupli sa position, et Reagan a cessé de dépendre l'URSS comme l'«empire du mal», pour amorcer un dialogue avec elle. Trudeau avait pris les risques, et il méritait une partie des honneurs. Toutefois, il y avait vraiment quelque chose de paradoxal dans cette situation, surtout pour ceux qui cherchent la cohérence dans les actions et le raisonnement de leurs dirigeants. À l'autonomie de sa carrière, Trudeau avait, de toute évidence, repris la lutte contre les positions très arrêtées de la Guerre froide; c'était une croisade qu'il avait pourtant abandonnée quelques années auparavant, après avoir réduit le contingent canadien à l'OTAN, en 1969. De plus, il s'était transformé en commode médiateur. Le premier ministre qui, en 1968, avait critiqué le style et le rôle de Lester Pearson, se retrouvait, en 1983-1984, en train d'essayer de révéler l'habit «pearsonien» — et probablement avec son serai certainement rendu compte que des négociations préalables soigneusement orchestrées étaient essentielles à toute initiative de paix. Mike Pearson avait certes son orgueil et son désir de briller sur la scène mondiale, mais il connaissait également ses points forts, ses faiblesses et les limites des efforts diplomatiques d'une puissance moyenne. En seize ans de règne, Trudeau n'avait toujours pas compris les contraintes qu'imposait à son pays le fait de vivre de façon précaire dans un monde dominé par les superpuissances. □

 Cet article est tiré du livre intitulé Prouette : Pierre Trudeau and Canadian Foreign Policy, publié chez les Presses de l'Université de Toronto. On peut se le procurer dans les librairies au coût de 35 \$.

Contrairement aux apparences, l'initiative n'était pas tout à fait terminée. Dix jours à peine après l'allocation de Trudeau devant le parlement, le ministre canadien a pris le premier avion pour Moscou; il comptait assister aux dirigeant soviétique Andropov à finalement rendu l'âme, et le premier ministre canadien a pris le premier avion pour Moscou; il comptait assister aux nouveaux Secrétaire général du Parti, dont la santé n'était pas meilleure que obsèques et, avec un peu de chance, rencontrer Constantin Tchernenko, le Canada n'avait obtenu ses trente-cinq minutes d'entretien, dont il a profité pour dire à Tchernenko qu'il y avait maintenant un compromis possible entre l'Est et l'Ouest. L'austère Gromyko, qui assistait à l'entrevue, répondit d'un ton morne que les pays occidentaux devraient faire des propositions s'ils voulaient que les relations pussent s'améliorer. Même si le premier ministre a déclaré, en sortant de la salle de réunion, que l'initiative venait de recevoir une autre impulsion politique, le doute était permis. Tchernenko, très malade, ne pouvait faire, en direction de la détenté, que des pas tout timides. Et Robert Ford, ambassadeur depuis longtemps à Moscou, au journal le *Globe and Mail* que «l'initiative de paix de Trudeau était une absurdité complète» et «que les Soviétiques en avaient fait des gorges chaudes». Trudeau n'avait aucune influence politique à Washington, et «non plus qu'à Moscou... il n'avait aucun crédit dans l'une ni dans l'autre ville».

ALORS QU'IL VIVAIT SES DERNIERS JOURS AU POUVOIR, LE PREMIER MINISTRE A fait une dernière tentative auprès de ses alliés à la réunion au sommet à Londres; il a alors participé à la rédaction d'un communiqué exigeant «la sécurité et le niveau de forces le plus bas possible». Trudeau a eu, à cette occasion, une bruyante altercation avec le président Reagan, à qui il a déclaré qu'il «devait en faire plus» pour promouvoir la détente. Contrairement à ses habitudes, l'imperturbable (ou comateux) chef d'Etat a répondu en frappant la table du ping et en criant : «Bon Dieu, Pierre, qu'est-ce que je pourrais bien faire pour les ramener à la table de négociations ?» La source de cette anecdote ? «Une session d'information très détaillée organisée par les Etats-Unis», a souligné d'un ton acerbe Patrick Grossage. Finalement, Ford avait peut-être raison : toute cette croisade manquée de Trudeau n'était qu'un «bain de jouie mondial» comme ont indiqué certains d'un ton railleur. Trudeau était au pouvoir depuis seize ans et il avait participé aux travaux de l'OTAN et du Commonwealth ainsi qu'à des réunions au sommet, mais il ne semblait toujours pas comprendre les rouages des relations entre les grandes puissances. Sûr de ses capacités intellectuelles et en aucun cas à l'abri de la vanité, Trudeau continuait naïvement de croire au pouvoir des mots et des idées, de croire que la raison pouvait convaincre les grandes puissances de renoncer à rechercher frénétiquement leur seul intérêt, et de croire enfin à sa propre étiole. Trudeau était un original, convaincu qu'il pouvait persuader les autres dirigeants de se joindre à lui dans le combat personnel qu'il menait contre la menace nucléaire. Mais malgré tout son génie, Trudeau n'a pas réussi à comprendre pourquoi les Soviétiques et les Américains rechignaient à prendre le moindre risque pour la paix. Pas plus qu'il n'a réussi à com-

prendre pourquoi les deux Grands hésitent à laisser des Etats plus petits venir leur mettre des bâtons dans les roues. De plus, en tant que tenant de l'équidistance et soucieux qu'il était de ne pas compléter sur les plates-bandes des superpuissances, Trudeau souffrait d'un mal que ses détracteurs assimilaient à un appareil refusé ou à une incapacité de faire la moindre distinction entre les superpuissances. La Russie d'Andropov était infiniment plus menaçante que les Etats-Unis, même sous Reagan, mais Trudeau semblait souvent incapable de le reconnaître.

AUTRE FACTEUR TOUT AUSSI IMPORTANT, le Canada n'avait tout simplement pas le rang ni les moyens de mener à bien une initiative aussi ambitieuse. Le Canada était un petit pays, et ce, malgré l'option un peu surestimée qu'avait de lui-même un peu d'influence. Si la politique extérieure du Canada avait effectivement

que le Pakistan exigerait un accès direct à la Chine. Le Front exige que le nouveau État envisagé comprenne non seulement les régions du Cachemire sous contrôle indien mais aussi les régions suivantes : l'*Azad Kasmir* (ou Cachemire libre), le Gilgit, l'Hunza et le Baltistan, que le Pakistan occupe, ainsi que les poches territoriales que ce dernier a cédées à la Chine. La moitié de la capacité de production hydroélectrique du Pakistan et les sources du Chenab, l'un de ses principaux fleuves, se trouveraient à l'intérieur de la nouvelle entité. De plus, outre les objections stratégiques et économiques pakistanaises, la création d'un Cachemire indépendant à majorité musulmane invaliderait la raison d'être même du Pakistan «partie des musulmans du sous-continent», que la sécession du Bangladesh, avec l'appui de l'Inde, avait déjà sapée.

Bien que le Pakistan affirme que toute l'aide au Cachemire provient de sources privées et non gouvernementales, le Front a dévoilé ses liens avec Islamabad dans une attaque en détail, menée le 26 avril, dans laquelle il a révélé que l'insurrection était dirigée depuis l'*Azad Kasmir* par le «général Imtiaz», chef de la «cellule n° 202» des services secrets pakistanais. Réaffirmant que son objectif était «l'indépendance du Grand Cachemire», le Front a déclaré que «quiconque se laisserait manipuler par les services secrets pakistanais pour servir ses propres visées étroites, à savoir, devenir maître du territoire kasmirien entier, serait considéré comme un traître par le peuple kasmirien».

Les services secrets pakistanais, dirigés par des officiers fondamentalistes nommés sous le régime de feu le président Zia Ul-Haq, sont en partie responsables de ce que le Front de libération croit à tort que le *Hezbe Islami* dominerait un mouvement rebelle unifié et qu'il le forcerait à mettre en sommeil sa demande d'indépendance. Le Cachemire, dans ce cas, serait submergé par la vague fondamentaliste qui se répand déjà dans le Moyen-Orient et, non loin de là, en Asie centrale soviétique.

Encore amers d'avoir perdu le Bangladesh, beaucoup de dirigeants pakistanais ont vu avec le Cachemire une occasion peu risquée de rendre à leur puissant voisin la monnaie de sa pièce. L'acquisition de l'option nucléaire et le flot continu d'armes américaines ont suscité une confiance envahissante. Lors de passages à Islamabad en juillet 1988 et en octobre 1989, on m'a assuré à maintes occasions que l'Inde ne lancerait pas une contre-attaque générale en réponse à la subversion au Cachemire, comme elle l'avait fait en 1965, parce que la dissuasion nucléaire rendrait cette réaction trop dangereuse.

À la surprise et à la consternation des services secrets, le Front de libération dépasse maintenant le *Hezbe Islami*. Le fondamentalisme islamique, d'implantation récente au Cachemire, compte des adhérents tout dévoués à leur cause, mais en nombre limité. Le Front en appelle bien plus largement à la population du Cachemire, une région montagneuse où l'on parle une langue distincte et où le sentiment d'une identité propre est fort. Bien avant leur lutte actuelle contre l'absorption par l'Inde à majorité hindoue, les musulmans de la vallée du Cachemire ont résisté à l'intégration par des dirigeants musulmans, notamment par l'empereur moghol Akbar, en 1586, et par l'Afghan Ahmad Shah, deux siècles plus tard.

En 1950, l'Inde a accordé à son secteur du Cachemire une autonomie symbolique en vertu d'une disposition constitutionnelle spéciale, qu'elle s'est cependant empressée d'invalider dans la pratique. Les dirigeants kasmis qui ont essayé de faire valoir cette autonomie ont été soit emprisonnés, soit remplacés par des opportunistes locaux corrompus prêts à se soumettre à la loi de New Delhi. Pour comble, l'Inde a peu investi pour le développement économique de la région.

Les rapports entre New Delhi et le Cachemire sont compliqués par le fait que ce dernier est une agglomération artificielle héritée de la période britannique. La vallée à majorité musulmane se trouve réunie avec le Jammu à une majorité hindoue et le Ladakh bouddhiste, deux régions aux minorités

Inde, ont fait obstruction aux demandes d'autonomie. L'une des possibilités qui s'offrent à l'Inde pour se sortir de l'impasse actuelle serait de scinder l'État, d'intégrer le Jammu et le Ladakh à l'Union indienne tout en conférant à une vallée du Cachemire autonome un statut confédéral particulier dans la défense et la politique étrangère indiennes. Cette stratégie, accompagnée de développements économiques importants, pourrait bien attirer des éléments importants du Front de libération qui reconnaissent avoir peu de chance d'accéder à l'indépendance face à la résistance combinée de l'Inde et du Pakistan. Pour l'heure, cependant, le premier ministre Singh, sous la pression des «durs» de la coalition hindoue, ne semble pas s'orienter dans cette direction. La politique indienne consiste à écraser l'insurrection par les armes avant de rechercher une solution politique.

L'Inde, comme le Pakistan, estime qu'il est essentiel pour elle, du point de vue militaire, de contrôler sa partie du Cachemire, région stratégique, et elle craint que l'autonomie de cette dernière crée un précédent dans le pays. La controverse indienne sur ce qui est de savoir quoi faire du Cachemire s'inscrit dans un débat en cours dont le sujet est : le système fédéral indien entier, avec ses frontières provinciales définies par les langues, devrait-il être plus décentralisé ?

CE DÉBAT EST DIRECTEMENT LIÉ AU DÉLICAT PROBLÈME DES RAPPORTS ENTRE HINDOUS ET MUSULMANS EN INDE. Contrairement à ce que l'on croit généralement en Occident, la partition du sous-continent en 1947 n'a pas abouti à une répartition nette dans laquelle le Pakistan aurait hérité de tous les musulmans et l'Inde, de tous les Indiens. L'Inde compte 90 millions de musulmans, soit presque autant que le Pakistan. Officiellement, s'attaque au principe de la laïcité. Les partisans de la laïcité redoutent, quant à eux, qu'une vallée du Cachemire autonome, à majorité musulmane, finirait par demander son indépendance ou son rattachement au Pakistan, ce qui exposerait les musulmans des autres parties de l'Inde à des attaques continues et à des accusations de trahison. Déjà important en lui-même, le Cachemire est devenu le foyer d'une lutte plus vaste et sans solution entre la majorité hindoue et la minorité musulmane dans l'Asie du Sud. L'origine de cette lutte remonte à plus de sept siècles. Des armées musulmanes étrangères ont conquis des royaumes hindous qui ne cessaient de se quereller entre eux et, au fil du temps, elles ont instauré une série de dynasties solides dont l'empire moghol a marqué l'apogée. L'accession à l'indépendance par rapport à la Grande-Bretagne a offert à la droite hindoue une chance de dominer enfin le sous-continent. La partition a été trahie, et les dirigeants indiens lui ont donné leur aval en pensant que le Pakistan deviendrait un associé minoritaire de l'Inde, d'une sphère d'influence indienne. Ils n'avaient pas négocié la Guerre froide ni la puissance gonflée que ce pays acquerrait en trois décennies d'aide militaire américaine. Surtout, ils n'avaient pas prévu que le Pakistan posséderait l'arme nucléaire. La droite hindoue prenant une puissance croissante en Inde, il est probable que les pressions s'intensifieront pour qu'une claire opérationnelle par des vecteurs ultra-modernes. La montée du nationalisme hindou est, quant à elle, accélérée par l'assurance grandissante des dirigeants fondamentalistes musulmans au Pakistan et de leurs alliés militaires, après la chute du gouvernement de Mme Benazir Bhutto en août.

Dans un avenir prévisible, la perspective d'une guerre nucléaire est faible, il n'en reste pas moins vrai que le processus d'instabilité et de détérioration politiques sans précédent qui se développe de part et d'autre de la frontière ne rend que trop crédibles les scénarios d'Armageddon nucléaire. □

# ÉPREUVE DE FORCE AU CACHEMIRE

Une quatrième guerre indo-pakistanaise éclaterait probablement à cause du Cachemire, territoire disputé de longue date, et les belligérants feraient usage d'armes nucléaires.

PAR SELIG S. HARRISON

Le 15 mai 1990, alors que le risque d'une guerre nucléaire dans le Sud asiatique suscitait une inquiétude croissante, le président Bush décidait soudain d'envoyer une mission de haut niveau en Inde et au Pakistan. Elle avait sa tête le vice-conseiller à la sécurité nationale, M. Robert Gates, principal spécialiste des affaires soviétiques à la Maison-Blanche, à qui M. Bush avait donné l'ordre d'abandonner les préparatifs de la prochaine rencontre au sommet entre les chefs d'Etat soviétique et américain. La raison de ce départ précipité de la mission Gates à un moment aussi inopportun pour Washington, ce sont des photos prises par satellite par la *National Security Agency* qui donnaient à penser que le Pakistan, alerté par des mouvements des troupes indiennes jugés menaçants, pouvait être en train de préparer une attaque préventive. Certains clichés montraient une circulation inhabituelle entre le centre de recherche nucléaire pakistanaise de Kahuta et des terrains d'aviation où des F-16 de fabrication américaine à capacité nucléaire sont basés. Quatre mois après la mission Gates, le danger d'une quatrième guerre entre l'Inde et le Pakistan est toujours sérieux. Mais la possibilité d'une explosion immédiate a apparemment reculé, en partie grâce à l'intervention opportune de Robert Gates à Islamabad, puis de diplomates soviétiques à New Delhi.

La raison de ce départ précipité de la mission Gates à un moment aussi inopportun pour Washington, ce sont des photos prises par satellite par la *National Security Agency* qui donnaient à penser que le Pakistan, alerté par des mouvements des troupes indiennes jugés menaçants, pouvait être en train de préparer une attaque préventive. Certains clichés montraient une circulation inhabituelle entre le centre de recherche nucléaire pakistanaise de Kahuta et des terrains d'aviation où des F-16 de fabrication américaine à capacité nucléaire sont basés. Quatre mois après la mission Gates, le danger d'une quatrième guerre entre l'Inde et le Pakistan est toujours sérieux. Mais la possibilité d'une explosion immédiate a apparemment reculé, en partie grâce à l'intervention opportune de Robert Gates à Islamabad, puis de diplomates soviétiques à New Delhi.

L'influence américaine est beaucoup plus grande au Pakistan qu'en Inde parce qu'il y a longtemps que les Etats-Unis sont le premier fournisseur d'armes d'Islamabad. Dans les années 1950, aux fins de décourager une agression soviétique et chinoise, Washington a donné au régime d'Ayub Khan pour 1,2 milliard de dollars de matériel militaire. Quand ce arsenal a été utilisé contre l'Inde dans le conflit de 1965, les Américains ont cessé leur ravitaillement. Mais, en 1981, une nouvelle aide militaire chiffrée à 1,5 milliard duquel les Etats-Unis ont fait transiter pour notamment plus que 2 milliards de dollars de matériel destiné à la résistance afghane contre 1980 et 1989. Puis, en 1986, Washington a rajouté 1,4 milliard de dollars et, depuis le retrait soviétique de l'Afghanistan, continue de fournir des armes au Pakistan. Selon des officiels américains et pakistanaï, M. Gates a signifié aux Pakistanaï que les Etats-Unis mettraient fin à leur aide et ne hiverneraient plus de pièces de rechange ni de munitions en cas de guerre, comme ils l'avaient fait en 1965. Plus important, il les a prévenus que Washington pourrait suspendre l'aide ou y mettre fin, sauf en cas de conflit, à moins que les services secrets d'Islamabad cessent d'aider les insurgés musulmans dans la vallée du Cachemire que l'Inde contrôle.

C'est le Pakistan qui a préicipité la crise actuelle en approvisionnant les rebelles kasmitis en capitaux, en assurant leur entraînement et en leur livrant de plus en plus d'armes, ce qui a enflammé le patriotisme des Hindous, qui exigent que leur pays réponde par une action militaire totale. C'est en faisant la sourde oreille aux griefs légitimes des Kasmitis pendant les quarante dernières années que les Indiens ont, à n'en pas douter, favorisé la montée de l'insurrection. Mais New Delhi pouvait encore apaiser le jeu, jusqu'au moment où les services pakistanaï se sont mis, en 1988, à fournir des fusils *Kalashnikov*, des lances-roquettes, des mortiers et d'autres armes puisées dans les stocks de l'aide américaine aux Afghans. Pour donner du poids à son avertissement, M. Gates a précisé que la législation américaine donnait déjà à son gouvernement plusieurs moyens de couper l'aide. Le Congrès a mis une condition à l'aide militaire, à savoir que le président certifie chaque année que le Pakistan ne «possède» pas

d'arme nucléaire. En dépit de preuves grandissantes à l'effet contraire, la Maison-Blanche a jusqu'ici fermé les yeux et donné tous les ans son feu vert au renouvellement de l'aide. M. Gates a prévenu les responsables militaires pakistanaï qu'il devenait de plus en plus difficile au président américain de certifier que leur pays ne possédait pas d'arme nucléaire et qu'il suffisait, en outre, d'invoquer les lois anti-terroristes pour justifier la suspension ou la suppression de l'aide militaire.

Il est évident maintenant que le soutien pakistanaï aux rebelles kasmitis a nettement diminué depuis la visite de M. Gates. L'Inde, pour sa part, a modéré son discours et retiré une partie de ses troupes de la zone frontalière suite aux pressions exercées par les Soviétiques et par les Américains. Bien que New Delhi ait développé un complexe militaro-industriel important au cours des dernières années, elle dépend encore beaucoup de Moscou pour les pièces détachées de son matériel militaire soviétique, notamment de ses astronautes *MiG*.

Le ministre des Affaires étrangères soviétiques, M. Chevardnadze, a mis en garde le Secrétaire d'Etat américain, M. Baker, lors de leur rencontre de Bonn, au mois de juin. Selon lui, toute entente manichéiste de leurs deux pays quant à l'arrêt des livraisons d'armes ne ferait qu'exacerber les passions nationalistes en Inde comme au Pakistan. Cependant, a-t-il ajouté, sans menacer directement de cesser ses livraisons, Moscou avait vertement sermonné New Delhi et l'Inde avait bien conscience que l'Union soviétique pouvait trouver des excuses pour ralentir les envois d'armes essentielles en cas de conflit.

OUTRE LES PRESSIONS AMÉRICAINES, DEUX FACTEURS ONT CONTRIBUÉ À TEM-pérer le soutien pakistanaï au mouvement insurrectionnel kasmiti. D'une part, New Delhi a recommencé à aider secrètement les séparatistes de la province côtière méridionale pakistanaise clé, le Sind, pour prouver au Pakistan qu'à bon chat bon rat. L'Inde avait suspendu son aide aux groupes sinitis il y a deux ans en espérant qu'Islamabad cesserait d'attiser les mouvements rebelles du Pendjab et du Cachemire. Mais, lorsque les Pakistanaï ont accueilli leur aide aux Kasmitis l'an dernier, les Indiens ont ravivé leurs opérations dans le Sind, tout en faisant savoir qu'ils étaient disposés à se retirer si Islamabad ne faisait autant dans le Cachemire.

D'autre part, facteur plus important grâce auquel on empêchera peut-être une intensification des combats dans le Cachemire, il y a eu rupture entre les services secrets pakistanaï et le principal groupe rebelle, le Front de libération, qui prône l'indépendance du Cachemire. Jusqu'à récemment, les factions fondamentalistes musulmanes favorables au rattachement du Cachemire au Pakistan. Mais un conflit qui couvait entre le Front et ses mentors pakistanaï a maintenant éclaté au grand jour.

Islamabad, qui s'est toujours opposé à l'idée d'un Cachemire indépendant, continue d'insister pour que les Nations-Unies organisent un plébiscite qui permettrait à tous les Kasmitis de se prononcer pour le rattachement à l'Inde ou au Pakistan. Depuis qu'une ligne de cessez-le-feu a été tracée après la première guerre indo-pakistanaise, en 1948, l'Etat est divisé en secteurs placés sous administration indienne ou pakistanaise.

Le premier ministre pakistanaï, Mme Benazir Bhutto, a déclaré en mai que l'indépendance risquait de déclencher une «balkanisation» du sous-continent en encourageant d'autres minorités de ce pays à demander elles aussi leur autonomie ou leur indépendance. Cette position cache une préoccupation stratégique. En effet, un Cachemire indépendant naîtrait-il

*La présente article est tiré du discours.  
Au cours de la dernière visite qu'il effectuait dans la capitale d'un pays du Commonwealth en qualité de Secrétaire général de cet organisme, Shridath Ramphal a prononcé un discours à l'Institut pour la paix et la sécurité, à Ottawa, le 5 juin.*

Nous savons reconnaître qu'une société nationale ne peut pas être en paix si le pouvoir, les privilèges et la prospérité ne sont l'appanage que de quelques-uns. Comment pouvons-nous croire que notre société mondiale puisse vivre en paix alors qu'elle souffre de pareilles disparités ? Il y a aujourd'hui beaucoup plus de gens souffrant d'insécurité économique que militaire : ceux qui meurent avant l'heure et ceux dont l'existence est marquée par les mêmes privations et mutilations que celles allant de pair avec les conflits militaires. En cinq ans, les ravages de la pauvreté et du sous-développement ont fait au moins 35 millions de victimes, sans compter les innombrables vies écourtées et insatisfaisantes. Pour les pauvres, c'est toujours la guerre.

Le relâchement des tensions Est-Ouest nous fournit certainement une occasion de profiter de nos interdépendances pour apporter des changements humains, un espoir d'avancer en renforçant les mécanismes collectifs et en découvrant de nouvelles façons de résoudre les problèmes dans la coopération, et non dans l'affrontement; un monde plus démocratique régi par une administration mondiale plus éclairée.

Mais il y a autre chose : nous tardons certainement trop à reconnaître le rôle du Canada et de toutes les sociétés pluralistes. Bien sûr, le Canada est un pays grand et riche, mais il n'est pas le seul à avoir un visage humain. Dans un certain nombre de pays, ce changement est caractérisé en partie par un engagement pour l'économie de marché, pour la méthode occidentale de faire aboutir les choses, par opposition au modèle collectiviste. Il n'y a rien de surprenant pour ceux et celles d'entre nous qui viennent du tiers-monde; car avant l'Europe de l'Est et l'Union soviétique, beaucoup de pays du tiers-monde avaient déjà eu un avant-goût de la marche à la fin de la guerre. Mais ils avaient dû apprendre à leurs dépens que la loi du marché n'est pas magique et qu'elle peut, en effet, se révéler impitoyable. Il faut espérer que les nouveaux dirigeants en Europe centrale et en Europe de l'Est vont comprendre que le capitalisme, comme le socialisme, doit avoir un visage humain.

Le fait que, de nos jours, il y a encore des droits du monde où le vote de liberté n'est pas comparable, et ce en dépit de nos autres réalisations, constitue une véritable mise en accusation de l'humanité tout entière. Cette situation s'explique encore trop souvent par notre capacité quasi incroyable de priver d'autres êtres humains de libertés que nous apprécions le plus nous-mêmes, et de leur infliger les plus horribles injustices quand ils les réclament en disant y avoir droit. Et on distingue, parfois de façon implicite, une violation de certains mouvements de libération, au milieu de certains mouvements de libération, on semble mettre l'accent sur le fait ethnique, sur des nationalismes étroits, sur les tribalismes d'un genre ou d'un autre, voire sur un engouement pour le fondamentalisme. Cette violation de liberté pourrait présager la désintégration des sociétés selon des modalités que nous n'avons pas encore commencé à envisager.

Hier soir, soucieux de respecter l'obligation faite aux gens de l'extérieur de ne pas intervenir, mais aussi désireux de remplir (du moins, je l'espère) le devoir incommodant aux amis et à la famille, qui ne doivent pas se taire quand le danger menace, je me suis risqué à exprimer quelques réflexions sur certains problèmes actuels du Canada. J'ai rappelé à la Royal Commonwealth Society à quel point le Commonwealth apprécie le Canada, pour la puissance et le respect qu'il lui a apportés, à quel point le Canada, de par sa simple existence, a fait du monde un endroit meilleur. J'ai dit que l'unité du Canada, son éthique multiculturelle, son intégrité nationale (territoriale et autre), ne sont pas simplement des atouts nationaux, mais aussi des cartes internationales; que le Canada est lui-même une «société distincte» qu'il est impossible de préserver; que le Commonwealth et le monde dans son ensemble en pâtiront si les choses tournent mal ici, que l'enjeu à des répercussions pour nous tous.

Aujourd'hui, je tiens à ajouter ceci : quels que soient les arguments avancés, pour ou contre, il y a sûrement moyen de satisfaire toutes les demandes dans le contexte d'un Canada uni et unique. Il n'existe aucun principe d'autodétermination qui même inexorablement au démentement national; à l'époque de la décolonisation, le problème était tout autre. À ce moment-là, les peuples voulaient l'autodétermination pour se libérer d'une domination extérieure. Or, cette notion n'a aucune application dans les pays établis. L'autonomie, la décentralisation, le fédéralisme, le pluralisme sous toutes ses facettes, des formes d'expression économique, sociale, culturelle politique qu'il nous reste à formuler, voilà autant de visages que peut prendre l'autodétermination au sein des nations. Ces expressions n'ont pas pour résultat de violer les frontières; elles ne portent pas atteinte à l'intégrité territoriale d'une nation. Le droit à l'autodétermination de tous les Canadiens — comme celui de tous les Guyanais, de tous les Indiens, de tous les Russes, de tous les citoyens de Papouasie-Nouvelle-Guinée, de tous les Yougoslaves et de tous les Sud-Africains — ne donne pas le droit de cesser d'être Canadien ou de faire disparaître le Canada. La doctrine n'a rien de nouveau. Vous vous y conformez depuis des années déjà; elle a renforcé et

Bonne Éducation

la démocratie constitue un droit universel, et ils ont lancé un appel à une solidarité humaine d'envergure planétaire.

# VIVRE EN BON VOISINAGE

*Au moment où l'Est et l'Ouest se tendent la main, les pays riches du Nord et les États pauvres du Sud sont toujours enlisés dans leur propre Guerre froide.*

PAR SHRIDATH S. RAMPHAL

IL EST CURIEUX DE CONSTATER QUE L'UNE DES MEILLEURES DESCRIPTIONS que l'on puisse faire de notre monde à l'aube du troisième millénaire est celle de Langland, un poète de l'époque médiévale, qui a peint le monde tel qu'il l'a connu il y a de cela six siècles, c'est-à-dire comme un «champ plein de gens». Nous avons à présent que le champ en question est beaucoup plus vaste qu'on ne le pensait à l'époque et qu'il contient plusieurs milliards d'habitants de plus que Langland ne l'a jamais imaginé. Et pourtant, la description du poète tient toujours; en fait, elle est plus proche de nos perceptions actuelles qu'elle l'a été pendant de nombreuses époques.

Ce «champ de gens» représente notre voisinage humain, notre village mondial. Il est vrai que nous continuons d'agir d'avantage en fonction de notre attrait pour le matérialisme que des exigences de l'humanité. Aujourd'hui, des considérations à la fois éthiques et pratiques nous obligent à rejeter l'individualisme et à reconnaître que l'humanité forme un tout indivisible. Et tout cela alors que nous sommes précipités vers le XXI<sup>e</sup> siècle, en épouvanté en même temps de la confusion, de l'excitation, de grands espoirs et un vague sentiment de panique.

Mais les augures nous sont favorables: la situation est en tout cas meilleure que ce qu'elle a déjà été, ne serait-ce que par rapport à il y a cinq ans. L'année 1985 a été dure. L'Union soviétique était embourbée en Afghanistan. La guerre du Golfe faisait rage. La Namibie était occupée, et ses régions frontalières ressemblaient encore à des champs de bataille. Dans l'Afrique du Sud de l'*apartheid*, une répression impitoyable sévissait, et l'on ne parlait pas encore de réforme. L'Europe de l'Est étouffait dans son carcan. Vclav Havel était dissident, pas président. Et de sérieux doutes planaient sur tout l'avenir de la coopération internationale. On n'avait aucune raison valable de supposer qu'il existait une éthique du multilatéralisme; les décisions des superpuissances n'étaient certainement pas issues d'une morale de l'internationalisme.

Mais heureusement, cette morale a survécu parmi les gens, et surtout parmi les jeunes, qui ont compris la communauté mondiale qu'ils se partagent. Partout dans le monde, les gens qui avaient le droit de manifester leur désapprobation (et aussi ceux à qui l'on refusait ce droit) ont fait comprendre qu'ils avaient l'impression d'être menés à la catastrophe. Nous avons été tirés de notre passivité, tant par des manifestations de masse que par l'héroïsme de voix solitaires, comme celle d'Andrei Sakharov et de Nelson Mandela.

LES CONDITIONS SONT DEVENUES PLUS PROPICES AU MULTILATÉRALISME ET À l'internationalisme depuis que les relations entre les superpuissances se sont améliorées. Mais les valeurs humaines concernent les gens et leur vie quotidienne. Notre voisinage mondial — comme n'importe quel autre voisinage — concerne la vie dans la rue, et non dans un appartement de luxe.

Si nous voulons nous pencher sur l'état du monde, il nous faut d'abord savoir de quel monde exactement nous parlons. S'agit-il, par exemple, du quart du monde qui est développé et matériellement prospère, ou des trois autres quarts qui ne vivent qu'en marge de la prospérité et du progrès? Mais se pose, à travers quels faut-il voir ce monde? Ceux des stratégies de l'Ouest, ou de l'Est? Ceux des courtois de New York ou de Tokyo? Ceux des agriculteurs des champs de riz du Bengladesh? Le point de vue que l'on adopte a une profonde influence sur les jugements que l'on peut porter sur les valeurs, en particulier sur les valeurs de bon voisinage.

À mon avis, le monde dans lequel nous vivons forme un tout, indégé et disparait, mais néanmoins complet. Notre société humaine étroitement unie et interdépendante constitue une réalité contemporaine, et ce, malgré la vigueur avec laquelle les instincts d'hier nous appellent aux anciens nationalismes et font renaitre les habitudes hostiles de la souveraineté pure et dure. À quoi correspond l'interdépendance dans le contexte mondial? Elle signifie que nous avons tous besoin les uns des autres. Riche ou pauvre, de l'Ouest ou de l'Est, nul ne peut se permettre de sous-estimer de faire cavalier seul. En réalité, il n'y a plus, dans notre monde de plus en plus petit, de sanctuaires humains. Or que ce soit dans le monde, il n'y plus d'endroit où l'on puisse aller se réfugier pour se mettre à l'abri que ce soit de la maladie, de la pauvreté, de l'holocauste nucléaire ou d'une catastrophe écologique. Nous constatons de plus en plus que le concept de juridiction n'a de sens que pour les avocats.

Dans les pays du Commonwealth comme le Canada, doté du précieux héritage qu'est la *common law*, il est reconnu dans la loi que nous avons tous le devoir de veiller au bien-être de notre voisin ou de notre voisin, d'agir de manière raisonnable de manière à lui éviter tout préjudice. Aujourd'hui, ce devoir de bienveillance nous impose de nouveaux impératifs: nous devons désormais le devoir de veiller sur tous les habitants du monde, devenus nos voisins, eux aussi. Dans le contexte d'un internationalisme nouveau, plus éclairé, nous devons de prendre en compte ces réalités dans nos idéologies; nous devons élaborer de nouvelles notions de ce que signifie «droits» et «devoirs», des notions qui soient adaptées à notre temps, au même titre que tous ceux qui ont été formulés par le passé. Il faut que les nations s'astreignent à la loi du droit exécutoire si nous voulons, en tant que société humaine, pouvoir vivre en conformité avec les valeurs de bon voisinage mondial.

Mais qui énonce ses besoins suppose qu'il reconnaît ses lacunes. Malgré la longue liste de réalisations que l'humanité peut porter à son actif, le monde où nous évoluons reste une énigme dangereuse: il est avancé à certains égards, et primitif à d'autres; il est caractérisé par un mélange de génie et de perversité qui pourrait encore le mener à l'auto-destruction. La société humaine a toujours été faite d'éléments de variété et d'identité, et ce depuis la nuit des temps. Mais aujourd'hui, ces éléments s'opposent avec une vertu grand combat d'idées qui va remplacer l'affrontement idéologique qui nous a dominés pendant une si grande partie du XIX<sup>e</sup> siècle. Permettez-moi d'essayer d'illustrer un peu les préoccupations qui nous attendent au cours des années à venir, en examinant quelques instants la «démocratie» et la «liberté».

Nombreux sont ceux et celles qui vont dire que l'aspect le plus saisissant et le plus fascinant de notre monde en évolution constitue la marche forcée vers la démocratie, la revendication de liberté; et c'est bien vrai. En Chine, en 1989, grâce au miracle de la révolution des communications qui a contribué à faire du monde un voisinage humain plus intime, les jeunes de la Place Tian anmen qui revendiquaient la liberté ont lancé un appel à chacun et à chacune d'entre nous, en des termes qui auraient pu être ceux de nos propres fils et filles qui se seraient opposés à ce que l'on refuse la liberté à leur génération en vertu de principes issus d'une ère révolue. Ils affirmaient

# NOTE DE LA DIRECTION

## « MYTHES » ET RÉALITÉS DU CANADA DANS LE MONDE APRÈS MEECH

« ILS AIENT OU NON été partisans de l'ordonnance du lac Meech, tous les Canadiens et Canadiennes réfléchissent à quelques changements fondamentaux dans le statut quo de leur pays. Au niveau international aussi, le « pactirique royanne » a suscité une attention et une inquiétude inhabituelles, et tout d'abord une certaine perplexité face à ce peuple si heureux et affrable qui s'est laissé entraîner dans un tel gâchis et une telle

anecdote. Peu de nos compatriotes se rendent compte que, dans un monde imparfait, notre pays est depuis longtemps admis comme étant un des modèles les mieux réussis de gestion de sociétés pluralistes et d'économies mixtes. C'est pourquoi le pressentiment d'un échec de l'expérience canadienne provoque une profonde inquiétude internationale, d'autant plus vive que la gestion de sociétés complexes se révèle être un défi

profondément dans le monde entier aujourd'hui. À l'heure où ils réfléchissent aux orientations futures et où ils en discutent, c'est à travers de ce miroir international que les Canadiens et Canadiennes doivent tous se voir. Malgré toutes les différences et les frictions dont nous avons conscience, globalement, nous avons toujours dans notre pays d'immenses réserves et des habitudes profondément ancrées de tolérance, et nous possédons de multiples atouts pour mener à bien ces tâches de gestion. Cette perspective élargie est un antidote vital au climat d'inspection maladroite et de tristesse aplomb sur soi-même nourris par l'amertume du processus du lac Meech.

« E NÉGATIVISME EST ALIMENTÉ PAR DES PERSONNES QUI SONT, DE TOUTE FAÇON, DEPUIS LONGTEMPS HOSTILES AU CANADA, ET PAR D'AUTRES QUI SONT À CE POINT BOULEVERCÉS QU'ELLES SE DEMANDENT SI NOUS POSSÉDONS, SI NOUS AVONS JAMAIS POSSEDE, LES MYTHES D'UNITÉ NÉCESSAIRES POUR FORGER UNE IDENTITÉ COMMUNE ET POUR POURSUIVRE LES MÊMES OBJECTIFS. CE DÉBAT A ÉTÉ, EN PARTIE, ARTISÉ PAR L'ESSAI DE M. WILLIAM THORSELL PARU AU MOIS D'AVRIL DANS *REPORT ON BUSINESS*, DANS LEQUEL L'AUTEUR PRÉTENDAIT DÉMONTRER NOS MYTHES RELATIFS À LA MONARCHIE, AUX DEUX PEUPLES FONDATEURS, À L'ÉCONOMIE MIXTE, À LA « NATION LA PLUS AIMABLE » AU RÔLE DE « CONCILIATEUR DANS LES AFFAIRES INTERNATIONALES ».

« Comme certains autres débats au Canada ces derniers mois, celui-ci a quelque peu dérapé, car nous n'avons pas su admettre que les mythes nationaux ne sont jamais entièrement vrais, jusqu'à ce qu'ils ne soient la combinaison changeante des héritages d'hier, des idéaux d'aujourd'hui et des aspirations de demain. Dans tout cela, on a un peu trop oublié l'identité internationale du Canada. M. Thorsell, quant à lui, n'a nullement prouvé l'existence du préjudice vide dans la tradition canadienne de participation active à la vie internationale; il semble s'être contenté de partir du principe que, le monde ayant changé, notre rôle a forcément diminué, ce en quoi il se trompe du tout au tout.

« Seuls les plus myopes des Canadiens et Canadiennes peuvent ne pas apprécier les bouleversements que connaît le monde et les conséquences qu'ils auront pour notre existence à l'échelle internationale. Notre politique étrangère sert à protéger nos intérêts et à présenter nos valeurs et, même s'il y a diversité sur ces deux plans, c'est souvent dans le contexte du monde extérieur que nous nous apercevons véritablement de tout ce que les Canadiens et Canadiennes ont en commun.

« UN POINT DE VUE PUREMENT PERSONNEL, LA plupart des Canadiens et Canadiennes qui voyagent ont l'agréable surprise d'être reçus très chaleureusement partout dans le monde du fait de leur passeport et de leur nationalité. N'allez surtout pas penser que cet accueil est une simple bizarrerie ou le signe de quelque nostalgie populaire. Dans une étude classique sur les élites de la politique étrangère réalisée il y a quelques années, les professeurs Peyron Lyon et Brian Tomlin ont découvert que le Canada se classe parmi les pays qui sont (par ordre d'importance) : «murs par des principes ou une éthique», et «généreux», «artisans de paix», «modérés», «internationalistes». À l'inverse, on l'opposait surtout à des pays qualifiés d'«égotiques et d'irréfléchis», d'«irrationnels», d'«idéologues», d'«expansionnistes ou de violents» et d'«isolationnistes».

« Cette image favorable tient-elle seulement à la distance qui sépare le Canada des grands événements mondiaux et au fait qu'il n'y soit pas partie ? Une fois encore, ce genre de question au scepticisme illimité ne pourrait germer que dans l'esprit d'un Canadien, et cela aussi est un de nos traits positifs dans un monde qui n'a pas le mode de vie pour fort. En fait, le Canada se classe au septième rang dans le monde pour ce qui est de l'économie et du commerce international; or, nul ne fait d'affaires à ce niveau sans être mis à l'épreuve.

« Les personnes qui suivent les affaires internationales sont moins surprises que les Canadiens et Canadiennes d'apprendre qu'en contributions volontaires au système des Nations-Unies, notre

« pays arrive en quatrième position, qu'il occupe le septième rang relativement à l'aide extérieure, soit dit en passant, qu'il est douzième au classement des dépenses militaires totales par État. Ces investissements lui confèrent une réelle crédibilité et un certain poids dans une communauté grandissante de pays où les problèmes se diversifient et où l'influence devient plus diffuse. Pendant dix ans au moins, c'est souvent le Canada (la benjamine des sept grandes puissances résidentes au Sommet des pays occidentaux) qui s'est efforcé d'aplanir les différends entre les membres du G-7 et entre ces derniers et de nombreux autres pays, des différends qui avaient pour thème les relations Nord-Sud, l'Afrique australe, le tiers-monde et l'environnement. D'ailleurs, seul le Canada peut se targuer d'une connaissance qui est le fruit d'une appartenance active au Commonwealth et aux communautés francophone et interaméricaine.

« E CANADA A JOUÉ PLEINEMENT SON RÔLE DANS le processus d'Helinski qui a contribué à mettre fin à la Guerre froide. En fait, pour assurer la sécurité européenne et internationale avec des niveaux d'armement beaucoup plus bas et pour être sûr de bien gérer les conflits, de les régler et de maintenir la paix, il faudra désormais s'engager bien davantage dans des activités de vérification, de type de travail. Comme l'a illustré tout récemment le rôle central joué par notre pays dans le règlement des conflits namibien et centrafricains, les «casques bleus» canadiens ont probablement mérité plus que ceux de n'importe quelle autre nation le prix Nobel décerné en 1988 en 1982 devant l'Association canadienne des sciences politiques, sur la «culture politique de la politique étrangère canadienne», le professeur Denis Stairs a démontré brillamment comment la contribution particulière du Canada au monde

« tient à ce qu'il comprend la constance de «conflits qui prennent racine dans la diversité», et, donc, le besoin de souplesse, de modération et de compromis. Les pièges à éviter dans la vie internationale sont les mêmes qu'il faut éviter chez nous, à savoir, se montrer dogmatique, faire primer les symboles et les symboles sur la réalité. «Un peuple qui est gouverné ainsi», a-t-il déclaré, «se voit nier la possibilité de percevoir un conflit comme une question d'intérêts concurrents plutôt que d'absolus irréconciliables et il est, par conséquent, privé de la volonté et de la capacité de discuter, de trouver des compromis et d'aboutir à un moyen terme satisfaisant.»

« Nous avons effectivement nos mythes, et il est indéniable que certains d'entre eux sont essentiels et que le monde nous les envie. □

— BERNARD WOOD

ment les salaires des ouvriers et accordé le samedi de congé payé, alors que l'Etat n'avait évidemment pas les moyens de supporter de telles mesures. Il a importé des quantités considérables de produits de consommation, bien que les effets d'une telle mesure sur le niveau de vie aient été assez marginaux. Mais alors que Ceausescu avait pratiquement liquidé la dette extérieure du pays, celle-ci aurait augmenté de 2 milliards de dollars entre janvier et mai seulement!

LES CHOSES NE PEUVENT EVIDEMMENT CONTINUER TRÈS LONGTEMPS DE CETTE façon. Le Front a promis une transition prudente vers l'économie de marché. D'après ses représentants, il vise à privatiser 70 p.100 des entreprises. Mais sa marge de manœuvre est plus qu'étroite. Elle est quasi inexistant. L'économie roumaine est au bord du précipice. Etant donné le niveau de vie déjà lamentable de la population et ses attentes, des grèves spontanées et des révoltes pourraient devenir monnaie courante et, à défaut de forces politiques réelles, on ne peut exclure que le pays sombre dans le chaos ou adopte une dictature militaire.

En Hongrie, la situation est à tous égards meilleure que en Roumanie et à plusieurs points de vue meilleure qu'en Pologne. Par suite des élections de la fin de mars et du début d'avril 1990 un véritable pluralisme politique en mai est dominé par le Forum démocratique hongrois qui a remporté 24,73 p.100 des voix contre son plus proche rival qui demeure dans l'opposition, l'Alliance des démocrates libres, qui a recueilli 21,39 p.100 des suffrages.

L'Alliance des démocrates libres a été formée par des intellectuels dissidents de la première heure. C'est le parti d'un libéralisme économique et politique des plus intransigeants et de type jacobin. Il se veut résolument moderne, anti-nationaliste et internationaliste. À titre d'exemple, il considère que la question des Hongrois de Transylvanie est un problème afférent aux droits de la personne et relevant des forums internationaux et non du gouvernement national hongrois. Le Forum démocratique hongrois, quant à lui, est nationaliste et plus près des traditions politiques hongroises. Témoin de populisme, il est accusé, plutôt à tort, par son principal adversaire, d'antisémitisme. Sur le plan socio-économique, il se voulait au départ partisan d'une «troisième voie». Mais, sous la pression électorale des Démocrates libres et, selon ceux-ci, pour gagner la confiance des institutions financières internationales, il a peu à peu adopté un programme économique qui ne se distingue plus guère de celui de son rival.

DE TOUS LES PAYS DE L'EUROPE DE L'EST, LA Hongrie est sans doute le mieux placé pour passer à une économie de marché. Le terrain y est beaucoup plus favorable, parce que mieux préparé. Depuis la fin des années 1960, le régime «libéral» de la région, avait mis en place de nombreux mécanismes de marché. Les cadres économiques des entreprises et de l'Etat ont été formés de longue date à cette école et ils sont habitués à fonctionner sous un régime où existe une concurrence, certes souvent limitée, mais réelle entre diverses unités économiques.

Tant en Hongrie, les économistes proches des gouvernements affirmant que ce n'est pas de crédits gouvernementaux étrangers que leurs pays ont besoin, mais plutôt d'investissements étrangers directs, soit dans de nouveaux projets, soit pour l'achat d'entreprises d'Etat. Les Pologne et la Hongrie en ont reçu insuffisamment. Bien que l'on juge ce chiffre tout aussi insuffisant, il montre bien que le terrain économique et l'état de l'infrastructure sont déjà meilleurs en Hongrie qu'en Pologne. Malgré ces éléments favorables, la dette extérieure de la Hongrie per capita est la plus élevée de toute la région, et le passage à l'économie de marché exigera des sacrifices importants de la population. Or, comme nous

L'économie de marché. Peut-être justement à cause de cela, le dogmatisme à l'égard du libéralisme économique est moins fort qu'en Pologne et même qu'en Hongrie. Les conseillers économiques du président Havel envisagent une économie mixte dominée par le secteur privé.

L'absence relative de sectarisme et de dogmatisme est aussi une caractéristique fondamentale de la culture politique du pays, marquée par un niveau élevé de tolérance. L'antisémitisme qui refait surface à différents degrés en Pologne, en Hongrie et en Roumanie ne se manifeste pas en Tchécoslovaquie. Certes, le ressentiment à l'égard des communistes y existe, mais on y observe moins qu'ailleurs une volonté de revanche et de réglementation de comptes. Avant l'avènement du communisme, entre les deux guerres, la Tchécoslovaquie était le seul pays d'Europe de l'Est à avoir vécu une expérience authentiquement démocratique. Cette dernière a laissé des traces profondes.

La Tchécoslovaquie aura, elle aussi, des problèmes difficiles à résoudre. L'environnement a été considérablement dégradé. Moderniser son équipement industriel et ramener son économie au niveau de celle de l'Europe de l'Ouest, comme avant la guerre, seront des opérations coûteuses. La question nationale slovaque refait surface et pourrait, à terme, compromettre l'avenir de la fédération. Mais la Tchécoslovaquie paraît disposer d'atouts pour faire face à ces défis. □

EN CONCLUANT AVEC LA TCHÉCOSLOVAQUIE, on peut terminer sur une note beaucoup plus optimiste. C'est certainement là que les conditions économiques et politiques sont les meilleures en Europe de l'Est. Le niveau de vie de la population y est nettement plus élevé que n'importe où ailleurs. L'endettement extérieur est faible. Le gouvernement dispose donc d'une assez bonne marge de manœuvre pour un passage prudent à l'économie de marché. Peut-être justement à cause de cela, le dogmatisme à l'égard du libéralisme économique est moins fort qu'en Pologne et même qu'en Hongrie. Les conseillers économiques du président Havel envisagent une économie mixte dominée par le secteur privé.

L'absence relative de sectarisme et de dogmatisme est aussi une caractéristique fondamentale de la culture politique du pays, marquée par un niveau élevé de tolérance. Moderniser son équipement industriel et ramener son économie au niveau de celle de l'Europe de l'Ouest, comme avant la guerre, seront des opérations coûteuses. La question nationale slovaque refait surface et pourrait, à terme, compromettre l'avenir de la fédération. Mais la Tchécoslovaquie paraît disposer d'atouts pour faire face à ces défis. □

Pendant la campagne électorale, le Forum démocratique a parlé d'une nation hongroise de 14 millions d'habitants, dont il se posait en défenseur. Or, on sait qu'il y a 10 600 000 Hongrois en Hongrie. Il faisait donc référence aux 2 500 000 Hongrois de Transylvanie (chiffre contesté), aux 500 000 autres de Slovaquie et aux quelques centaines de milliers qui vivent en Yougoslavie. C'est avec la Roumanie que les problèmes pourraient de venir les plus aigus. En janvier, après la chute de Ceausescu et l'ouverture des frontières roumaines, des autobus entiers de militaires du Forum démocratique ont été envoyés en Transylvanie pour y soutenir et y mobiliser les Hongrois, ce qui a accentué les tensions entre les gouvernements des deux pays. Actuellement, et depuis plusieurs mois, environ 200 réfugiés hongrois quittent chaque jour la Roumanie pour la Hongrie. Proportionnellement, il s'agit d'un chiffre plus élevé que le nombre quotidien des réfugiés est-allemands de l'été dernier. Le gouvernement hongrois soupçonne son homologue roumain de favoriser cet exode, pour se débarrasser du problème. Un intellectuel, conseiller du gouvernement hongrois et par ailleurs plutôt modéré, nous disait à Budapest : «Si c'est bien la une politique délibérée de la Roumanie, nous allons accepter les réfugiés, mais nous allons exiger qu'ils viennent avec leurs terres.» On en est bien sûr pas encore là.

2. Voir *New York Times*, 10 mai 1990, p. A13.  
3. *José Pilsudski (1887-1935), héros national polonais et chef d'Etat du premier gouvernement indépendant de la Pologne.*

Malais c'est justement parce qu'il s'agit d'un mouvement spontané et sans direction politique organisée que le groupe dirigé par Ion Iliescu a pu s'emparer du pouvoir en adoptant avec les forces armées un compromis politique dont on ignore toujours les termes.

Contrairement à ce qui avait été affirmé au départ, il a été rapidement établi que ce n'est pas la *Securitate*, mais l'armée qui a tiré sur la foule à Timisoara et à Bucarest, la veille de la fuite de Ceausescu. Ce n'est qu'à la toute dernière minute, avec le'intensification de l'insurrection populaire, que l'armée s'est retournée contre le dictateur. Le processus presque organisé à toute vitesse et à l'issue duquel Ceausescu a été immédiatement exécuté pour «généralisme», avait notamment pour objectif essentiel, de blâmer le dictateur pour tout, de l'empêcher de parler, et d'amoindrir le rôle de l'armée dans la répression. Le général Blanculescu, un des organisateurs du procès, serait celui qui aurait ordonné la répression à Timisoara. La version la plus longue de l'enregistrement du procès a été coupée au moment où Ceausescu, après avoir nié avoir donné l'ordre de tirer à Timisoara, s'apprêtait à désigner les responsables.

Petre Roman, son certainement bien intentionné et comme Silviu Brucan et Ion Iliescu et plusieurs de ceux qui l'entourent, comme Silviu Brucan et prisonniers de l'armée et non seulement de l'appareil d'Etat, mais aussi de l'appareil politique de l'ancien régime. Tout comme l'exécution de Ceausescu a évité que l'on fasse le procès du régime, la mise hors-la-loi du parti communiste a servi des buts semblables. Elle n'a fait disparaître que le nom du parti: n'ayant pas d'organisation politique véritable, le Front de salut national s'est appuyé essentiellement sur l'organisation et les cadres du parti interloqué, partant du pays.

Avant même la chute de Ceausescu, de sourdes oppositions existaient entre différents éléments de son régime, notamment entre la *Securitate* et les forces armées. Des signes très nets sont apparus pendant les événements de décembre, et plusieurs faits troublants à cet égard n'ont toujours pas été éclaircis. On sait maintenant que le charnier «découvert» près de Timisoara a été crevé de toutes pièces, notamment avec des cadavres «recouverts» trans-Portés jusque-là depuis des salles de dissection d'hôpitaux et de morgues. On ne sait toujours pas qui a monté l'opération, et pour disculder qui. De même, dans les jours qui ont suivi la chute du dictateur, on a dit qu'il y avait eu 60 000 morts dans toute la Roumanie. Finalement, la réalité serait plus près de 600. S'agissait-il simplement d'erreurs d'estimation? Les rumeurs les plus extravagantes continuent de circuler à Bucarest là-dessus. Certains affirment que l'on a cherché (qui?) à susciter délibérément panique et confusion pendant que des difficultés de tractions pour la mise en place du nouveau pouvoir. Quoi qu'il en soit, il semble bien qu'Iliescu doive maintenant composer avec des forces qu'il maîtrise très mal. Ainsi, ce serait en raison du refus de l'armée de réprimer les émeutes, en juin, qu'il aurait été forcé de faire appel aux mineurs, qui, encadrés par des organisateurs politiques de l'ancien Parti, ont dépassé leur «mandat» notamment en arrêtant des dirigeants des nouvelles formations politiques.

Compte tenu d'une culture politique qui n'a guère pu se développer en Roumanie, la mise au pilon de Ceausescu, comme seul responsable de tous les maux du pays, semble avoir largement réussi pour le Front de salut national. Ce n'est cependant pas là la seule raison de sa victoire électorale éclatante. Les partis politiques d'opposition constitués à la hâte après la chute de Ceausescu. Les grands partis traditionnels comme le Parti national paysan et le Parti national libéral qui se sont reconstitués sont largement demeurés des coquilles vides. Leurs dirigeants respectifs, Ratiu et Campeanu, candidats à la présidence contre Iliescu ne vivaient plus dans le pays depuis trente-cinq ans dans le cas du premier et quinze ans, dans le cas du second. Ils avaient peu de crédibilité, et leurs partis, surtout actifs à Bucarest ont pu pénétrent les profondeurs du pays encore sous la coupe des anciens cadres ralliés au Front.

De plus, pendant qu'il servait de gouvernement intermédiaire, le Front a adopté des méthodes «électorales» au sens occidental et péjoratif du terme. Tout en continuant de contrôler les prix, il a également sensible-

Dans la mesure où il n'y a pas de véritable opposition de gauche en Pologne, ni à court terme, ni probablement à moyen terme en raison du discredit de l'ancien parti communiste qui a cherché à se réhabiliter en prenant le nom de Social-Démocratie de la République de Pologne, contentant par là à discréditer d'avantage une telle option, c'est un régime d'extrême-droite qui pourrait remplacer le présent gouvernement. Walesa est actuellement tenu par une surenchère de type populiste, nationaliste et autoritaire. À la veille du Congrès de Solidarité, dont il a fait le régal président, il avait commencé à critiquer «son» gouvernement en lui reprochant de «se traîner les pieds» et en exigeant «l'accélération des réformes». Par là, il entendait essentiellement l'élimination des communistes (ou plutôt des anciens communistes, car ils ont quitté massivement le Parti et son successeur) qui occupent effectivement encore un très grand nombre de postes importants aux différents niveaux de l'Administration et dans les entreprises d'Etat. Dans les conditions actuelles, une «chasse aux sorcières» communistes pourrait devenir un moyen politique pour détourner l'attention des difficultés économiques et sociales de la Pologne. Elle pourrait aller très loin dans la mesure où presque toute l'intelligentsia polonaise, y compris la majorité des conseillers de Solidarité, a été communiste pour des périodes plus ou moins longues.

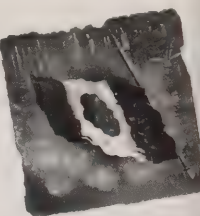

Le président de Solidarité accuse maintenant les intellectuels de l'avoir trahi et il prend un ton leur étant de plus en plus hostile. Il affirmait en mai : «Je me suis peut-être pris les intellectuels, j'ai trop cherché dans les intellectuels polonais et trop suivi leurs conseils. Ils m'ont induit en erreur». 2. Contrairement à ce que souhaitait le gouvernement polonais, Walesa a demandé le retrait complet des troupes soviétiques de Pologne. Au mois de mars, il a affirmé son intention d'être candidat à la présidence du pays et il réclamait, depuis, des élections présidentielles anticipées.

Tous ces éléments montrent qu'il semble voir son rôle politique comme celui d'un nouveau Plisudski. 3. Quoiqu'il en soit, il demeure en Pologne un héros national et, s'il décidait d'encourager un mouvement de grève qui, dans les conditions actuelles, risquerait de prendre une ampleur considérable, il pourrait sans doute facilement faire renverser le gouvernement.

C'est cependant en Roumanie, où les conditions économiques générales sont beaucoup plus catastrophiques qu'en Pologne, que les perspectives d'avenir s'annoncent les plus sombres. Pour nous, qui avons connu la Roumanie il y a près de vingt ans, un retour sur place après toutes ces années produit un effet de choc. Le niveau de vie des Roumains est tombé à celui que les Soviétiques connaissaient au début des années 1960. On peut dire sans beaucoup d'exagération que la dictature mégalomane et impitoyable de Ceausescu a pratiquement désertifié le pays, sur les plans économique, politique et culturel.

Ce sont précisément ces conditions qui expliquent le grand paradoxe de la Roumanie par rapport aux autres pays d'Europe de l'Est et qui fait que le successeur du Parti communiste roumain, le Front de salut national a pu non seulement conserver le pouvoir, mais aussi remporter les élections présidentielles de mai 1990 avec une majorité inouïe de 89 p. 100, alors que les succès des partis beaucoup plus réformistes de Pologne et de Hongrie se sont effondrés.

AU COURS DES DERNIÈRES ANNÉES, LA RÉPRESSION avait été tellement forte en Roumanie que, contrairement à ce qui s'était passé dans les autres pays d'Europe de l'Est, aucun groupe d'opposition relativement structuré n'avait pu fonctionner ni se manifester d'un seul coup dans la société. Il n'y avait pas d'autre choix politique immédiat. C'est ce qui a permis à un petit groupe composé de plusieurs anciens collaborateurs de Ceausescu et de quelques autres personnalités coplées à la dernière minute de s'emparer du pouvoir dans des conditions qui Roumanie en 1989 en Roumanie ont tenu simultanément d'une véritable insurrection populaire et d'un coup d'Etat. Ce sont effectivement les révoltes spontanées de Timisoara du 15 au 20 décembre, et de

ANNÉE 1989 AURA ÉTÉ CELLE DE L'EUROPHORIE RÉVOLUTIONNAIRE EN EUROPE DE L'EST. LES LÉNINISMES DE révolution sont rarement faciles, et c'est particulièrement le cas pour la plupart des pays de l'Est. Même la dictature, qui constituait l'enjeu le plus précieux des mouvements sociaux de chacun de ces pays, demeure fragile, et son avenir est loin d'être partout assuré.

Dans une entrevue donnée au Canada en 1989, le professeur Bronislaw Geremek, l'homme politique polonais chef du groupe parlementaire issu de Solidarité, faisait très justement observer que si auparavant, plusieurs pays étaient déjà passés de la dictature à la démocratie, aucun n'avait encore jamais expérimenté un passage simultané de la dictature à la démocratie et d'une économie centralisée planifiée à une économie de marché. Les problèmes, risques et défis sont donc d'une ampleur et d'un ordre nouveaux.

Presque partout en Europe de l'Est, le ressaucage par la vague révolutionnaire a été tel que les partis communistes ont emporté dans leur chute non seulement le modèle politique et économique du socialisme stalinien, mais aussi toute l'idée de socialisme démocratique, ou même de social-démocratie. La privatisation au maximum et le regain complet des lois du marché sont devenus des mois d'ordre impératifs. Chez la grande majorité des intellectuels d'Europe de l'Est, qui dans la plupart des cas sont d'anciens communistes, on peut même parler d'un nouveau dogmatisme (qui a remplacé l'ancien) à l'égard du libéralisme économique le plus absolu, qui est considéré comme une panacée pour tous les problèmes.

Tous les tenants de ce libéralisme radical savent très bien que l'application intégrale des lois du marché et l'intégration rapide des économies de l'Est au marché mondial ne peuvent qu'aggraver à court terme leur situation en suscitant une inflation galopante, en entraînant la fermeture de centaines d'usines (peu habituées à la compétition et incapables de le devenir rapidement), en créant un chômage massif et des inégalités sociales considérables. Ils considèrent que c'est à un prix inévitable à payer, qu'il n'y a pas d'autre choix et que les choses iront nécessairement mieux.

*Certains pays de l'Est sont mieux équipés que d'autres pour relever les défis de taille qui se présentent.*

VOYONS DE FAÇON GÉNÉRALE ET SCHEMATIQUE COMMENT LA SITUATION SE  
présente dans les quatre pays de l'Est que nous avons visités, outre la  
République démocratique allemande (RDA) en avril et mai 1990, en com-  
mençant par la Pologne, car c'est là que la présence d'un gouvernement non  
communiste, qui date de septembre dernier, est la plus ancienne. C'est là  
aussi qu'on a appliqué le plus rapidement et le plus radicalement la loi du  
marché, de telle sorte que des résultats assez nets apparaissent déjà et que  
commencent à émerger différentes conséquences politiques possibles.

Selon les statistiques officielles du gouvernement polonais, le niveau de  
vie de la famille polonaise moyenne a baissé de 40 p.100 en cinq mois, soit  
de septembre 1989 à mars 1990 ! Le chiffre est très impressionnant, surtout  
si l'on tient compte du fait que le niveau de vie en Pologne avait déjà chuté  
considérablement depuis le début de la décennie. La détérioration drama-  
tique récente s'est surtout fait sentir à partir de janvier 1990, par suite  
d'une libéralisation de presque tous les prix qui a porté ce mois-là,  
le taux d'inflation à plus de 1000 p.100, ramené sur une base annuelle.  
Au début de l'été, il y avait environ 350 000 chômeurs, ce qui est  
relativement peu dans un pays de 37 millions d'habitants. Cependant, si le  
chiffre est encore peu élevé, c'est qu'une grande partie du chômage a été  
absorbé collectivement. Voici de quoi il s'agit. La thérapie de choc ap-  
pliquée à l'économie polonaise a partir de janvier a entraîné une sévère ré-  
cession qui a conduit de très nombreuses entreprises à réduire leur production de 25 à 50 p.100. Phénomène qui a conduit de très nombreuses  
entreprises à effectuer des mises à pied considérables, les ouvriers ont accepté que les heures de travail de tous  
soient réduites. Il est évident que cette situation ne peut durer très longtemps et qu'une restructuration véritable des  
entreprises devra intervenir. La plupart des économistes polonais s'attendent à une importante vague de chômage  
dans la seconde moitié de 1990.

NAS CES CONDITIONS, IL EST ABSOLUMENT REMARQUABLE QUE, MALGRÉ CELA, LE GOUVERNEMENT MAZOWIECKI ait pu jusqu'ici conserver une cote de popularité impressionnante. Elle tient à la légitimité tout à fait exceptionnelle dont il bénéficie. Sa légitimité est celle que le parti ayant succédé au parti communiste n'a pas osé encore rompre ouvertement avec ce dernier et que les ministres communistes demeurent encore au gouvernement. Malgré cela, cependant, la cote est grande de plus en plus dans la population. Le gouvernement a promis au début de janvier une amélioration de la situation économique au cours des six mois suivants. Ce délai touche à sa fin, et ce n'est pas à depuis quelques mois, Lech Wałęsa a de plus en plus de mal à contenir le mécontentement de ses troupes et à éprouver les nombreuses grèves qui surgissent à l'échelle locale. Cette situation difficilement tenable et ses ambitions personnelles expliquent la guerre larvée qu'il a commencée à livrer au gouvernement formé par ses propres conseillers et pratiquement nommé par lui.

## SOMMAIRE

- 2 **LE RÊVE ET LA RÉALITÉ** PAR JACQUES LÉVESQUE  
Les lendemains de révolution sont rarement faciles, et c'est particulièrement le cas pour la plupart des pays de l'Est.
- 6 **VIVRE EN BON VOISINAGE** PAR SHRIDATH RAMPHAL  
Le Secrétaire général sortant du Commonwealth fait le point sur la «Guerre froide» entre le Nord et le Sud.
- 8 **ÉPREUVE DE FORCE AU CACHÉMIRE** PAR SELIG S. HARRISON  
Un différend pourrissant depuis longtemps sur le sous-continent indien risque de dégénérer en affrontement nucléaire.
- 10 **LE DERNIER «HOURRA» DE PIERRE TRUDEAU** PAR J.L. GRANATSTEIN ET ROBERT BOTHWELL  
Deux historiens analysent l'«Initiative de paix» de 1983.
- 12 **SAUVONS L'ATMOSPHÈRE TERRESTRE** PAR DAVID RUNNALLS  
Compte rendu sur la stratégie et les jeux d'influence politiques déployés pour sauver l'atmosphère.
- 24 **LETTRE DE HÉRON** PAR JEAN-FRANÇOIS LÉPINE  
Les dures réalités de la vie quotidienne, au cœur d'un des plus longs et des plus dangereux conflits du monde.

## NOTE FROM THE EDITOR

Our cover story this issue by **Janice Gross Stein**, deals with the gravest issue of war and peace that has faced Canada and the rest of the world in a long time. The House of Commons Committee on External Affairs and International Trade has been holding hearings on the Gulf crisis, and on 8 November heard testimony from three Canadians. The brief excerpts presented below from these committee witnesses illustrate the broad range and quality of the debate.

**Bernard Wood**, CLIPS Chief Executive Officer: "What are the international community's legitimate goals? They are straightforwardly defined by the UN

resolutions concerned: withdrawal, restoration of the status quo ante, including the restoration of what was internationally recognized as the legitimate regime in Kuwait.

We cannot waiver on those conditions.... By the same token, it is not a legitimate objective of the international community to eliminate Saddam Hussein and his regime. We cannot choose Iraq's rulers any more than he can choose Kuwait's.

... I do not believe full-scale war is inevitable. There should still be at least an even chance that it can be avoided. However, we cannot ignore the proven track record of Saddam Hussein and the unconcerned resort to large-scale warfare.... [T]he international community is forced to conclude that a credible threat of overwhelming attack on himself may be essential to ensure the compelling of his compliance with international law ..."

**Ernie Regehr**, Project Ploughshares: "There is a moral obligation, we increasingly hear, to be prepared to go to war, whether under formal UN authority or not, in order ... to uphold international law. The reasoning is familiar,... If Saddam Hussein does not pull out of Kuwait, the failure to resort to direct mili-

tary action would set an unacceptable precedent. It would show that one can flagrantly violate international law and get away with it....

I want to argue that this is fundamentally wrong ... direct military action against Iraq, as distinct from monitoring and enforcement of sanctions, will exact unacceptable human, political, and material costs. In addition, it will undermine the very principle that its proponents claim they most want to defend: respect for international law."

**Gwynne Dyer**, Military analyst and historian: "Saddam Hussein's great virtue, in a sense, is his undoubted wickedness....

The great majority of international conflicts have incredibly tangled pasts and there is always some wrong on both sides. This case, almost uniquely, is a nice open and shut case, and handled well it is a great opportunity, but of course it has enormous risks. If this precedent is successfully pursued and established, particularly if it can be done without war, a year from now we will almost miraculously find ourselves at least half way toward a workable international security system based on United Nations principles.... But we have to get through this one first."

— Michael Bryans

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

# THE CHALLENGE OF THE PERSIAN GULF CRISIS

*For the fragile, new world order,  
fault lines through the Middle East  
are a clear and present danger.*

BY JANICE GROSS STEIN

**T**HE PEACE THAT BROKE OUT WHEN THE COLD war ended did not last. Less than a year after the Berlin wall came down, the world is on the brink of a war that threatens to spread destruction throughout the Middle East. Riven with multiple conflicts, the region has become more dangerous in the last decade as the size of armies has grown and sophisticated military technology has proliferated.<sup>1</sup> The fault lines running through the Middle East have shattered the optimistic expectations of the peaceful shaping of the new international order.

Despite the new and improved relationship between the United States and the Soviet Union, the propensity to serious crisis in the new international order is clear, as are the changing dynamics of managing international crises without resort to war. The possibility of a nuclear exchange between the United States and the Soviet Union as a result of a crisis in the Middle East has disappeared, but the probability of chemical warfare and widespread civilian casualties in a regional war is real – for the people who live there, a distinction with very little difference.

Before dawn on 2 August, Iraqi troops poured across the border into Kuwait. Within three hours, the army had accomplished its objectives: the overthrow of the government of Kuwait and control of its oilfields. A week later, Iraq formally annexed Kuwait.

The use of force by one Arab government to annex another is unprecedented in the modern Middle East. World-wide condemnation, an international air and naval embargo, the deployment of air and ground forces in the Gulf states, and the presence of naval forces in the Gulf have not yet succeeded in compelling Iraq to withdraw. On

the contrary, as the weeks have passed, both President George Bush and President Saddam Hussein have manipulated the risk of war in a test of resolve.

The international community, led by the United States, has deployed substantial forces in Saudi Arabia and other Gulf states both to deter further use of force by Iraq and to compel Iraq to withdraw from Kuwait, by raising the risk of war. The unprecedented approval by the United Nations of wide-ranging sanctions has strengthened international pressure against Iraq.

In considering the origins and evolution of this crisis, several sets of issues are relevant. First, could this use of force have been avoided through more effective strategies of crisis prevention? If indeed a

crisis could have been avoided, why were these strategies not used? And now that the crisis is upon us, can it be managed, can international coercion succeed short of a catastrophic war throughout the region?

## Did the US Fail to Prevent the Crisis?

The strategies used by the US in the weeks before Iraq's invasion are already the object of intense debate. The controversy focusses both on the intentions of Iraq and the response of the United States. To understand American strategy, it is necessary to put the current crisis in context.

In 1980, a year after the Ayatollah Khomeini came to power in Tehran, President Saddam Hussein of Iraq attacked Iran, hoping for a quick victory over armed forces that were disorganized in the midst of a revolution. After a series of initial victories by Iraq, Tehran gradually began to reverse the tide of battle. Although the war had been initiated by Iraq, most Arab states were sufficiently alarmed by the prospect of an Iranian victory that they began to supply extensive military and financial aid to Baghdad.

The relationship between the United States and Iraq similarly began to improve in the context of tense relations between Washington and the government in Tehran. After the war ended in 1988, the US continued to try to strengthen its relationship with Iraq as a regional counterweight to Iran. Despite the improved relationship, President Saddam Hussein made a series of disturbing speeches in the spring of 1990.

In February, at the end of a meeting of the Arab Cooperation Council,<sup>2</sup> Iraq's president predicted that because of the decline of Soviet power, the US would exercise hegemonic power in the Middle East for five years. Hussein argued:

The country [the United States] that will have the greatest influence in the region, through the Arab Gulf and its oil, will maintain its superiority as a superpower without an equal to compete with it. This means that if the Gulf people, along with all Arabs, are not careful, the Arab Gulf region will be governed by the wishes of the United States ... [Oil] prices will be fixed in line with a special perspective benefiting American interests and ignoring the interests of others.

The answer, he concluded, was the use of Arab economic power to force changes in American policy.

On 2 April, after a shipment to Baghdad of devices suitable for triggering nuclear weapons had been intercepted, President Hussein announced that Iraqi scientists had developed advanced chemical weapons and threatened to use them against Israel should Israel attack. At an Arab summit the following month in Baghdad, Saddam Hussein denounced the Arabs of the Gulf who were keeping the price of oil artificially low and thereby engaging in economic sabotage of Iraq.

1. Iraq's armed forces numbered 188,000 in 1977, and 1,000,000 in 1987; Iraq now deploys the fourth largest army in the world. Iran's forces numbered 342,000 in 1977 and 645,500 in 1987, excluding 350,000 listed as reserves; Syria's forces numbered 227,500 in 1977 and 407,500 in 1987; and Saudi Arabia's forces numbered 61,500 in 1977 and 73,500 in 1987. Israel's reserve call-up system makes troop strength comparisons difficult, but in the same period its tank strength increased from approximately 3,000 to almost 4,000. See International Institute for Strategic Studies (London), *The Military Balance*, 1977/78 and 1987/88.

2. The Arab Cooperation Council included Egypt, Jordan, and then North Yemen, as well as Iraq.

It was against this backdrop that the Bush administration, on 24 July, evaluated intelligence reports of the movement of two Iraqi armoured divisions to its border with Kuwait. In his Revolution Day speech on 17 July, President Hussein had attacked Kuwait and the United Arab Emirates as agents of imperialism who were waging economic warfare against Baghdad. Iraq demanded that Kuwait and the UAE stop violating their OPEC quotas and reduce their production of oil. In response to Iraqi threats, the US dispatched two ships for manoeuvres in the Gulf. At the OPEC meeting that followed, Kuwait and the United Arab Emirates agreed to observe their quotas and permit a modest increase in the price of oil.

Hussein was not satisfied: he alleged that Kuwait had promised to observe the quotas for only two months and insisted that Kuwait forgive Iraq's debt that had accumulated during the long and costly war with Iran, that it cease its unfair exploitation of the disputed Rumaila oilfields along their common border, and that it agree to new arrangements for the islands of Bubiyan and Warbah at the top of the Gulf that controlled access to Iraq's only port on the Gulf.

In an effort to prevent a crisis, President Hosni Mubarak of Egypt quickly arranged a meeting between Kuwait's Sheikh Saad al-Sabah and the vice-chairman of Iraq's Revolutionary Command Council, Izzat Ibrahim, in Jidda on 1 August, with further meetings to follow in Baghdad. After only a single meeting, the talks broke down and Iraq's tanks crossed the border the next morning.

Although the United States had accurate intelligence of the growing concentration of Iraq's forces on its border with Kuwait, its strategy to prevent the crisis was unclear. Uncertain of Iraq's intentions, Washington made only a token and confused attempt to deter Saddam Hussein from acting and instead relied principally on efforts at reassurance. The difference between these two approaches is no small matter.

#### To deter or reassure – that is the question

A strategy of deterrence uses threats to prevent an adversary from taking an unwanted action – “don’t do that or else.” It requires that leaders of state define the behaviour that is unacceptable, publicize their commitment to punish transgressors or deny them their objectives, possess the capability to do so, and communicate their resolve to implement their threats. Deterrence is most appropriate as a strategy of crisis prevention against an adversary that is opportunistic and bent on expansion.

Strategies of reassurance begin from a different set of assumptions. Like deterrence, they too presume the other side is hostile, but root the source of that hostility in an adversary's feelings of acute vulnerability. Reassurance attempts to diminish hostility by trying to reduce the fear, misunderstanding, and insecurity that are so often responsible for escalation to war. Reassurance dictates that countries anticipating the possibility of an attack by a vulnerable opponent would try to communicate their benign

intentions and their interest in alternative ways of addressing the issues in dispute.<sup>3</sup>

The US first tried to prevent a crisis with a weak and ambiguous attempt at deterrence. On 19 July, Secretary of Defense Richard Cheney told journalists that the American commitment made during the war between Iran and Iraq – to come to the defence of Kuwait if it were attacked – was still valid. His press spokesman subsequently emasculated the American commitment by explaining that the secretary had been quoted with “some degree of liberality.”

Margaret D. Tutwiler, the spokesperson for the State Department, was even less forthcoming. When asked on 24 July whether the US had any commitment to defend Kuwait, she replied: “We do not have any defense treaties with Kuwait, and there are no special defense or security commitments to Kuwait.” Asked whether the US would help Kuwait if

it were attacked, she said: “We also remain strongly committed to supporting the individual and collective self-defense of our friends in the Gulf with whom we have deep and long-standing ties.”

Even more telling was a meeting on 25 July in Baghdad, at President Saddam Hussein's request, with the American ambassador to Iraq, April Glaspie. In discussing the conflict with Kuwait, the American ambassador told Iraq's president:

... we have no opinion on the Arab-Arab conflicts, like your border disagreement with Kuwait. I was in the American Embassy in Kuwait during the late 60s. The instruction we had during this period was that we should express no opinion on this issue and that the issue is not associated with America. James Baker has directed our official spokesmen to emphasize this instruction.<sup>4</sup>

After clearly dissociating the United States from a commitment to defend Kuwait, the ambassador concluded the discussion by asking “in the spirit of friendship, not in the spirit of confrontation,” about Iraq's intentions. President Hussein replied that President Mubarak had arranged a meeting between Iraq and Kuwait in Saudi Arabia (he was referring to the meeting that would subsequently end in failure). President Hussein concluded with the warning that Iraq's patience was not unlimited. Ambassador Glaspie did not warn President Hussein of the consequences of the use of force.

The American strategy of crisis prevention was both poorly conceived and badly executed; Washington neither deterred nor reassured effectively. When an Iraqi use of military force against Kuwait became possible, the US first chose to deter and then to reassure Iraq. And the execution of deter-

rence was seriously flawed: the Pentagon first communicated a commitment to defend Kuwait and then drew back; the State Department distanced the US from any commitment whatsoever to Kuwait and reassured Iraq of the benign intentions of the United States.

This confusion in strategy was in large part a function of Washington's uncertainty about whether Iraq was motivated principally by the opportunity to expand or by the vulnerability of its economy. Most analysts across the political spectrum in the West are persuaded that President Saddam Hussein is an opportunity-driven expansionist – the analogy to Hitler and 1939 is often drawn – but a plausible argument can be made that Iraq's leader was motivated by perceptions of

*Through its action,  
Iraq has heightened  
the strategic  
vulnerabilities of every  
state in the Gulf  
as well as many in the  
fertile Crescent.*

Nicholas Vitacco

3. For detailed discussion of these two strategies and their requirements, see Richard Ned Lebow and Janice Gross Stein, *When Does Deterrence Succeed and How Do We Know?* (Ottawa: Canadian Institute for International Peace and Security, Occasional Paper 8, 1990) and Janice Gross Stein, “Deterrence and Reassurance,” in Philip E. Tetlock, Jo L. Husbands, Robert Jervis, Paul Stern, and Charles Tilly, eds. *Behaviour, Society, and Nuclear War* (New York: Oxford University Press, forthcoming.)

4. The transcript of the meeting between President Hussein and Ambassador Glaspie was released by the government of Iraq and published by The New York Times on 23 September 1990. The US State Department refused to confirm or deny its validity.

vulnerability as well. Even now, some four months after the fact, the evidence is not decisive.

### Why Did Saddam Do What He Did?

It is likely that Saddam Hussein identified an opportunity to assert Iraq's long-standing claim to Kuwait, to establish a commanding position in the international oil market, and that he decided to exploit the opportunity. Most of the available evidence sustains such an interpretation. One critical component of such a "war of opportunity" is the expectation by leaders that the victim state will not be able to mobilize the assistance of powerful outsiders or friends in time to affect the outcome. As we have seen, this condition was met.

A second component is the calculation by leaders, in this case Saddam Hussein and his regime, that the local balance of military capabilities is strongly in their favour. This condition was also met. Iran was still recovering from its eight-year war and no other combination of Arab states in the Gulf could conceivably match the battle-tested Iraqi army. Moreover, Baghdad had received substantial amounts of financial aid from Gulf states and sophisticated military technology and equipment from the Soviet Union and the Western world, who all felt threatened, albeit in different ways, by the Khomeini revolution in Iran.

Iraq's military supremacy in the Gulf was overwhelming. If, indeed, Saddam Hussein was motivated largely by the opportunity he saw to expand, then reassurance from the US and others was an inappropriate strategy against this kind of challenge.

It is also possible that President Hussein was driven in part by the growing vulnerability of Iraq's economy. Foreign Minister Tariq Aziz, in an interview after the invasion, explained that Iraq was stunned by Kuwait's insistence that Iraq's debt be repaid; the debt had accumulated during the war with Iran, a war fought to defend the Gulf states as well as Iraq. He then drew an explicit linkage between Iraq's deteriorating economy and the invasion of Kuwait:

The economic question was a major factor in triggering the current situation. In addition to the forty billion dollars in Arab debts, we owe at least as much to the West. This year's state budget required seven billion dollars for debt service, which was a huge amount, leaving us with only enough for basic services for our country. Our budget is based on a price of eighteen dollars a barrel for oil, but since the Kuwaitis began flooding the world with oil the price has gone down by a third.

When we met again – in Jidda, at the end of July – Kuwait said it was not interested in any change. We were now desperate, and could not pay our bills for food imports. It was a starvation war. When do you use your military power to preserve yourself?

To the extent that Iraq was motivated principally by opportunity, only a clear and unequivocal commitment combined with an explicit threat of the consequences of the use of force stood any chance of preventing Iraq's massive use of force against Kuwait. Deterrence had to be forcefully executed. If, on the other hand, Hussein was driven primarily by Iraq's economic vulnerability, then a strategy of reassurance had to address the issues that were central to ameliorating its acute economic problems.

If the United States was uncertain of Iraq's motives and intentions, then it could have used a mixed strategy of a strong and unequivocal commitment to come to Kuwait's defence, and reassurance to address Iraq's pressing economic concerns. Although it is far from certain that a mixed strategy of deterrence and reassurance would have succeeded if it had been tried, Washington did neither effectively. It did not warn of the

consequences of an invasion of Kuwait – on the contrary it distanced itself from an "inter-Arab dispute" – and it did not address Iraq's concerns about its growing debt. Under these conditions, crisis prevention stood little chance of success.

### Crisis Management and the Risk of Inadvertent War

Now that the crisis is upon us, the acute dilemmas inherent in managing it are evident if we assume that neither Iraq nor the United States want war, but that both wish to achieve their fundamental objectives: for Iraq, the annexation of Kuwait and for the US, the withdrawal of Iraq's forces from Kuwait. In order to achieve their objectives, both are now manipulating the threat of war to compel the other to back down.

In the short term, as Iraq and the American-led international coalition both wield the threat of war, each risks losing control of events through

accident, or because the other side anticipates an attack and decides to strike first. War could break out accidentally if some unit, ship or soldier in one of the many national contingents that are now deployed in the Gulf fires mistakenly at a target it considers hostile; the shooting down of the Iranian Airbus by the USS Vincennes in the Gulf in 1988, and the erroneous attack by an Iraqi fighter-bomber on the USS Stark in 1987 are vivid examples of how easily such an accident can occur.

War could also occur if any of the military powers in the region anticipate an attack. Iraq has threatened, for example, to strike first against forces in the Gulf if its economy were strangled by economic sanctions, and to broaden the war to include Israel. In response, Israel's air force was placed on the highest possible state of alert and a significant proportion of its fighters is in the air at all times. In a context of rising tension where the military cost of being attacked first is very high, the incentives to pre-empt rise dramatically.

In the longer term, either side may find that it has so committed itself that despite the heavy costs it sees no political alternative but war. In such a case, Iraq's armed forces are likely to mount strong resistance but suffer massive casualties. The 955,000-man army, organized in fifty-three divisions, varies in quality from the six formidable divisions of Republican Guards to poorly-trained and armed conscripts. In addition, Iraq has reached the limit of its capacity to mobilize forces. Iraq's faltering economy and its infrastructure would be devastated. As Foreign Minister Tariq Aziz recently acknowledged, "This is more frightening to Iraq than eight years of war with Iran."

The consequences of the military options available to the United States are also grave. The option of a swift "surgical strike" against Iraq does not exist. Iraq's nuclear research centres and chemical plants are located in the midst of densely populated areas. The destruction of Iraq's military infrastructure would of necessity involve thousands of civilian as well as military casualties. A more limited attack against Iraq's forces in Kuwait would involve extensive fighting, heavy military casualties on both sides, and the risk of chemical warfare and widespread collateral damage, both to civilians and to the economic infrastructure.

These estimates do not include the consequences of a war that could easily spread throughout the region. Once war begins, it could escalate in scope and intensity with devastating consequences.

The *London Observer* of 30 September reported a claim by a senior officer attached to the armoured brigade the UK has sent to the Gulf that "if they are attacked with chemical gas by Iraqi troops, they will retali-

*Washington made

Saddam from acting  
and instead relied  
principally on  
efforts at reassurance.*

ate with battlefield nuclear weapons.” The armoured brigade normally operates with howitzers designed to fire shells filled with conventional or nuclear explosive. Prime Minister Thatcher later said “she knew of no authority” for such a claim. While governments routinely hedge on such matters, the fact that the use of nuclear weapons is the subject of open discussion dramatizes the possibility of escalation.

The economic consequences of war are likely to be grave as well. If oil fields in Iraq, Kuwait, and Saudi Arabia are badly damaged, the international price of oil would soar. Many of the industrialized economies would be pushed into a cycle of stagflation and the economies of the developing world would suffer even more seriously.

As for the political consequences of a regional war in the Gulf, these are almost inestimable. The political landscape of the Middle East is likely to be changed beyond recognition. The shape of a post-Hussein regime in Baghdad is unclear and would not necessarily be an improvement as far as the international community is concerned. Arab governments in the Gulf that fought against a fellow Arab state in a war initiated by the American-led international coalition would be at risk, as would the shaky regime of King Hussein in Jordan.

Such an earthquake in the Middle East could also create severe aftershocks in the nascent international order that is emerging in the wake of the Cold War. It is far from certain that the coalition forged between the US and the USSR would survive a war initiated by the United States without approval by the UN. In early October, General Mikhail A. Moiseyev, Chief of the Soviet General Staff, explicitly warned that force should not be used in the Persian Gulf unless it was approved by the United Nations.

Yet if the UN publicly debates and then authorizes the use of force before military action is taken, at best the advantage of surprise is lost and at worst, a cycle of pre-emptive logic is set in motion throughout the region – knowing that war is coming, each side will be strongly tempted to attack first.

If war is a bad choice for both, retreat is also very difficult. Unless he is compensated politically and economically, a retreat for Saddam Hussein would be very costly. In addition, Iraq’s resolve is in part a function of the expectation that it is prepared and equipped to suffer far greater casualties for a much longer time than is the American-led coalition. As President Hussein told Ambassador Glaspie at their meeting in July: “Yours is a society which cannot accept ten thousand dead in one battle.”

Finally, President Hussein may be convinced that there is no exit, that even the withdrawal of Iraq’s forces from Kuwait will not satisfy the minimum demands of the forces deployed against him and that they seek his removal from office. Under these conditions, he may deliberately provoke Israel to military action in order to split the Arab members of the international coalition that President Bush has assembled, and unify the Arab world in a war against the US and Israel.

George Bush has committed the United States to secure the withdrawal of Iraq’s forces. If, as time goes on, President Hussein does not withdraw, a retreat by the United States would be politically costly at home. It would also have serious consequences in the Middle East. Even without major armed conflict, through its action Iraq has heightened the strategic vulnerabilities of every state in the Gulf as well as many in the fertile Crescent. If Kuwait’s borders are illegitimate, then so are those of almost every state in the region. When fears of Iraq’s ambitions are reinforced by its relatively sophisticated military capabilities,

including its nascent nuclear weapons capability, an acute perception of threat spreads beyond the Gulf throughout the region.

Compounding these dilemmas are the high costs to the United States of a prolongation of its large military deployment in the Gulf – not only the obvious economic and political consequences at home, especially if the recession deepens – but the impact of the deployment on the politics of the Middle East.

The deployment is large, visible, and intrusive, and for the first time since the death of President Nasser of Egypt, a leader has won the widespread sympathy and support of Arab opinion in the Middle East. He has done so in large part because of the explosive appeal of his amalgam of Arabism and his attacks against Western imperialism and those Arabs who do its bidding. The longer the stalemate continues, the more powerful Saddam Hussein becomes in Arab streets.

### Choosing the Lesser Evil

This analysis suggests that there is no desirable resolution to this crisis. Political leaders consequently must focus on achieving the least damaging outcome. Given the large and ultimately unpredictable costs of war, compelling a negotiated withdrawal of Iraqi forces from Kuwait through sanctions seems preferable. If this fails, a war – most likely a high-intensity and destructive war of unprecedented scope – will change dramatically the military and political configuration of the Middle East.

Even if war is avoided through the withdrawal of Iraq’s forces from Kuwait, the post-crisis strategic order will be built around a permanent American military presence in the Gulf. Under these conditions, President Hussein will threaten not only the military security of the Gulf, but also the political security of governments throughout the Middle East as he exploits the intrusive character of foreign military forces and the weaknesses of Arab governments. And the heightened vulnerabilities of governments in the Middle East will be shared by the world as a whole.

Iraq’s invasion of Kuwait precipitated the first post Cold War crisis. At its deepest level, the crisis is about the shaping and management of the new international order. On this, ironically, Baghdad, Moscow, and Washington are all agreed. Iraq acted as it did in order to prevent the consolidation of what Saddam Hussein considers imminent American pre-eminence in the Gulf. At the first meeting of the National Security Council in Washington after the invasion, the crisis was defined as the first test of American ability to maintain global and regional stability in the post Cold War era.

Yevgeny M. Primakov, a member of Mikhail Gorbachev’s Presidential Council and one of his closest advisers, offered a strikingly similar analysis: “However dangerous the Gulf crisis may be in itself and however important it is to settle it, I think we should proceed from the fact that it offers a kind of laboratory, testing our efforts to create a new world order after the cold war.”

The Gulf crisis is so grave because it involves the intersection of political, economic, and strategic vulnerabilities throughout the Middle East. How the crisis is resolved will indeed tell us a great deal about the resilience of the new order in the making. What is already apparent is that priority must be given to crisis prevention. In the new order, as in the old, finding the safest way through a crisis is difficult and fraught with grave dangers; the challenge is to prevent a crisis in the first place. Once in a crisis, there are often no good options, only a choice among lesser evils.

*As Iraq and the American-led coalition wield the threat of war, each risks losing control of events through accident, or because the other side anticipates an attack and decides to strike first.*

# NEW GERMANY: EUROPE'S BENEVOLENT GIANT?

*The old East Germany may have been swallowed whole, but its unique culture could be just what the Federal Republic needs.*

BY MADELEINE POULIN

ONE CAN SAY A LOT ABOUT THE UNIFICATION of Germany; there is economics, sociology, history, even futurology – and of course, there is anxiety. Claude Cheysson, a former French minister of foreign affairs in the Socialist government, hasn't quite gone this far yet. But as he sees it, to speculate about the eventual absorption of Austria into Germany – “So is Austria next?” – is more than just a bad joke: it's a way of saying, “What are they capable of next?” This senior civil servant, who served as European commissioner in Brussels, is clearly annoyed with the manner in which the West Germans have steamrolled their way to political and monetary union, without regard to either the fragile state of the East German economy – “It's a kind of colonization,” he says – or to the delicate structure of European integration.

Despite all the reassurance emanating from Bonn, France wonders whether Germany will lose some of its enthusiasm for forging ahead with the Europe of tomorrow; there is so much to do at home now. After they have finished their work, will a counterbalance to the powerful German voice within the great European concert still be possible? Chancellor Kohl has said he wants “a united Germany in a united Europe.” The first part of this wish has already come true; the second is still a long way off.

In this Parisian apartment overlooking the Luxembourg gardens, there is a prevailing sense of unease. Will Germany be the guarantor of European security or a destabilizing force? It's a question that preoccupies Claude Cheysson, but one for which he can only answer, “I don't really know.”

BUT HOW CAN WE KNOW, after all the new Germany has not taken shape. Maybe it will simply become a larger version of the Federal Republic, adding another sixteen million inhabitants in much the same way that a person adds kilos and now tips the scales at seventy-eight with no change in personality. The former German Democratic Republic did agree after all, to be swallowed whole, leaving no trace of its previous political, economic and legal structure.

In West Germany, however, no one is betting on this. These events are absolutely un-

precedented and even the economic outcome, to take the area most easily measured and analyzed, is still very much in doubt. At the prestigious *Deutsches Institut für Wirtschaftsforschung*, quartered in a quiet suburb of (West) Berlin, the economist Heiner Flassbeck reminds us that in the space of just a few short months East Germany has gone through a political revolution, followed by two severe economic jolts: the abrupt introduction of a market economy and, most important, the drastic revaluation of its currency from the unofficial, but realistic, rate of 4.4 to the Deutschmark, to parity.

No other country has ever undergone such a transition, Flassbeck points out. No doubt, East German citizens were happy to exchange the anaemic communist marks they had accumulated (up to a certain amount, depending on the age group) for powerful capitalist marks, but the impact on East German businesses and industries was disastrous. In the space of a day, they were rendered totally uncompetitive in the new larger German market. The result in the East was unemployment, disenchantment and numerous demonstrations. Easterners knew immediately that they would remain poor cousins for a long time to come.

“DO YOU THINK IT'S A PLEASURE BEING SWALLOWED up?” asked Ludwig the Second of Bavaria at the time of the first German unification carried out by Bismark in 1871. Even Wilhelm the First, who had done the swallowing, reportedly had nothing more positive to say than, “It's the saddest day of my life.” Why so? Because he feared that the Prussian virtues would be diluted and lost in the larger Germany. This same apprehension exists today in what was once the Federal Republic.

Today's West German intellectuals have different virtues in mind to be sure, and if they worry it is because they believe these only recently acquired virtues to be still fragile. The “virtues” can be summarized in a single word: democracy. After Bismark and the Kaisers, after the brief unhappy interlude of the Weimar Republic, and after Hitler, the West Germans

were presented, as it were, with democracy by the victorious Western Allies. But is democracy all that more firmly entrenched among West Germans than totalitarian socialism was among the East Germans who, having been given it by Soviet victors, now say “no thank you.” It is a question that some dare to ask.

GEORGIA TORNOW IS AN ELEGANT YOUNG woman who manages *Die Tageszeitung*, more familiarly known as “Taz”, the most anti-establishment of West Berlin's newspapers and a vehicle for the avant garde. “Here in the FRG we have experienced democracy, how it works, the checks and balances, its interest groups, etc. But in the GDR, even the most politically astute people have no idea of all this when they try to imagine an effective political order. They have been living in a cocoon all this time.”

Georgia Tornow is impatient. She fears that the sixteen million new citizens will retard Germany's progress toward the kind of society of which she dreams. They will want, she says, a failure-proof social security system and guaranteed employment rather than flexible arrangements which take into account the quality, and not just the standard of life. In the eyes of some, however, most notably the always restless left, the situation appears even more grave.

Dieter Esche was born during the Second World War and has worked with the entire spectrum of left-wing parties, including the Greens. He is one of many Germans who distrusts Germans, who expresses doubts about the depth of democratic sentiment in the Federal Republic and is astonished that West Germany is viewed in Eastern Europe as an exemplary democratic society. The doubts are even greater when it comes to the sixteen million new citizens who have joined the ranks of the expanded Germany. For evidence, Esche points to the traditions of old authoritarian Prussia, the core of East Germany, on to which, over the last forty years, have been grafted habits of obedience to the totalitarian state. He does not discount the possibility that these influences could change the Federal Republic, and above all, he fears the emergence of a new nationalism.

For Esche, nationalism is original sin. "We always understood that the division of Germany resulted from Nazism, from the war that Germany inflicted on all of Europe, from German crimes. We had to live with that. It was a form of penance." That is why, he says, left-wing intellectuals abandoned the national question – the question of German unification – to the right, rather than seizing it and lending it a more democratic hue. It is not clear whether it would have made any difference. In any case, the triumph of Kohl's approach only adds to their feelings of guilt and responsibility.

IF YOU CROSS THE BRANDENBURG GATE INTO the East, past the long scar the Wall has left across Berlin, you hear similar sentiments in certain quarters, but expressed without the guilt. Here too they worry about a right-wing, nationalist revival. According to Tatiana Galla – a rock star and idol who personified for some young people the defiance and anger that preceded the dismantling of the Wall – the shadow of Hitler is already visible.

East Berlin's 10,000 mostly local squatters – with a few West Germans, Dutch and others – have to defend the abandoned buildings in which they live against attacks from "skin-heads" in paramilitary gear. This very unusual group of extremists, also called "Fachos" (from Fascists), not only take on the "punks" and other squatters, but also homosexuals, foreign workers and students mostly from Vietnam and Mozambique.

What is behind these youth gangs? One hears of an extreme right-wing group that has established itself on the street, the Movement for Social Alternatives. In the upper storey of a little apartment building the skin-heads are renovating, two kids sit behind a table. Only the leader talks; he is about twenty years old and has the sober appearance of an office clerk. "We favour a sovereign Germany, free from all foreign influence. We also believe that Germany should withdraw from all political blocks, whether the East block – the Warsaw Pact – or NATO or even the European Community." This is Claude Cheysson's nightmare.

BUT HOW SERIOUSLY SHOULD we take these people? They are a few friends many of whom were imprisoned as juvenile delinquents under the old regime. They have modest jobs and share a taste for German military history. They have no visible means of support, and apart from the skin-heads, have no following in the general population. And yet when the media speaks of dangerous right-wing move-

ments, it is this group which turns up over and over again.

There is a legitimate political party of the extreme right to be sure: the Republican Party. However, the fact of its existence cannot be laid at the feet of the East, it was born in the Federal Republic. Moreover, its information booths were not exactly overrun by interested voters during the run-up to the October elections in the former GDR, and Republicans drew few votes in the East's five new *Länder* or states. Voters placed their fate in the hands of Chancellor Kohl's Christian Democrats, except in the state of Brandenburg around "red" Berlin, which elected the Social Democrats.

Of course, it's not all over yet. Galloping unemployment in the five Eastern states and the widespread popular sense of being second-class citizens could well have a pernicious influence on the newly-annexed Germans. It should not be forgotten that poverty and humiliation have a history of raising demons in Germany. But much time has passed and societies change, even inside totalitarian rule.

Winston Churchill said of the Germans, they are always either "at your throat or at your feet." But in which Germans is this notorious submission to authority supposed to be most ingrained these days? Nothing says that it must be the East, where the people have developed a healthy blend of cynicism and humour through the years, closer, in fact, to the Polish tradition than the German. Before rising up last year, East Germans long feigned submission, an attribute which often required enormous inge-

nuity, especially in the simple chores of day-to-day living and which helped to develop in them a flare for improvisation. All this was hidden, of course, but private life, as such, was enriched. Mutual aid and solidarity, and for those who had no chance for foreign travel, art and literature – nourished and sustained a kind of internal exile.

THE WEST BERLIN AUTHOR PETER SCHNEIDER speaks of the East's *Nischenkultur* – society that values friendship over success. In a Leipzig apartment lovingly decorated and lined with books, Karin and Stefan Haidekker recall with a hint of nostalgia that their West German visitors used to envy their calmer, more congenial lives. In the same vein, our interpreter in East Berlin told us with some pride about the results of a recent survey showing that East Germans were superior to their Western cousins in at least one way:

they have sex more often and masturbate less. It is undoubtedly the same survey cited several days later in the *New York Times*, according to which East German women are eleven per cent more likely to achieve orgasm.

A central question, therefore, is: what if East Germans, in exchange for the marvelous *Deutschmark*, brought to the marriage an even greater gift, that of the art of living, a sort of languid warmth. Some years ago, the late British social critic Malcom Muggeridge said: "There are hopeful signs that the Germans are becoming less industrious and efficient, and may well soon be as indolent and improvident as we English are ... what a blessed relief."

It is a wish that perhaps is to be fulfilled twenty-five years later with the arrival in serious, industrious, and not very happy West Germany of millions of sons and daughters of the *Nischenkultur*. François Mauriac, the noted French novelist and journalist of the early post-war years, said he loved Germany so much that he was happy there were two of them. And there still are; despite monetary and political union, genuine unification is still far off.

Why then not hope that with time the virtues and strengths of each Germany will combine to create a benevolent giant in the heart of Europe.

James Woodall

# TO NEW YORK, A MESSAGE FROM GENEVA

*Holding an existing treaty hostage to progress on another  
is the wrong way to go about arms control.*

BY DAVID COX

**A**T FOUR IN THE MORNING OF 15 SEPTEMBER – FIVE HOURS AFTER the official deadline for the end of the Fourth Review Conference on the Nuclear Non-proliferation Treaty (NPT) – four weeks of diplomatic negotiations among the states party to the Treaty appeared to have failed. Amidst threats that the translators would soon leave, the air conditioning would stop and the lights would go out for want of money, the Conference President received a one paragraph report from the Conference drafting committee. It stated simply that the committee was unable to agree on common language describing progress, or the lack of it, in halting the nuclear arms race and, most significantly, in achieving a comprehensive ban on all testing of nuclear weapons.

A latecomer to the conference might well have been puzzled by the stalemate. The past year has been full of promise for arms control and disarmament, particularly in Europe, where the end of the Cold War and reductions in conventional forces must surely be welcomed. Led by Mexico, however, the non-aligned states zeroed in on the single issue – an end to nuclear weapon tests – which they see as the touchstone of superpower good faith in the collective effort to prevent nuclear proliferation.

The Geneva Review Conference was only the first round in an on-going attempt to confront the United States on the test ban issue. The second round is scheduled for early January in New York, when, again on the initiative of a group of non-aligned states, the signatories to the 1963 Partial Test Ban Treaty will gather to consider an amendment which would ban all nuclear tests. In turn, the New York meeting will set the tone for future actions and policies which may well determine the ultimate fate of the NPT, for in 1995 the next review conference will decide whether to extend the Treaty, and for how long.

In the last hour of the Review Conference, therefore, it was well understood that the disagreement involved far more than the inability to find common language for a final document. The United States wanted an acknowledgement of its negotiations with the Soviets on verification protocols for the existing threshold treaties as part of a step-by-step approach to a Comprehensive Test Ban (CTB). Mexico did not agree, taking the view that any such acknowledgement would detract from the essential point that the Bush administration, like its predecessor, had no intention of seeking an end to nuclear weapon tests. On that single sticking point, efforts to achieve compromise language stalled.

WELL AWARE OF THE BROADER ISSUES AT STAKE, CONFERENCE PRESIDENT Oswaldo de Rivero of Peru had prepared a last ditch compromise which he was in no mood to discuss further. When the plenary session reconvened, Mexico asked for the floor and objected, confirming that its month long opposition to the Western position was not a bluff intended to wring the maximum concessions at the eleventh hour. The compromise draft was withdrawn, and, amidst mutual recriminations, the President gavelled the meeting closed.

The failure to achieve a final document is not a death threat to the Non-Proliferation Treaty. The 1980 Review Conference was also

unable to agree on a document, and in 1985 failure was averted only by a diplomatic sleight of hand. The five-year review conferences, however, are not simply a month of wrangling about nuclear weapon tests. The NPT is a framework within which the flow of commercial nuclear technology and materials is authorized, regulated and monitored. It is a forum in which the non-nuclear weapon states can reaffirm their own belief that security is enhanced by not having nuclear weapons in their arsenals and address the problems posed by the commercial trade in nuclear goods.

Canada, for example, pressed hard and successfully to secure a draft agreement governing trade in tritium. Such an agreement, which would have been included in a final document, is part of a broader attempt to bring non-nuclear materials, including heavy water and possibly beryllium, into a safeguard system. This is intended to give assurance that materials intended for peaceful purposes are not diverted into weapons development.

When such tangible, practical purposes of the Review Conference are lost, the damage is not so much to the fundamentals of the Treaty as to the ability of the signatories to tackle cooperatively the serious issues that threaten to erode the non-proliferation regime. These include the failure to date to draw “threshold” or near-nuclear states such as Brazil, Argentina, Pakistan and South Africa into the Treaty, and the monitoring of increasingly large plutonium stockpiles which are a by-product of civilian nuclear facilities.

IN 1963, AFTER SEVERAL YEARS OF UNSUCCESSFUL NEGOTIATIONS TO ACHIEVE a total ban on all nuclear weapon tests, the United States and the Soviet Union were able in a matter of weeks to agree on a partial ban which did not apply to underground tests. The preamble to the Partial Test Ban Treaty, however, reaffirmed the determination of the superpowers to negotiate a comprehensive agreement. Five years later, without any real progress made, the preamble to the NPT repeated the same commitment.

Despite these treaty declarations, it is doubtful whether a compelling case can still be made for a direct linkage between a comprehensive ban on nuclear weapon tests and the substantive issues of non-proliferation. There is a broad scientific consensus, for example, that near-nuclear states do not need to test in order to develop and deploy first generation nuclear weapons – fission weapons, with yields anywhere from a few kilotons to perhaps a hundred kilotons.

Moreover, even if a single test were thought necessary, it would likely be a “deniable” test, such as India undertook in 1974, and Israel and South Africa may have done in 1979. In regional contexts, the fine tuning of nuclear weapons – perhaps only possible through testing – may be militarily unnecessary. The political and deterrent impact of Israeli nuclear weapons in the Middle East, for example, is not diminished by the possibility that they may be of relatively small yields. Used against cities or large military targets, a basic fission weapon is more than adequate to alter irrevocably the course of battle.

The key to home-built nuclear weapons, therefore, is not testing but the availability of weapons-grade fissionable materials. It follows that

the non-proliferation regime would be better served by focussing on the spread of fissionable materials rather than on a treaty commitment to a comprehensive test ban which no longer has the arms control significance that it had in the early 1960s.

PURE ARMS CONTROL LOGIC, HOWEVER, DOES NOT DRIVE THE TEST BAN question. For the non-nuclear weapon states continued testing is a political issue. It is the most flagrant symbol of the nuclear profligacy of the "have" states (meaning essentially the US) who, determined to modernize their arsenals, are unwilling to foreclose potential future nuclear options. The test ban, therefore, has become a good faith issue: if the nuclear weapon states really want the Non-proliferation Treaty, they must show that they care by taking serious measures to achieve a comprehensive test ban.

This linkage between the CTB and the NPT will be argued again in January 1991 when the Conference to amend the Partial Test Ban Treaty reconvenes in New York. Urged on by Parliamentarians for Global Action, an international group currently chaired by Canadian Liberal MP Warren Allmand, a number of the signatories of the 1963 Treaty have acted on the Treaty provisions which require the depositary states – the United Kingdom, the United States and the Soviet Union – to call an amendment conference. The proposed amendment is very simple – to make the ban on test explosions total rather than partial.

To many supporters of the NPT regime, the amendment conference is a further example of the wrong way to go about arms control. It is bad enough to hold one treaty ransom to another, as in linking the future of the non-proliferation regime to the comprehensive test ban. Now, in the amendment conference, another valuable treaty is undermined by resorting to the fiction of an amendment which amounts in reality, to a new treaty.

In these circumstances, US policy in New York could easily turn the amendment conference into a multi-million dollar charade. As one of the three states that negotiated the Partial Test Ban, the US has a veto on amendments. In political terms, there is simply no prospect that US policy on testing will change dramatically before January. What is the point, therefore, in convening a conference which cannot succeed in its principal purpose and which could be easily turned into a mere rhetorical show if, at the outset, the United States called for an immediate vote?

IF THE WORST IS NOT TO HAPPEN IN NEW YORK, Canada and other states need to address two key questions. The first, and more important one, is to settle on a policy which, over the next several years, might help to soften the dispute about the comprehensive test ban, and so improve the prospects for the continuation of the NPT regime. The second is to turn the amendment meeting into a more constructive meeting than it seems to promise at present.

Looking ahead to the 1995 NPT Review Conference, there can be no doubt that current Canadian policy places a higher value on the non-proliferation regime than on the achievement of a total test ban. But if it is the case, as now appears, that the one is politically threatened by the failure to achieve progress in the other, then the Canadian government will need to move beyond its rather lame current position whereby it supports a step-by-step approach (no time frame indicated) to a comprehensive test ban.

The most plausible way to do this is to support a very low yield threshold test ban. When the US government talks of a step-by-step, "ratcheting down" approach to a CTB, the great danger is that the next steps down will be both politically and militarily insignificant. Reducing the current threshold of 150 kilotons to 100, for example, will have no significant effect on the US nuclear programme, and will cut no ice with those who plan to support the Mexican position in 1995. Instead, a significant reduction in testing is required which could plausibly be achieved by 1995. While the precise threshold is open to discussion, the threshold chosen must show boldness. This suggests that Canada should declare its support for a threshold around five kilotons, accompanied by a quota on the number of annual tests. Not the least of the strengths of this position is that considerable independent scientific support can be marshalled in support of the claim that the threshold could be verified.

This policy would do little to constrain the ambitions of the near nuclear states – but then, neither would a CTB. On the other hand, it would severely constrain the modernization programmes of states that already have nuclear weapons, and it would encourage further political reviews of the testing issue. Would it satisfy the non-nuclear states? Perhaps only a total ban could do that, but a low threshold would force the non-aligned to reassess their position. Regional security is enhanced by the NPT, which, despite its inequities, does benefit the non-nuclear powers. It would be foolish for them to undermine the protection afforded by a non-proliferation regime if there were significant progress towards a CTB, just as it is foolish now for the US to prejudice its fundamental interest in non-proliferation by its intransigent approach to nuclear weapon testing.

A POLICY WHICH LOOKED AHEAD TO 1995 WOULD ALSO HELP AT THE amendment conference. To avoid a destructive meeting, the amendment conference can best be used not to corner the United States, but to air the issues surrounding the linkage between the NPT and the CTB. There

will be, moreover, a significant difference in the composition of the conference in New York. A number of the threshold states – India, Israel, South Africa, Brazil and Argentina, for example – are parties to the partial test ban treaty where they are not to the non-proliferation treaty. While this may complicate life in New York, it provides an unusual opportunity to discuss proliferation problems with the states most likely to acquire nuclear weapons in the future.

Paradoxically, the broad range of issues covered by the 1990 Review Conference convincingly demonstrated that the non-proliferation regime is more important than a comprehensive test ban. But that is why it is necessary to take steps to curtail nuclear weapon testing. Following the failure of the Geneva Review Conference, the Western states, Canada included, will not relish the prospect of the impending amendment conference, but they cannot now dismiss it or simply assume that it has no bearing on the future of the NPT. Nor is it sufficient to argue that a CTB is no longer as important as it once was. If the gavel is not to fall on another failure to reconcile the differences between the nuclear haves and have-nots at the 1995 Review Conference, a renewed effort is required now to salvage the upcoming amendment conference in New York.

### How the Non-proliferation Treaty and Nuclear Weapons Testing are Linked

The Non-proliferation treaty was opened for signature in 1968. When it was being negotiated, the nuclear weapon states were under pressure to match the undertaking of the non-nuclear states not to acquire nuclear weapons, with some recognition of their own obligation to halt the arms race. The result was Article 6:

*"Each of the Parties to the Treaty undertakes to pursue negotiations in good faith on effective measures relating to cessation of the nuclear arms race at an early date and to nuclear disarmament, and on a treaty on general and complete disarmament under strict and effective international control."*

Since the Treaty came into effect, Article 6 has been the focus of debate between the two classes of states party to the Treaty – the nuclear weapon states and the non-nuclear weapon states. The linkage between Article 6 and progress towards a comprehensive test ban is made in the Preamble to the Treaty, which recalls the determination expressed by the Parties to the 1963 Partial Test Ban Treaty,

*"...to seek to achieve the discontinuance of all test explosions of nuclear weapons for all time and to continue negotiations to this end..."*

This preambular statement combined with Article 6 has led the non-aligned states to point to a comprehensive test ban as the single most important indication that the nuclear weapon states are keeping their side of the bargain.

# HAITI'S LONG UNHAPPY ROAD TO DEMOCRACY

*The hopes of many Haitians are riding on the outcome of national elections set for December.*

BY CLAUDE MOÏSE

HAITI IS AN ASTONISHING COUNTRY WHICH AROUSES MIXED feelings of admiration and sorrow. It gained national independence in 1804, at a time when most of the Americas were still European colonies, and yet today, after a turbulent history, its level of human and social development can only be described as disastrous. In addition to bankruptcy, Haiti must contend with political repression, widespread corruption, contempt for human life and personal freedom, and the continuing exodus of its people to nearby islands and the large cities of Europe and North America.

The fall of Jean Claude Duvalier in February 1986 raised hopes that Haiti would rediscover the path to dignity, justice and democracy. However, since the dictator fled, observers and citizens alike have been further discouraged by a seemingly interminable transition period marked by violence, coups d'état, shortages, decay of public infrastructure and an inability to establish civil institutions. Anyone acquainted with Haiti's history might well be tempted to view the present situation as a tragic repetition of its tumultuous past – an echo of the many misfortunes that plagued the island throughout the nineteenth century.

HAITI WAS BORN IN VIOLENCE. THE EUROPEANS WHO FOLLOWED Christopher Columbus in 1492, slaughtered the indigenous people, and repopulated the island with slaves from Africa. Under the impulse of burgeoning European capitalism, the land's resources were exploited to the hilt. Thus the foundations were laid for the colonial, slave-owning, racist society within which Haiti incubated for three centuries, until the general upheaval of the 1789 French revolution.

Between 1789 and 1804, white colonists, freed slaves, representatives of colonial power, poor whites and black slaves, struggled to preserve established privileges or gain new rights. Revolts, insurrections, civil wars, foreign campaigns and wars of independence led to the overthrow of colonial rule and Haiti emerged as an independent nation in 1804.

With independence, the victorious coalition of freemen from colonial times, the newly-free elite created by the revolutionary wars and liberated slaves, inherited the task of constructing the new state. Their first obligation was the preservation of Haiti's independence, but there were other challenges: a trade embargo imposed by France, putting the country's economy back on its feet, sharing out colonial wealth and guaranteeing civil liberties. In short, a new social contract had to be written.

Faced with these challenges, the "sacred union" formed against the French under the leadership of General Dessalines, the first Haitian head of state, began to fall apart almost immediately. While all social classes were united in striving towards the consolidation of national independence, they could not agree on economic and social issues. A power struggle had already broken out during the 1791–1804 revolutionary period between two factions of the ruling class. Now the farmers, former slaves, laid claim to land and showed little inclination to working for new masters.

To this background of nineteenth century Haitian political history we must add the danger of war and the threat of attack by the former colonists. Repeated peasant revolts reflected discontent in the country-

side, but the conflicts and power struggles within the ruling classes were the major cause of Haiti's chronic political instability. The assassination of Dessalines by generals from the south of the country marked the beginning of this struggle. It continued with the outbreak of civil war and the partition of the country into a northern state and the Republic of the East and South (1807–1820). Haiti suffered insurrections, conspiracies and plots, civil wars, and *pronunciamentos* (army coups d'état) until the American occupation in 1915.

MILITARISM IN HAITI IS A LEGACY OF THE REVOLUTIONARY WARS; THE army attended the birth of the nation. It was the military which advanced the nationalist, anti-slavery cause and coordinated the political struggle. The army was the guarantor of the interests of the nation, particularly of the emerging oligarchies, and provided a natural incubator for leaders of the new state. Through the nineteenth century, twenty-four of Haiti's twenty-six presidents were soldiers.

The role of the army became even more central because governments created by coups believed they could survive only by eradicating their opponents. Adversaries, real or potential, had to be kept under close surveillance, and were often driven into exile or physically eliminated. A vicious cycle of repression and conspiracy resulted in irreconcilable government and opposition views. In fact, an opposition as such did not exist in the Haitian system.

Haiti's level of economic and social development deteriorated over time, with problems getting worse on all fronts: population growth, over-exploitation of land and resources, declining productivity, a deteriorating public infrastructure, and financial anarchy. The State existed only during the short lulls between "revolutions." Between 1913 and 1915 the National Assembly elected four presidents; three of whom came to power by *pronunciamentos* and were retroactively approved by the Assembly. It was then that Haiti – like Cuba, the Dominican Republic and Nicaragua – fell like ripe fruit into the hands of an American imperialism eager to ensure stability in the Caribbean basin and to extend its domination over Central America.

HAITI WAS OCCUPIED BY THE US MARINES FROM 1915 TO 1934, breaking the cycle of coups d'état and scattering the traditional army. With the collapse of the ruling classes' political structure, the Americans imported their own solutions, and imposed their own peace. They had the existing National Assembly elect a new government, overhaul the regime and restore the administrative apparatus. The Americans replaced the army with a police force which, after battle hardening in the struggle against peasant guerillas from 1915 to 1920, became a central pillar of government authority after the occupation. Under American tutelage, the government was stabilized and political turmoil greatly reduced by the simple expedient of replacing parliament with a Council of State, the composition of which was left in the hands of the executive.

The American occupation succeeded neither in changing the system nor in transforming Haitian political culture. It reduced the level of conflict within the ruling elites but failed to deliver them from their demons, eliminate their predilection for dictatorship or restore the rule of law. The *pax americana* lasted for thirty years, until 1946.

The recovery of national sovereignty began in 1930 with the re-establishment of Parliament, and was completed in 1934 with the departure of the last contingents of Marines. Apart from a brief period when an attempt was made to establish parliamentary democracy after the general elections of 1930, power was exercised in the traditional manner under the iron rule of a dictator drawing his strength from an Americanized army – one that was disciplined, hierarchical and obedient.

As in the past, no opposition was tolerated. Opponents of the regime were driven from parliament and the independent press was beaten into submission. The government controlled the entire electoral machinery, and the two legislative chambers contented themselves with rubber-stamping decisions of the executive. One difference from the century before was that the presidents were now civilians recruited from the ranks of the professions – almost all of them lawyers. In the office of president appeared a succession of five lawyers, a soldier with a law degree, and one doctor. And the government of the doctor – François (Papa Doc) Duvalier – proved to be the bloodiest and most destructive Haiti had experienced since 1804.

During the American-imposed peace, successive governments were able to carry out the affairs of state calmly and the country was relatively free of turmoil. With the end of World War II came a thaw, and notions of civil liberty, democracy, social justice, and human rights began to gain ground. Nourished by these ideas, a large opposition movement swept into power in January 1946 – an event that marked a genuine break with the past. For the first time since 1930, a government was overthrown by the popular will.

 THE RESULT WAS A GREAT SOCIAL AND POLITICAL CHURNING giving rise to new forces: a trade union movement, professional associations, and an array of political groupings. On a political level, the upper middle class began its rise to power by noisily denouncing what it called the exclusiveness of the mulatto bourgeoisie, and by posing as the champion of the middle class and the black masses. Their black-power ideology was fused with the nationalism fashionable under the US occupation in order to justify claims to a position of dominance in the State, as well as admittance into the ranks of the bourgeoisie.

The movement gave birth to the government of President Estimé, which lasted from 1946 to 1950. But hopes were soon dashed. From this new crop of politicians, whether advocates of black power or not, emerged speculators and criminals who scandalously enriched themselves. When challenged by opposition forces, President Estimé succumbed to the temptation of a constitutional coup in order to have himself re-elected. He then fell victim himself, in May 1950, to a coup d'état organized by Colonel Paul Magloire. Taking over the presidency after thoroughly manipulated elections, Magloire was himself forced to resign six years later under the pressure of widespread popular opposition.

In 1957, political interest and unrest flared anew: the number of political parties mushroomed, newspapers appeared, and the island was awash in radio programmes. However civil war threatened, and the ensuing crisis engulfed five provisional governments before a military junta finally cleared the decks, enabling Papa Doc to defeat his principal rival, Louis Déjoie, in largely fraudulent presidential and legislative elections.

The political struggles of 1946, 1950 and 1957 proved that political power was held at the pleasure of the heads of the army. Duvalier pondered this, no doubt, and moved quickly to neutralize the military in order to ensure a lengthy stay in power. He bribed officers, "macoutized"\* the army, and created his own militia and parallel police force loyal only to him.

Duvalier did not stop there. He destabilized all traditional centres of political power in Haiti through unprecedented demonstrations of force. Besides taming Parliament and assassinating his opponents, he defied the Americans, took on the Roman Catholic hierarchy and subjected the middle class to unsurpassed levels of repression. Finally, he dismantled the democratic organizations and labour unions that had sprung up during the movement of 1956–57 and terrorized the peasantry by unleashing the large landowners.

Under Duvalier, personal dictatorship took on an unprecedented criminal character. As we now know all too well, the results were catastrophic: thousands of dead and disappeared, social and political collapse, the spreading of corruption and mediocrity throughout society, the dismissal of qualified public servants, and mass emigration. Haiti lost an enormous number of trained personnel and young people – the best and brightest of an entire generation. Jean-Claude Duvalier succeeded his father, doing little to correct the disaster.

IN THE END, DUVALIERISM REPRESENTS A CRITICAL MOMENT IN the long history of a country that seems devoted to the development of underdevelopment. It was under the "macoute" regime between 1975 and 1986 that the most socially mobile and vigorous democratic movement in recent history took root, raising political awareness among Haitians, and encouraging democratic ideas. It was back room manoeuvring and public demonstrations involving the entire country in a campaign of sustained pressure and mass resistance, that finally destabilized Jean-Claude Duvalier's government.

Unlike some earlier changes in government, the political succession of 1986 plunged the whole society into crisis. Haiti not only woke up from a long dictatorship, but it began to understand the historic failure of the bourgeoisie and the ruling elite to rise to the challenges presented by development and democracy. The present crisis is aggravated by this failure, and by the fragility of the democratic movement. The old ways, represented by the Duvalierists and the entire range of forces opposed to change, are not quite dead; while the new ways, nurtured in the institutions of civil society and democratic political parties, have not yet succeeded in asserting themselves.

The present predicament can be attributed largely to the disunity of the democratic movement in a society that has few points of reference and has lost its traditional methods of settling conflict. The usual supreme authority, the army, has disintegrated; the state is crumbling, and the ongoing crisis at the centre has cleared the way for all sorts of gangsters. To the general anti-dictatorial anger of the population, the impotent State responds with whatever is expedient. Anti-democratic elements, clinging to their privileges, respond with banditry and terror.

TO THE GREAT COST AND ANGUISH OF THE COUNTRY THE ORGANIZED democratic movement remains crippled by a lack of cohesion and strategic vision. Meanwhile, the most resolute people are also among the most criminal of the anti-democratic elements. The explosiveness of the elections to be held in December stems from the determination of the Duvalierists – seeing the advanced state of decay of the central authority and the wrangling that undermines the democratic forces – to act against the clear aspirations of the population.

The interests of various social and political camps, and the international context, would seem to indicate that the "macoute" dictatorship has no chance of returning to power. Nevertheless, there is no guarantee that democracy will easily triumph. Under current conditions, successful elections represent the first basic step on the path to democracy; even if they succeed, the largest task remains to be accomplished. Democratic forces must bring together a national movement capable of mobilizing the nation's resources to tackle the problems of democratization and development.

\*Papa Doc Duvalier organized a private military force, the Tontons Macoutes, to suppress his opponents.

# EMPTY SHELVES AND EMPTY MONEY

*In the Soviet Union's most difficult hour, paralysis overwhelms the government.*

BY MICHAEL BRYANS

**A**FTER AN AUTUMN OF INCESSANT RAIN in Moscow, and equally endless wrangling over competing approaches to economic recovery – a period that could fairly be dubbed the “battle of the plans,” Shatalin, Ryzhkov, the grand compromise – the Soviet parliament and Mr. Gorbachev’s government finally agreed on one of them. But calling what they have to do a “plan” is misleading. The Soviet Union is in uncharted waters, its peoples inventing a new political economy for themselves and beginning from somewhere we have never been.

It is not an experiment they are taking part in voluntarily, and like the Irish joke about the lost man who asks a local farmer how to get to Dublin, and the farmer replies, “Lad, if you want to get there, this is a poor place to start from” – Soviets, or Russians as many Soviets who are Russian prefer to call themselves, must start from where they are.

Moscow air is thick with the population’s depression and apprehended misery, but there are those who have more objective ways of gauging the public mood. Uri Levada is a sociologist by profession, attached to the new centre for public opinion studies which has its offices on a side street not far from the famous GUM department store – a place now eerily devoid of goods and shoppers.

SOVIET PUBLIC OPINION POLLING IS NOT THE high art it has become in the West; methods and results are often criticized by Western pollsters as suspect. However, the striking trends in popular opinion revealed by Levada and his colleagues would overwhelm even a large statistical margin of error. The losers in this survey – governments, politicians and optimism of any kind – aren’t even close.

Pulling a hand-drawn chart down from the wall displaying the September polling results, he points to the lines which show that people’s expectation for the future has slipped yet again. Only ten percent think things will get better and over fifty percent, and rising fast, expect life in the USSR to get worse. Positive expectations ticked up briefly in the spring

after Gorbachev’s accession to the presidency, but have been in a long steep dive since May after his prime minister predicted rising prices for basic foods and other staples.

Levada continued with more gloomy statistics: fifteen percent, and rising, anticipate civil war or a coup d’état; only seven percent of the population believe their life to be better since Gorbachev’s rise to power in 1985, and two out of three think life is worse. And as an aside, he adds that Gorbachev’s personal popularity has dwindled from over fifty percent at the end of last year down to less than thirty percent in July.

ALONG WITH ALL THE OTHER SHORTAGES, Russians seem to have run out of faith. Modern economies run on it – faith that the currency in one’s hands will in one year be worth more or less as much as it is today, faith that not everyone who has money deposited at your bank will attempt to withdraw it the same day you do. It is the essential bargain citizens make with the future that allows for savings, investment and all the things that make up a prosperous, civilized life. It is a shell game that everyone, but most of all a nation’s institutions, has a duty to keep going.

And it is here in the figure of Gorbachev, and the behaviour of his all-Union government, that there lies a great puzzle: why do they seem to be doing nothing about the mounting political chaos and economic misery that surrounds them? It is a puzzle because Gorbachev and his advisors have demonstrated masterful political agility and humanity for over five years. Yet in what is arguably the USSR’s most difficult hour – the country’s leaders openly acknowledge that economic collapse at this point will almost certainly mean the demise of the place we call the USSR – paralysis and sheer fecklessness appear to have gripped the centre.

Gorbachev’s first act under the emergency powers given him by parliament in late September was a Presidential Decree ordering state enterprises to fulfil production quotas under the five year plan, and then to draft – yet

again – university students into vegetable picking for part of their first semester. These edicts were greeted by Muscovites I met with open derision – deck chair rearranging of the most desperate kind.

Another explanation for the paralysis, which finds fertile ground in the very active rumour mill, is that the existing government ministries, which have little stake in real reform, are engaged in active sabotage of Gorbachev’s and others’ efforts. In early October *Izvestia* ran an investigative piece about the ever growing shortage of meat in Moscow shops. It seems that in an effort to obtain more meat, the state procurement agency responsible decided it would increase prices paid to state farms. The rub was that the agency announced its intentions three months in advance of the actual price rise. The result – as any first year economics student could have predicted – was that the already pitiful meat supply vanished altogether. State farms, quite sensibly from their perspective, stopped slaughtering meat to wait for the new prices. The food ministry had finally discovered the microeconomic power of price signals – sort of.

Question: was this an example of an inept state enterprise experiment or deliberate sabotage by a recalcitrant bureaucracy? Answer: it is impossible to prove, and, in any case, as one person expert in the ways of Soviet bureaucracy put it, the central planners don’t need to conspire actively against economic reform. All they have to do is sit on their hands and say, “you can’t do this without us.”

THE EXASPERATION AND GENUINE DISAPPOINTMENT with Gorbachev’s regime runs deep within the intellectual and expert community – the kind of people governments at every level will need on their side if the country is to have a chance at a stable future. Sociologist Levada was only one of several observers of the Soviet political and economic state of mind who told me that the central government under Gorbachev, and his widely disliked prime minister, Nikolai Ryzhkov, was becoming more feeble as the weeks passed. The sense is not one of recrimination, but more a sad realization that a once admired man is no longer in the game, for

whatever reason, that the levers of power at the central government's disposal are just not connected to anything, and so it's time to look elsewhere.

Nikolai Shmelev is a respected pillar of the movement for genuine economic and democratic reform. Head of the USA and Canada Institute's economics department, novelist, member of the Congress of People's Deputies, and self-professed "economic liberal," he

toiled in the intellectual wilderness for years before Gorbachev's *glasnost* set him loose on the impossible task of rescuing the Soviet economy. Shmelev's disappointment with the present government is palpable.

He has long promoted a scheme, now shared by many other reformers in the country, to buy several tens of billions of dollars of Western consumer items to sell in Soviet stores. This would soak up the vast quantity of roubles now held in people's hands, avert hyperinflation during the transition to a market economy, and not incidentally, quickly improve the grim, deprived lives of ordinary citizens. He is perplexed by what he sees as the indifference of the Gorbachev government:

I know Mr. Gorbachev has begun to understand the enormity of the situation, but our government is so stubborn. I am afraid of this tradition of the Soviet leadership to despise its own people – just as the old aristocracy despised the people. They find it hard to spend such an enormous sum of money on medicine, pants, cosmetics, personal computers. Why? In our history we have spent our money on huge Egyptian pyramids – and now to spend it on such trifles?

AFTER OUR INTERVIEW, SHMELEV WAS OFF ON A trip to Bonn with Boris Yeltsin, the president of the Russian republic. This action itself says a lot. Yeltsin is widely seen, in the West at least, as a less appealing character than Gorbachev. But Yeltsin's stock is rising in public opinion polls, and most important for those who want to get things done, he is perceived by Russians as wanting to move more quickly and decisively than Gorbachev. An obvious advantage in a situation which cries out for someone to do something, but also a great danger. In desperate situations, "do something" can become "do anything" – a focus of power for opportunists and ideologues.

Regarding the opportunists of Russia's last great political upheaval in 1917, Adam Ulam, a pre-eminent historian of the Russian revolution, wrote that the Bolsheviks did not

seize power, they picked it up. "Any group of determined men could have done what the Bolsheviks did in Petrograd in October 1917: seize a few key points of the city and proclaim themselves the government. But the government of what? ... the Russian empire was in full dissolution."

The sense of disarray in the Soviet capital makes historical comparisons of this kind unavoidable. The impression that governments at all levels are losing their grip is growing. One of Gorbachev's principal economic advisors, Abel Aganbegyan, admitted to the Soviet parliament recently that no one actually knows what is happening to the economy. In Lenin-grad, the council of a local district (essentially a city ward) debated the option of declaring independence and printing its own currency – for the moment, cooler heads prevail.

ON THE FACE OF IT SUCH ACTIVITY SEEMS ABSURD, yet it is driven by its own inner logic. The rouble has lost so much value – "empty money" was one common euphemism – that it no longer makes sense to work for them. People don't need roubles and neither do state enterprises and republics. An increasing proportion of wholesale trade occurs on the barter system: cotton for wheat, meat for oil – a reversion to feudal era economics and yet another sign of the disintegration of the state.

Packages of foreign cigarettes, preferably "Marlboro", are displacing the national currency, the rouble, as the medium of exchange, a daily indignity that cannot help but have a corrosive effect on what little remains of the popular sense of what it means to be Soviet.

Nicolai Shmelev is impatient with questions about what a functioning Soviet economy would look like after the immediate crisis. He is thinking in months and weeks, not years: "So what kind of economy would emerge from the present mess? God knows. We ourselves don't know. I have no comprehensive vision of what kind of society it will be in ten years. But I hope we have had enough suffering and enough madness."

To set against all the pessimism, a glimmer of light. Until the various new property laws come into effect, there remains only one tiny crack in the door of the state's complete monopoly over economic activity – the so-called "cooperative." Two years ago, according to Shmelev, there were about 100,000 co-op members in the country generating production that could be measured in millions of roubles. Today

there are five million co-op members with a turnover of some sixty billion roubles – restaurants, taxis, and other small businesses. These co-ops have operated in the face of a hostile state bureaucracy "strangling them," in Shmelev's words, and a large proportion of the population regarding them as exploiters and mafia. "A miracle," says Shmelev – "grass growing through the concrete."

IF WORLD EVENTS IN THE LAST EIGHTEEN remarkable months have taught us anything, it is to be circumspect about predicting what will happen next. But for observers of the Soviet economy, it is clear that the issue is not whether the USSR will be a wealthy nation by Western standards within ten or twenty years, rather, it is whether there will be a Soviet Union at all by the middle of the decade, or even by the end of next year. The disappearance of the Soviet state would not necessarily be a calamity for the world. It all depends on how it's done.

If it is smaller political units, republics or regions, that pick up the political reigns and work with people to create local productive economies, why not. But such large-scale political upheavals have the nasty tendency to become violent and dangerous. The 1989 East European revolution was a rare event in that respect. So while the West has an enormous stake in how events unfold in the USSR, it is also the case that we have very little influence on the outcome – which is no reason not to worry about it.

"Why would a peace and security institute be interested in our economy?" a Russian friend asked me as we sped along in her state-supplied car with driver. "Because a country with 285 million impoverished, sullen, people and 30,000 hydrogen bombs is a menace to the world. We want you to be content and prosperous." When she translated for the driver, he laughed.

# THE GULF CRISIS AND THE ISRAELI-PALESTINIAN EQUATION

BY JIM LEDERMAN

HE NEAR-UNANIMOUS SUPPORT by Palestinians for the Iraqi invasion of Kuwait is yet another example of what happens when a popular national myth confronts and then takes control over national political policies. The Iraqi invasion brought the Palestinian masses out into the streets of Jordan and the West Bank in an extraordinary show of support for Saddam Hussein.

Palestinian newspapers of all political hues in East Jerusalem were unanimous in their praise of the Iraqi leader. Even among Palestinians who are Israeli citizens, the degree of applause was remarkable. A telephone poll released on 9 August, showed that 62 percent supported the invasion and 69 percent believed that Saddam Hussein was a national hero. Only 15 percent thought he was mad or irrational.

The practical consequences of this support were felt almost immediately. Egypt ordered its frontier posts to restrict the entry of Palestinians. Thousands of Palestinians who had been working in the Gulf states were expelled. The \$250 million they sent annually in remittances to their families in the Israeli-occupied territories slowed to a trickle. And once again, the PLO was condemned and became politically isolated in most of the Western world. To understand why the Palestinians acted as they did, and why they acted as uniformly as they did, one has to examine the context of events that were occurring in the Middle East at the time immediately prior to the invasion.

THE KUWAITIS WERE AMONG THE MOST WIDELY unpopular people in the Arab world. Whether they appeared in Cairo, Tunis, or Beirut, they were viewed as arrogant spendthrifts who used their money to throw their weight around and to ride roughshod over local sensitivities. The Sabahs, the ruling family, in particular, were viewed by most Palestinians as avaricious and unwilling to contribute more to the Palestinian cause than was absolutely necessary to contain Palestinian unrest at home.

Moreover, the Palestinian's political position prior to the invasion of Iraq looked particularly bleak. The Americans had suspended their low-level contacts in June in the wake of a terrorist attack on Israeli beaches. Israel's government had become dominated by ideological and security hawks. There was a crisis in Palestinian-Egyptian relations. The Soviet Union had withdrawn as an active patron. And the Palestinian uprising in the Israeli-occupied territories had stagnated and turned on itself. In July, more Palestinians had been killed by other Palestinians than by Israeli soldiers.

ANOTHER MAJOR REASON FOR PALESTINIAN despondency, which has gone virtually unnoticed in the Western press, is the massive Soviet immigration to Israel. Some 90,000 Soviet Jews had arrived in Israel in 1990 by the time the invasion occurred, and Israeli officials were predicting that immigration might reach two million by the end of the decade. This challenged one of the central Palestinian theses – that even if the Arabs could not defeat the Israelis on the battlefield, the far higher Palestinian birthrate would soon change the demography of the area and cause a political crisis.

To expatriate Palestinians, the arrival of the Soviet Jews meant more Jewish soldiers and, eventually a stronger Israeli economy. To Palestinians in the occupied territories the new arrivals represented an immediate threat to their jobs in Israel, and more importantly, a huge new source of Jewish settlers for the occupied territories. To Israeli Arabs, they represented a twofold threat. The first was that settling the immigrants was putting such a strain on the Israeli economy that Arab efforts to achieve parity with Jews in government grants for municipal services would be halted. The second was that Israeli Arabs, because of their high birthrate, were on their way to becoming a significant fulcrum of power in the Knesset. With the arrival of the Soviet Jews, this potential source of power would be lost.

ONE OF THE CENTRAL NATIONAL MYTHS THAT Palestinians turn to in times of crisis is that Zionist Jews are modern Crusaders – a foreign Western body implanted within the Arab midst, which can and will be cauterized by the sword. The model for almost all Palestinians is Salladin, the Kurdish general who drove the Crusaders from Jerusalem in 1187, and reestablished Moslem hegemony in the holy city.

Iraqi leader Saddam Hussein had cultivated an image of himself as the modern Salladin. His willingness to confront the American superpower, his ability to sow fear in the Gulf sheikdoms where the Palestinian workers had few civil rights, and his calls for holy war against the infidels the Saudis had invited onto

their territory, elicited an immediate emotional response among Palestinians. In many ways, Saddam Hussein was viewed as a secular messiah.

The effects on the Israeli-Palestinian equation have been substantial. The right in Israel launched a campaign of “we told you so” – Palestinians had entered into a perfidious alliance with Israel's most dangerous enemy and so they could not be trusted. Israeli doves, including many who had worked hard for an Israeli-Palestinian dialogue, were

left in disarray. The doves' elder statesman former foreign minister Abba Eban, stated, “My colleagues and I cannot possibly have a fruitful discussion with Palestinians who applaud the brutality of Saddam.” Knesset member Yossi Sarid, a leading peace activist added, “You need to put on a gas mask to protect yourself against the poisonous smell of the pro-Saddam stand of the Palestine Liberation Organization.”

THE ISRAELI LEFT'S PRIMARY INTERLOCUTORS in the occupied territories, like Feisal al Hussein, arguably the most influential political figure in the West Bank, tried to soften the effect the Palestinian stand was having in Israel. He stated that Palestinian support for Saddam was “a sign of frustration.” Furthermore, Palestinians were not for the Iraqi invasion, but against the “American double standard” of supporting Israel despite its conquest of the West Bank and Gaza, while opposing Iraq's similar conquest of Kuwait. The latter argument made little impression on the Israelis, who recalled that they did not launch the war that led to the capture of the West Bank, while Iraq's action was one of naked aggression.

For the majority of the Israeli centre and right wing the emphasis has shifted to another concern, the fear that any resolution of the Gulf crisis, including an Iraqi withdrawal from Kuwait, will somehow be linked to Western efforts to pressure Israel to withdraw from the occupied territories. Both the right and the left are, however, united by a concern over the as yet unimaginable short and long-term consequences of a possible Iraqi decision to launch a major international terrorist campaign led by Palestinian terrorist mercenaries like Abu Abbas and Abu Nidal.

*This is the second in a series of articles Peace&Security will present on issues that comprise the Middle Eastern and Arab-Israeli conflicts. Jim Lederman, a Canadian, is the longest-serving foreign correspondent in Israel. He is currently finishing a book on US media coverage of the Intifadah.*

## FROM THE DIRECTOR

*Policy reviews – when are they more trouble than they are worth?*

REVIEWS OF FOREIGN POLICY, SECURITY POLICY, defence policy and aid policy are not always a good idea – at least in the somewhat irregular manner in which Canada has traditionally undertaken them. One thing we have surely now learned from recent history is that events can move very quickly – the agenda is a continuously evolving one, and perhaps we should now be looking at rolling reviews and annual white papers on the British model. This would help ensure that the consultation process is never closed, nor focussed in great spasms of input, followed by long periods of silence.

There are some lessons specific to the Canadian government context: most of the policy review exercises of the late 1960s and early 1970s – with the possible exception of the Defence White Paper of 1971 – were poorly conceived and executed, with full involvement of the top levels of government. The net results were reviews that did more harm than good, and some of that harm has been quite lasting.

The then new Conservative Government's "Grey Paper" on foreign policy of 1985 (*Competitiveness and Security: Directions for Canada's International Relations*) was largely countermanded by the subsequent Special Joint House-Senate committee report (Hockin-Simard) as well as by the government's own response to this parliamentary study. This response was never enshrined as official policy in a White Paper, nor was the earlier Grey Paper ever withdrawn, raising the possibility of confusion in a number of areas. Some subsequent debates and decisions about independent Canadian agendas, multilateral participation and bilateral coordination with the US might conceivably have been more straightforward if a clearer review process had produced a more definitive result, but this is debatable. These discrete and sometimes conflicting agendas, and the contentious issues which tend to focus them, are the hardy perennials of Canadian foreign policy.

FOR ANOTHER EXAMPLE OF HOW THE PROCESS handicaps the product, we need only look to the Defence White Paper of 1987. It was motivated by a perceived need to review the means

for security and defence policy, but was undertaken at what proved to be a supremely unlucky time for the reviewers – just when the objectives of Canadian defence policy, after remaining largely static for some decades, had begun to shift under their feet. Many of us were strongly critical of the White Paper at the time, mostly because we thought it misdirected. Some of us judged its goals unrealizable as well.

In the end, fiscal concerns did more to gut the White Paper than did reduced East-West tensions. However, the fact that new directions for the armed forces were once again blunted, and raised expectations were once again dashed, has also done lasting harm. On balance in this case, "twere better never to have reviewed at all, than to have reviewed and lost."

It is not clear whether or to what extent this mixed history of recent Canadian foreign policy and defence reviews may have contributed to a reluctance to plunge in again in 1989, even after Mr. Gorbachev had quite evidently begun to turn the international order inside out. Other factors obviously played a role, including the constant necessity for policy fire-fighting – intensified because of these very developments – and internal resource and organizational preoccupations.

There was also prolonged official and political debate in Canada about whether Gorbachev would bring qualitative change. Canada, while never a leader in armed confrontation with the Soviet Union, had always been one of the toughest in the West on issues of human rights abuses of the Soviet totalitarian system. The net result was that our government was one of the slowest in the West to acknowledge and then respond to this change.

ONCE UNDERTAKEN, HOWEVER, THE INDISPENSABLE policy review proceeded apace and has so far produced well. A Minister has provided personal and institutional commitment, and has been prepared to carry the results of the review into dialogue with interested Canadians and with our partners abroad. Officials seem, from the outside, to have managed their internal analyses and debates relatively expeditiously. The immediacy of substantive change in some of the pillars of the international system seems to have given direction to the review so there was neither the need nor the temptation to start out from abstract first principles, as, for example, the 1970 review had done.

Many Canadians have contributed to the review process, some in more organized ways

than others. Many of us in the field took the opportunity to organize consultations, prepare papers, and contribute to the mechanisms of policy formulation. The public products of the security policy review have, so far, also been conditioned to promote ongoing dialogue – mainly a series of speeches by the Secretary of State for External Affairs, beginning with the exploratory McGill University speech in February, on principles of our future relationship with Europe, and the Humber College speech in May confirming Canadian directions on Europe.

There was also an interesting debate in the House of Commons on 31 May triggered by an Opposition motion which referred to a lack of policy initiative in the foreign policy area. Mr. Clark has moved on to open up the debate on security questions in the Asia-Pacific arena, which has now helped generate lively and important discussions with our Pacific partners.

IN THE ELEMENTS OF POLICY THAT HAVE SO FAR emerged, there has been some intriguing analysis and risk-taking. The Canadian position on the strengthening and enlarging of the Conference on Security and Cooperation in Europe (CSCE), long a preoccupation of this Institute, was well ahead of that of either Washington or London, and helpful in moving NATO forward on the issue. We, outside government, do not know what all the other shoes are that are supposed to drop. We understand that there has been some thinking about policies on multilateral participation which should be well-timed to respond to the many new challenges and opportunities facing the UN.

Of course, there is one big shoe still to drop, and that is the defence policy review – much promised and often delayed. In fairness we should remember that the '87 review came out when it came out, and as it came out, in part through desperation – another unhappy imperative of the spasmodic review approach. In light of the events of the past few months, we must recognize that the issues facing Canadians in the defence area have changed radically. Mr. McKnight has stated unequivocally that "the geopolitical basis for much of the [1987] policy had evaporated" by the end of 1989. The new geopolitical realities are even more complex and our defence options need to be even more closely and flexibly geared to our foreign policy and security policy agendas. All Canadians will have a stake in getting these reviews right as we move through the 1990s.

– BERNARD WOOD

IN AUGUST 1990, THE CANADIAN AND QUEBEC governments called on the Canadian armed forces in two very different situations. On 6 August, the Government of Quebec made a formal request for aid from the Canadian armed forces in order to deal with the confrontation between the Mohawk Indians and the Sûreté du Québec (SQ) at Oka and at the Mercier Bridge. Four days later, on 10 August, Prime Minister Mulroney announced that two naval destroyers and a supply ship, along with eight hundred personnel, would travel to the Persian Gulf to aid the multinational force gathering there to enforce UN sanctions against Iraq. In both cases, authority for the actions undertaken derives from the National Defence Act.

The National Defence Act or Defence of Canada Act is a lengthy document which outlines the regulations governing the Canadian Armed Forces, including inter alia, regulations for court martials, calling up and releasing men and women from the armed forces, and regulations for reserve forces.

#### **Aid to the Civil Power: The Army at Oka and Kahnawake**

Part XI of the National Defence Act provides for aid of the civil power. This means that the armed forces can be called to aid the civil power in instances where it can no longer control a situation. This differs from the 1970 use of the armed forces in Quebec during the FLQ crisis. In that case the federal government declared that a state of apprehended insurrection existed. Under the War Measures Act this gave them special powers of arrest.

The War Measures Act has since been replaced by a new Emergencies Act which contains a number of safeguards against abuse of the powers to be used in an emergency, provides for Parliamentary review and gives provinces a greater role than they had under the War Measures Act. Since the actions at Oka and the Mercier Bridge were carried out under the authority of the National Defence Act, it must be assumed that it was determined that an emergency did not exist.

According to the National Defence Act, the request for aid must be made by the attorney general of the province in which the situation arises. The request can be made on the initiative of the attorney general but may also be based on information received from a judge of a superior, county or district court.

Section 275 states that aid can be requested

## **CALLING OUT THE TROOPS**

### *The National Defence Act and How It's Used*

when "... a riot or disturbance of the peace, beyond the powers of the civil authorities to suppress, prevent or deal with ... occurs or is, in the opinion of an attorney general, considered as likely to occur." The attorney general must make the request in writing. The act provides an outline of the wording that should be used in the request.

The request is made to the Chief of the Defence Staff who from that point onwards makes decisions about the number of forces needed, and may increase or decrease them as he sees fit. The forces stay in place until notification is received from the attorney general that the aid is no longer required. Previously, the National Defence Act required the province requesting the aid to pay all costs incurred in using the armed forces. Under the new Emergencies Act, this provision was changed and the federal government now pays for the use of the forces. Within seven days of the request from a province, the attorney general must hold an inquiry into the circumstances requiring the call-up of forces and give the report to the Secretary of State of Canada.

In the incident at Oka, the army initially undertook to relieve the SQ at Oka and Kahnawake. On 27 August, when the Government of Quebec determined that negotiations had broken down, it asked the armed forces to proceed with the mandate initially given to them by the Quebec government. The mandate included removal of the barricades, restoration of freedom of movement on roads and bridges, removal of strong points, and the restoration of public order. The Chief of the Defence Staff, General John de Chastelain, gave the orders to the forces in place to proceed with this mandate.

#### **Active Status: Canadian Navy to the Persian Gulf**

The use of the armed forces in the defence

of Canada is also provided for by the National Defence Act. Section 31 states that the ... Governor in Council may place the Canadian Forces or any component, ... thereof ... on active service anywhere in or beyond Canada at any time when it appears advisable to do so (a) by reason of an emergency, for the defence of Canada; or (b) in consequence of any action undertaken by Canada under the United Nations Charter, the North Atlantic Treaty or any other similar instrument for collective defence that may be entered into by Canada.

Under Section 32, if Parliament is not meeting at the time the forces are placed on active service, "... a proclamation shall be issued for the meeting of Parliament within ten days..."

Traditionally, an order-in-council is used to place troops on active service. The three naval vessels assigned to join the multinational force in the Gulf by Prime Minister Mulroney left Canada on 24 August. However, at the time, no order-in-council was signed placing the forces on active service. Parliament was due to reconvene on 24 September. To avoid calling Parliament any sooner, the naval forces could not officially be placed on active service until 14 September.

This presented a problem of timing when the Canadian contingent found itself ready to enter the Suez Canal two days prior to the expected order-in-council. According to the regulations in United Nations resolutions establishing the sanctions and their enforcement, those military forces taking part in the enforcement process are on active status once they enter the zone. Since the Canadians would enter the zone immediately upon leaving the Canal, the Canadian ships remained in Sicily until their passage through the Canal would coincide with active status.

Once on active status, the Canadian forces receive their orders from the Chief of the Defence Staff. Canadian forces operate under rules of engagement established prior to departure. The multinational force undertaking to enforce the UN sanctions has been operating under general guidelines established by the UN and developed through consultations among the military chiefs of the countries involved. □

## DEFENCE NOTES

### Ballistic Missiles and the Gulf Crisis

The Gulf crisis has focussed attention once again on the proliferation of ballistic missiles. Iraq is believed to have deployed three types of ballistic missiles: the Scud-B, a Soviet built short-range missile with a range of 300 kilometres, and two Iraqi developments of the Scud-B, the *al-Husayn* and the *al-Abbas*. The *al-Husayn*, with a range of 650 kilometres, has a greater fuel capacity and a larger warhead than the Scud-B. The *al-Abbas* is a further modification which increases the range to around 900 kilometres. Iraq also has under development the *el-Abid*, a three-stage rocket designed to launch satellites into orbit, but which could also serve as an intermediate-range missile.

In a controversial change of policy, on 5 September the US State Department issued an export license for missile casings destined for Brazil. Several press reports, neither confirmed nor denied by Brazilian officials, claim that contracts were signed in 1989 establishing cooperative projects between Brazil and Iraq on missiles and satellites.

September press reports also claimed that in 1989 Western intelligence had detected the Iraqi test of a missile armed with a chemical warhead. According to these reports, Iraq unsuccessfully sought an agreement with Mauritania to allow further tests in deserted areas of that country. Baghdad used chemical weapons repeatedly in the last phases of the war with Iran, mainly in the form of canisters dropped from airplanes. Iraq manufactures both mustard and nerve gas, and is

believed to have significant stockpiles of both.

### Ballistic Missile Defences

On 9 September, Israel for the first time flight-tested the Arrow, an anti-tactical ballistic missile intended to intercept and destroy short- and intermediate-range ballistic missiles of the Scud type. Although the test was described as a success, Israeli officials stressed that many more tests would be required before the missile could be considered ready for production. The Arrow development is co-funded by Israel and the United States.

Meanwhile, in Washington key administration officials have stressed the connection between events in the Gulf and the importance of the Strategic Defense Initiative (SDI). In July Henry Cooper, former US defence and space arms negotiator in Geneva and a strong supporter of SDI, was appointed as the new director of the SDI programme. Threatened with cutbacks which could reduce funds for the research programme, Cooper has strongly emphasized the importance of SDI as a counter to the proliferation of ballistic missiles. Perhaps coincidentally, in August the US Senate proposed to redirect SDI funding from "exotic" space-based technologies to land-based ballistic missile defences which, in the short term, would be less likely to threaten the ABM Treaty and have more immediate application to defence against short- and intermediate-range missiles.

### The US Defence Budget

In late October, the House-Senate Conference Committee finally reached agreement of a sort on the fiscal year 1991 US defence budget. The compromise agreement authorized total expenditures of US\$288.3 billion. While many programmes were cut, no major projects were abandoned. The SDI budget was held to \$2.9 billion, almost \$2 billion less

than requested by the Pentagon. Funding for the B-2 was continued at levels close to Pentagon requests, but dispute continued between the Senate and the House on the future of the programme. Defense Secretary Richard Cheney fought to preserve the SDI programme, but earlier signaled his own intentions in mid-August when he cut nine destroyers and one submarine from the Navy building programme. In cutting one of the two advanced, high speed Seawolf attack submarines, Cheney opened the door to the critics in the Congress who want to cancel the entire Seawolf project. The Seawolf, at a cost of US\$1.2 billion per submarine, may be judged unnecessary if the Soviet threat continues to decline.

### Rethinking US Defence Policy

While the FY 1991 budget promised few changes other than fiscal restraint, long-term defence policy appeared destined for change. Prior to the Iraqi invasion of Kuwait, the Pentagon proposed a fundamental restructuring of US military forces based on the assumption that the defence budget would shrink by ten percent over five years. The plan, reportedly overseen by General Colin Powell, Chairman of the Joint Chiefs of Staff, and first presented to the President in June, is premised on the assumption that, once the Soviets have withdrawn from Eastern Europe, it would take up to two years to mobilize a full-scale, multi-front attack on Western Europe. It envisages reducing US forces in Europe to between 100,000 and 125,000 as part of an overall reduction which would cut the armed forces by 500,000 from the current level of 2.1 million.

Further key elements in the proposal include cutting the number of navy aircraft carrier groups from fifteen to eleven, and reducing the number of active Army divisions from eighteen to twelve. In addition, the plan calls for the

establishment of two "reconstitutable" divisions which would stockpile equipment and rely on small cadres of permanent soldiers while relying on the rapid call-up of reservists to bring the divisions to operational strength. In general, the plan emphasises the need to respond to a variety of regional conflicts rather than to the defence of Western Europe against the Soviets.

### The End of World War II

Largely unheralded in the midst of the Gulf crisis, on 12 September the victors of World War II relinquished their military occupation rights in Berlin. In Moscow the British, French, US and Soviet foreign ministers signed a treaty representing the final settlement with Germany. Building on the "two plus four" formula developed in Ottawa in February, the occupying powers surrendered their right to maintain air corridors to Berlin, to oversee the administration of the city, and to determine the boundaries of Germany. In exchange, the two Germanies agreed that the new unified country will limit the size of its army, will not acquire nuclear, chemical or biological weapons, and will consist of the area enclosed by the boundaries of the two countries as they were immediately before unification. On 2 October 1990 the two Germanies were officially united.

The combined German armies, now numbering over 600,000, will be reduced to 370,000 over the next four years. In a separate agreement, Germany undertook to pay Moscow \$US7.5 billion to resettle Soviet soldiers in the Soviet Union. The unified Germany will be a member of NATO. However, there are restrictions. Until 1994, German units assigned to NATO will not be allowed to deploy in East Germany. After 1994, German but not foreign NATO troops will be allowed to deploy in East Germany, but without nuclear weapons.

— DAVID COX

## ARMS CONTROL DIGEST

### NPT Review

The Fourth Review Conference of the Nuclear Non-Proliferation Treaty (NPT), meeting in Geneva from 20 August to 15 September, failed to agree on a consensus final document, as the result of a dispute over the issue of a comprehensive test ban (CTB). Mexico and Iran objected to a last-minute draft paragraph by the conference President that merely noted the differences of opinion on this issue. Earlier, proponents of immediate negotiations on a CTB had blocked a US attempt to insert a reference to its agreement with the USSR to proceed with "step-by-step negotiations on further intermediate limitations on nuclear testing, leading to the ultimate objective of the complete cessation of nuclear testing as part of an effective disarmament process."

Nevertheless, most delegates described the conference as largely successful. Agreement was reportedly reached on about ninety-five percent of the issues under discussion, including the need for full-scope nuclear safeguards as a condition for "significant" nuclear supply, and tighter export controls on nuclear technology. Some states, led by the US, called for an indefinite extension of the Treaty after its first term expires in 1995, but many non-aligned states insisted that this depended on progress towards a CTB. Meanwhile, a conference to amend the Partial Test Ban Treaty of 1963 by transforming it into a CTB is scheduled for January 1991. Its proponents, while not expecting the US and Britain to agree to

such a move, are nevertheless hoping that it will raise public awareness and increase the pressure on those governments to begin negotiations on a CTB. (For more on the review conference see *To New York – A Message From Geneva*, on page 8).

### Conventional Forces in Europe

In New York in early October, US Secretary of State Baker and Soviet Foreign Minister Shevardnadze announced that they had reached an agreement in principle on all the major issues remaining in the negotiations for a Conventional Forces in Europe (CFE) Treaty. They predicted that the Treaty would be ready for signing at the 19 to 21 November Paris CSCE Summit – a document ready for signature has been a long-standing Western condition for convening the summit.

The two countries had previously decided to drop the limits on personnel in Central Europe agreed to in Ottawa last February, noting that they had become obsolete as a result of the announced Soviet withdrawal of all of its forces from Germany by 1994. Instead, personnel reductions are to be discussed in follow-on "CFE-IA" negotiations which they have agreed will begin on the basis of the same membership and mandate, after the Paris Summit.

As the result of consultations in late September and early October, the two alliance leaders were able to agree to a ceiling of 5,550 on Soviet aircraft, including a politically-binding limit of 400 on land-based naval aviation (not including maritime patrol aircraft); "sufficiency rules" that would limit the USSR to an average of 33.6 percent of the European total in ground forces; and the destruction, rather than conversion, of the vast majority of equipment to be reduced. NATO and the Warsaw Pact will each be allowed 20,000 tanks, 20,000 artillery pieces, 30,000 armoured combat vehicles (ACVs), 6,800 combat aircraft, and 2,000

helicopters. Within these ceilings, no one country can have more than 13,300 tanks, 13,700 artillery pieces, 20,000 ACVs, 5,150 combat aircraft, and 1,500 helicopters. NATO will destroy about 4,000 tanks, compared to 19,000 for the Warsaw Pact (the latter figure is lower than previous estimates because of the recent transfer of large Soviet forces to the east of the Urals). In addition, because of the existing disparity in numbers between East and West, the Pact will have to destroy thousands of armoured combat vehicles, artillery pieces, and aircraft.

Meanwhile, as part of a "Treaty on the Final Settlement With Respect to Germany" signed by the "two-plus-four" countries in Moscow on 12 September, Bonn formally agreed to reduce the military personnel of a united Germany from over 600,000 at present to 370,000 within three to four years, of which no more than 345,000 will belong to the ground and air forces. It also agreed that no foreign armed forces or nuclear weapons and their carriers would be stationed in former East German territory after Soviet military withdrawal. The restriction would not apply to dual-capable weapon systems, however, as earlier demanded by the Soviets.

### Nuclear Testing

The US Senate on 25 September ratified the 1974 Threshold Test Ban and 1976 Peaceful Nuclear Explosions treaties, by a vote of 98-0. The USSR Supreme Soviet followed suit on 9 October by a vote of 347-0, with 3 abstentions.

The two bilateral agreements, which limit the yield of underground nuclear explosions to 150 kilotons (kt), had been held up by US insistence on the strengthening of their verification provisions, by means of Protocols agreed to at last June's Washington Summit. Under the new Proto-

cols, the US will be able to use its favoured "CORTEX" method to measure the yield of every Soviet explosion planned to exceed 50 kt. In addition, on-site inspection will be permitted for all other explosions with a planned yield of over 35 kt.

While the Soviets are eager to proceed immediately with further "intermediate" testing limitations in the absence of a CTB, the current US position is that the resumption of such negotiations must await the putting into practice of the new Protocols. In a UN speech on 26 September, Canadian External Affairs Minister Clark called for the US-Soviet commitment to further restrictions on nuclear testing to "be followed up immediately."

### Short Notes

US and Soviet officials continue to express the hope that a Strategic Arms Reduction Treaty (START) will be completed before the end of the year and ready for signature at the next Presidential summit, planned for Moscow. In early October, Foreign Secretaries Baker and Shevardnadze reported "substantial progress" on the outstanding issues, which were said to include non-circumvention (especially Soviet concerns about the transfer of US weapons and technology to Britain) and US concerns about the Soviet Backfire bomber. However, President Bush suggested that the next Moscow summit – with a START treaty as its centrepiece – was unlikely before 1991.

In his 26 September UN speech, External Affairs Minister Clark announced that Canada, in support of efforts at greater "transparency" of arms transfers and procurement, this year for the first time will be releasing an annual report on its exports of military goods. —

## REPORT FROM THE SECURITY COUNCIL

### Middle East

Since the Iraqi invasion of Kuwait on 2 August, the UN Security Council has been engaged in one of its most intense and prolific periods ever. Not since its creation forty-five years ago, have the five major powers and the ten other nations worked with such unanimity within the Council.

The new tone was set at 5 a.m. on 2 August, when the Council voted to condemn the Iraqi invasion. The adoption of Resolution 660, which demanded the unconditional withdrawal of all Iraqi forces, became the foundation for further Council action as Iraq steadfastly refused to heed the demand. It also marked the beginning of almost non-stop diplomatic activity that would continue in the coming months.

On 6 August, the Council adopted Resolution 661, which imposed on Iraq the most sweeping set of mandatory sanctions in the history of the UN. In explaining Canada's support for the measure, ambassador Yves Fortier told the Council that it was necessary to safeguard the rule of law and to deter future aggressors. "We owe this responsibility particularly to the small and vulnerable states such as Kuwait who look to this Council for protection and support," he said.

On 9 August, the Council declared Iraq's annexation of Kuwait "null and void." The vote was unanimous. On 18 August, after Iraq announced that foreign nationals would be treated as "guests" and could not leave the country, the Council again acted unanimously. It adopted Resolution 664 which demanded Iraq "permit and facilitate" the immediate depart-

ture from Kuwait and Iraq of all third-country nationals.

Soon after, the US indicated it planned to "interdict" ships headed for Iraq and Kuwait, a unilateral move strongly opposed by Canada which led a diplomatic offensive in the Council to persuade Washington to act within the authority of the UN. This led to intense negotiations which resulted in Resolution 665. The document, adopted on 25 August with only Cuba and Yemen abstaining, called on States deploying maritime forces in the Persian Gulf and Red Sea area to use "measures commensurate to the specific circumstances" to halt all inward and outward shipping. It also requested the states involved to coordinate their actions using "as appropriate," mechanisms of the Council's Military Staff Committee.

The language was carefully chosen and reflected the desire to accommodate the differing views of the US and the Soviet Union on the role of the Military Staff Committee, a long dormant organ whose original purpose, among other things, was to direct UN military operations.

The Soviet Union wanted to activate the committee by invoking article 42 of the UN Charter, a move successfully resisted by the US. The result was a compromise, which gave a UN blessing to naval interdiction efforts but avoided placing US and other forces under a unified UN command.

Amidst reports that Iraq was depriving third-country nationals of food, the Council adopted Resolution 666 on 13 September. The resolution stated that the Council "expects" Iraq to comply with its obligations and that it was responsible for their safety. It also authorized the sanctions committee created by Resolution 661 to keep the situation regarding foodstuffs under constant review. The document also requested that the sanctions committee pay particular attention to the needs of children under fifteen, expectant mothers, the sick and the elderly with a

view of exempting them from the impact of the UN embargo.

On 16 September, the Council took further action after Iraq entered various diplomatic premises and arrested a number of diplomats and foreign nationals. Resolution 667, adopted unanimously, "strongly condemned" Iraq and demanded that it protect the safety and well-being of diplomatic and consular personnel.

On 25 September, the Council voted 14 to 1 (Cuba) to tighten the embargo against Iraq. At an unusual meeting attended by the foreign ministers of thirteen of the fifteen member countries, the Council elected to ban air transport to and from Iraq or Kuwait. The resolution did not allow for military interdiction of aircraft. Rather, it called on all states to deny overflight permission to any aircraft destined for Iraq or Kuwait unless the aircraft landed at a specified airport for inspection. The resolution further stated that only humanitarian food aid and medical supplies should be allowed to pass.

On 12 October, the Council unanimously adopted a resolution that condemned Israeli actions that resulted in the deaths of over twenty Palestinians four days before (8 October) at the Temple Mount (Al Haraam alShareef) in Jerusalem during clashes with security forces. The resolution was significant in that the US supported the condemnation and the unanimity of the Council was preserved.

Diplomats feared that a US veto or abstention would signal to Iraqi leader Saddam Hussein that the Council was divided. At the same time, a number of non-aligned countries insisted that the Council not be perceived as having a double standard, one for dealing with issues dear to the US and another for issues of concern to Arab nations.

Under the terms of resolution 672, the Secretary General was requested to send a mission to the region and report back by the end

of the month. Israel, however, refused to receive the mission. On 24 October, the Council voted, again unanimously, to deplore the Israeli refusal and urged it to reconsider. Underlying Israel's refusal was a reluctance to grant the UN any role in East Jerusalem, which it considers part of its capital but which the international community considers to be under occupation.

### Cambodia

On 20 September, in the midst of consideration of further measures against Iraq, the Council unanimously adopted Resolution 668 that welcomed the formation of a Supreme National Council by the parties in the Cambodian conflict. The decision by the warring factions was the result of prolonged efforts by the five permanent members to create a framework for a peaceful solution in Cambodia.

The resolution was viewed by diplomats as a significant step forward in the efforts to end the conflict. Soon afterwards, the UN began planning for a possible operation in Cambodia which would be one of the biggest of its kind with a force that some officials said could be as high as 20,000 military and civilian personnel.

### Other Business

The Council also managed to attend to some routine matters. On 14 August, it adopted Resolution 663, which recommended that the Principality of Liechtenstein be admitted to membership of the United Nations. Liechtenstein became the 160th member, and in October, the 159th when the German Democratic Republic and the Federal Republic of Germany united.

On 27 September, the Council extended the mandate of the Iran-Iraq military group (UNIIMOG) by two months, to 30 November. Diplomats predict the group will eventually be dismantled as a result of Iraq's decision to settle its dispute with Iran.

— TREVOR ROWE

## REPORT FROM THE HILL

### The Gulf Crisis

On 8 August, the Secretary of State for External Affairs, Joe Clark announced that the government had put regulations in place to give effect to UN sanctions against Iraq: all Iraqi and Kuwaiti imports to Canada and all Canadian exports there were prohibited; all unused export credits ceased and nothing further would be issued; and any assets or securities of the Iraqi and Kuwaiti governments or their agencies were frozen, while no funds could be transferred there.

On 10 August, shortly after a visit with US President Bush on 6 August, Prime Minister Mulroney announced that Canada would send two destroyers and a supply ship, with 934 personnel aboard, to join the multinational force that was being assembled in the Persian Gulf. Both Liberal House Leader Herb Gray and NDP external affairs critic Bill Blaikie pointed out that it was the first time since World War II that Canada had sent troops abroad other than under the flag of the United Nations. Both also called for Parliament to be recalled immediately from its summer break to debate the decision.

The Prime Minister chose to avoid this course, which is required under the National Defence Act, by delaying putting the ships on active service ("war ready") until they reached their destination. (For more on the National Defence Act, see *Defence Notes Background* on page 16).

On 14 September the Prime Minister also announced that the government would deploy a squadron of CF-18 fighter aircraft to the Gulf to provide air cover for Canadian ships and sailors, as well as

another 450 personnel. At the same time, an additional sum of up to \$75 million was allocated for humanitarian and economic assistance for people and countries seriously affected by the crisis. An initial \$2.5 million had already been provided.

### The Oka Dispute

Meanwhile, on 14 August, in response to a request from the Quebec government, 2,500 Canadian troops were deployed to two Quebec sites at Oka and Chateauguay which were the scene of blockades by Mohawk natives in a dispute over land claims in the area. After prolonged negotiations, Mohawks began working with the army on 29 August to dismantle barricades near Chateauguay, which had blocked the Mercier Bridge that links South Shore communities to Montreal. The bridge reopened to traffic 6 September (after being closed since 11 July), but a small enclave of Mohawks continued to hold out at Oka until 26 September, with the army operation finally ending some days later.

### The Debate in Parliament

Parliament finally resumed on 24 September, the date originally agreed to at adjournment in June, but since protested by an opposition anxious to debate both the Oka dispute and the Gulf crisis. Joe Clark presented a motion for the House's approval which condemned the invasion of Kuwait, supported all relevant UN Security Council resolutions since then, and supported the dispatch of Canadian Forces to take part in the multinational military effort.

During the lengthy debate that followed, the opposition parties focussed their objections on the fact that Parliament had not been recalled earlier to debate the motion and on the need for the government to adhere strictly to United Nations-sanctioned mea-

sures. Thus the Liberals presented an amendment which called on Canadian Forces to enforce the UN resolutions, while the NDP urged an amendment "that Canada work at the Security Council to seek assurances that no country will undertake offensive military operations against Iraq unless they are under UN command and explicitly authorized by the Security Council."

Ultimately, after discussions between the Liberals and Conservatives, a new motion was presented on 19 October which included an undertaking by the government "to present a further motion to this House in the event of the outbreak of hostilities involving Canadian Forces in and around the Arabian Peninsula." This motion was agreed to in a vote on 23 October of 170 to 33, with most of the NDP and a handful of dissident Liberals and the Bloc Québécois voting against.

### Committee Work

The House motion was referred to the House Standing Committee on External Affairs and International Trade, which had already begun a series of hearings on the Gulf crisis. Joe Clark and Defence Minister Bill McKnight appeared before it on 25 October. There Clark declared that "Canada is ready to use force to get Iraq out of Kuwait, even without UN approval." This prompted a spate of questions in the House that afternoon, with the opposition parties expressing strong disapproval of such a course. The Committee will seek to report to the House before Christmas.

In addition to its work on the Gulf crisis, the House Committee also held hearings on 16 and 18 October on the renewal of the North American Aerospace Defence (NORAD) agreement with the United States, whose current five-year term ends in the spring of 1991. Thereafter, a sub-

committee was established under the chairmanship of Walter McLean. The sub-committee called for submissions from various interested groups on the question of NORAD renewal and commissioned a paper by a small group of outside experts. It is hoped that the sub-committee will report its recommendations to the full Committee some time in December.

The House of Commons Standing Committee on the Environment tabled its fourth report entitled *No Time to Lose: The Challenge of Global Warming* on 17 October. It called for Canada to cut its emissions of carbon dioxide by at least twenty per cent by 2005. The government had not yet staked out its position on carbon-dioxide cuts for the World Climate Conference that was held in Geneva, 29 October to 6 November. The report contained sixteen other recommendations, including a strong admonition that "energy policy-making must have as its most immediate focus the more efficient and conserving use of energy."

### Shadow Cabinets

Both opposition parties reorganized their shadow cabinets. The Liberal critic for External Affairs is Lloyd Axworthy, for Defence, William Rompkey and for Environment, Paul Martin. In addition, Warren Allmand took responsibility for Disarmament and Arms Control, Christine Stewart for CIDA. Liberal Leader Jean Chrétien also organized a series of caucus committees, including ones on External Affairs and Defence, chaired by Lloyd Axworthy, and Sustainable Development, chaired by Paul Martin.

New Democratic Party Leader Audrey McLaughlin named British Columbia MPs Svend Robinson as External Affairs critic and John Brewin as Defence critic, while Jim Fulton remained responsible for the Environment. □

— GREGORY WIRICK

## REVIEWS

### Kennedy & Diefenbaker: Fear and Loathing Across the Undefended Border

Knowlton Nash

Toronto: McClelland and Stewart, 1990,  
336 pp., \$28.95, cloth

John Diefenbaker and John Kennedy disliked one another intensely. In this fascinating portrait of their relationship and their times, Knowlton Nash explores both the personal and the substantive reasons for their distrust of one another, and analyses the effects of their personal differences on relations between the two countries.

Diefenbaker and Kennedy were completely different personalities and neither had much respect for the attributes of the other. Diefenbaker loved the House of Commons, and the cut and thrust of debate. He revelled in campaigning and grand speeches. He was effective in Opposition but, once in power, dithered and found decisions difficult. Kennedy was the opposite; while a member of the US Senate, he had given at best perfunctory attention to it. Campaigning was only a means to an end. What he loved was to govern, to exercise the levers of power in order to further his ideas.

Diefenbaker revered Dwight Eisenhower, and from 1957 through 1960, relations between the two countries were friendly and cordial. Indeed, the seeds of later discontent might have been sown in those early days of the Diefenbaker government when the NORAD agreement was signed with what seemed in retrospect to have been undue haste.

Many of the subsequent irritants during the Kennedy years focused on arming with nuclear warheads the Bomarc missiles already in place in North Bay and La

Macaza, and the CF-104s which were part of the Canadian forces in Europe. The Americans and our NATO allies were convinced that in accepting the missiles and the assignment of a strike force capacity for the 104s, we had agreed to obtain nuclear warheads for them – otherwise they were not effective. The Americans would continue to own and to authorize the use of the weapons in consultation with Canada.

During the three meetings between Diefenbaker and Kennedy there was continued discussion of the nuclear issue, with, according to Nash, Diefenbaker vacillating between acceptance and denial. Howard Green, the Minister of External Affairs, was very active at the UN and on issues of disarmament, and counselled against acquiring nuclear weapons; Douglas Harkness, the Minister of National Defence, was equally convinced that we should live up to what he thought was our commitment to accept them. Kennedy supported the latter view, but more than anything else, wanted a decision, and grew increasingly irritated by Diefenbaker's refusal to make one.

The book is full of interesting bits of information, including details about the so-called lost memo of Kennedy's which Diefenbaker found and locked away in a safe, and the famous State Department release of January 1963 which set out American views of the state of negotiations between Canada and the US on nuclear weapons. Diefenbaker seized the release to claim American interference in Canadian affairs, an issue which he used during the subsequent election campaign.

Nash has written an accessible and compelling account both of the times and the protagonists, and in the course of so doing has demonstrated that personal chemistry is indeed an important factor in the conduct of foreign policy.

– Nancy Gordon

Ms. Gordon is Director of Public Programmes at the Institute.

### Besieged: A Doctor's Story of Life and Death in Beirut

Chris Giannou

Toronto: Key Porter Books, 1990,  
254 pp., \$28.95, cloth

Much more than a "story of life and death," *Besieged* is an organizational manual for resistance, a war surgeon's textbook, a piercing analysis of Middle East politics and a commentary on the tremendous human capacity to withstand great suffering. The author is a Canadian surgeon, and the book is a lucid and detailed account of his experiences in Shatila, a Palestinian refugee camp in Beirut, during its intermittent besieging by Amal (a Lebanese Shi'ite militia) from 1985 to 1987. The longest of these sieges lasted for nine months causing the 2,500 inhabitants of Shatila to suffer extreme shortages of food, water, electricity, space and hope.

Six months of incessant military bombardment by tanks and howitzers pummelled the tiny camp into a pile of dust, sending the residents into cramped and dirty subterranean shelters. The camp's defenders also went underground, digging tunnels around Shatila's perimeter to continue their defence foxhole-style. Unable to overrun Shatila's rubble militarily, Amal resorted to psychological and starvation tactics for three more months in the hopes of bringing the camp to its knees. And still, Shatila's resistance held, the question is how?

Giannou's perspective is hardly non-partisan, but neither is it sentimental or uncritical. He was not only an observer of events, but was also an active participant, playing a key role in the camp's internal politics and external resistance. His importance stemmed from his skill as a surgeon and his position as director of the camp's only functioning institution, the hospital, which itself became a prime target of Amal attacks.

Giannou and the hospital also played an important role in the camp's inter-factional political

rapprochement. Within Shatila, there were five major Palestinian political factions as well as other minor dissident groups, all of which were more or less at war with each other. Of course, the siege necessitated Palestinian internal cooperation and coordination in order for them to withstand the onslaught. The hospital, as a camp-wide, Palestinian institution provided the meeting ground and Giannou acted as political liaison.

While Giannou's analysis, as he states in his preface, is not an "academic treatise," he has a exceptional grasp of the political intricacies of Palestinian and Middle Eastern politics. As participant-observer Giannou provides us with the personalities of the faction leaders, and the reasons behind their actions, and thus renders the events more comprehensible to the outsider.

This comprehension is important because what happened inside Shatila between 1985 and 1987 both contributed to and was a reflection of the wider Palestinian rapprochement which paved the way for eruption of the *Intifadah* in the Occupied Territories. The symbolic significance of a united Palestinian resistance to the terrors of siege in Lebanon was not lost on their brethren in the Territories.

Lurking beneath the book's matter-of-fact style of writing is a simmering anger. Both in his book and in person, Giannou's pointed, judgemental words could be mistaken for arrogance, but this would be to miss their meaning. It is not from self-importance that Giannou condemns. Rather, the anger is drawn from the devastating experiences which forged his profoundly humane sense of what is wrong with our world.

– Deirdre Collings

Ms. Collings is a Research Fellow at the Institute.

Reviews of French language publications can be found in the *Paix et Sécurité* "Livres" section.

## NEWS FROM THE INSTITUTE

A number of new staff members joined the Institute during the summer and autumn. **Louise Graham** is the new receptionist, **Marcel Langlois** an administrative clerk, **Robert Gosselin** a library technician, **Veronica Suarez** the public programmes secretary, and **Larry Miller** the distribution and publications technician. **Maria Sievers** is the executive assistant to the director, and **Veronica Baruffati** is an editor. **Karen Balentine**, **Ross Mallick** and **Jean-François Rioux** are new research fellows, specializing in the Soviet Union, regional conflict and non-proliferation issues respectively. **George Lindsey** and **Ron Fisher** are part-time visiting senior fellows. While the research section has expanded, other new staff members are filling positions created by resignations or promotions.

Prior to the Paris summit of the leaders of the thirty-four member states of the Conference on Security and Cooperation in Europe (CSCE), the Institute sponsored a roundtable briefing for members of the media. Speakers included **Jirí Stépanovsky**, Deputy Director of the Institute of International Relations in Prague, Czechoslovakia, who addressed the question of CSCE institutionalization and future security arrangements in Europe; **Roger Hill** on the CFE agreement and its implications for NATO; and **Mark Moher** of the Department of External Affairs who spoke about the agenda of the summit and the Canadian views on its items. **Bernard Wood**

chaired the session. In addition to those who participated in person, a number of journalists from outside Ottawa participated in the discussion via telephone hookups.

The Institute has embarked on a major study of the conflict in Lebanon, with the objectives of developing a better understanding of it, and possibly, recommendations for concrete action. Under the direction of **Deirdre Collings** there will be three workshops and a final seminar during the 1990/91 year. The first workshop took place in late September at the Institute, and was preceded in the evening with a public session entitled "Lebanon: Hope from Within." Mgr **Gregoire Haddad** of the Mouvement social in Beirut, and Dr. **Amal Shamma'**, Chief of Paediatrics at the Berbir Medical Centre in Beirut, spoke of the services provided by the non-governmental sector in a country where, because of the fifteen-year civil war, government services are severely limited. During the following two days, a group of twenty-five academics, policy makers and analysts examined the various proposals to end the war put forward

between 1976 and 1989. The next workshop, which is scheduled for mid-December, will look at the social and economic costs of the prolonged war. Following the final seminar, the Institute will publish a conference report on the four sessions.

In late November the Institute for Peace and Security, the Parliamentary Centre for Foreign Affairs and Foreign Trade, and the Canada-USSR Business Council, co-sponsored a major conference in Ottawa entitled "The Changing Soviet Union: Implications for Canada and the World." Featuring a number of prominent policy makers and analysts, including the Rt. Hons. **Brian Mulroney** and **Joe Clark**, the conference looked at Soviet power in a changing world and the consequent necessity for rethinking the east-west balance; the impact of *glasnost* and democratization and the prospects for *perestroika* on the Soviet economy. Smaller groups examined the climate for trade and investment, Arctic questions, nationalism and human rights, and a new security agenda. At each session of the conference there was a

Soviet, a European or American, and a Canadian speaker.

The autumn schedule at the Institute featured a full complement of seminars on a variety of topics. **John Baylis** of the University College of Wales and **Peter Schmidt** of the Ebenhausen Institute in Munich spoke on contemporary European security issues; the Hon. **Monique Landry**, Minister for External Relations and International Development, led a discussion on peace and international development; **Chris Smith** of the Institute of Development Studies at the University of Sussex in England, examined military technology and security in the Third World.

The non-proliferation treaty review conference was held in Geneva in early September, and the Institute was able to hear a number of perspectives on the subject. **Mitsuru Kurosawa** of the Faculty of Law at Niigata University in Japan, spoke on the Japanese perspective on non-proliferation; **William Epstein**, formerly with the UN and UNITAR, gave a briefing on the review conference, as did **David Cox** of Queen's University. **Hans Blix**, Director General of the International Atomic Energy Agency in Vienna led a discussion on the world's energy needs, nuclear energy and non-proliferation.

**Peggy Falkenheim** of the University of Western Ontario, and **Ron Purver** gave a briefing on a conference they both attended in Vladivostok on security issues in the Asia-Pacific region; **John Halstead** spoke about a seminar he had attended in Helsinki on the developing CSCE framework.

---

### Teachers' Handbook on Peace and Security

---

This exciting new publication from the Institute provides teachers with a flexible tool for teaching international relations in the classroom. Thoroughly field-tested and revised, the Handbook includes:

- simulations and group activities for introducing concepts
- authoritative readings and factsheets carefully tailored to student reading levels
- charts and maps to help students organize and visualize international relations issues
- detailed lesson plans to address a variety of student learning styles
- historical and current case-studies specifically written to illustrate key concepts of international relations
- evaluation forms for debates, oral presentations and student contracts.

The handbook is available now from the Institute for \$ 35.00. Please order directly.

**Serge Sur**, deputy director of UNIDIR, the UN specialized agency dealing with disarmament research, led a delegation of verification experts who gave a seminar at the Institute. **Bassam Tibi**, professor of international relations at Georgia Augusta University of Göttingen, Germany, and a specialist on the Middle East, gave a seminar on the repercussions of the Gulf Crisis. **Martin Lee**, a barrister, member of the Legislative Council, and Chairman of the United Democrats in Hong Kong spoke on the future of Hong Kong. **Gerald Segal** of the University of Bristol led a discussion on China and east Asian regional security.

His Holiness the **Dalai Lama** of Tibet visited the Institute during his recent visit to Canada, and led a seminar on the human dimension of conflict resolution.

**Michael Bryans**, Senior Editor at the Institute, spent two weeks in Moscow and Leningrad in the autumn conducting research on the Soviet economy. His visit was part of an exchange agreement between CIIPS and the Institute for the USA and Canada, as was that of **Edward McWhinney**, an international lawyer, whose area of study was constitutional development in the Soviet Union. **Olga Shapryrina** and **Sergei Molotchkov**, both of ISCAN, were each guests of CIIPS for a month during the fall.

In October, **Bernard Wood** spoke to a group of teachers in Gander, Newfoundland on the new security environment. At that meeting, as well as at the Ontario History and Social Science Teachers' Association meeting in Toronto and at professional development days in Cobourg, Alexandria, and Edmonton, **Brad Feasey** gave workshops based on the Institute's publication "Teachers' Handbook on Peace and Security."

"National Security and Defence in a Changing World" was the subject of a one-day meeting

in Ottawa of the Defence Associations National Network, Eastern Canada region, in which **Bernard Wood** participated. The afternoon session was devoted to a hypothetical role-playing scenario and panel discussion focussing on Canadian defence capabilities. Later that same week, Mr. Wood participated in a conference organized by York University in connection with a research project commissioned by the Institute on new challenges to security. In Ottawa he spoke to a joint meeting of the India-Canada Association and the Mahatma Gandhi Society: the subject was Mahatma Gandhi, and his message for today's Canadians. He also spoke at the Annual Canadian International Development Agency/Non-government Organizations Consultation in Ottawa on the relationship between peace and development, emphasizing the enormous challenge they represent for us in the 1990s.

In early September, **John Toogood** participated in the annual

meeting of the International Institute for Strategic Studies in Virginia where the subject was "America's Role in a Changing World." Defense Secretary Cheney spoke of the shift in US policy away from preparations to fight a global conflict with the USSR towards dealing more with regional conflicts. He said that strategies were being prepared during the summer for gradual implementation during 1990 and 1991. The crisis in the Gulf, of course, changed the planning cycle. "We have now had to put all our briefings and speeches about the new strategy on hold because we've been too busy dealing with regional contingencies in order to have time to talk about it," he said.

**Katherine Laundy**, **Susan Connell** and **Grazyna Beaudoin** attended disarmament week activities in Quebec City where they staffed a kiosk and answered questions about the Institute, its publications and other peace and security resources. In early November, Ms.

**Laundy** and **Ms. Connell** performed similar tasks at Université de Montréal, as part of its annual week of activities. Ms. Beaudoin took part in the first World Summit of Children of Peace, organized in Montreal by the Association canadienne du programme de diminution des tensions.

**Roger Hill** participated in a conference at Queen's University on new relationships amongst Canada, the US and Japan, and at a meeting in Montebello on verification. He also gave a presentation to the House of Commons Standing Committee on External Affairs and International Trade on the question of NORAD renewal. In November **Bernard Wood** appeared before the same committee to make a statement on the crisis in the Gulf. He also spoke at the National Defence College in Kingston. **John Toogood** spoke to a meeting of the Ottawa Rotary Club on Canada and the Gulf, and attended meetings in Quebec City sponsored by the Centre Québécois des Relations Internationales on the new Germany. **Gabrielle Mathieu** participated in a conference at Laval on the media and conflict. **Ross Mallick** represented the Institute at a conference in Washington sponsored by the US Institute for Peace on conflict resolution. **Karen Ballentine** attended a conference on nationalism and *perestroika* at Columbia University in New York. **Jean-François Rioux** participated in a conference in Washington on the role of private organizations in nuclear non-proliferation. In September **Ron Purver** toured the Western Arctic as part of Operation Napoleon sponsored by the Department of National Defence. He also organized a workshop on security and political cooperation as part of the third Northern Regions conference in Anchorage, Alaska.

### Barton Awards Programme

The Institute invites applications for its Awards Programme, designated the Barton Awards in honour of the first Chairman, former UN Ambassador William Barton. The programme is open to both academics and non-academics who wish to enter or continue studies in the field of international peace and security. The programme is intended to encourage expertise and scholarship in that area by supporting Canadians and permanent residents who wish to pursue their studies at institutions abroad or in Canada.

The Institute expects to make eleven awards: two fellowships valued at up to \$30,000 and nine scholarships at up to \$14,000 each. Applications will be assessed by an independent selection committee and decisions will be announced in May 1991.

Applicants must be Canadian citizens or permanent residents whose experience or academic qualification enable them to pursue advanced study.

The deadline for applications for the 1991-1992 academic year is 1 February 1991.

For further information and application forms please write to:

The Barton Awards Programme  
Canadian Institute for International Peace and Security  
360 Albert, Suite 900  
Ottawa, Ontario K1R 7X7

### Peace and Security Competitions Fund Procedures and Deadlines

*The Fund allocates contributions semi-annually. Contact the Fund for a copy of updated criteria and application forms. Please note the following deadlines:*

30 June for an October decision

30 November for a March decision

Peace and Security Competitions Fund

Ottawa, Ontario K1R 7X7

## LETTER FROM LIMA BY MIRKO LAUER

**It is eight in the morning. My wife and I are in a queue behind twenty-five other cars, slowly pushing our 1974 Volkswagen towards a gas station,**

where each sale is limited to five gallons. Two days ago the workers of Petroperu, the State's oil monopoly, went on strike demanding pay raises. So fuel is just reappearing on the market. A new oil workers' strike is announced for next week.

Around us the first dollar dealers are appearing on the sidewalks, pocket calculator in hand, waiting for the early customers. The day's exchange rate is 430,000 Intis to the dollar. As we reach the end of the queue, almost one hour later, we change a US\$10 bill, enough money for seven gallons. At home we had no electricity today and, since our building uses an electric pump, no water until six in the afternoon. Some neighbourhoods can go weeks without electricity or water. Many shantytowns get their electricity through illegal connections and buy their water by the canister.

After ten years of blackouts in the main cities, the blowing up of high-voltage pylons by Sendero Luminoso (the Maoist Shining Path guerrillas who have caused 19,500 deaths and \$17 billion in material damages – almost equal to Peru's foreign debt – since they first emerged in May 1980) hardly makes it to the inner pages of the local newspapers. Even the news of dozens of soldiers or campesinos dead in confrontations with Sendero Luminoso every month receive grudging attention from the population.

Under President Fujimori's (elected on 28 July) government adjustment plan, which has slashed incomes by seventy-five percent, people fear the new electricity rates more than the power-cuts or Sendero Luminoso manoeuvres in the provinces. Electricity rates increased by five hundred percent for domestic use of over thirty KW a week, and water rates increased

by more than eight hundred percent. Ex-President Fernando Belaunde, who lives in a small apartment, went on TV in September to complain about his 50 million Inti (about US\$135 at that moment) August electricity bill.

The same day that the Petroperu workers went on strike, the minister of Energy and Mining, a member of the Socialist Left coalition, announced that to meet Electrolima workers' salary demands a further four hundred percent hike

shock, they face the same basic problems. "All this suffering for nothing" is a frequent remark. Fujimori's government admits that the number of Peruvians at the extreme poverty level has increased from seven to twelve million since coming to power, out of a total population of twenty-three million.

The government's first reaction to the resurgence of inflation has been to condemn private monopolies in the food business and announce the liberalization of imports. One serious weakness in the Fujimori adjustment plan is that cocaine paste exports pour around one billion dollars in cash into the Peruvian economy and keep the Inti higher than the local ex-

---

**... Fujimori has managed to prevent the development of serious opposition through a sort of political judo, which consists of playing all sectors against each other.**

---

in electricity bills would be necessary. Most of the larger unions are discussing salary increases now, and all public services see rate increases as their only way out of insolvency. So the prospect of a wave of strikes and shortages is the clearest sign that after one hundred days of sailing in what most Peruvians still consider the right direction – adjustment along IMF and World Bank guidelines – the government is now bracing for a new bout with inflation.

After forty to fifty percent a month inflation in Alan Garcia's final semester as President (1985 to July 1990), and compared to the 397 percent price jump which reflected Fujimori's anti-inflation drive, people may still consider the fifteen percent price increase this October mild. But it is nearly double the September figure, and caused a four-fold increase in food prices for Peru's poor.

So a new, restless mood is setting in as the population realises that in the aftermath of the August

porters' stated needs. Up until now the Central Bank has managed to boost the dollar exchange rate from 300,000 to 430,000 Intis by buying close to US\$10 million a day from private banks, who in turn pick up their dollars on the street. Now the Central Bank will try to hoist the exchange rate by unloading reserves into the hands of the importers.

Local producers have not protested this new scheme as yet. In part because they fear that criticism of Fujimori's programme will bring a return of populist politics and controls of the economy, and also because they have no qualms about starting to import what they had been producing. The population believes that a more liberal import policy will translate into cheaper goods. An example frequently cited these days is tires. The two local producers, both multinational companies, were selling them for US\$70 each before imports forced the price down by half.

Another widespread, albeit unfounded, belief is that Peru's re-

turn to the fold of the international financial community will make funds available to relieve the crisis situation. Peru has started making down payments on its external debt (former President Alan Garcia refused to make debt payments causing Peru to fall out of grace with the IMF and World Bank), but government officials concede in private that they expect no significant loans from outside before the second half of 1991.

So far, Fujimori has managed to prevent the development of serious opposition through a sort of political judo, which consists of playing all sectors against each other. A lack of significant protest on the streets has given Fujimori ample room to develop his own presidential style, to the extent that he has enhanced his reputation as a pragmatist and a creator of unlikely alliances. One effect of Fujimori's luck so far is that all political and institutional forces seem eager to collaborate in his current struggle against inflation.

Fujimori's Prime Minister comes from the Right and several of his ministers from the Left. Most of his proposals are being pushed through Congress by an alliance between his Cambio 90 movement, the Centre-right APRA (American Popular Revolutionary Alliance which came to power for the first time in its fifty year history with Alan Garcia) and a segment of the Left. And since coming to power he has established close ties with the military.

Last week the Minister of Agriculture, another Socialist Left member, resigned after hearing from the Prime Minister that the funds earmarked for financing local agriculture would go to food imports. But even as he was taking leave from the government, he urged his party and the rest of the population to stay on the government's side. □

(élu le 28 juillet de cette année), qui

launde, qui vit aujourd'hui dans un

petit appartement, est passé à la té-

lvision en septembre pour se plain-

dre de ce que sa facture d'électricité

de 400 p. 100 les factures d'électricité.

La plupart des syndicats les plus im-

portants sont en train de négocier

services publics voient dans le

relèvement des tarifs le seul moyen

de s'en sortir. Donc, la

goutte d'huile qui tombe sur le feu

de la crise économique péruvienne

est devenue une explosion.

La première réaction du gouverne-

ment face à la reprise de l'inflation

a été de condamner les monopoles

privés du secteur alimentaire et

de donner la libéralisation des im-

portations. Une des graves faiblesses

du plan de redressement de Fujimori,

c'est que les exportations de

de dollars environ, en espèces, dans

maintenant le cours de l'inti plus

haut que les besoins déclarés de ex-

portateurs péruviens. Jusqu'à pré-

sent, la banque centrale est parvenue

à gonfler le taux de change du dollar

tion, remise du choc du mois d'août,

se rend compte que les problèmes

«Avoir enduré tout cela pour rien»,

entend-on souvent dire. Le gou-

vernement Fujimori reconnaît que,

depuis son arrivée au pouvoir, sur

un total de 23 millions d'habitants,

le nombre des Péruviens vivant dans

des conditions d'extrême pauvreté

est passé de 7 à 12 millions.

La première réaction du gouverne-

ment face à la reprise de l'inflation

a été de condamner les monopoles

privés du secteur alimentaire et

de donner la libéralisation des im-

portations. Une des graves faiblesses

du plan de redressement de Fujimori,

c'est que les exportations de

de dollars environ, en espèces, dans

maintenant le cours de l'inti plus

portateurs péruviens. Jusqu'à pré-

sent, la banque centrale est parvenue

à gonfler le taux de change du dollar

part de ses réserves en dollars aux

importateurs.

Les producteurs locaux ne se sont

pas encore insurgés contre ce nou-

veau procédé. En partie, parce qu'ils

cratigant, en critiquant le programme

de Fujimori, de provoquer le retour

à des politiques et à des contrôles

populistes en matière d'économie, et

aussi parce que c'est sans scrupule

qu'ils se mettraient à importer ce

qu'ils produisaient jusqu'ici. La po-

lisation croit qu'une politique plus

libérale des importations leur ap-

portera des produits meilleur marché,

L'exemple souvent cité est celui des

peus. Les deux producteurs locaux,

filiales de sociétés multinationales,

les vendaient 70 dollars pièce avant

que les importations les forcent à

diminuer leurs prix de moitié.

Selon une autre croyance large-

ment répandue, et pourtant sans fon-

dement, en rentrant dans le giron de

la communauté financière interna-

tionale, Lima pourra se procurer des

fonds pour atténuer la situation de

crise. Le Pérou a commencé à verser

des accompagnements sur le remboursement

de sa dette extérieure (le dernier

ce qui avait sommé la disgrâce du

pays auprès du FMI et de la Banque

mondiale), mais les responsables

gouvernementaux admettent en privé

qu'ils ne s'attendent pas à bénéficier

de prêts étrangers importants avant

la dixième moitié de 1991.

pour le moment, Fujimori a réussi

à prévenir la montée d'une réelle op-

position par une sorte de judo poli-

tique qui consiste à opposer tous les

secrétaires les uns aux autres. Grâce à

l'absence de manifestations de rue

importantes, Fujimori a pu ample-

ment développer son propre style

présidentiel, à tel point qu'il s'est

forcé la réputation d'un homme

pragmatique capable de susciter des

alliances improbables. Un des effets

de la chance du président, c'est qu'il

l'heure actuelle, toutes les forces

politiques et institutionnelles sem-

blent impuissantes de collaborer à la

lutte anti-inflationniste qu'il est en

train de mener.

Son premier ministre est de droite

et plusieurs membres du Cabinet

sont de gauche. La plupart de ses

propositions sont adoptées par le

Congrès grâce à l'appui de son

mouvement, *Cambio 90* (Change-

ment 1990), avec l'APRA du

centre-droit (!) Alliance populaire

révolutionnaire américaine qui, avec

Alan Garcia, a tenu les rênes du pou-

voir pour la première fois en cin-

quante ans d'existence) et avec une

partie de la gauche. De plus, depuis

son élection, il a noué des liens

étroits avec l'armée.

La semaine dernière, le ministre

de l'Agriculture, socialiste lui aussi,

a démissionné après s'être entendu

dire par le premier ministre que les

fonds destinés à financer l'agricul-

ture locale traitent à l'importation de

denrées alimentaires. Mais, alors

même qu'il prenait congé, il a ex-

horté son parti et le reste de la popu-

lation à continuer de soutenir le

gouvernement. □

**Roger Hill** a assisté à une conférence à l'Université Queen's sur les nouvelles relations entre le Canada, les États-Unis et le Japon, et a rendu visite à l'Institut au cours de son récent passage au Canada et il a dirigé un colloque sur la dimension humaine du règlement des conflits.

**Michael Bryan**, rédacteur principal de l'Institut, a passé deux semaines à Moscou et Leningrad cet automne pour faire de la recherche sur l'économie soviétique, dans le cadre d'un programme d'échange entre l'ICPSI et l'Institut des études canado-américaines (ISCAN), à Moscou. **Edward McWhinney**, avocat en droit international, participait aussi à ce programme, et ses recherches portaient sur le développement constitutionnel en Union soviétique. **Oлга Shapryina et Sergei Molotchkov**, de l'ISCAN, étaient tous deux les invités de l'ICPSI pendant un mois cet automne.

Au mois d'octobre, **Bernard Wood** a parlé de la nouvelle conjoncture en matière de sécurité à un groupe d'enseignants à Gander (Terre-Neuve). Au cours de cette réunion, de même qu'à l'Assemblée de l'Association des professeurs de l'histoire et de sciences sociales de l'Ontario, et dans le cadre des journées de formation professionnelle à Cobourg, **Alexandra et Edmonston, Brad Feasey** a dirigé des ateliers inspirés de la nouvelle publication de l'Institut, le *Teachers' Handbook on Peace and Security*.

Le Réseau national des associations de la défense (région de l'est canadien) s'est réuni pour une journée à Ottawa. Le thème de cette réunion, à laquelle participait **Bernard Wood**, était *National Security and Defence in a Changing World*. La séance d'après-midi était consacrée à des mises en scène et à des débats sur les capacités du Canada en matière de défense. Plus tard dans la même semaine, **M. Wood** a pris part à une conférence organisée par

l'URSS pour se concentrer davantage sur le règlement de conflits régionaux. Il a déclaré que l'on a élaboré des stratégies pendant l'état d'urgence de leur application progressive en 1991. La crise du Golfe a évidemment changé les plans. «Nous avons dû reporter toutes nos séances d'information et nos discours sur la nouvelle stratégie, a-t-il dit, car les événements imprévus à l'échelle régionale ont pris tout notre temps.»

**Katharine Laundy, Susan Connell et Grazyna Beaudoin** ont participé aux activités de la semaine de désarmement, à Québec, où elles se sont occupées d'un kiosque et ont répondu aux questions concernant la crise du Golfe devant le Comité. Il s'est aussi adressé aux membres du Collège de la Défense nationale, à Kingston. **John Toogood** a parlé aux membres du club Rotary d'Ottawa de la position qu'il a assumée, à Québec, et sur la nouvelle Allemagne organisée par le Centre québécois des relations internationales. **Gabriele Laval**, à une conférence sur le rôle des médias dans les conflits. **Ross Mallick** a représenté l'Institut à une conférence sur le règlement des conflits organisée à Washington par le *US Institute for Peace*. **Karen Balentine** a assisté à un colloque sur le nationalisme et la *perestroika*, qui s'est tenu à New York, à l'Université Columbia. **Jean-François Rioux** a pour sa part assisté à un autre colloque, qui a eu lieu à Washington, sur le rôle des organisations privées dans le contexte de la non-prolifération nucléaire. En septembre, **Ron Purver** s'est rendu dans l'Arctique occidental dans le cadre de l'Opération Napoléon, rainée par le ministère de la Défense nationale. Il a aussi organisé un atelier sur la sécurité et la coopération en matière de politique dans le contexte de la trisisme conférence des régions septentrionales à Anchorage (Alaska).

**Concours «Paix et Sécurité» : procédure et échéancier**

Le Fonds pour les Concours «Paix et Sécurité» accorde de l'aide financière deux fois par année. On est prié de communiquer avec les personnes responsables pour obtenir des formulaires et la liste à jour énonçant les critères à respecter. Veuillez prendre note des échéances suivantes :

le 30 juin, pour la sélection d'octobre  
le 30 novembre, pour la sélection de mars

Concours «Paix et Sécurité»

Ottawa (Ontario) K1R 7X7

**Programme de bourses Barton**

Dans le cadre de son programme des «Bourses Barton», ainsi appelé en l'honneur de son premier président, **M. William Barton**, ancien ambassadeur du Canada à l'ONU, l'Institut invite les personnes intéressées à déposer leur dossier de candidature. Le programme est ouvert aux universitaires et aux autres personnes qui veulent entreprendre ou poursuivre des études sur la paix et la sécurité internationales. Il entend favoriser l'accroissement des compétences et des connaissances de haut niveau dans ce domaine, en appuyant des Canadiens, Canadiennes, immigrants et immigrantes reçus(e)s qui souhaitent poursuivre des études dans des institutions au Canada et à l'étranger.

L'Institut compte choisir onze récipiendaires, deux d'entre eux reçoivent chacun une bourse de «fellow» de 30 000 \$ maximum et les neuf autres bénéficieront chacun d'une bourse d'étude de 14 000 \$ maximum. Un comité de sélection indépendant évaluera les candidatures et rendra ses décisions en mai 1991.

Les candidat(e)s doivent être citoyen(ne)s canadien(ne)s ou immigrant(e)s reçu(e)s pour(eu)s d'expérience ou des compétences universitaires leur permettant de poursuivre des études supérieures.

Les candidat(e)s pour l'année universitaire 1991-1992 doivent parvenir à l'Institut le 1er février 1991 ou plus tard.

Pour obtenir plus de détails et des formulaires de demande, prière d'écrire à l'adresse suivante :

Programme des bourses Barton  
Institut canadien pour la paix et la sécurité internationales  
360, rue Albert, bureau 900  
Ottawa (Ontario) K1R 7X7

Au début septembre, **John Toogood** a assisté à l'Assemblée annuelle de l'International Institute for Strategic Studies, en Virginie, dont le thème était *America's Role in a Changing World*. Le secrétaire à la Défense, **M. Cheney**, a parlé de la reconstitution de la politique américaine en matière de conflits, c'est-à-dire de l'abandon des préparatifs à un conflit mondial contre

le Mahatma Gandhi et son message aux Canadiens d'aujourd'hui. À l'occasion de la Consulation annuelle entre l'Agence canadienne de développement international et les organismes non gouvernementaux, il a aussi parlé du rapport entre la paix et le développement, en insistant sur les énormes difficultés que nous réservent les années 1990.

# NOUVELLES DE L'INSTITUT

L'Institut a entrepris une étude importante sur le conflit du Liban, en se donnant comme objectifs de mieux faire comprendre la situation et, peut-être, de formuler des recommandations concernant des mesures concrètes. Pendant l'année 1990-1991, il y aura, sous la direction de **Deirdre Collings**, trois ateliers suivis d'un colloque de clôture. Le premier atelier, précédé d'une séance publique en soirée intitulée «Le Liban : espoir provenant de l'interieur», a déjà eu lieu à l'Institut le 7 septembre. Mgr **Gregoire Haddad**, du Mouvement social de Beyrouth, et le docteur **Amaal Shamma**, directrice du département de pédiatrie du Centre médical Berth à Beyrouth ont parlé des services offerts par le secteur non gouvernemental dans un pays où les services gouvernementaux sont gravement limités en raison de la guerre civile qui sévit depuis quinze ans. Au cours des deux jours suivants, un groupe de vingt-cinq universitaires, décideurs et analystes ont examiné les diverses propositions avancées entre 1976 et 1989, pour mettre fin à la guerre. Le prochain atelier, prévu pour la mi-décembre, portera sur les conséquences sociales et économiques d'une guerre prolongée. Après la dernière conférence, l'Institut publiera un rapport sur les quatre réunions.

De nouveaux membres se sont joints à l'Institut cet été et cet automne. **Louise Graham** est la nouvelle réceptionniste; **Marcel Langlois** est commis administratif; **Robert Gosselin**, bibliothécaire; **Veronica Suarez**, secrétaire des programmes publics et **Larry Miller**, technicien de la distribution et des publications. **Maria Sievers** est adjointe administrative auprès du directeur et **Veronica Baruffati** est rédactrice. **Karen Balemite**, **Ross Mallick** et **Jean-François Rioux** sont de nouveaux chargés de recherche, et ils se spécialisent respectivement dans les questions relatives à l'Union soviétique, aux conflits régionaux et à la non-prolifération. **George Lindsey** et **Ron Fisher** sont chargés de recherche de recherche s'est élargie et d'autres nouveaux membres du personnel occupent maintenant des postes libérés par des démissions et des promotions.

Avant le sommet de Paris réunissant les dirigeants des treize-cinq Etats membres de la Conférence sur la sécurité et la coopération en Europe (CSCE), l'Institut a parrainé une table ronde d'information à l'intention de membres des médias. Parmi les orateurs, on comptait **Igor Stépanovskiy**, directeur adjoint de l'Institut des relations internationales de Prague (Tchécoslovaquie), qui s'est exprimé sur la question de l'institutionnalisation de la CSCE et sur les futures dispositions relatives à la sécurité en Europe; **Roger Hill**, FCE et de ses conséquences pour l'OTAN; **Mark Mohr**, du ministère des Affaires étrangères, qui a parlé du programme du sommet et de la position du Canada sur les éléments qui le composent. **Bernard Wood** présidait cette table ronde. En plus des personnes présentes, plusieurs journalistes de l'extérieur d'Ottawa ont participé à la discussion par téléphone.

## Le temps de changer

À la fin novembre, l'Institut pour la paix et la sécurité, le Centre parlementaire pour les affaires étrangères et le commerce extérieur et le Conseil canado-soviétique des affaires ont coparrainé une importante conférence à Ottawa intitulée «L'Union soviétique en mouvement : conséquences pour le Canada et le reste du monde». Un grand nombre de dirigeants et d'analystes y ont assisté, notamment le premier ministre du Canada, **M. Brian Mulroney** et le secrétaire d'Etat aux Affaires extérieures, **M. Joe Clark**. On y a abordé les thèmes suivants : le pouvoir soviétique dans un monde en changement et la nécessité qui en découle de repenser l'équilibre Est-Ouest; les conséquences de la glasnost et de la démocratisation et l'avenir économique de l'URSS dans le cadre de la *perestroika*. Des plus petits groupes ont examiné les possibilités d'échanges et d'investissements, des questions relatives à l'Arctique, le nationalisme et les droits de la personne ainsi qu'un nouveau programme de sécurité. A chaque séance, il y a eu un orateur soviétique et un orateur canadien, ainsi qu'un orateur européen ou américain.

Le programme de l'automne de l'Institut a comporté une série de conférences complémentaires sur divers sujets. **John Baylis**, du University of Western Ontario, et **Ron Purver** ont fait le compte rendu d'une conférence sur les questions de sécurité dans la région de l'Asie-Pacifique, qui a eu lieu à Vladivostok et à laquelle ils ont tous deux assisté; **John Halseid** a parlé d'un colloque sur les progrès de l'organisation de la CSCE auquel il a participé, à Helsinki.

**Serge Sur**, directeur adjoint de l'Institut de recherche des Nations Unies sur le désarmement, était à la donne une conférence à l'Institut. **Bassam Tibi**, professeur de relations internationales à l'Université de Göttingen (Allemagne), et spécialiste du Moyen-Orient, a présenté un exposé sur les répercussions de la crise du Golfe. L'avocat **Martin**

Les Editions Libre Expression ont publié, à l'automne dernier, l'ouvrage de **Boyce Richardson** intitulé «Le temps de changer». Les questions environnementales sont aujourd'hui au coeur des préoccupations de la majorité des Nord-Américains. Le livre de **Boyce Richardson** esquisse les cinq grands défis qui sont aujourd'hui les nôtres : environnemental, économique, démographique, militaire et politique. Comment nous, habitants de l'hémisphère nord, pouvons-nous influencer l'ordre des choses dans le monde? **Boyce Richardson** énonce la-dessus plusieurs hypothèses qui ont le grand mérite d'incarner chacun de ces défis dans ses dimensions les plus concrètes. Gagnant du prix de la Presse nationale, **M. Richardson** s'est aussi mérité le prix **Flaherty** de la *British Society of Film and TV Arts*, accordé au meilleur documentaire ainsi qu'une nomination aux *Academy Awards* pour son film tourné en 1984, *The Children of Soong Ching Ling*.

Il a déjà cinq publications à son actif. «Le temps de changer» a été écrit en collaboration avec l'Institut canadien pour la paix et la sécurité Editions Libre Expression.

224 pages, 19,95 \$.

# EN DIRECT DE LA COLLINE PARLEMENTAIRE

Le 14 septembre, le premier ministre a fait savoir que le gouverne-

ment envisageait une escadrille de chasseurs CF-18 dans le Golfe pour fournir une couverture aérienne aux navires et aux marins canadiens et qu'il accorderait de 450 hommes les effectifs militaires sur place. Par ailleurs, le Canada versera un maximum de 75 millions de dollars supplémentaires en aide humanitaire et des pays fortement touchés par la crise, somme qui viendra s'ajouter aux 2,5 millions de dollars déjà fournis.

## Crise d'Oka

Entre temps, le 14 août, à la demande du gouvernement du Québec, 2 500 soldats canadiens ont été déployés dans les villes d'Oka et de Châteauguay, où des barricades avaient été dressées par des Mohawks revenant à la propriété de certaines terres dans la région. Après de longues négociations, les autochtones ont accepté de coopérer avec l'armée pour débayer les barricades près de Châteauguay et de mettre ainsi fin au blocage du pont Mercier, qui relie les agglomérations de la Rive sud à Montréal. Le 6 septembre, un petit groupe de Mohawks a continué à résister jusqu'au 26 septembre, l'opération militaire s'est terminée quelques jours plus tard.

## Débats à la Chambre

Le Parlement a finalement repris ses travaux le 24 septembre, date qui avait été convenue au moment de l'ajournement en juin, mais que l'opposition a contestée depuis, car elle souhaitait discuter de la situation à Oka et de la crise dans le Golfe. M. Joe Clark a présenté une motion à la Chambre condamnant l'invasion du Koweït par l'Irak, appuyant toutes les résolutions prises à ce sujet par le Conseil de sécurité de l'ONU et donnant le feu vert à l'envoi de forces canadiennes dans le Golfe pour participer à l'opération militaire multinationale.

Durant le long débat qui a suivi, les partis de l'opposition se sont plaints surtout de ce que le Parlement n'avait pas été rappelé plus tôt pour débayer la motion et ils ont exigé que le gouvernement se conforme à la lettre aux mesures sanctionnées par les Nations Unies. Les

## Crise du Golfe

Le 8 août, le secrétaire d'État Clark, a annoncé que le gouvernement avait introduit des procédures pour faire appliquer les sanctions décrétées par l'ONU à l'encontre de l'Irak. Ainsi, toutes les importations de produits irakiens et koweïtiens et toutes les exportations de produits canadiens vers l'Irak et le Koweït sont désormais interdites; tous les crédits à l'exportation non utilisés ont été annulés et aucun crédit additionnel ne sera débouqué. Par ailleurs, tous les biens ou titres appartenant aux gouvernements irakien et koweïtiens ou à leurs organismes sont gelés, et aucun fonds ne peut être transféré dans ces pays.

Le 10 août, peu après son entretien avec le président des États-Unis, M. Bush, le premier ministre, M. Mulroney, a déclaré que le Canada enverrait deux destroyers et un navire de ravitaillement dans le golfe Persique. Ces bâtiments et les 934 membres d'équipage se joindraient à la force multinationale que l'on réunissait dans cette région du globe.

MM. Herb Gray et Bill Blacketer, respectivement chef du groupe libéral à la Chambre et porte-parole du NPD pour les Affaires extérieures, ont souligné que c'était la première fois depuis la Seconde Guerre mondiale que le Canada envoyait des troupes à l'étranger autrement que sous l'égide des Nations Unies. Ils ont également tous deux réclamé la convocation immédiate du Parlement, afin qu'il débâte la question.

Le premier ministre a décidé de ne pas rappeler les députés, mesure normalement exigée aux termes de la Loi sur la défense nationale, en retardant la mise en service

acrit «préparation au combat» des navires jusqu'à ce qu'ils arrivent à destination (pour de plus amples détails concernant la Loi sur la défense nationale, voir la Chronique de la

Défense, à la page 16).

libéraux ont présenté un amendement dans lequel ils demandaient que les Forces canadiennes appuient les résolutions de l'ONU, tandis que le NPD a demandé que la motion soit modifiée comme suit :

«que le Canada cherche à convaincre le Conseil de sécurité de faire le nécessaire pour obtenir la garantie qu'aucun pays ne lancera une offensive militaire contre l'Irak, à moins de le faire sous la banquette de l'ONU et avec l'approbation du Conseil de sécurité.»

Finalement, après les discussions entre députés libéraux et conservateurs, une nouvelle motion a été présentée le 19 octobre. Le gouvernement y promettait «de présenter une autre motion à la Chambre en cas de desclenchement d'hostilités auxquelles seraient mêlés des Forces canadiennes, dans la péninsule arabique ou dans une région voisine.» Cette motion a été adoptée le 23 octobre par une majorité de 170 voix contre 33, une poignée de libéraux dissidents et le Bloc québécois s'y opposant.

## Travaux des comités

La motion présentée en Chambre a été soumise au Comité permanent des Affaires étrangères et du Commerce extérieur, qui avait déjà entamé une série d'audiences sur la crise du Golfe. M. Joe Clark et le ministre de la Défense M. Bill McKnight, ont comparu devant le Comité le 25 octobre. À cette occasion, M. Clark a déclaré que «le Canada est prêt à recourir à la force pour débayer les forces irakiennes pour déloger les forces irakiennes du Koweït, même sans l'approbation de l'ONU.» L'après-midi du même jour, cette déclaration a été l'objet de nombreuses questions en Chambre, les partis de l'opposition désapprouvant fortement la position exprimée. Le Comité fera son possible pour soumettre un rapport à la Chambre avant Noël.

Le Comité a également tenu des audiences les 16 et 18 octobre à propos du renouvellement de l'Accord sur la défense aérospatiale de l'Armée-rique du Nord (NORAD) conclu avec les États-Unis, qui arrive à expiration au printemps de 1991. À la suite de ces audiences, un sous-comité a été créé et placé sous la présidence de M. Walter Maclean. Ce sous-comité a demandé que les différents groupes s'intéressant à la question du NORAD lui communi-

## Cabinets-fantômes

Les deux partis de l'opposition ont remanié leurs cabinets-fantômes. Dans le camp des Affaires extérieures, le porte-parole pour les Affaires extérieures, M. Lloyd Axworthy, a été nommé à la Défense, et un autre, M. Jean Chrétien, a mis sur pied un certain nombre de comités de caucus, dont un sera présidé par M. Lloyd Axworthy et examinera les questions liées aux Affaires extérieures et la Défense, et un autre, dirigé par M. Paul Martin, se verra confier les dossiers concernant le développement durable.

Le chef du Nouveau Parti démocratique, Mme Audrey McLaughlin, a nommé les députés MM. Svend Robinson et John Brewin, l'un des porte-paroles extérieures et de Défense. Quant à M. Jim Fulton, il continuera de se charger des questions liées à l'environnement. □

— GREGORY WIRICK

## A L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

Institut canadien pour  
la paix et la sécurité internationales

## Le Moyen-Orient

Peu après, les Etats-Unis ont annoncé qu'ils envisageaient d'intervenir pour faire cesser l'occupation du Koweït. Le Canada, fermement opposé à cette décision unilatérale, a mené une offensive diplomatique au sein du Conseil pour persuader Washington d'agir sous l'autorité des Nations Unies. D'où d'intenses négociations qui ont débouché sur la résolution 665. Le document, adopté le 25 août (seuls Cuba et le Yémen se sont abstenus) demandait aux Etats déployant des forces maritimes dans le golfe Persique et la mer Rouge d'employer «des mesures en rapport avec les circonstances particulières» pour arrêter tout trafic maritime en direct et en provenance de ces deux pays. Il demandait également aux Etats concernés de coordonner leurs actions en utilisant «comme il convient» les instruments mis à leur disposition par le Comité d'état-major du Conseil.

La formulation, soigneusement choisie, traduisait la volonté de tenir compte des points de vue divergents des Etats-Unis et de l'URSS quant au rôle du Comité d'état-major, organe depuis longtemps relégué aux oubliettes dont le mandat, à l'origine, était entre autres de diriger les opérations militaires des Nations Unies. L'URSS souhaitait activer ce comité en invoquant l'article 42 de la charte de l'ONU, ce à quoi les Etats-Unis se sont opposés avec succès. Le Conseil a finalement trouvé un compromis : les Nations Unies donnaient leur bénédiction aux efforts d'interdiction navale américains et autres, sous un commandement unifié de l'ONU.

Le 13 septembre, alors que le bruit courait que l'Irak affirmait les étrangers qu'il recevait, le Conseil a adopté la résolution 666. Il y déclarait espérer que l'Irak respecterait ses obligations et lui rappelait qu'il était responsable de la sécurité des «navires». Il autorisait aussi le comité de sanctions créé en vertu de la résolution 661 à suivre l'évolution de la situation en ce qui concerne les produits alimentaires, en prenant une attention particulière aux besoins des enfants de moins de quinze ans, des femmes enceintes, des malades et des personnes âgées, afin de leur épargner les conséquences de l'embargo décrété par l'Assemblée générale.

Le 16 septembre, le Conseil a pris de nouvelles mesures à l'encontre de l'Irak après que ce dernier a persisté dans plusieurs encroissements diplomatiques et arrêté un certain nombre de diplomates et de ressortissants étrangers. La résolution 667, adoptée à l'unanimité, condamnait officiellement l'Irak et l'exhortait à assurer la sécurité et le bien-être des personnels diplomatiques et consulaires.

Le 22 septembre, par 14 voix contre 1 (Cuba), le Conseil a décidé de renforcer l'embargo contre Bagdad. Au cours d'une réunion inhabituelle des ministres des Affaires étrangères de treize des quinze pays-membres, le Conseil a décidé d'interdire les transports aériens à destination et en provenance de l'Irak ou du Koweït. La résolution n'autorise pas l'interception d'aéronefs. En fait, elle demande à tous les Etats de refuser toute autorisation de survol de leur territoire à des appareils faisant route vers l'Irak ou le Koweït à moins qu'ils avertissent sur un aéroport donné aux fins d'inspection. La résolution précise que seules l'aide alimentaire et les fournitures médicales doivent être autorisées pour des raisons humanitaires.

Le 12 octobre, le Conseil a adopté à l'unanimité une résolution condamnant Israël après les affrontements entre forces de sécurité et Palestiniens qui, quatre jours plus tôt (le 8 octobre), s'étaient soldés par la mort d'une vingtaine de Palestiniens à la colline de Temple/Haram (Al-Chart). La résolution (l'Israël-Chart) que les Etats-Unis appuyaient la condamnation et préservée. Les diplomates craignant qu'un veto ou une abstention des Américains ne soient interprétés par Saddam Hussein comme un signe de division du Conseil.

Parallèlement, plusieurs pays non alignés ont insisté pour que le Conseil ne donne pas l'impression d'appliquer deux poids deux mesures, à savoir qu'il ne semble pas traiter les questions chères aux Etats-Unis d'une façon et celles intéressant les nations arabes d'une autre façon. Aux termes de la résolution 672, le Secrétaire général devait envoyer

## En bref

[illegible]

- TREVOR ROWE

Le Conseil a également réussi à régler quelques questions de routine. Le 14 août, il a adopté la résolution 663 par laquelle il reconnaît d'admettre la principale titularité de membre. Le Liechtenstein est donc devenu le 166<sup>e</sup> membre des Nations Unies, avant de remonter, en octobre, au 159<sup>e</sup> rang, quand la République démocratique allemande et la République fédérale d'Allemagne se sont unifiées.

# CHRONIQUE DE LA DÉFENSE

Les missiles balistiques et la crise du Golfe

La crise du Golfe a remis une fois de plus, la question de la prolifération des missiles balistiques sur le devant de la scène. L'Irak dispose-rait en effet de trois types de missiles appartenant à cette catégorie : le *Scud-B*, un missile soviétique de portée intermédiaire pouvant atteindre des objectifs situés à 300 kilomètres et deux missiles de conception irakienne inspirés du *Scud-B*, soit l'*al-Husayn* et l'*al-Abbas*. Le premier, est muni d'un plus grand réservoir de carburant et d'une ogive plus importante que le missile soviétique. L'*al-Abbas*, modèle plus avancé, est capable de détruire des cibles situées à 900 km. L'Irak a également entrepris la mise au point d'une fusée à trois étages, l'*el-Abid*, qui servirait à placer des satellites sur orbite, mais qui pourrait aussi être utilisée comme missile de portée intermédiaire.

Le 5 septembre, le Secrétaire d'Etat américain a octroyé un permis d'exportation de tubes enveloppés de missiles vers le Brésil, ce qui, outre constituer un revirement politique, lui a valu des critiques. En effet, plusieurs journalistes affirment que le Brésil et l'Irak ont signé, en 1989, des contrats portant sur des projets conjoints de missiles et de satellites, mais, ces affirmations n'ont été ni confirmées ni démenties par les autorités brésiliennes. En septembre, on a rapporté dans la presse qu'en 1989 également, les services de renseignement occidentaux avaient détecté, en Irak, l'essai d'un missile armé d'une ogive chimique. Selon la presse toujours, Bagdad aurait essayé, en vain, de conclure une entente avec Nouakchott qui lui aurait permis de poursuivre ses essais dans les régions désertiques de Mauritanie. L'Irak n'est servi d'armes chimiques que dans les dernières reprises dans la forme de épisodes de la guerre contre l'Iran, principalement sous la forme de

boîtes larguées depuis des avions. L'Irak produit du gaz moutarde et des gaz neurotoxiques dont il posséderait d'importantes réserves.

## Interception des missiles balistiques

Le 9 septembre, Israël a procédé à une premier essai en vol de son missile anti-missile balistique *Arrow*, conçu pour intercepter et détruire les missiles balistiques à moyenne et courte portées du genre *Scud*. Même si l'essai a été couronné de succès, les représentants israéliens ont souligné que de nombreux autres essais étaient nécessaires avant de décider de sa fabrication en nombre. La mise au point du missile *Arrow* est cofinancée par Israël et les Etats-Unis.

Entre temps, à Washington, des hauts fonctionnaires américains ont affirmé que les événements du Golfe monteraient à quel point l'Initiative de défense stratégique (IDS) est importante. En juillet, M. Henry Cooper, l'un des négociateurs américains aux pourparlers à Genève sur la Guerre des étoiles et grand partisan de l'IDS, a été nommé directeur du programme IDS. Devant la menace de compression budgétaires risquant de toucher le programme de recherche, il a fait valoir toute l'importance de l'IDS comme un moyen de contourner la prolifération des missiles balistiques. Il s'agit sans doute d'un hasard, mais au mois d'août, le Sénat a proposé de réorienter les fonds technologiques spatiales « exotiques » vers les systèmes de défense terrestres mettant en oeuvre des missiles balistiques, ce qui, à court terme, menacerait moins l'avenir du trafic ABM et offrirait plus de possibilités dans l'immédiat en matière de protection contre les missiles à courte et moyenne portées.

Vers la fin octobre, les membres du Comité mixte de la Chambre et du Sénat sont finalement arrivés à un compromis en ce qui concerne le budget de la défense des Etats-Unis pour l'exercice 1991. Les dépenses totales autorisées s'élèvent à 288,3 milliards de dollars. Même si de nombreux programmes ont été éliminés, aucun des grands projets n'a été abandonné. Le budget de l'IDS a été établi à 2,9 milliards de

dollars, ce qui représente presque 2 milliards de moins que la somme demandée par le Pentagone. Les fonds alloués pour le développement du B-2 sont très proches de ceux demandés, mais la politique a continué entre le Sénat et la Chambre quant à l'avenir du programme.

Le Secrétaire à la Défense, M. Richard Cheney, a défendu l'IDS avec ardeur, mais il a dévoilé ses propres intentions à la mi-août, en rayant neuf destroyers et un sous-marin de la liste des bâtiments devant être construits pour la Marine. En éliminant ainsi l'un des deux sous-marins perfectionnés *Seawolf*, il a donné aux destructeurs du programme *Seawolf* au Congrès une occasion rêvée de réclamer son annulation pure et simple. Si la menace soviétique continue de s'estomper, il se pourrait fort bien que ces sous-marins, qui coûtent 1,2 milliards de dollars pièce, soient jugés superflus.

## Réforme de la politique de défense des Etats-Unis

Alors que le budget de 1991 promettait peu de changements en dehors des mesures de restriction, la politique de défense a long terme, par contre, semble vouer à un renouveau. Avant l'invasion du Koweït par l'Irak, le Pentagone avait posé une restructuration complète des forces militaires américaines en partant du principe que le budget de la défense serait réduit de 10 p. 100 sur cinq ans. Le plan, apparemment établi sous la direction du général Colin Powell, le chef d'état-major interarmes, et qui a été soumis au président en juin, se fonde sur la supposition suivante : une fois que l'Europe de l'Ouest. Dans le plan, on propose de ramener les effectifs américains stationnés en Europe à quelque 100 000 à 125 000 hommes, dans le cadre d'une réduction générale qui diminuera les effectifs actuels d'un demi-million d'hommes par rapport aux 2,1 millions actuels. Autres réductions importantes : le nombre de groupes de porte-avions passerait de quinze à onze et le nombre de divisions militaires actives, de dix-huit à douze. Par ailleurs, on mettrait sur pied deux divisions « reconstituables », qui accumuleraient

du matériel et seraient dirigées par une poignée d'officiers permanents. De plus, il sera possible de rapatrier rapidement les réserves pour rendre les divisions opérationnelles. D'une façon générale, le plan met plus l'accent sur l'intervention dans divers types de conflits régionaux que sur la défense de l'Europe

soviétique. Le 12 septembre, les pays victorieux de la Seconde guerre mondiale ont renoncé à leurs droits d'occupation Berlin, mais l'événement a été largement éclipsé par la crise du Golfe. À Moscou, les ministres des affaires étrangères britannique, français, américain et soviétique ont signé un traité, marquant la dernière étape du processus de règlement final avec l'Allemagne. Appliquant la formule des «deux plus quatre» adoptée à Ottawa en février, les quatre pays occupants ont, en effet, renoncé au droit de maintenir des troupes au-delà des frontières de la ville de Berlin, de surveiller l'administration de la ville et de tracer les frontières de l'Allemagne. En contrepartie, les deux pays ont accepté que le pays hôte ne dispose que d'une armée limitée et n'acquière pas d'armes nucléaires, chimiques ou biologiques et que son territoire ne s'étende pas au-delà des frontières existantes. Le 2 octobre 1990, les deux Allemagne se sont officiellement unifiées.

Les effectifs combinés des deux armées, qui s'élevaient à plus de 600 000 hommes à l'heure actuelle, seront réduits à 370 000 hommes au cours des quatre prochaines années. Aux termes d'un accord distinct, l'Allemagne a versé 7,5 milliards de dollars américains à Moscou pour l'aider à rapatrier ses soldats. La nouvelle Allemagne fera partie de l'OTAN, mais devra toutefois se plier à certaines restrictions. Jusqu'en 1994, les unités allemandes ne pourront pas être déployées en Allemagne de l'Est. Après 1994, seules les unités allemandes de l'OTAN pourront être envoyées dans cette partie du pays, mais sans armes nucléaires.

— DAVID COX

# LA LOI SUR LA DÉFENSE NATIONALE ET L'UTILISATION QUI EN EST FAITE

mettre en service actif les Forces canadiennes ou tout élément constitutif... n'importe où au Canada ou à l'étranger quand il estime opportun de le faire :

- a) soit pour la défense du Canada, en raison d'un état d'urgence;
  - b) soit en conséquence d'une action entreprise par le Canada aux termes de la Charte des Nations Unies, aux traités de l'Alliance Nord ou de tout autre instrument semblable pour la défense collective que le Canada peut souscrire.» (sic)
- En vertu de l'article 32, si le Parlement ne siège pas au moment où les forces sont mises en service actif, «celui-ci doit se réunir dans les dix jours de la proclamation le convoquant...».

C'est traditionnellement par le biais d'un décret que l'on met les troupes en service actif. Les trois navires de guerre que le premier ministre Mulroney a envoyés dans le Golfe ont quitté le pays le 24 août. Toutefois, à ce moment-là, aucun décret n'a été signé qui plaçait les forces en service actif. Le Parlement devait reprendre ses travaux le 24 septembre. Pour éviter d'avoir à le convoquer plus tôt, il fallut attendre le 14 septembre avant de mettre les forces navales en service actif officiel.

Il y eut un problème de synchronisation lorsque le contingent canadien se trouva prêt à pénétrer dans le canal de Suez deux jours avant l'émission du décret. Selon les règlements enon- cés dans les résolutions des Nations Unies qui établissent les sanctions et la façon dont elles seront appliquées, les forces militaires prenant part à la mise en vigueur des sanctions sont considérées en service actif dès qu'elles ont pénétré dans la zone visée. Puisque les Canadiens au- raient pénétré dans la zone en question dès le moment où ils auraient quitté le canal de Suez, les navires canadiens ont dû demeurer en Sicile jusqu'à ce que le moment de leur passage dans le Canal corresponde avec le début de leur service actif.

Dès qu'elles sont en service actif, les Forces canadiennes reçoivent leurs ordres du Chef d'état-major de la Défense. Elles agissent en vertu des règles d'engagement établies avant leur départ. La force multinationale chargée d'im- poser les sanctions des Nations Unies a, depuis le début des opérations, suivi les directives établies par l'ONU et élaborées à la faveur des consulta- tions qu'ont tenues les chefs militaires des pays constituant cette force. □

— JANE BOULDEN

Jane Boulden est chercheure, et auteure à Kingston. Elle défend une maîtrise en droit international de l'Université Queen's.

9 MOIS D'AOÛT 1990, LES GOUVERNE-

ment aux Forces canadiennes dans deux situations très différentes. Le 6 août, le gouvernement du Québec a officiellement de- mandé l'aide des Forces canadiennes afin de ré- gler le conflit qui opposait les indiens Mohawks à la Sûreté du Québec (SQ) dans la ville d'Oka et au pont Mercier. Quatre jours plus tard, soit le 10 août, le premier ministre Brian Mulroney a annoncé que deux destroyers et un navire de ravitaillement transportant 800 militaires se rendraient dans le golfe Persique pour appuyer la force multinationale regroupée là-bas pour faire respecter les sanctions des Nations Unies impo- sées contre l'Irak. Dans les deux cas, les mesures en question ont été prises en vertu de la Loi sur la défense nationale.

La Loi sur la défense nationale, ou Loi sur la défense du Canada, est un long document qui définit les règlements régissant les Forces cana- diennes et notamment ceux concernant les cours maritimes, les forces de réserve et la mobilisation ou la libération des hommes et des femmes des Forces armées.

## L'aide au pouvoir civil : l'armée à Oka et à Kahnewake

La partie XI de la Loi sur la défense nationale traite de l'aide au pouvoir civil. En effet, les Forces armées peuvent être appelées à prêter main-forte aux autorités civiles lorsque celles-ci ne peuvent plus maîtriser une situation. Ce n'est pas ce qui s'est passé en 1970, lors de l'interven- tion des Forces armées au Québec au moment de la crise du FLQ. Le gouvernement fédéral avait alors proclamé l'existence d'un état d'insurrec- tion appréhendée, et la Loi sur les mesures de guerre lui donnait des pouvoirs d'arrestation exorbitants.

La Loi sur les mesures de guerre a depuis été remplacée par la nouvelle Loi sur les mesures d'urgence qui contient diverses sauvegardes con- tre les abus de pouvoir risquant de survenir dans une situation d'urgence; elle prévoit également un examen par le Parlement des décisions prises et elle accorde aux provinces un rôle plus impor- tant que sous le régime de la Loi sur les mesures nationales; il faut donc conclure que, selon les autorités, il n'y avait pas de situation d'urgence. Selon la Loi sur la défense nationale, c'est au procureur général de la province touchée qu'il incombe de demander l'aide des Forces cana- diennes. Le procureur général peut rédiger lui- même la requête, mais celle-ci peut également être fondée sur l'information reçue d'un juge d'une cour supérieure, de comité ou de district. L'article 275 mentionne que l'on peut deman- der l'aide des forces armées «... en cas d'émeutes

## Le service actif :

Dans le cas des événements de 1990, l'armée a tout d'abord remplacé la Sûreté du Québec à Oka et à Kahnewake. Le 27 août, après que le gou- vernement du Québec eut constaté l'échec des négociations, il a demandé aux Forces armées de s'acquiescer du mandat qu'il leur avait accordé à l'origine, soit enlever les barricades, rétablir la liberté de circulation sur les routes et les ponts, démanteler les centres de résistance, et restaurer l'ordre public. Le Chef d'état-major de la Dé- fense, le général John de Chastelain, a ordonné aux Forces armées déployées sur place de s'acquiescer de ce mandat.

## La marine canadienne dans le golfe Persique

La Loi sur la défense nationale autorise également le recours aux forces armées pour assurer la défense du Canada. L'article 31 men- tionne que : «Le gouvernement en conseil peu

## NOTE DE LA DIRECTION

Le danger des bilans politiques.

préparation ne pouvait tomber à plus mauvaise époque, à savoir précisément au moment où les objectifs de la politique de défense du Canada, après être restés inchangés pendant des décennies, ont commencé à se modifier. Beaucoup d'entre nous ont sévèrement critiqué le Livre blanc à sa sortie, surtout parce que nous le pensions mal orienté, encore que certains jugeaient également ses objectifs utopiques.

En définitive, ce sont d'abord des considérations financières que l'apaisement des tensions Est-Ouest qui l'ont vidé de sa substance. Cependant, le fait qu'on ait une fois encore édulcoré des orientations nouvelles données aux forces armées et qu'une fois encore les attentions suscitées ont été déguisées à cause des dommages durables. En l'occurrence et tout bien considéré, il aurait mieux valu ne dresser aucun bilan plutôt que d'en avoir dressé un en vain.

On ne sait pas vraiment si, et dans quelle mesure, l'histoire mitigée des derniers bilans de la politique étrangère et de la défense canadienne a contribué à une certaine réticence à renouveler l'exercice, même après que M. Gorbatchev a très manifestement entrepris de «chambarder» l'ordre international. À l'évidence, d'autres facteurs ont joué un rôle, dont la nécessité constante d'éteindre des incendies politiques, nécessaires renforcés par ces événements-mêmes, et les préoccupations internes d'ordre financier et organisationnel.

Il y a aussi eu au Canada un débat officiel et politique incessant sur la question de savoir si M. Gorbatchev allait apporter des changements qualitatifs. Le Canada, sans jamais avoir joué les va-et-vient contre l'Union soviétique, a tout de même compté parmi les pays qui, en Occident, critiquaient le plus sévèrement les violations des droits de la personne dans le système totalitaire soviétique. En conséquence, notre gouvernement a été un des plus lents à reconnaître les changements et à y réagir.

EXAMINER LA POLITIQUE ÉTRANGÈRE, LA POLITIQUE en matière de sécurité, de défense et d'aide au développement n'est pas toujours une bonne idée, du moins lorsque l'examen se pratique aussi irrégulièrement qu'au Canada. S'il y a une chose que nous a enseignée l'histoire récente, c'est bien que les événements peuvent s'enchaîner à un rythme très rapide. La situation est en évolution constante, c'est pourquoi nous devrions peut-être envisager une forme de bilans continus, à la publication annuelle de Livres blancs, à l'instar des Britanniques. Nous y gagnons un processus de consultation ininterrompu qui ne connaîtrait plus de ces périodes d'activité effrénée entrecoupées de longs silences. Certaines leçons s'appliquent particulièrement au gouvernement canadien, car la plupart des examens politiques réalisés à la fin des années 1960 et au début des années 1970, à l'exception peut-être de celui qui a donné lieu à la publication du Livre blanc de la défense, en 1971, étaient mal conçus et mal exécutés, malgré la pleine participation des plus hauts échelons du gouvernement. Il en a résulté des bilans plus préjudiciables que bénéfiques, et une partie de ce préjudice a mis du temps à s'effacer.

Le «Livre gris» du nouveau gouvernement conservateur d'abord sur la politique étrangère de 1985 (*Compétitivité et sécurité : les orientations des relations internationales canadiennes*) a été en grande partie annulé par le rapport qu'en a fait ensuite le comité mixte extraordinaire du Parlementaire. Cette réaction n'a jamais été officialisée par aucun Livre blanc, pas plus que le Livre gris n'a été retiré, ce qui a pu sembler une certaine confusion dans plusieurs domaines.

Certains débats et décisions qui ont suivi sur l'indépendance des programmes canadiens, la participation multilatérale et la coordination bilatérale avec les États-Unis auraient sans doute gagné en franchise si un processus d'examen plus clair avait produit un résultat plus net, mais c'est difficile à dire. Ces programmes parfois contradictoires et les questions litigieuses qui les entouraient inmanquablement constituent le sempiternel lot de la politique étrangère canadienne.

SI VOUS VOULEZ UNE AUTRE PREUVE QUE LE PROCESSUS d'élaboration de la politique de défense de la défense de la sécurité et de la défense, sa

de la sécurité internationale, avons saisi l'occasion pour organiser des consultations, préparer des documents et apporter notre contribution aux mécanismes de formulation des politiques. À ce jour, la participation du public à l'examen de la politique de sécurité a aussi été conçue pour favoriser un dialogue permanent, principalement par le biais d'une série d'allocations du ministre des Affaires étrangères, dont la première, présentée à l'Université McGill en février, portait sur les principes de nos futures relations avec l'Europe, et une autre, donnée en mai au Collège Humber, a permis de confirmer les orientations canadiennes en Europe.

En outre, une motion de l'opposition reprochant au gouvernement son manque d'initiative en matière de politique étrangère a provoqué un débat intéressant à la Chambre, le 31 mai. Débat que M. Clark a d'ailleurs élargi aux problèmes de sécurité dans la région de l'Asie et du Pacifique, ce qui nous a amené aussi à des discussions animées et importantes avec nos partenaires du Pacifique.

DANS LES ÉLÉMENTS POLITIQUES QUI ONT ÉMERGÉ jusqu'ici, sont apparues des analyses et des prises de risques intrigantes. Ottawa s'est déclaré en faveur du renforcement et de l'élargissement de la Conférence sur la sécurité et la coopération en Europe (CSCPE), depuis longtemps préconisée par l'Institut, bien avant Washington ou Londres, et notre pays a contribué à orienter l'OTAN dans ce sens. Nous qui ne sommes pas au gouvernement, ne savons pas quels sont tous les autres dossiers à régler. Nous savons que les politiques relatives au multilatéralisme ont fait l'objet d'une certaine réflexion de façon à répondre en temps voulu aux nombreux nouveaux problèmes et opportunités auxquels les Nations Unies seront confrontées.

Bien entendu, il reste encore du pain sur la planche, en l'occurrence la révision de la politique de défense, bien promise mais souvent repoussée. Soyons justes et rappelons-nous que le bilan de 1987 a été publié dans les conditions que nous savons, en partie en désespoir de cause, ce qui est malheureusement inévitable lorsque l'on choisit de procéder à des révisions sporadiques. Au vu des événements de ces tout derniers mois, force nous est de constater que les problèmes que le Canada a à résoudre en matière de défense ont changé radicalement. M. McKnight a déclaré sans équivoque qu'à la fin de 1989, les fondements géopolitiques de l'essentiel de la politique [de 1987] avaient disparu. Les nouvelles réalités géopolitiques sont encore plus complexes et les options relatives à la défense doivent suivre de plus près encore et avec plus de souplesse les programmes de notre politique étrangère et de notre sécurité. À l'aube des années 1990, tout Canadien et Canadienne a intérêt à ce que les bilans soient dressés convenablement.

NE FOIS ENTAMÉ, NEANMOINS, L'INDISPENSABLE bilan politique est allé bon train et, jusqu'ici, il se révèle efficace. Un ministre s'y est investi personnellement et au nom du gouvernement, et il est disposé à discuter de ses conclusions avec les Canadiens et Canadiennes intéressés ainsi qu'avec nos partenaires à l'étranger. De l'extérieur, les dirigeants semblent avoir conduit leurs analyses et leurs débats internes de manière assez expéditive. L'urgence de modifications importantes à apporter à certains piliers du système international a apparemment orienté l'examen de telle manière qu'ils n'ont éprouvé ni le besoin ni la tentation de partir de principes fondamentaux abstraits comme cela avait été le cas en 1970, par exemple.

Nombre de Canadiens ont contribué au processus d'examen, certains de façon plus organisée que d'autres. Beaucoup d'entre nous, qui travaillons dans le domaine de la paix et

# LA CRISE DU GOLFE L'ÉQUATION ISRAËLO-PALESTINIENNE

PAR JIM LEDERMAN

lui-même. En juillet, on dénombrait plus de Palestiniens tués par leurs frères que par des soldats israéliens.

UNE AUTRE CAUSE D'ABATTEMENT POUR LES Palestiniens, qui est passée pratiquement inaperçue dans la presse occidentale, c'est l'arrivée massive de Juifs soviétiques en Israël. Quand la crise irakienne a éclaté, ils étaient déjà 90 000 à avoir immigré en Terre sainte en sept mois, et les autorités israéliennes en attendent 2 millions d'autres avant la fin de la décennie. Or, voilà qui défie une des principales thèses palestiniennes, à savoir que, même si les Arabes sont incapables de gagner une guerre contre les Israéliens, grâce aux taux de massacres bien plus élevés des Palestiniens, la démographie de la région serait bientôt modifiée et il s'ensuivrait une crise politique.

Pour les Palestiniens expatriés, l'arrivée des Juifs soviétiques signifierait d'ailleurs un double menace. D'abord, l'installation de ces immigrants mettrait l'économie israélienne à si forte contribution que les efforts des Arabes pour obtenir les mêmes subventions publiques que les Juifs pour leurs services municipaux n'aboutiraient pas. Ensuite, les Arabes israéliens, en raison de leur croissance démographique élevée, auraient bien-tôt pesé d'un poids important à la Knesset; or, avec l'arrivée des Juifs soviétiques, ils pouvaient dire adieu à ce pouvoir potentiel.

Selon un des grands mythes nationaux que les Palestiniens brandissent dans les périodes de crise, les Juifs sionistes ont un corps étranger occidental incrusté en terre arabe qu'il faut extirper par l'épée. La plupart des Palestiniens ont pour modèle la peur dans les émirats du Golfe où les travailleurs palestiniens avaient peu de droits civils, et ses appels à la guerre sainte contre les Sadam Husseins s'est forgé une image de Sionisme. La plupart des Palestiniens ont pour modèle la persécution antijuive, le fait qu'il ait su semer la peur dans les émirats du Golfe où les travailleurs palestiniens avaient peu de droits civils, et ses appels à la guerre sainte contre les Sadam Husseins s'est forgé une image de Sionisme.

En outre, j'ai vu à Bagdad, même parmi les Palestiniens, une certaine peur de l'agitation palestinienne sur son territoire. En outre, j'ai vu à Bagdad, même parmi les Palestiniens, une certaine peur de l'agitation palestinienne sur son territoire. En outre, j'ai vu à Bagdad, même parmi les Palestiniens, une certaine peur de l'agitation palestinienne sur son territoire.

En outre, j'ai vu à Bagdad, même parmi les Palestiniens, une certaine peur de l'agitation palestinienne sur son territoire.

En outre, j'ai vu à Bagdad, même parmi les Palestiniens, une certaine peur de l'agitation palestinienne sur son territoire.

E SOUTIENS QUASI UNANIMES DES Palestiniens à l'invasion du Koweït par l'Irak démontre une fois encore ce qui arrive quand un mythe populaire national est confronté à des politiques nationales et qu'il l'emporte sur elles. Après le coup de force irakien, les Palestiniens sont descendus en masse dans les rues de Jordanie et de Cisjordanie pour montrer, de façon extraordinaire, qu'ils soutenaient Saddam Hussein. À Jérusalem-Est, les journaux palestiniens, toutes tendances confondues, ont chanté les louanges du maître de Bagdad. Même parmi les Palestiniens qui sont citoyens israéliens, nombreux ont été ceux qui ont applaudi. D'après un sondage par téléphone dont les résultats ont été publiés le 9 août, 62 p. 100 d'entre eux donnaient raison à Saddam Hussein et 69 p. 100 le considéraient comme un héros national. Seulement 15 p. 100 des personnes interrogées pensaient qu'il était fou ou qu'il avait perdu la tête.

Les conséquences pratiques de ce soutien n'ont pas tardé à se faire sentir. L'Égypte a ordonné un filtrage strict des Palestiniens à ses postes frontaliers. Des milliers de Palestiniens qui travaillaient dans les pays du Golfe ont été expulsés. Alors que c'était 250 millions de dollars que ces travailleurs immigrants envoyaient chaque année à leurs familles dans les territoires occupés par Israël, aujourd'hui, l'argent du Golfe n'arrive plus qu'à compte-gouttes. Et une fois de plus, l'OLP, condamnée, s'est retrouvée isolée politiquement. Le fait d'étudier la conjoncture unanime, il faut ajouter la conjoncture moyen-orientale juste avant l'invasion.

Dans le monde arabe, les Koweïtiens comprenaient parmi les gens plus largement impopulaires. Partout où ils allaient, que ce soit au Caire, à Tunis ou à Beyrouth, on trouvait qu'ils dépassaient avec ostentation, qu'ils écrasèrent les populations locales de leur richesse sans pudeur ni tact. Aux yeux de la plupart des Palestiniens, la famille régnante notamment, c'est-à-dire les Sabah, était avare et peu disposée à contribuer à la cause palestinienne plus qu'il ne fallait pour contenir l'agitation palestinienne sur son territoire.

Palestiniens traversaient une très mauvaise passe politique. En juin, suite à une attaque terroriste contre des plages israéliennes, les Américains avaient suspendu leurs contacts à des niveaux internationaux. Pour ce qui était de l'idéologie et de la sécurité, le nouveau gouvernement israélien était dominé par les «faucous». Les relations palestino-égyptiennes étaient notoirement tendues. L'Union soviétique avait renoncé à apporter son soutien actif à la cause palestinienne. De plus, en Cisjordanie et dans la bande de Gaza occupées, le soulèvement stagnait et se retournait contre

indignes que les Saoudiens avaient invités sur leur territoire ont tout de suite fait vibrer le cœur des Palestiniens. De bien des façons, Saddam Hussein faisait figure de messie laïc. Tout cela n'a pas été sans effets sur l'équation israélo-palestinienne. La droite israélienne s'est lancée dans une campagne de «nous vous l'avons dit», les Palestiniens se sont engagés dans une alliance perfide avec l'ennemi le plus dangereux d'Israël, on ne peut donc pas leur faire confiance. Les «colombes» israéliennes, dont beaucoup n'avaient pas ménagé leurs efforts pour instaurer un dialogue entre Israéliens et Palestiniens, étaient au désarroi. Dans leurs rangs, le vétéran de la politique qu'est Abba Eban, ancien ministre des Affaires étrangères, déclarait : «Nous ne pouvons, mes collègues et moi, avoir une discussion fructueuse avec des Palestiniens qui applaudissent à la brutalité de Saddam. Yossi Sarid, député et militant pacifiste en vue, ajoutait : «On doit porter un masque à gaz pour ne pas respirer le poison distillé par la position pro-irakienne affichée par l'Organisation de libération de la Palestine».

Les interférences privilégiées de la gauche israélienne dans les territoires occupés, comme Feisal Al Hussein, qui passe pour être le personnage politique le plus influent de Cisjordanie, ont essayé d'atténuer l'effet déclencheur en Israël par l'Irak. Ce dernier argument n'a guère convaincu les Israéliens, qui ont rappelé que ils n'avaient pas commencé la guerre qui s'était solidée par la prise de la Cisjordanie, alors que l'action de l'Irak était une agression non déguisée.

Pour la majorité des Israéliens du centre et de droite, il y a un autre sujet d'inquiétude : le risque que Israël de se retirer des territoires occupés. Par ailleurs, la droite et la gauche réduisent toutes deux les conséquences encore inimaginables de Bagdad de lancer une campagne terroriste internationale qui serait dirigée par des mercenaires palestiniens tels que Abou Abbas et

Abou Nidal. □

Le présent article est la deuxième d'une série que Paix et Sécurité consacrera à des problèmes tels que les conflits moyen-orientaux et arabo-israéliens. Jim Lederman, journaliste canadien, est depuis longtemps correspondant étranger en Israël. Il est en train de terminer un livre sur l'initia vue par les médias universitaires.

14 HIVER 1990-1991

FACE AU PESSIMISME GÉNÉ-  
ralisé, brille une lueur  
d'espoir. Jusqu'à ce que les  
nouvelles lois sur la pro-  
priété entrent en vigueur, il  
dans le monopole complet  
que l'Etat exerce sur l'ac-  
tivité économique, à savoir  
les «coopératives». Il y a  
deux ans, selon Chmelev,  
le pays comptait environ  
100 000 «coopératives»,  
dont la production se  
chiffrait en millions de rou-  
bles. Aujourd'hui, on en  
dénombrerait 5 millions, et leur  
chiffre d'affaires global  
s'élève à quelque 60 mil-  
liards de roubles. Ils font tourner ces coopératives  
(restaurants, taxis et autres petites entreprises)  
malgré une bureaucratie étatique hostile qui «les  
étrangle», dit Chmelev, et alors qu'une large pro-  
portion de la population les considère comme des  
exploiteurs affiliés à la mafia. Pour Chmelev, leur  
existence est aussi minuscule que de l'herbe qui  
pousserait dans du ciment.

Si les événements mondiaux des dix-huit  
derniers mois nous ont enseigné quelque chose,  
c'est de nous montrer étonnés quand il s'agit  
de prédire l'avenir. Mais pour ceux qui suivent  
les tribulations de l'économie soviétique, il est  
évident que l'important, ce n'est pas de savoir si,  
dans dix ou vingt ans, l'URSS sera riche au re-  
gard des normes occidentales, mais plutôt de  
savoir s'il existera encore une Union soviétique  
d'ici cinq ans, voire à la fin de l'année prochaine.  
La disparition de l'Etat soviétique ne serait pas  
fatallement un mal pour le monde. Cela dépendra  
des conditions dans lesquelles elle surviendrait.  
Si ce sont de plus petites unités politiques, les  
républiques ou les régions, qui reprendront les rênes  
du pouvoir et qui travailleront de concert avec la  
population pour créer des économies locales pro-  
ductives, pourquoi pas. Mais des bouleversements  
politiques d'une telle ampleur ont une fâcheuse  
tendance à tourner dangereusement à la violence.  
À cet égard, la révolution est-européenne de 1989  
aura été l'exception confirmant la règle. Or, même  
si l'Occident a beaucoup à gagner au bon dérou-  
lement des événements en URSS, il a très peu  
d'influence quant à leur issue, ce qui ne justifie  
nullement de ne pas s'en préoccuper.

«Pourquoi un Institut pour la paix et la sécurité  
s'intéresserait-il à notre économie ? » m'a de-  
mandé mon amie moscovite, alors que nous  
fitions à bonne allure installés dans sa voiture de  
fonction avec chauffeur. «Parce qu'un pays  
peuple de 285 millions d'habitants apparaît  
maussades et en colère, et doit de 30 000 bombes  
à hydrogène est une menace pour le monde. Nous  
voulons le voir heureux et prospère.» Quand  
elle a eu traduit mes propos au chauffeur, il a  
bien ri. □

l'avaient cueilli. «N'importe quel groupe d'hommes  
déterminés auraient pu faire ce que les bolche-  
viques ont fait à Petrograd au mois d'octobre  
1917 : s'emparer de quelques points clés de la  
ville et se proclamer gouvernement. Mais gou-  
vernement de quoi ? ... l'Empire russe était en  
pleine déliquescence.»

La confusion qui semble régner dans la capi-  
tale soviétique rend ce genre de comparaisons  
historiques inévitable. On a de plus en plus l'im-  
pression que les gouvernements sont en train de  
perdre pied, à tous les niveaux. Un des principaux  
conseillers économiques de Gorbatchev, Abel  
Aganbegian, a reconnu il y a peu de temps de-  
vant le parlement soviétique que personne ne sait  
réellement ce qui arrive à l'économie. À Lenin-  
grad, un conseil de district local (ce qui corres-  
pond, en gros, à un quartier) a envisagé de  
proclamer son indépendance et d'imprimer sa  
propre monnaie, mais en fin de compte, ce sont  
les têtes les plus froides qui l'ont emporté.

À première vue, un tel acte paraît absurde.  
Pourtant, il répond à sa propre logique interne. Le  
rouble s'est tellement dévalorisé — par cupé-  
tisme, les Soviétiques parlent d'«argent facile»  
— que cela ne vaut plus la peine de travailler pour  
en gagner. Les gens n'en ont pas besoin, pas plus  
que les entreprises publiques ou les républiques,  
d'ailleurs. Une part croissante du commerce de  
échange du coton contre de la viande, de la  
viande contre de l'huile, ce qui, outre de cons-  
tituer un retour à une économie de type féodal,  
est un signe supplémentaire de la désintégration  
de l'Etat.

Les paquets de cigarettes étrangères, de  
préférence des «Marlboro», supplantent la mon-  
naie nationale, le rouble, en tant que moyen  
d'échange. Outre qu'il n'aide en rien, cet affront  
quotidien a un effet corrosif sur le peu de sens  
que la population attache encore au fait d'être  
soviétique.

Nicolas Chmelev est impatient de savoir à quoi  
ressemblera une économie soviétique en état de  
marche après la crise immédiate. Il pense en mois  
et en semaines, pas en années : «Quelle sorte  
d'économie sortira-t-elle du pétrin actuel ? Dieu seul  
le sait. Nous pas. Je n'ai pas de vision détaillée  
du genre de société qui sera la nôtre dans dix ans.  
Mais j'espère que nous aurons en notre part de  
souffrance et de folie».

Nicolas Chmelev est un  
pilier respecté du mouve-  
ment pour une vraie ré-  
forme économique et  
démocratique. Chef du dé-  
partement d'économie à  
l'Institut sur les États-Unis  
et le Canada, romancier,  
membre du Congrès des  
députés du peuple et parti-  
san déclaré d'une écono-  
mie libérale, il a trime  
pendant des années dans le  
dessert intellectuel avant  
que la glasnost de Gor-  
batchev le laisse s'atteler  
en toute liberté à la tâche  
impossible que constitue le  
sauvetage de l'économie  
soviétique. On sent bien, cependant, que le  
gouvernement actuel le dégoûte.

Comme beaucoup d'autres réformateurs  
aujourd'hui dans son pays, il prône depuis long-  
temps d'acheter pour des dizaines de milliards de  
dollars de biens de consommation à l'Occident  
afin de les vendre dans les magasins soviétiques.  
Cela permettrait d'éponger l'énorme masse de  
roubles en circulation, d'éviter une hyperinflation  
pendant le passage à une économie de marché  
et, fait non négligeable, d'améliorer rapidement  
le fait sinistre et misérable du Soviétique moyen.  
L'attitude, qu'il qualifie d'indifférente, du  
gouvernement Gorbatchev le rend perplexe :

Je sais que M. Gorbatchev commence à com-  
prendre l'énormité de la situation, mais notre  
gouvernement est tellement entêté. Je redoute  
cette tradition qui veut que les dirigeants sovié-  
tiques méprisent le peuple, exactement comme  
la vieille aristocratie le méprisait. Ils ont du  
mal à se faire à l'idée de consacrer une somme  
d'argent aussi faramineuse dans les médica-  
ments, des pantalons, des produits cosmétiques  
et des micro-ordinateurs. Pourquoi ? Parce que  
nous avons jadis englouti notre argent dans de  
gigantesques travaux; alors pourquoi aller le  
dépenser dans pareilles bagatelles ?

APRÈS NOTRE ENTRETIEN, CHMELEV S'ENVOLAIT  
pour Bonn (Allemagne) avec Boris Eltsine, le  
président de la république de Russie. Ce seul fait  
en dit long. En Occident du moins, Eltsine plaît  
moins que Gorbatchev. Mais sa cote monte dans  
les sondages d'opinion et, plus important pour  
ceux qui veulent que les choses changent, les  
Russes pensent qu'il est décidé à aller plus vite  
en besogne que Gorbatchev. Ce qui est manifeste-  
ment un atout dans une situation qui demande  
d'espérer un homme d'action, mais qui est  
également périlleuse. Or, dans des situations  
transformer en «faire n'importe quoi», ce qui est  
la porte ouverte aux opportunistes, voire aux  
idéologues.

S'agissant des opportunistes du dernier grand  
soulèvement politique qu'a connu la Russie,  
en 1917, Adam Ulam, éminent historien de la  
révolution russe, a écrit que les bolcheviques ne  
étaient pas emparés du pouvoir, mais qu'ils

# RIEN DANS LES MAINS, RIEN DANS LES POCHES,

*Un hiver de grogne en Union soviétique.*

PAR MICHAEL BRYANS

PRÈS UN AUTOMNE DE PLUIES INCESSANTES sur Moscou, et une interminable querelle autour de programmes de redressement économique opposés, que d'aucuns qualifient de « bataille des plans » entre Chataline, Ryzhkov et le grand compromis, le parti soviétique et M. Gorbatchev se sont mis d'accord sur l'un d'eux. Mais, si l'on considère la tâche à accomplir, parler de « plan » est trompeur. L'Union soviétique, qui navigue à l'aveuglette, est en train de s'inventer une nouvelle politique économique en partant de conditions jamais vues ailleurs.

Ce n'est pas une expérience dans laquelle les puples de l'Union soviétique s'embarquent de gaieté de coeur, mais comme dans la blague irlandaise sur l'homme qui, demandant son chemin à un paysan, s'entend répondre qu'il est Soviétiques, ou les Russes, comme ils préfèrent se présenter quand ils sont de nationalité russe, doivent partir de là où ils se trouvent.

La déprime des Russes et la misère redoutée sont omniprésentes à Moscou, mais certaines personnes ont des façons plus objectives de prendre le poids de la population. Sociologues de formation, Lvi Levada travaillait pour le tout nouveau centre d'études de l'opinion publique, qui a ses bureaux à deux pas du célèbre grand magasin GUM, un endroit aujourd'hui sinistrement vide de marchandises et de clients.

En Union soviétique, les sondages d'opinion qu'ils ont en Occident, d'ailleurs, les instituts occidentaux critiquent souvent les méthodes employées et les résultats obtenus. Cependant, les sondages révélés par Levada et ses collègues sont tellement frappantes que peu importe une marge d'erreur statistique, même importante. Pour les perdants de ces sondages, gouvernementaux, personnalités politiques et optimistes de tous bords, on est même bien en deçà de la réalité.

Prenant au mur un graphique des sondages de septembre, M. Levada montre les courbes qui indiquent une nouvelle baisse des espoirs populaires, à la main, les résultats des sondages de fin d'été, estimant que la situation augmentait à vue d'oeil, l'accession de M. Gorbatchev à la présidence au printemps, mais le moral est resté en l'air.

En plus de toutes les autres pénuries, les Russes semblent à court de foi. Or, la foi est le moteur des économies modernes. La foi en ce que la monnaie que l'on a entre les mains vaudra plus ou moins autant dans un an qu'aujourd'hui, la foi en ce que tous les gens qui ont déposé de l'argent dans la même banque que vous ne tenteront pas de le retirer le même jour que vous. C'est grâce à ce parti essentiel que les citoyens font sur l'avenir que l'épargne, les investissements et toutes les choses qui rendent une vie prospère et civilisée existent. C'est un jeu que tout un chacun, mais surtout toutes les institutions d'une nation, ont le devoir de pérenniser.

Mais c'est ici, dans le personnage de Gorbatchev et dans le comportement de son gouvernement « fédéral » que réside un grand mystère : pourquoi ne semblent-ils tous ne faire à propos du chaos politique croissant et de la misère économique que l'environner ? C'est un mystère parce que, depuis plus de cinq ans, Gorbatchev et ses conseillers ont su faire preuve d'une maîtrise agitée politique doublée d'humanité. Pour tant, à l'heure que l'on pourrait qualifier de plus difficile qu'il ait connue l'URSS — les dirigeants du pays reconnaissent ouvertement qu'un effondrement de l'économie sonnerait le glas de ce que l'on appelle l'Union soviétique — le centre décisionnel semble frappé de paralysie et d'incapacité totale.

Les premières décisions que M. Gorbatchev a prises en vertu des pouvoirs spéciaux que le parlement lui a conférés à la fin septembre ont été d'ordonner aux entreprises publiques de respecter les quotas de production fixés par le plan quinquennal, puis de mobiliser, une fois encore, les étudiants pour ramasser des légumes pendant une partie de leur premier semestre. Les Moscovites que j'ai rencontrés ont accueilli ces décrets

présidentielles avec une franche dérition : pour eux, Mikhail Gorbatchev, pris à la gorge, brasse du vent. La paralyse politique s'expliquerait aussi autrement, comme le veulent les rumeurs, très abondantes dans ce pays. En effet, les ministères actuels, qui ont peu d'intérêt à tirer de véritables réformes, s'acharnent à saboter les efforts de Gorbatchev et de ses partisans. Au début du mois d'octobre, le quotidien *Izvestia* a publié un reportage sur la pénurie croissante de viande dans les boutiques de Moscou. Apparemment, pour se en procurer davantage, l'organisme public chargé du ravitaillement a décidé d'augmenter les prix qu'il payait aux fermes d'État. Le hic, c'est qu'il l'a fait savoir trois mois avant la majoration effective des prix. Résultat, comme n'importe quel étudiant en économie de première année aurait pu le prédire, l'approvisionnement en viande déjà lamentable a simplement cessé. Les fermes d'État, ce qui est assez sensé de leur part, ont arrêté tout abattage jusqu'à l'application des nouveaux tarifs. Le ministre de l'Alimentation venait enfin de découvrir le pouvoir économique de l'établissement des prix.

QUESTION : S'AGISSAIT-IL D'UN EXEMPLE DE CITOYENNETÉ ? RÉPONSE : IL EST IMPOSSIBLE D'UN SABOTAGE DÉLIBÉRÉ ORCHÉSTRÉ PAR UNE BUREAUCRATIE COMMISSAIRE À L'ENTREPRISE PUBLIQUE OU À L'ÉTAT. L'exaspération et la réelle déception que cause le régime Gorbatchev sont profondes chez les intellectuels et les spécialistes, qui sont des gens sur lesquels les gouvernements, à tous les niveaux, doivent pouvoir compter s'ils veulent donner au pays une chance d'avenir stable. Le sociologue Lvi Levada n'est pas le seul observateur à scruter l'état d'esprit politique et économique soviétique qui a été déclaré que le gouvernement central dirigé par Gorbatchev, et par son très impopulaire premier ministre, Nicolas Ryzhkov, s'affaiblissait de semaine en semaine. Il ne s'agit pas de récrimination, mais plutôt du triste constat que l'on admettrait se retrouve hors jeu, peu importe pourquoi, que les leviers du pouvoir dont dispose le gouvernement central ne sont tout bonnement reliés à rien et qu'il est donc temps de regarder ailleurs.

LA FAVEUR DE LA PAIX AMÉRICAINES, LES GOUVERNEMENTS SUCCESSIONS ONT pu gérer l'Etat tranquillement, sans grandes secousses. L'un d'eux, celui de Lescro (1941-1946) exerça un despotisme absolu pendant la guerre. Grâce au dégel consécutif à la fin de la Seconde Guerre mondiale, les concepts d'ordre, de liberté, de démocratie, de justice sociale et de droits du peuple gagnent le pays et nourrissent un large mouvement de contestation qui empêche le gouvernement de l'1 janvier 1946. Cet événement marque un véritable rupture. C'est la première fois depuis 1930 qu'un gouvernement est renversé sous la pression populaire. Il en est résulté un grand brassage social et politique d'où ont émergé de nouvelles forces (naissance d'un mouvement syndical, création d'associations professionnelles, foisonnement de groupements politiques et d'organes de presse). Sur le plan politique, l'élite des classes moyennes reprendra sa montée vers le pouvoir en s'opposant bruyamment à ce qu'elle appelle l'exclusivisme de la bourgeoisie mulâtre et en se posant en défenseurs des classes moyennes et des masses noires. L'idéologie noiriste va alors se conjuguer à l'idéologie nationaliste, en voguant sous l'occupation, pour légitimer la préférence de cette nouvelle élite à occuper une position dominante dans l'appareil d'Etat et forcer ainsi son entrée dans la bourgeoisie.

# HAÏTI : LA LONGUE MARCHÉ

Les élections de décembre permettront-elles à la démocratie de s'installer en Haïti?

PAR CLAUDE MOÏSE

CUR DE NOMBREUX OBSERVATEURS, HAÏTI EST UN PAYS ÉTON-  
nant qui suscite tantôt l'admiration, tantôt le découragement.  
Ce pays a accédé à l'indépendance nationale en 1804, au  
moment où la quasi-totalité du continent américain était sous  
la dépendance coloniale européenne; il offre aujourd'hui,

après un parcours historique cahoteux, un bilan de

développement humain désastreux.

À l'état de faillite du pays, il faut ajouter la répression, l'absence de

liberté, le mépris de la vie humaine, l'exode et les tribulations des émigrés

haïtiens dans les Antilles et les grandes capitales occidentales et la corrup-

tion. La chute de Jean-Claude Duvalier survenue en février 1986 a fait

naître l'espoir que Haïti reprendrait vigoureusement sa marche vers la digi-

nité, la justice et la démocratie. Mais depuis la fuite du dictateur, les péti-

tes d'une inévitabile transition marquée par la violence, désespèrent la

population et les observateurs. À bien des égards, la crise actuelle semble

renouer avec un passé de turbulence et avec les malheurs qui ont accablé le

pays tout au long du XIX<sup>e</sup> siècle. Qui connaît l'histoire d'Haïti est tenté de

lire dans le présent une répétition tragique du passé.

HAÏTI EST NÉE DE LA VIOLENCE. AU COMMENCEMENT ÉTAIT LE GÉNOCIDE DES

autochtones (1492-1500). Puis, lentement et laborieusement, dans le sillage

de Christophe Colomb, des Européens occupèrent les terres, repoussèrent

l'île de travailleurs esclaves noirs attachés à l'Afrique et organisèrent une

exploitation à outrance des ressources sous la poussée du capitalisme eu-

ropéen en expansion. Tels furent les éléments de base de la formation d'une

société coloniale, esclavagiste et raciste au sein de laquelle Haïti demeura en

gestion durant trois siècles (1500-1804). C'est du bouleversement de cette

société, consécutif à la Révolution française de 1789, qu'elle vit le jour le

1<sup>er</sup> janvier 1804 en tant que nation indépendante. Entre 1789 et 1804, les

colons blancs, les affranchis, les représentants du pouvoir métropolitain, les

petits blancs et les esclaves noirs se sont affrontés dans une lutte sans merci

pour la conservation des privilèges divers ou pour la conquête des droits

nouveaux. Durant quinze ans, les révoltes, les insurrections, les guerres

civiles, les guerres étrangères, les guerres d'indépendance se sont succédé

pour faire exploser la colonie et aboutir à la naissance du nouveau pays.

L'indépendance solennellement proclamée en ce 1<sup>er</sup> janvier 1804, la coa-

lition victorieuse des anciens libres de la colonie, de l'élite des nouveaux habi-

tants libres constituée à la faveur des guerres révolutionnaires et les esclaves

libérés, hérité de la tâche de construire un nouvel État. La préservation de

ces mobilisées derrière ses généraux, vainqueurs des Français. Mais d'autres

défis les attendent : il faudra survivre à la mise en quarantaine imposée

par la France, reconstruire l'appareil de production, réactiver les réseaux

économiques, partager l'héritage colonial, sauvegarder la liberté générale.

En somme, l'ordre colonial esclavagiste du XVIII<sup>e</sup> siècle dément, il s'agit de

réorganiser la production dans un nouveau cadre de relations de travail.

Confrontée à ces questions fondamentales, l'union sacrée réalisée jadis

contre les Français est déjà menacée de dislocation au lendemain de la vic-

toire. En effet, si toutes les classes de la société tiennent farouchement à

consolidier l'indépendance, elles ne s'entendent pas sur ses volets écono-

mique et social. Déjà pendant la période révolutionnaire (1791-1804), la

conquête du pouvoir et la prise de possession des habitations abandonnées

Benoit Frenette

par les colons. De leur côté, les cultivateurs, hier esclaves, réclament  
aujourd'hui leur part des terres et n'entendent nullement travailler pour  
de nouveaux maîtres.

TELLE EST LA TOILE DE FOND DE L'HISTOIRE POLITIQUE HAÏTIENNE AU XIX<sup>e</sup>

siècle. Il faut y ajouter les menaces de guerre et le danger d'un retour offen-

sement dans les campagnes, mais c'est surtout aux conflits d'intérêt et

aux luttes de pouvoir qui déchirent les classes dirigeantes que nous devons

l'instabilité politique chronique au XIX<sup>e</sup> siècle. La tragédie a commencé en

1806 avec l'assassinat de Dessalines, père de l'indépendance, par les géné-

raux du Sud. Elle s'est poursuivie par la guerre civile et par la scission du

pays entre l'État du Nord et la République de l'Ouest et du Sud (1807-1820).

Puis, tout le reste du siècle jusqu'à l'occupation américaine de 1915 est

marqué par des insurrections, des complots d'importance variable (on en

compte une centaine) des guerres civiles, des *pronunciamientos*, etc.

Au XIX<sup>e</sup> siècle, vingt-quatre des vingt-six présidents ont été des mili-

taires. Les généraux, commandants d'arrondissement ou de département,

sont les piliers du pouvoir central. Ils règnent en maîtres sur les grandes

villes et dans les régions.

Le militarisme est un héritage des luttes révolutionnaires. À l'origine

de la nation, ce sont les armées qui relaient les revendications nationalistes

et anti-esclavagistes et coordonnent les luttes politiques. Elles sont à la

fois gardiennes des intérêts de la nation toute entière et de ceux, en particulier,

des oligarchies naissantes. Elles constituent donc tout naturellement les

épinières de dirigeants du nouvel État.

Le rôle des militaires est encore amplifié par la place qu'occupe la sécu-

rité gouvernementale dans les priorités du pouvoir. Toujours en quête de

légitimité, les gouvernements issus de coup de force ne croient pouvoir sur-

vivre qu'en exterminant leurs adversaires. Ils doivent exercer une surveil-

lance de tous les instants sur les opposants réels et potentiels qui sont,

le plus souvent, contrainits à l'exil quand ils ne sont pas physiquement éli-

minés. C'est un engraisage infernal de répression et de conspiration qui rend

inconciliables gouvernement et opposition. En réalité, celle-ci n'existe pas

en tant que composante du système haïtien.

Depuis l'indépendance, Haïti marche dans le sous-développement. Avec

le temps, les problèmes se sont creusés dans tous les domaines : croissance

de la production, détérioration de l'équipement collectif, anarchie financière, etc.

L'État n'existe que le temps d'une accalmie, entre deux « révolutions ». De

1913 à 1915, l'Assemblée nationale a élu quatre présidents, parmi eux, trois

*pronunciamientos* confirmés par la suite par l'Assemblée. Haïti, après Cuba,

la République dominicaine et le Nicaragua, tombera alors comme un fruit mûr

dans le panier de l'impérialisme américain préoccupé d'assurer la stabilité

au bassin des Caraïbes et d'étendre sa domination sur le sous-continent.

ES MARINES AMÉRICAINES ONT OCCUPÉ LE PAYS DE 1915 À 1934.

Leur intervention a pris le mécanisme des *pronunciamientos*

et dispersé l'armée traditionnelle. À la faillite des classes

dirigeantes, les Américains apportent leur solution et imposent

leur paix. Ils font élire un nouveau gouvernement par la même

Assemblée nationale qu'ils ont trouvée sur place, ramenant

le régime et remettent en marche les institutions administratives. Pour rem-

placer l'ancienne armée, ils créent une gendarmerie qui, après s'être aguer-

rie en luttant contre la guérilla paysanne (1915 à 1920), se prépare à devenir

La meilleure façon d'y arriver consisterait pour notre pays à préconiser le gouvernement américain parle d'un cheminisme progressif vers l'ICJ, il y a fort à craindre que les prochaines étapes soient insignifiantes tant poli-

tiquement que militairement. Ramener le seuil actuel de 150 à 100 kilotonnes, par exemple, n'influerait pas sensiblement sur le programme nucléaire américain et n'impresionnerait guère ceux qui comptent appuyer la position mexicaine en 1995. Il faut plutôt réduire considérablement le seuil sus-mentionné et tenter de parvenir à un accord là-dessus d'ici 1995. Reste à fixer le seuil en question, mais, chose certaine, il doit témoigner d'audace. Voilà donc à penser que le Canada devrait se dire en faveur d'un seuil d'environ cinq kilotonnes et d'un nombre déterminé d'essais autorisés chaque année. Aspect digne de mention qui renforce cette position, de nombreuses données scientifiques prouvent que le respect d'un tel seuil serait vérifiable. Pareil régime n'altérerait pas beaucoup à limiter les ambitions des pays rattachés considérablement les programmes de modernisation des puissances nucléaires et il encouragerait d'autres examens politiques de la ques-

tion des essais. Cela satisfait-il les pays non munis de l'arme atomique ? Rien de moins qu'une interdiction complète serait sans doute nécessaire pour cela, mais l'adoption d'un faible seuil obligerait les pays non alignés à réévaluer leur position. Le TNP renforce la sécurité régionale et, en dépit de ses lacunes, il profite aux pays non munis d'armes nucléaires. Il serait stupide de leur part d'affaiblir la protection que leur procure le régime de non-prolifération, si l'on accomplit des progrès sensibles vers une ICF, tout comme les États-Unis auraient tort de compromettre le succès de leurs efforts en faveur de la non-prolifération en refusant mordicus de bouger sur la question des essais d'armes nucléaires.

UNE POLITIQUE Tournée VERS 1995 FAVORISERAIT AUSSI LA RÉUSSITE DE LA Conférence d'amendement. Afin d'éviter des affrontements destructeurs en janvier prochain à New York, il vaudrait mieux éviter d'accueillir les États-Unis au pied du mur et profiter plutôt de l'occasion pour étudier les questions intéressantes le rapport entre le TNP et l'ICJ. Il ne faut pas oublier non plus qu'à New York, la composition de l'Assemblée diffèrera sensiblement de celle de Genève. Un certain nombre des États quasi nucléaires (l'Inde, Israël, le Brésil et l'Afrique du Sud, par exemple) sont parties au Traité d'arrêt partiel des essais, mais non au TNP. Voilà qui risque de compliquer les choses à New York, mais qui offre aussi une occasion unique de discuter des problèmes de la prolifération avec les États les plus susceptibles d'acquiescer des armes nucléaires dans l'avenir.

Paradoxalement, la vaste gamme des questions abordées à la Conférence d'examen de 1990 a montré de façon éclatante que le régime de non-prolifération importe davantage qu'une interdiction complète des essais. Voilà pourquoi il faut prendre des mesures pour limiter les essais d'armes nucléaires. Par suite de l'échec de la Conférence d'examen à Genève, la perspective de la Conférence d'amendement ne sourit guère aux États occidentaux, dont le Canada, mais ils ne peuvent désormais plus y passer outre, ni supposer tout simplement qu'elle n'influera en rien sur l'avenir du TNP. Et il ne suffit pas non plus de soutenir qu'une ICF n'est désormais plus aussi importante qu'autrefois. Afin de réussir cette fois à concilier les points de vue des «manus nucléaires» et des autres à la Conférence d'examen de 1995, un effort renouvelé s'impose maintenant pour éviter la catastrophe totale à la Conférence d'amendement de New York.

matières au lieu de mettre l'accent sur l'adoption d'un traité d'interdiction complète des essais, qui n'a plus l'importance qu'elle revêtait au début des années 1960, aux fins de la limitation des armements.

Le DÉBAT SUR L'INTERDICTION DES ESSAIS NE REPOSE CEPENDANT PAS SUR LA logique pure et simple de la limitation des armements. Aux yeux des États non munis de l'arme nucléaire, il s'agit là d'une question politique. C'est le symbole le plus manifeste de la prodigalité nucléaire des pays dotés d'un engin atomique (les États-Unis, essentiellement) qui, déterminés à maintenir leurs arsenaux, refusent de se priver d'option pour l'avenir. C'est donc une question de bonne foi : si les pays dotés d'armes nucléaires tiennent vraiment au Traité sur la non-prolifération, ils doivent le prouver en prenant des mesures concrètes pour réaliser une interdiction complète des essais.

On fera de nouveau valoir ce lien entre l'ICJ et le TNP en janvier 1991, quand se tiendra la Conférence d'amendement du Traité sur l'arrêt partiel des essais. New York. Poussez par «Action mondiale des parlementaires», groupe international actuellement présidé par le député libéral canadien Warren Allmand, un certain nombre des signataires du Traité de 1963 ont fait valoir les clauses de ce dernier qui obligent les pays depositaires (le Royaume-Uni, les États-Unis et l'Union soviétique) à convoquer une conférence d'amendement. L'amendement proposé est très simple : rendre totale plutôt que partielle l'interdiction des explosions nucléaires expérimentales. Pour de nombreux partisans du TNP, la conférence d'amendement, comme bien d'autres mesures antérieures, va nuire aux efforts de limitation des armements. On a bien tort de lier l'avenir du régime de non-prolifération à la conclusion d'un accord d'interdiction complète des essais. Maintena-

ment, on s'apprête à affaiblir un autre précieux traité en recourant à l'article d'un amendement; ce qu'il faut en réalité, c'est un nouveau traité sur la limitation partielle des essais.

Vu la conjoncture et la politique américaine, les États-Unis pourraient facilement, à New York, transformer la conférence d'amendement en une charade fort coûteuse. Ils comptent parmi les trois pays qui ont négocié le PTBT et, en cette qualité, ils peuvent opposer leur veto aux amendements. Rien ne laisse prévoir que la politique américaine sur les essais changera sensiblement d'ici janvier. À quoi bon, par conséquent, convoquer une conférence vouée à l'échec et risquant facilement de dégénérer en un spectaculaire affrontement verbal, si dès le début, les États-Unis exigent un vote immédiat ?

Pour ÉVITER LE PIÈGE À NEW YORK, LE CANADA et d'autres États doivent se pencher sur deux questions clés. Tout d'abord, et c'est là l'aspect crucial, il leur faut s'entendre sur une politique susceptible, au cours des prochaines années, d'aider à adoucir le différend au sujet de l'interdiction complète des essais et d'améliorer ainsi les chances de survie du régime de non-prolifération. En second lieu, ils doivent transformer la conférence d'amendement en une réunion plus constructive qu'elle ne paraît destinée à l'être à l'heure actuelle.

En égard à la prochaine Conférence d'examen du TNP prévue pour 1995, il est certain que la politique canadienne actuelle accorde plus d'importance au régime de non-prolifération qu'à l'adoption d'un traité d'interdiction complète des essais. Mais s'il est vrai, comme cela semble être maintenant le cas, que ce régime est menacé par l'incapacité de progresser vers la réalisation d'un autre accord, alors le gouvernement canadien a devoir s'éloigner de sa position actuelle plutôt qu'imposer une démarche progressive (sans échéancier) vers l'interdiction complète des essais.

que les États dotés d'armes nucléaires auront respecté leurs obligations dans ce contexte.

«Chaque partie au traité s'engage à poursuivre de bonne foi des négociations sur des mesures efficaces relatives à la cessation de la course aux armements nucléaires, et sur une date rapprochée et où désarmement nucléaire, et sur un traité de désarmement général et complet sous un contrôle international strict et efficace.»

Depuis l'entrée en vigueur du traité, l'article VI a été au cœur du débat entre les deux catégories d'États parties au Traité, à savoir les puissances nucléaires et les pays non dotés d'armes atomiques. Le rapport entre l'article VI et la progression vers une interdiction complète des essais est établi dans le Préambule du traité, qui rappelle la détermination des parties au Traité de 1963 sur la limitation partielle des essais

«à assurer l'arrêt de toutes les explosions expérimentales d'armes nucléaires à tout jamais (et) à poursuivre les négociations à cette fin...»

Cette déclaration, combinée au libellé de l'article VI, a conduit les pays non alignés à faire de l'interdiction complète des essais l'étape la plus importante à franchir pour ostenser que les États dotés d'armes nucléaires ont respecté leurs obligations dans ce contexte.

## Le rapport entre le Traité sur la non-prolifération et les essais d'armes nucléaires

C'est ce qui a donné lieu à l'article VI :

«Chaque partie au traité s'engage à poursuivre de bonne foi des négociations sur des mesures efficaces relatives à la cessation de la course aux armements nucléaires, et sur une date rapprochée et où désarmement nucléaire, et sur un traité de désarmement général et complet sous un contrôle international strict et efficace.»

Depuis l'entrée en vigueur du traité, l'article VI a été au cœur du débat entre les deux catégories d'États parties au Traité, à savoir les puissances nucléaires et les pays non dotés d'armes atomiques. Le rapport entre l'article VI et la progression vers une interdiction complète des essais est établi dans le Préambule du traité, qui rappelle la détermination des parties au Traité de 1963 sur la limitation partielle des essais

# GENÈVE : UNE LEÇON POUR NEW YORK

Les négociations nucléaires : à tout vouloir, on risque

de tout perdre.

PAR DAVID COX

QUATRE HEURES DU MATIN LE 15 SEPTEMBRE. CINQ HEURES APRÈS l'échec d'examen du Traité sur la fin de la quatrième Conférence d'examen du Traité sur la non-prolifération (TNP), quatre semaines de pourparlers entre les États parties au Traité semblaient avoir abouti à l'échec. Les interprètes et traducteurs menaçaient de partir, les climatiseurs allaient s'arrêter et les lumières, s'éteindre, faute d'argent; au milieu de tout cela, le président de la Conférence a reçu un rapport d'un paragraphe qui émanait du Comité de rédaction, lequel y précisait que ses membres ne pouvaient s'entendre sur les mots à employer pour décrire le progrès accompli (ou l'absence de progrès) afin de mettre un terme à la course aux armements et, aspect primordial, de conclure une entente sur l'interdiction complète des essais d'armes nucléaires.

L'impasse aurait pu intriguer un nouveau-venu à la conférence. L'année qui venait de s'écouler aurait fort bien dû désarmer et de la limitation des armements, notamment en Europe, où l'on accueillait certes avec enthousiasme la fin de la Guerre froide et les réductions des forces conventionnelles. Cependant, les pays non alignés ont, sous la gouverne du Mexique, concentré leur attention sur une seule question : la fin des essais d'armes nucléaires. Pour eux, c'est là le gage de la bonne foi des superpuissances, dans la Conférence d'examen de Genève n'était que le premier round dans les démarches que les États parties font pour mettre les États-Unis au pied du mur relativement à l'interdiction des essais. Le deuxième round est prévu pour le début janvier à New York, quand, encore une fois par suite d'une initiative d'un groupe de pays non alignés, les signataires du Traité de 1963 sur l'arrêt partiel des essais (PTBT) se réuniront pour étudier une modification qui interdirait tous les essais nucléaires. En outre, la réunion de New York déterminera le ton des actes et politiques à venir qui, quant à eux, pourraient bien sceller le sort du TNP, car en 1995, les participants à la conférence d'examen décideront s'il faut proroger le Traité et, le cas échéant, de combien de temps.

À la toute fin de la conférence d'examen, il était évident que le désaccord ne tenait pas simplement au libellé du document final. Les États-Unis voulaient que l'on prit en compte leurs négociations avec l'URSS sur les protocoles de vérification devant être intégrés aux traités existants de limitation partielle des essais, et que l'on vît là une des étapes d'une démarche progressive vers une interdiction complète des essais (ICBE). Le Mexique a dit non, en soutenant qu'un tel acquiescement violerait le point essentiel, à savoir que le gouvernement Bush, tout comme l'administration précédente, n'avait aucunement l'intention de mettre un terme aux essais d'armes nucléaires. Les efforts pour trouver un texte de compromis ont échoué sur ce seul point litigieux.

Parfaitement conscient des enjeux, le président de la Conférence, M. Oswaldo de Rivero (Pérou), avait en dernier ressort rédigé un texte de compromis qu'il n'était pas disposé à discuter davantage. Quand la séance plénière a repris, le Mexique a demandé la parole et a objecté ses motifs, en confirmant qu'il ne s'était pas opposé à la position occidentale pendant un mois simplement pour bluffer et arracher le plus de concessions possible à la onzième heure. On a dès lors retiré le texte de compromis, et, au milieu des réminiscences, le président a abruptement clos la séance.

Le fait que les pays signataires n'aient pas réussi à s'entendre sur un texte final ne met pas le Traité sur la non-prolifération en péril. Aucun document

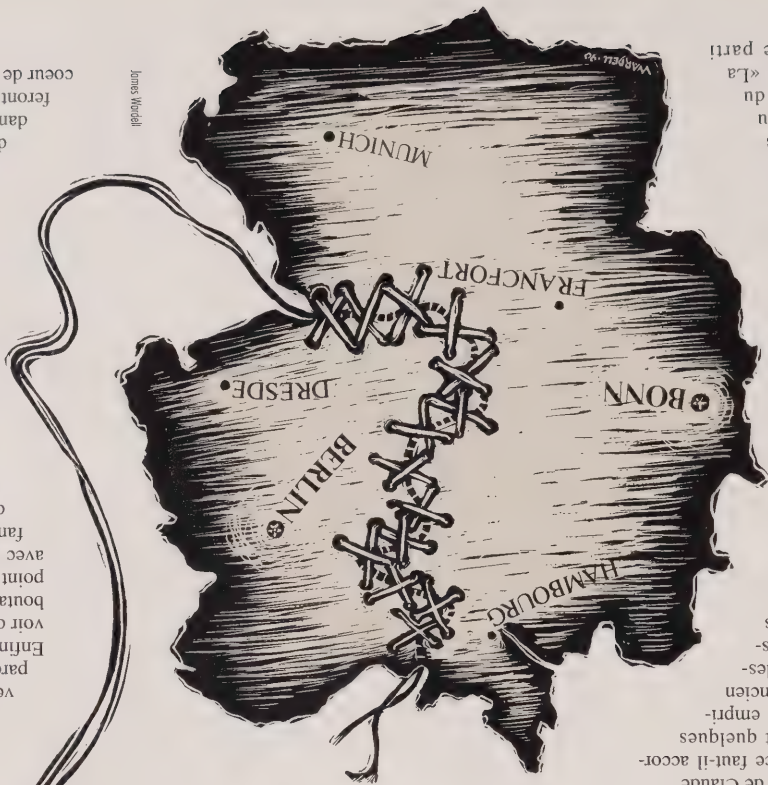

n'a transpiré de la conférence d'examen en 1980 et, en 1985, l'échec ne fut évité que par un tour de passe-passe diplomatique. Cependant, ces conférences, qui ont lieu tous les cinq ans, ne se résument pas uniquement à l'échange d'efforts plus vastes pour assujettir des matières non nucléaires, dont l'eau lourde et peut-être même le béryllium, au régime des garanties. Lorsque l'on oublie de tels objectifs aussi concrets et pratiques de la conférence d'examen, ce ne sont pas tant les bases du Traité qui sont minées, mais plutôt la capacité des signataires de s'attaquer ensemble aux problèmes graves menaçant d'affaiblir le régime de non-prolifération : citons à cet égard le fait que les États parties n'aient pas encore réussi à convaincre des pays quasi nucléaires tels que le Brésil, l'Argentine, le Pakistan et l'Afrique du Sud d'adhérer au Traité, et la surveillance de quantités toujours plus grandes de plutonium, lesquelles sont un sous-produit des installations nucléaires civiles.

En 1963, après plusieurs années de négociations infructueuses sur l'adoption d'un traité d'interdiction complète des essais d'armes nucléaires, les États-Unis et l'Union soviétique avaient réussi en quelques semaines à s'entendre sur un arrêt partiel qui ne s'appliquait pas aux essais souterrains. Dans le préambule du Traité sur l'arrêt partiel des essais nucléaires (PTBT), cependant, les superpuissances se disaient résolues à négocier une entente d'interdiction complète. Cinq ans plus tard, sans que des progrès sensibles aient eu lieu sur ce dernier plan, elles ont répété le même engagement dans le préambule du TNP.

En dépit de ces déclarations, il n'est pas certain que l'on puisse établir hors de tout doute un lien direct entre une interdiction complète des essais d'armes nucléaires et les aspects fondamentaux de la non-prolifération. Par exemple, les scientifiques s'entendent généralement pour dire que les États quasi nucléaires n'ont pas besoin de faire des essais pour mettre au point et déployer des armes nucléaires de première génération (armes à fission, dont la puissance varie de quelques kilotonnes à une centaine de kilotonnes). En outre, si un seul essai était jugé nécessaire, ce serait sans doute un essai dont on pourrait ensuite «nicher» l'exécution, tout comme l'Inde le fit en 1974, et tout comme Israël et l'Afrique du Sud l'ont probablement fait en 1979. Dans les contextes régionaux, il n'est sans doute pas nécessaire, aux fins militaires, de perfectionner les armes nucléaires (ce n'est peut-être possible qu'avec des essais). Par exemple, la possibilité que les armes nucléaires israéliennes soient d'une puissance relativement limitée ne diminue en rien leur influence politique et dissuasive au Moyen-Orient. Employée contre des villes ou de grands objectifs militaires, une arme à fission élémentaire est plus que suffisante pour modifier irréversiblement le cours de la bataille.

La fabrication «domestique» d'armes nucléaires ne dépend donc pas essentiellement des essais, mais plutôt d'un approvisionnement en matières fissiles de qualité appropriée. Il s'ensuit que le régime de non-prolifération progresserait davantage si l'on cherchait à enrayer la production de ces

Jonas Meckel

De son côté, François Mauriac disait tant aimer l'Allemagne qu'il se refusait à y en être deux. Il y en a toujours deux. En dépit de l'union monétaire et de l'union politique, la vraie, la profonde union n'est pas espérée pour qu'on ne se cède pas le temps, les vertus de chacune et la qualité fon-

damentale de l'Allemagne en feront un géant bienveillant au coeur de l'Europe ? □

heureuse. Dans l'Allemagne industrielle, et pas très dans l'Allemagne sérieuse, avec l'arrivée de millions d'enfants de la «Nischenkultur» venant aussi insouciant et de l'Ouest se relâchaient et de ceux qui les Allemands (de déjà cru voir des signes de Malcom Muggeridge à la britannique, le regrette l'homme d'esprit indolente ? à dire, un art de vivre, une chaleur plus grande, c'est-à-dire, une richesse bien corbellée de mariage, apportant, dans la Allemagne de l'Est, les Deux-Deutschmark, les Et si, contre le tabou allemand, à atteindre l'orgasme...

ce même sonde, cité quelques jours plus tard dans le *New-York Times*, selon lequel les femmes allemandes sont plus nombreuses (11 p. 100) que leurs collègues ouest-allemandes (11 p. 100) que moins dans un domaine : ils ont davantage de rapports sexuels et se masturbent moins que les Allemands de l'Ouest... il s'agit sans doute de son côté, à Berlin-Est, notre interprète nous annonce, non sans fièvre, qu'un récent sondage mode de vie plus calme et plus chaleureux. De visiteurs ouest-allemands disent leur envie leur rappellent avec un brin de nostalgie que leurs tapissés de livres, Karin et Stefan Handwerker se dans un appartement amoureusement privé et belle à l'amitié qu'à la réussite. Et à Leipzig,

Evidemment, tout n'est pas encore dit. Il se pourrait bien que le chômage galopant, dans les cinq Länder de l'Est, et le sentiment d'être des citoyens de seconde zone aient une influence néfaste sur les Allemands fraîchement annexés. La pauvreté et l'humiliation ont déjà révélé des démons en Allemagne, on ne peut pas l'oublier. Mais le temps passe, et les sociétés changent, même sous la «cloche à fromage» d'un gouvernement totalitaire.

WINSTON CHURCHILL disait : «QUAND ILS NE sont pas à nos pieds, ils sont à notre gorge.» Mais aujourd'hui, cette fameuse soumission à l'autorité, chez quels Allemands est-elle la plus profonde ? Rien ne dit que ce soit à l'Est ou, au contraire, au fil des ans, les gens ont acquis un sens scepticisme accompagné d'humour, plus proche de la tradition polonaise que germanique. Avant de se rebeller, ils ont longtemps fait semblant de se soumettre, ce qui souvent demandait des prodiges d'ingéniosité, comme pour la vie matérielle, où le bricolage nécessaire à développer l'esprit d'ordre privé. Mais la vie privée étant bien sûr d'ordre privé. La solidarité, la complicité, l'entraide, et pour ceux à qui manquent les voyages, la fréquentation des arts et des livres, nourrissent l'exil intérieur.

L'auteur ouest-berlinois Peter Schneider évoque cette «Nischenkultur» qui fait la part plus

de longue cicatrice qu'a laissée le mur dans la char de Berlin, on peut entendre, dans certains milieux, des propos semblables, culpabilité en moins. On craint, ici aussi, le réveil d'un nationalisme de droite. Chantreuse de rock, idole d'une certaine jeunesse pour qu'elle a incarné l'insubmission qui a précédé le démantèlement du mur. Tatiana Galla voit déjà se profiler l'ombre d'Adolf. Mais on est là dans le royaume du «skat», où les 10 000 squatters de Berlin-Est, surtout locaux, mais aussi de RFA, des Pays-Bas, donnés qu'ils occupent contre les «skin-heads» en tenues paramilitaires, qualifiés de «fachsos» (pour fascistes). Ceux-ci ne s'en prennent pas aux homosexuels et aux travailleurs ou étudiants étrangers, vietnamiens et mozambicains.

QU'Y A-T-IL DERRIÈRE CES BANDES DE JEUNES ? On nous parle d'un groupe d'extrême-droite qui a pignon sur rue : le Mouvement pour l'alternative sociale. Au dernier étage d'un petit immeuble d'habitation que des skin-heads sont en train de rénover, deux jeunes gens sont assis derrière une table. Seul le chef parle. Il a vingt ans, et l'apparence discrète d'un employé de bureau. «Nous sommes pour une Allemagne souveraine, libre de toute influence étrangère. Nous considérons également que l'Allemagne doit se retirer de tous les blocs, que ce soit le bloc de l'Est, le Pacte de Varsovie, ou bien l'OTAN, ou même la Communauté européenne.» Le cauchemar de Claude Cheysson ! Mais quelle importance faut-il accorder à ces jeunes gens ? Ils sont quelques amis, qui ont pour la plupart été emprisonnés pour délinquance sous l'ancien régime. Ils ont des emplois modestes. Ils partagent un goût pour l'histoire militaire allemande. Ils semblent totalement dépourvus de moyens, et en dehors des skin-heads, ne paraissent avoir aucun appui. Il pourrait, quand la presse parle de dangereux mouvements d'extrême-droite, c'est leur nom qui revient.

Il y a aussi, bien sûr, un parti reconnu d'extrême-droite : le parti République. Mais l'Ouest ne peut pas l'imputer à l'Est, puisqu'il est né en RFA. Et ses kiosques d'information n'attirent pas les foules avant les élections d'octobre dans l'ancienne RDA. Il a d'ailleurs été boudé par les électeurs des cinq nouveaux «Länder», qui ont remis leur sort entre les mains du chancelier Kohl, à l'exception du Brandebourg qui entoure Berlin «La Rouge» et qui a voté pour le parti social-démocrate.

La crise du Golfe est si grave, c'est parce qu'elle met à nu la fragilité politique, économique et stratégique du Moyen-Orient entier. En fait, le règlement de cette crise nous en dira beaucoup sur la souplesse du nouvel ordre mondial au lendemain de la Guerre froide.

Si la guerre est  
un mauvais  
choix pour tous, un  
retrait est lui  
aussi très difficile.

### Choisir le moindre mal

Après cette analyse, il n'existerait pas de solution heureuse à la crise. Il reste donc aux dirigeants politiques à s'efforcer de trouver l'issue la moins préjudiciable. Etant donné le prix énorme et, pour finir, imprévisible d'une guerre, il semble préférable d'imposer, par le biais de sanctions, un retrait négocié des forces irakiennes du Koweït. Si cette stratégie devait échouer, une guerre, à n'en pas douter extrêmement violente, destructrice et d'une ampleur inouïe, bouleverserait la configuration militaire et politique du Moyen-Orient.

Quant bien même la guerre serait évitée par un retrait des forces irakiennes du Koweït, l'ordre stratégique d'après la crise se construirait autour d'une présence militaire permanente des Américains dans le Golfe. Dans ces conditions, le président Hussein menacerait non seulement la sécurité du Golfe, mais aussi la sécurité politique des gouvernements de tout le Moyen-Orient en exploitant l'intrusion de forces militaires étrangères et les faiblesses des gouvernements arabes. Or, la fragilité accrue des gouvernements moyen-orientaux se répercuterait dans le monde entier.

L'invasion du Koweït par l'Irak a provoqué la première crise d'après la Guerre froide qui, au fond, vise la formation et la gestion du nouvel ordre international. Paradoxalement, Bagdad, Moscou et Washington sont d'accord sur ce point. L'Irak a agi comme il l'a fait pour empêcher la consolidation de ce que Saddam Hussein estime être une domination américaine imméritée dans le Golfe. À Washington, à la première réunion du Conseil de sécurité nationale après l'invasion, la crise a été définie comme étant la première mise à l'épreuve de l'aptitude des États-Unis à maintenir la stabilité mondiale et régionale maintenant que la Guerre froide est bel et bien terminée.

George Bush s'est engagé à ce que les États-Unis obtiennent le retrait des troupes irakiennes du Koweït et de beaucoup de ceux du Croissant fertile. Si les frontières du Koweït ne reposent sur aucune légitimité, c'est aussi le cas des frontières de presque tous les pays de la région. Quand l'arsenal militaire assez perfectionné de l'Irak, qui comprend une capacité nu-

Le président irakien est persuadé qu'il n'y a pas d'issue, que même le retrait des forces du Koweït ne satisferait pas les plus petites exigences des forces déployées contre lui et que celles-ci cherchent à le renverser. Dans ces conditions, il pourrait provoquer délibérément une réaction militaire d'Israël pour inciter les membres arabes de la coalition réunie par le président Bush à en partir, ce qui lui permettrait d'unir le monde arabe dans une guerre contre les États-Unis et Israël.

Si la guerre est un mauvais choix pour tous, un retrait tenté d'attaquer la première sachant que la guerre est proche, chaque partie sera la surprise et, au pire, un cycle de logique d'anticipation se mettra en branle dans la région entière, car la détermination de l'Irak explique en partie qu'on le croit tout à fait prêt à subir de grosses pertes en hommes pendant bien plus longtemps que la coalition dirigée par les États-Unis. Comme le président Hussein l'a déclaré à l'ambassadeur Claspie pendant leur entretien de juillet, « Dans votre société, on ne peut accepter de perdre 10 000 hommes en une seule bataille ».

Enfin, le président irakien est persuadé qu'il n'y a pas d'issue, que même le retrait des forces du Koweït ne satisferait pas les plus petites exigences des forces déployées contre lui et que celles-ci cherchent à le renverser. Dans ces conditions, il pourrait provoquer délibérément une réaction militaire d'Israël pour inciter les membres arabes de la coalition réunie par le président Bush à en partir, ce qui lui permettrait d'unir le monde arabe dans une guerre contre les États-Unis et Israël.

a agi parce qu'il se sentait pris au piège. Même aujourd'hui, quelque quatre mois après les faits, rien n'avantage nettement une thèse plutôt que l'autre.

## Pourquoi Saddam Hussein n'a-t-il agi de la sorte ?

Il est probable que Saddam Hussein ait vu une occasion de satisfaire la vieille revendication territoriale irakienne sur le Koweït et de se placer en position de force sur le marché pétrolier international, et qu'il ait décidé de saisir cette occasion. La plupart des données connues corroborent une telle interprétation. Dans ces « guerres opportunistes », l'agresseur doit pouvoir, entre autres, compter sur le fait que la victime ne pourra mobiliser l'aide de tiers ou d'amis à temps pour changer l'issue de l'attaque. C'est ce qui s'est produit cette fois, nous l'avons vu.

Ensuite, l'agresseur, en l'occurrence Saddam Hussein et son régime, doit s'assurer que l'équilibre des capacités militaires locales joue nettement en sa faveur, ce qui lui encores s'est avéré. L'Irak pense encore les plates d'une guerre

de huit ans et les États arabes du Golfe, encore al-liance qu'ils concluent entre eux, n'étaient assurément pas de force à affronter l'armée irakienne aguerrie. De plus, Bagdad avait reçu une aide financière considérable des pays du Golfe et bénéficié de la technologie et du matériel militaires de pointe des Soviétiques et des Occidentaux, qui se sentaient tous menacés, quoique accidentellement, par la révolution iranienne de Khomeiny.

La suprématie militaire irakienne dans le Golfe était écrasante. Si c'est effectivement une occasion d'étendre son territoire qui a motivé Saddam Hussein, en décidant de le rassurer, les Américains et les autres

ont choisi la mauvaise stratégie.

Se peut aussi que le président Hussein ait été poussé par la fragilité croissante de l'économie irakienne. Dans un entretien accordé après l'invasion, son ministre des Affaires étrangères, Tariq Aziz, a expliqué d'exiger le remboursement de la dette contractée par Bagdad pendant la guerre avec l'Iran, une guerre qui visait autant à défendre les États du Golfe que l'Irak. Puis il a établi un lien formel entre la détérioration de l'économie irakienne et l'invasion du Koweït :

La question économique a agi comme un détonateur dans la situation actuelle. En plus des 40 milliards de dollars que nous devons à des pays arabes, nous en devons au moins autant à l'Occident. Cette année, le service de la dette compte pour 7 milliards de dollars dans le budget de l'Irak, et c'est une somme colossale qui nous laisse tout juste assez pour assurer les services essentiels de notre pays. Notre budget est calculé en fonction d'un bari à 18 dollars, mais depuis que les Koweïtiens inondent le monde de leur production, les cours ont chuté d'un tiers. Quand nous nous sommes à nouveau rencontrés, à Djeddah, à la fin du mois de juillet, le Koweït a refusé d'envisager tout changement. Nous étions donc acculés, et dans l'impossibilité de payer des importations alimentaires. On cherchait à nous affamer. Quand doit-on employer la force armée pour se protéger ?

Si l'Irak était principalement motivé par une occasion qui se présentait, seul un engagement clair et sans équivoque combiné à une menace explicite quant aux conséquences d'un recours à la force avait une chance d'empêcher Bagdad de lancer sa machine de guerre contre le Koweït. Il fallait user d'une dissuasion vigoureuse. Si, au contraire, Saddam Hussein était surtout poussé par la vulnérabilité économique que de l'Irak, il fallait le rassurer en lui proposant des solutions qui auraient permis d'atténuer les graves problèmes de son économie.

Si les États-Unis n'étaient certains ni des motivations ni des intentions de l'Irak, ils pouvaient toujours utiliser une stratégie mixte alliant un engagement formel et sans équivoque à venir à la rescousse du Koweït et la promesse d'aider l'Irak à résoudre des problèmes économiques pressants. Bien que rien ne prouve qu'une telle stratégie mixte aurait porté ses fruits, l'États-Unis n'ont pas prévenu des conséquences auxquelles il s'exposait

## Washington n'a fait qu'une vague tentative pour dissuader Saddam Hussein de passer à l'action.

## La gestion de la crise et le risque d'une guerre accidentelle

Il y avait peu de chance de réussir à éviter la crise.

en cas d'invasion du Koweït — au contraire, ils ont pris leurs distances par rapport au « différend inter-arabe » — et ils ne se sont pas soucés des préoccupations qu'une dette croissante causait à l'Irak. Dans ces conditions, il y avait peu de chance de réussir à éviter la crise.

Maintenant que la crise est là, les dilemmes profonds inhérents à sa gestion sont évidents si l'on part du principe que ni l'Irak ni les États-Unis ne veulent la guerre, mais que tous deux souhaitent atteindre leurs objectifs ; à savoir, pour le premier, annexer le Koweït et, pour le second, obliger l'Irak à retirer ses troupes du Koweït. Pour y parvenir et obliger l'autre à céder, l'un comme l'autre brandissent maintenant la menace d'un conflit armé.

À ce jeu-là et à court terme, les Irakiens comme la coalition internationale conduite par les Américains risquent de perdre le contrôle des événements en cas d'accident, ou parce que la partie adverse, anticipant une attaque, décide de frapper la première. La guerre pourrait éclater si une unité, un navire ou un soldat d'un des nombreux contingents nationaux maintenant déployés dans le Golfe ouvre le feu sur une cible jugée à tort hostile ; la destruction d'un Airbus iranien par le USS Vincennes dans le golfe Persique en 1988 et l'attaque contre l'USS Stark en 1987 montrent combien il est facile de commettre de telles bêtises.

La guerre pourrait aussi être déclenchée si l'une des puissances militaires présentes dans la région attaque par anticipation. L'Irak a menacé, par exemple, de frapper le premier les forces présentes dans le Golfe si son pays était pris à la gorge économiquement à cause des sanctions, et d'étendre la guerre jusqu'en Israël. Aussi, l'armée de l'air israélienne a été mise en état d'alerte maximale et un nombre important de ses avions de chasse sont en service vingt-quatre heures sur vingt-quatre. Dans une situation de tension croissante où le coût de la première attaque est très lourd pour l'armée qui la subit, la tentation de porter le premier coup augmente considérablement.

À long terme, il se peut que l'une et l'autre partie estiment s'être tellement engagées que, malgré les coûts énormes, elles ne voient pas d'autre solution politique que la guerre. En pareil cas, les forces armées irakiennes opposeront probablement une résistance farouche à l'ennemi, mais elles subiront des pertes massives. La qualité de son armée, forte de 955 000 hommes répartis entre cinquante-trois bataillons, varie des six redoutables divisions des Gardes républicains aux conscrits mal entraînés et mal équipés. En outre, Bagdad ne peut mobiliser plus d'hommes. Son économie et son infrastructure chancelantes en seraient amhaies. Comme l'a reconnu récemment le ministre des Affaires étrangères, Tariq Aziz, « cette situation est plus effrayante pour l'Irak que huit années de guerre contre l'Iran ».

Les conséquences des options militaires dont disposent les États-Unis sont également sérieuses. Une opération éclair contre l'Irak est hors de question. Les usines chimiques et les centres de recherche nucléaire irakiens se trouvent au cœur de régions densément peuplées. En plus des soldats tués, la destruction de l'infrastructure militaire irakienne ferait obligatoirement des milliers de victimes parmi les civils. Une attaque plus circonscrite contre les forces irakiennes stationnées au Koweït entraînerait des combats importants, de lourdes pertes en vies humaines, de part et d'autre et le risque d'une guerre chimique qui, parallèlement, causerait des dégâts considérables, tant dans la population civile et pour l'infrastructure économique.

Ces estimations ne tiennent pas compte des répercussions d'une guerre qui risquerait fort de s'étendre à la région entière. Une fois déclenchée, le conflit pourrait s'amplifier et s'intensifier et avoir des conséquences désastreuses.

Le 30 septembre, le *London Observer* rapportait les propos d'un officier supérieur membre de la brigade blindée que le Royaume-Uni a envoyé dans le Golfe, qui affirmait qu'« en cas d'attaque aux gaz chimiques par les Américains ne l'ont pas prévenu des conséquences auxquelles il s'exposait

LA PAIX QUI S'EST INSTALLÉE AVEC LA FIN DE LA Guerre froide n'a pas duré. Moins d'un an après la chute du Mur de Berlin, le monde est au bord d'une guerre qui menace de répandre la destruction à travers le Moyen-Orient. Avec le gonflement des armées et la prolifération des armements modernes, la région, que déchirent maints conflits, est devenue plus dangereuse au cours des dix dernières années.<sup>1</sup> Les lignes de faille qui parcourent le Moyen-Orient ont vite fait volé en éclat les espoirs de voir le nouvel ordre international se modeler pacifiquement.

Malgré l'amélioration des relations américano-soviétiques, le risque de grave crise du nouvel ordre international est aussi évident que les paramètres de gestions des crises internationales, sans recours à la guerre, sont changeants. La possibilité d'un échange nucléaire entre les Etats-Unis et l'URSS suite à une crise au Moyen-Orient a disparu, mais la probabilité d'une guerre chimique et d'un conflit régional qui ferait de l'immensité des populations de cette région, victimes est réelle, ce qui, pour les populations de cette région, revient au même.

Le 2 août avant l'aube, les troupes irakiennes franchissaient en masse la frontière koweïtienne. En l'espace de trois heures, l'armée avait atteint son objectif, qui était de renverser le gouvernement de l'émirat et d'inverser ses champs pétroliers. Une semaine plus tard, l'Irak annexait officiellement le Koweït. L'utilisation de la force par un pays arabe pour annexer un autre pays arabe est sans précédent dans le Moyen-Orient moderne. La condamnation mondiale, l'embargo aérien et naval international, le déploiement de forces aériennes et terrestres dans les Etats du Golfe et la présence de forces navales dans le Golfe n'ont pas encore réussi à forcer l'Irak à se retirer du Koweït. Au contraire, depuis des semaines, pour éprouver leur détermination mutuelle, le président Bush et le président Saddam Hussein jouent avec le risque de guerre.

# LE DÉFI DU GOLFE PERSIQUE

Pour le nouvel ordre mondial encore fragile, les lignes de faille qui traversent le Moyen-Orient constituent un réel danger.

PAR JANICE GROSS STEIN

La communauté internationale, Etats-Unis en tête, a déployé une véritable armada en Arabie saoudite et dans d'autres Etats du Golfe, autant pour dissuader l'Irak d'utiliser davantage de la force que pour l'obliger, en brandissant le risque d'une guerre, à se retirer du Koweït. Le fait que les Nations Unies approuve, pour la première fois, toute une panoplie de sanctions a renforcé la pression internationale contre l'Irak.

A examiner les origines et l'évolution de cette crise, on s'aperçoit qu'il y a plusieurs ensembles de problèmes. D'abord, cet usage de la force aurait-il pu être évité moyennant des stratégies plus efficaces de prévention des crises ? Si cette crise avait pu effectivement être évitée, pourquoi ne les a-t-on pas employées ? Et main-

## Les Etats-Unis se sont-ils montés les impoibles de prévenir la crise ?

Les stratégies utilisées par les Américains dans les semaines qui ont précédé l'invasion irakienne font déjà l'objet d'un vif débat. La controverse porte essentiellement sur les intentions de l'Irak et sur la réaction des Etats-Unis. Pour comprendre la stratégie américaine, il est nécessaire de replacer la crise dans son contexte.

En 1980, un an après l'arrivée de l'ayatollah Khomeiny au pouvoir à Téhéran, le président irakien, Saddam Hussein, a attaqué l'Iran avec l'espoir d'une victoire rapide sur des forces armées désorganisées par une révolution. Après une première série de victoires irakiennes, Téhéran a peu à peu pris le dessus sur le champ de bataille. Bien que la guerre ait été déclarée par Bagdad, la plupart des Etats arabes tremblaient sur-le-champ de bataille. Cependant, les relations entre l'Irak et l'Iran ont commencé à s'améliorer alors que les rapports entre Washington et Téhéran étaient tendus. Une fois la guerre terminée, en 1988, les Américains ont continué d'essayer de renforcer leurs liens avec l'Irak, qui faisait figure de contre-poids face à l'Iran. Malgré ces plusieurs relations, le président Saddam Hussein a tenu plusieurs fois des propos troublants durant le printemps 1990. En février, à la fin d'une réunion du Conseil de coopération arabe, le président irakien a prédit qu'en raison du déclin de la puissance soviétique, les Etats-Unis exerceraient un pouvoir hégémonique sur le Moyen-Orient pendant cinq ans. Il s'est exprimé en ces termes :

Le pays [les Etats-Unis] qui exercera la plus grande influence dans la région, grâce au golfe Persique et à son pétrole, conservera sa supériorité de superpuissance sans égal pour lui faire concurrence. Cela signifie que si les populations du Golfe, ainsi que tous les Arabes, ne font pas attention, la région du golfe Arabique sera soumise au bon vouloir des Etats-Unis... Les cours [du pétrole] seront fixés en fonction des seuls intérêts américains.

La parade, a-t-il dit en conclusion, consistait à utiliser la puissance économique arabe pour obliger les Américains à modifier leur politique. Le 2 avril, après l'interception d'une cargaison de pièces pouvant servir à des démonstrateurs d'armes nucléaires destinée à Bagdad, le président Hussein a annoncé que les savants irakiens avaient mis au point des armes chimiques perfectionnées et il a menacé de s'en servir contre Israël si ce dernier l'attaquait. Puis, lors d'un sommet arabe le mois suivant, à Bagdad, il a accusé les Arabes du Golfe de saboter l'économie irakienne en maintenant le prix du pétrole artificiellement bas.

En 1977, les forces armées irakiennes comptaient 188 000 hommes, ce chiffre était passé à 1 000 000 d'hommes. L'armée irakienne est maintenant la quatrième du monde pour elle comptait 342 000 hommes en 1977 et 645 000, en 1987. Plus 350 000 réservistes. La Syrie allignait pour sa part 227 500 soldats en 1977 et 407 500, en 1987 ; et l'Arabie saoudite, 61 500 en 1977, et 73 500 en 1987. A cause du système de rappel de réservistes en vigueur, il est difficile d'établir une comparaison des effectifs, mais entre ces deux années repère, le nombre des chars est passé de 3 000 à presque 4 000 dans l'armée israélienne. Voir The Military Balance de l'Institut international d'études stratégiques (Londres), 1977-1978 et 1987-1988.

2. Appartenant au Conseil de coopération arabe l'Egypte, la Jordanie, le Yémen du Nord et l'Irak.

Paix et Sécurité paraît tous les trois

mois. Ce bulletin vise à informer la

population canadienne sur les activités

de l'Institut et à favoriser l'expression

de toutes les opinions ayant cours ou

pays sur les questions susmentionnées.

Les opinions formulées dans chaque

article sont exclusivement celles de

l'auteur. Nous ne faisons pas de nous faire

part de vos observations et idées.

Tout texte de Paix et Sécurité peut être

reproduit dans des périodiques, revues ou

autres médias imprimés, à condition que

l'Institut en accorde préalablement l'auto-

risation expresse écrite, et à condition que

ces périodiques, revues ou autres médias

imprimés citent leur source. Les droits

d'auteur des illustrations, dessins, gra-

phiques et autres travaux artistiques figu-

rant dans Paix et Sécurité appartiennent à

l'artiste qui les a réalisés et ne soumettent

être réimprimés ou reproduits sous quel-

que forme que ce soit sans l'autorisation

expresse écrite de l'Institut et de l'artiste.

● Les institutions éducatives peuvent pho-

tocopier les textes de Paix et Sécurité, à

condition que ce soit en usage limité. ●

Paix et Sécurité est membre de la Cana-

dian Periodical Publishers Association et le

magazine est coté dans l'Index de

prolifiques canadiens. Il est possible de

se procurer les numéros antérieurs de Paix

et Sécurité, sous forme de microfilms

en s'adressant à la Société Micromédia

limitée, à Toronto.

À peine la Guerre froide termi-

née, des hostilités risquent déjà

d'éclater au Moyen-Orient. Y

aurait-il le moyen d'éviter cette

crise, et comment ? Ce sont là

quelques-unes des questions aux-

quelles tente de répondre Janice

Gross Stein dans l'article principal

du présent numéro de Paix et Secu-

rité. Selon l'auteure, maintenant

que la crise est là, il incombe aux

dirigeants politiques de trouver

l'issue la moins dommageable.

Comme la guerre entraînerait des

coûts humains et matériel très élevés,

en reliant l'histoire du pays, pour-

quoi ce dernier a sombré dans le

sous-développement.

## NOTE FROM THE EDITOR

At the end of December, Canada came to the end of its two-year term on the United Nations Security Council. During that time the world passed from one epoch – the period of frozen history and predictable future we call the Cold War – to we know not what. For at least a year, the Security Council has been at the centre of that alternately exhilarating and troubling transformation.

The editors of *Peace & Security* see it as the mandate of the magazine to venture behind the daily headlines and beyond tomorrow's battles to identify problems and issues that are not necessarily grist for the mass media which has, after all,

a different job to do. With one of the central issues of Gulf War debate in Canada being the function and legitimacy of the United Nations, specifically the Security Council, *Peace & Security* gathered together a group of individuals from various countries and with different perspectives. We asked them to look critically at how the UN Security Council machinery has functioned in recent months, tell us what the lessons from that experience might be, and how they could be used to improve the peace and security functions of the United Nations. Without any prompting the discussion quickly turned to the phrase "new world order," what it meant or, indeed, whether it had any meaning at all. The result of this discussion is our cover story.

One might conclude, judging from the daily content of our newspapers and television since mid-January, that there were three countries on the planet – the US, Kuwait and you know where. We have two stories that contain barely a mention of "the Gulf." The first is by our frequent contributor on Asian affairs, **Gérard Hervouet**, on the interminable wrangling over a possible settlement of the Cambodian conflict, an ordeal for the Cambodian people that has lasted seventeen

years. The other is by **Sharon Stevenson**, a freelance writer and resident of Lima, Peru on the new president's various wars against internal corruption, domestic insurrection, external debt and the destructive international commerce in narcotics.

Our feature stories do not neglect the Gulf War entirely. **Chris Smith**, a writer and academic in the field of arms sales to Third World countries, speculates on what might seem to be paradoxical implications of the war for arms sales. Finally, in addition to his survey of Canadian attitudes to the world and international issues in general, **Don Munton**, in *From Paardeberg to the Persian Gulf*, gives us an historical perspective to consider on Canadians' opinions of Canada's wars. And where is Paardeberg anyway?

On 18 February 1900, Canadian soldiers of the 2nd Battalion, Royal Canadian Regiment, fought a small battle with a Boer army near the village of Paardeberg, Orange Free State, in South Africa. It was the first time Canadians had fought a battle outside Canada. Ninety-one years later, almost to the day, Canadians found themselves again at war far away from home.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

**World Order and Double Standards, Peace and Security 1990-1991: Director's Annual Statement 1990.** by Bernard Wood, 37 pages. Once a year the director of the Institute takes stock of the major events and trends in the area of peace and security, and their implications for Canadian policy.

# WHAT KIND OF WORLD AND WHOSE ORDER?

*The meaning of "new world order," and what part  
the UN will play in it, depends on who you talk to.*

## ROUNDTABLE

### THE PANELISTS

#### THOMAS FRANCK

*is Professor of Law and Director,  
Center for International Studies at the  
New York University School of Law.*

*He is author most recently of*

*The Power of Legitimacy Among Nations,  
Oxford University Press.*

#### C. R. GHAREKHAN

*is the Permanent Representative of India  
to the United Nations. India has just begun a  
two-year term on the Security Council.*

#### AMRE MOUSSA

*is the Permanent Representative of Egypt  
to the United Nations.*

#### ENID SCHOETTLE

*is the Director of the  
International Affairs Program at  
The Ford Foundation in New York.*

#### BRIAN URQUHART

*is Scholar in Residence at the  
Ford Foundation in New York and was  
formerly UN Under-Secretary General for  
Special Political Affairs.*

#### OLIVIA WARD

*is a reporter for the Toronto Star  
specializing in international  
and UN affairs.*

*This roundtable is based on a discussion held  
on 23 January in New York. The moderator  
was Bernard Wood, Chief Executive Officer of  
the Canadian Institute for International Peace  
and Security.*

**Bernard Wood:** Without plunging into today's events I want to take one step back and look at the changed role the Security Council and UN have taken on in relation to peace and security. How close is what the UN is now doing to what the Charter writers intended, and should we be thinking of putting in place the other machinery in support of the Security Council that was envisaged in the Charter? Should we have a military staff committee as a fully operating entity, and should we be putting in place standby forces so that in another crisis, where aggression is as clear-cut as in the recent one, you could follow the Charter provision-by-provision because all the machinery would be there?

**Brian Urquhart:** Though there is a great deal of talk about the renaissance of the United Nations, the truth of the matter is that a lot of machinery of the United Nations has been frozen stiff for forty years. And far less attention has been paid to Chapter VII of the Charter, and the preparations you are supposed to make for it, than I think to any other chapter of the Charter. It has become extremely clear in this particular crisis. When we get through the Gulf crisis it will be terribly important for the Security Council to try to see itself as a systematic mechanism for the maintenance of international peace and security, rather than a last resort and safety net it has tended to be.

**C. R. Gharekhan:** I think we must all acknowledge that the reactivation of the Security

reference to the Gulf crisis, but even before that, when cooperation between the two started. You will recall that many of us in the non-aligned world were not exactly looking forward to the two superpowers coming together. You know the famous anecdote about the two elephants making love or making war, the results being the same in either case. I was one of those skeptics about the coming together of the two, but I confess that the results have so far been very positive.

Now having said that, I should like to add that good times like bad times do not last forever. This convergence of interest among the two is not going to last very long. It means that in practical terms we must make the best of the situation now. We must seize this opportunity to solve as many regional problems, and regional crises in the world as possible.

We should acknowledge one fact: the Council has functioned the way it has primarily because of the efforts of the United States. It is the US that has mobilized the Council and the international community. And there is a perception that the US is building an influence disproportionate to its economic power. But the US is the only country that has the military capability to launch the operations that the international community has launched in the Gulf. So while you may think about bringing about some institutional changes for reforms in the Security Council, I doubt if we can really tinker with the Charter, because any proposal which would amount to an amendment to the Charter will open up Pandora's box.

**Amre Moussa:** I don't think that it is too early in the morning to be the Devil's Advocate. I will be the Devil's Advocate now. I believe that the UN renaissance is a false renaissance. What

Council has become possible because of the convergence of interests of the US and the permanent members – especially the two most important of them. And this is not only with

has happened in the Security Council in the last few months was the result of growing US influence, of being the only superpower, as Ambassador Gharekhan has said, and had it not been for that, the Security Council would have been paralyzed. Second: the reactivation of the Security Council was and still is connected to one issue – that is the Gulf. When you move from the Gulf to any other issue, the Palestinian issue for example, or any other that the United States does not believe is urgent, you will find the Security Council returning to the very poor performance of the last few years. It is a new reality that the UN is acting when the US wants it to act. Perhaps it is not so black and white, but this is, *grosso modo*, the reality.

I don't think the United Nations has really come back to what was meant by the founding fathers or by the Charter. One of my colleagues said, in his analysis of the situation, that the Security Council is becoming the political arm of US foreign policy, as the International Monetary Fund and the World Bank are considered the economic arm of US policy, and an aid to the military arm of US policy. Is this true? I don't believe that. But there are certain indications that the Security Council is performing, because of the United States, in the same direction. This might be beneficial later on, because once the wheel has started moving, perhaps the Security Council will move in a more positive and less double standard, less selective way.

**Thomas Franck:** If it was Devil's Advocate time I think it is also cup half full time. I think it depends on what your standard of comparison is. Yes, the United States exercised a lot of leverage and played politics very hard to keep a voting majority together on the Security Council, and build a coalition of forces against Iraq.

This was not the way people in San Francisco thought the world would respond to an act of aggression by one country against a neighbour. But it was infinitely better than anything the UN could have conceived of being able to do from 1946, all the way to six months ago. It is just incomparably better than that. It is true that the US was

lead dog but then it was always intended that some countries were going to have to do more of the fighting, and therefore would have to have more of the responsibility in the Security Council. What is striking is the fact that the United States was willing to do a number of things which most hawks in Washington thought were logistically, strategically and militarily unwise, including the 15 January deadline, in an effort to engage the political machinery that is represented by the Security Council.

There is nothing magic about the Security Council, it is just a place where some kind of systemic politics gets played out. In that process, the power of those other players – including the non-aligned bloc, and the Soviet Union and China – is certainly magnified compared to the same kind of situation without that

machinery. The machinery has in fact diluted rather than strengthened the United States as sole player, and that is all to the good.

Now to go on to the question raised by the chair: the founders had in mind exactly what you suggested, that is Article 43, plus the staff committee machinery. But a certain amount of this is a constitution that we are interpreting, and constitutions develop through usage and the UN Charter is no exception. With that rather liberal construction of the parameters of the constitutional instrument one has to review the way in which these Articles have evolved. Since nobody entered into any agreements with the Security Council – for obvious reasons, during the Cold War – to commit forces to collective security operations, two things happened: one of them was, in effect, the invention of the famous Chapter 6½ for which Brian takes

much blame, responsibility and praise. Six and a half has been one of the extraordinary achievements of a period of virtual stasis in the UN system. So that is part of why the cup is at least half full.

In addition, at least in the otherwise pretty systemically unsatisfactory example of Korea, the system did invent a way of activating a very rudimentary, very unsatisfactory – but the amazing thing was that it was there at all – international force. And so we have a kind of Article 42½ now which is somewhere between the power of the Security Council to authorize members to do things, and the failed Article 43 which is intended to result in a series of Treaties in which forces are dedicated to decisions of the Security Council.

The ultimate and more desirable pattern for the use of collective security machinery would be if we could gradually develop a preventive force that would discourage the kind of miscalculation that Hussein has made, by there being a ready-made force consisting primarily of countries other than the superpowers. There I think I would go back to the Urquhart formula for peace keeping.

**Wood:** It is very interesting to see in the discussion in our country around the current crisis that the evolution of peacekeeping had become identified, in very large chunk of the public mind with

## INSIDE THE UN CHARTER

**Chapter VI** of the UN Charter, titled *Pacific Settlement of Disputes*, deals with the UN's role in investigating international disputes and recommending solutions to the parties involved. Chapter VI also gives UN member states the right to bring a dispute to the attention of the General Assembly or the Security Council.

UN "peacekeeping" operations, of the sort in which Canada has traditionally participated, are not enforcement actions as envisaged in Article 42. Peacekeeping is carried out with the consent and cooperation of the parties concerned, and aims to achieve its objective through impartial supervision of cease-fires, truce or armistice agreements and troop withdrawals. "Chapter 6 and a half" is not a change in wording of the Charter, but effectively an improvisation on the existing Charter to allow for the undertaking of peacekeeping operations.

**Chapter VII**, entitled, *Action with Respect to Threats to the Peace, Breaches of the Peace, and Acts of Aggression*, deals with the "collective security" and enforcement role of the Security Council in maintaining or restoring international peace and security in the event the Council determines that such a threat exists.

**Article 41** gives the Council the power to impose non-military measures on parties involved, such as economic and trade sanctions. It is this article which was invoked in the days and weeks immediately following Iraq's annexation of Kuwait. In the event that such actions are inadequate to restore international peace and security, **Article 42** provides for the Council to take,

*such action by air, sea or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade or other operations by air, sea or land forces of Members of the United Nations.*

In the case of Iraq's invasion of Kuwait, Article 42 was invoked on 29 November 1990, as Resolution 678.

**Articles 43 through 47** provide for members of the UN, at the request of the Security Council, to enter into agreements with the Council to make available armed forces, assistance, and facilities in order to carry out the restoration of peace and security. Plans for the use of the armed force are to be made by the Security Council with the assistance of a "Military Staff Committee" described in Article 47. Since the founding of the UN, action has never been taken by the Security Council to implement Articles 43 through 47. □

the security functions of the UN. When collective security, as envisaged in the Charter, was actually put into operation, there was a lot of shock and horror in many quarters to say – “we never thought it was about this.”

**Enid Schoettle:** It is not only Canada that has that point of view. There is great concern in a number of the non-permanent five countries that they are reluctant to make commitments of forces under Chapter VII provisions, without any sense of how it is going to materialize without the protection of veto. So I suspect that the Canadian view is rather widely shared.

**Gharekhan:** I am not sure that the non-aligned countries would be enthusiastic to enter into any agreement with the Security Council to give troops to be used for the national interests of the veto powers. The five permanent members, because of their veto, would not agree to any operation which goes against their interests. I am not sure that India – well I am sure that India – would not wish to make any troops available, the deployment of which India would have no control over. Troops which would be used, as Amre Moussa said, as an instrument of US foreign policy.

In this Gulf Crisis, the US was able to use the Security Council because the situation is so blatantly obvious. Here is a clear case of aggression by one country against another. And there was an international consensus that, yes, this is absolutely wrong and must be reversed. I must compliment the US in the professional way in which they went about mobilizing in-

tion to use the UN as an instrument of foreign policy. The intention is very clear.

**Urquhart:** I very much agree that the use of the word renaissance is extremely premature. I also very much distrust the now very fashionable use of the phrase “New World Order.” I think that everything, almost, has to be done before we can begin to justify either of those phrases. It is absolutely true that the Iraq-Kuwait crisis is unique in its clarity. Except for Iraq’s attack on Iran – about which incidentally the Security Council, in one of its lowest moments did absolutely nothing.

It isn’t really a bureaucratic or an organizational problem, early warning and preemptive action. I spent some forty years in the UN with various Secretaries General trying to alert the Council in advance to things that were obviously going to happen. The Indo-Pakistani war of 1965 for example, even the Cuban Missile Crisis, the Lebanese Civil War – on all of those occasions the Council was totally resistant to preemptive action of any kind. They didn’t want to attract trouble. ORCI [Office for Research and Collection of Information] – it was set up after I left, I was always against it – is a very large bureaucratic organization. It doesn’t address the real problem. The real problem in getting the Security Council to be a sort of preventive system is the attitudes of governments. For various

reasons of their own they mostly don’t want to try to take action before something happens.

It is very nice now for the United States to say that we are planning a new world order; it just happens to suit them extremely well. What happens if something happens somewhere else which doesn’t suit them that well?

One of the difficulties of the Security Council is that the different elements of its functioning have always been separated up to now. There is the diplomatic side, then there is so-called peacemaking – people like the Secretary General and others trying to exercise good offices in different disputes. Then there is peacekeeping, and then there is collective action. And they have always been kept very separate, particularly peacekeeping and collective action, for good political reasons. Now there is no reason.

I submit that a system would consist of a combination of those four main activities so

that one supplements the other. For example, if a peacekeeping operation gets run over by a government, like for example the peacekeeping forces in South Lebanon did in 1982, in the mandate of that peacekeeping operation that should automatically trigger collective action from the Security Council. Then peacekeeping would not be just this very decent bunch of chaps in blue helmets behaving extraordinarily well in difficult situations. If they got trampled

## “The Security Council is becoming the political arm of US foreign policy, like the IMF and the World Bank.”

on, they would become a tripwire. Until you get governments prepared to consider that kind of thing there isn’t any point in talking about a renaissance or new world order. Peo-ple are talking nonsense at the moment. Especially these very sort of upbeat notes emanating from Washington – it just isn’t true.

**Wood:** The Devil’s Advocacy said there’s more hierarchy than ever, and that you don’t just have permanent members, you have one super permanent member, and then you have all the rest in varying categories. But I haven’t heard anybody say it is time to open up the Charter again and try for a less hierarchical structure.

**Moussa:** This would come automatically if the debate is open and we enter a really sincere debate on this issue. Then we might reach that point. But we have to bear in mind that many countries, the small countries in particular, Third World countries in their entirety, are against opening the Charter for amendment – for fear of dropping certain principles, of certain guarantees, that are there and we might not be able to reach a consensus on those principles again. So opening up the Charter is a very serious, very dangerous, operation.

On the question of preventative action, what about Article 99 – the right of the Secretary General to call a Security Council meeting whenever he considers that there is a threat to international peace and security? If the Secretary General got information, solid information, from the United States, from the Soviet Union, from France, from whoever, that secret services have determined that forces of Iraq are moving in a way that they might be attacking

“There is nothing magic  
about the Security Council, it is just a place  
where some kind of systemic politics gets  
played out.”

ternational support – very reluctantly in some country’s cases. But I doubt whether the US would be able to use the Council as an instrument of its foreign policy in other situations where the case is not so obvious. But I do agree that the US would want to use the Security Council. Les Aspin [Chairman of the US House Armed Services Committee] said just three days ago, in the *Washington Post*, that one of the things that should come out of the Gulf War is that the US should be in the posi-

Kuwait, would the Secretary General intervene at this point, on the strength of Article 99?

**Urquhart:** Article 99 is a rather a two-edged weapon, and that is the reason why it has been used so sparingly. Because the trouble with Article 99 is if you use it and absolutely nothing happens, you are making it worse rather than better. Hammarskjöld, who was supposed to be more dashing than the others, only used it over the Congo in 1960. And he only invoked it after getting all of the members of Council to a luncheon and saying to them, over the soup, look boys this is a terrible situation. If I invoke Article 99 are you prepared to do something about it, and they all said yes, including the Soviet Union, incidentally. Waldheim invoked it over the American hostages in Iran, with absolutely no effect whatsoever. The real problem with Article 99 is not the existence of a threat to international peace and security, so much as getting the Security Council to follow up on it.

The Secretary General can be extremely influential – provided he has international stature – in unexpected situations as a warning. After all, everybody knew about Iraq and Kuwait, they [Iraq] nearly took it in 1971 – it wasn't a new problem. So if the Secretary General had invoked Article 99 I wonder what would have happened – not much I think. It just happened to suit everybody not to pay any attention to it, and everybody got it wrong.

**Franck:** There is an unexamined and partially true assumption here that the future of a sovereign independent Kuwait is somehow top priority for the United States and at the bottom of everybody else's list. And that somehow this has been sold to everybody else by a shrewd bunch of horse traders in the Security Council. I just don't believe that that's correct. Most African and a goodly number of Asian states feel intense interest in the matter of sanctity of boundaries, however irrational, however drawn by whatever heinous colonial forces. The sanctity of those boundaries is of a direct practical importance to those countries. I don't believe that in fact it took a lot of selling to get the principle across or that those countries think that this is all a terrific ploy simply to keep the price of oil down. That undersells the precedential value of what's happening here. And because it has this larger precedential value, perhaps that's my lawyer's perspective, and that an important legal issue is at stake, the world will be different when we come through this.

If this operation fails it is quite clear that the United States will never get involved in another one and there will be many wars over

many boundaries, because it will have become clear that the international system is incapable of stopping a stronger state from redressing what it perceives to be historic grievances against weaker neighbours. If it succeeds there will be some momentum to discourage that kind of activity. The question then is whether it can in some way be institutionalized through the framework of the UN.

I don't exclude the possibility of some kind of reform in the structure of the Security Council. Even at the depth of the Cold War we were able to amend the Charter to bring about an enlargement and some transformation of the membership of the Security Council. It is not totally unrealistic to think of the Japanese proposal, to add five more permanent members without giving them a veto. But it ought to be imagined in terms of what would make the institution more legitimate.

**Olivia Ward:** I was just going to follow up on what Brian had said about the difficulty of getting the Security Council to take action. In the past, there were very few media representatives hanging around the UN. I was there from time to time in the last two years and I saw tremendous apathy. I was able to alert my organization to the fact that some important things do happen, and ought to be happening, even if they're not. One year ago, when I came down to cover Central America, I found that during a daily briefing the room was maybe a third full, now it is standing room only. So I really think that the media climate is so right now, that should some early warning group within the United Nations go directly to the media, call regular press conferences or irregular ones when they have something to say, and say, alert, eyes up, today we have a major an-

“The Iraq-Kuwait crisis is unique in its clarity, except for Iraq's attack on Iran, about which the Security Council did absolutely nothing.”

nouncement for you. Just put across the information, leave it with the media, and then say to the Security Council, fine if you don't want to take it up, it will be in the *New York Times* on the front page tomorrow.

**Wood:** Brian will remember when there was a great deal more attention of the media on this place, and in some ways it is again. Everyone who has been watching the system for a long time would say this does reflect an important shift of attention and opportunity that has to be captured because it could slip again. Is it an appropriate thing to ask about other machinery as well – the danger of overloading the Security Council. Now that it has finally been asked to do some of the work it was intended to do, you don't want to throw everything at it all at once. Regional systems [Chapter VIII] were envisaged in the Charter.

**Moussa:** The regional systems which started around the end of WWII, are moving steadily to be something of a bust – they are not functioning well. The Arab League, for example, did not perform the functions that were intended in its creation. In terms of peace and security in the region, the Arab League hasn't played any role. Perhaps recently on the question of Lebanon, but it came too late – so many years after the beginning. What is the role of the OAS – the Organization of the American States – vis-à-vis the major problems that we have seen from Grenada to Panama to Cuba, let alone the economic and social problems of Latin America? Move to the OAU, the Organization of African Unity – it suffers from the same defects.

There is a new development emerging with the CSCE [Conference on Security and Co-operation in Europe]. But it is in Europe, where it is highly advanced in coordination – it is an industrial society where many of the small matters which we consider big in the Third World have been relegated to the back burner. So the CSCE would be a new form of regional organization for security, economic and social matters. It is a looser kind of organization.

It might not be an organization at all; it is a conference by rule of consensus.

**Urquhart:** I don't know about this CSCE business – it sounds so plausible when one says it. The CSCE seems to be a state of mind rather than an organization. It is a state of mind which has fitted in remarkably well with historical developments in the European area. If you were to try to do something like that in the Middle East region, I can't envisage quite how it would get going. There isn't a common state of mind.

**Wood:** It is worth remembering that the CSCE started in the midst of a conflictual relationship that it was intentionally designed to bridge. There was competition over the agenda, one side was insisting that human rights be a large part of the agenda and the other saying that

the recognition and inviolability of borders be another. And direct security issues, even confidence and security building measures, were late in the game. So it is not only when things are better that you can do it.

**Franck:** I was going to say in response to Brian, that a state of mind is the only state worth a damn.... You can't talk about regional organizations, a lot of these are regional organizations only by the wildest stretch of the imagination. Any regional organization that includes Turkey and British Columbia obviously is a funny kind of regional organization, and any regional organization that includes Turkey and Ireland, or Malaysia and Egypt is a funny kind of regional organization. The notion has gotten rather diffuse and it is much more important to talk in terms of interest groupings.

Moreover, the OAU has not been useless. The Chad-Libya dispute, which I am currently involved in, was brought to the International Court by pressure by the OAU. Neither the Libyans nor the Chadians thought that this was their preferred way of achieving a satisfactory outcome, and it was eventually the OAU that prevailed – an agreement to go through a year of negotiation and if that failed there was to be result certain in the International Court. So there is a kind of ethos in the OAU which is not nothing.

**Ward:** I would like to put a question to Ambassador Moussa because I think the answer might not be too optimistic. There is much talk that at the end of the Gulf conflict there must be some kind of regional, not only peacekeeping, but perhaps arms control planning. What would you think the prospects are for an effective arms control plan?

**Moussa:** Well, thank you for this very complicated question. Any weapons control, disarmament, non-proliferation of nuclear weapons, has to include all countries, particularly Israel. We cannot, even now, agree with the opinion that Iraq, within the framework of its conflict with Kuwait, be subjected to certain arrangements for the limitation of or elimination of or supervision of its arms, chemical or biological or whatever – while leaving Israel outside of any control system. The region should be declared free from weapons of mass destruction. So any system there has to include nuclear weapons, which means Israel has to adhere to the Nuclear Non-proliferation Treaty.

**Ward:** Israel is nowhere close to accepting such a thing, but what do you think the climate of opinion is within the Arab states?

**Moussa:** Perhaps you are reading between the lines; that there are certain Arab countries, small countries, that do not really care about what Israel has now, they have Iraq in mind. But if you go deeper, a security system there cannot be established without the participation of Israel, without control over Israeli arms. If you want a viable system you cannot exclude anyone of the major powers in the area – Arab, Persian, Turkish or Jewish.

**Ward:** So really you are saying that after the Gulf conflict is settled there can be no arms control arrangement in that area unless there is an International Conference to settle these other issues.

**Moussa:** Yes, because Israel will not, and other Arabs might not, be able to sit around the same table to discuss weapons control without solving the Palestinian problem. But I would add a note here that it is not without "solving" the

tremely important relationship with Mahmoud Fawzi, [Egyptian Foreign Affairs Minister from 1953 to 1962] in Egypt. He had a very important relationship with Mike Pearson and with Nehru, and he operated on the basis of a very constant and detailed personal correspondence with a number of leaders in what you are calling middle powers. It certainly was one of the most important supports he had. I think it is a concept you can use, provided you don't formalize it.

**Moussa:** I believe this idea should be reactivated and very soon, at the moment when this "new world order" is very much talked about and when it's no longer a bi-polar system. It is one superpower with other big powers behind it, and then the Third World. What is the North anyway? It is the five biggest or seven richest or twelve European states, and the South is totally devoid of superpowers or centres of power. So some of us came up with the idea of middle powers – that between North and South has to be India and Egypt and Brazil and Argentina and Indonesia, as responsible countries, to bridge the two worlds. Just imagine the Council in 1990, when this Gulf problem erupted, if the middle powers had been even more fully represented. It might have been a different and very responsible discussion.

## **"Permanent members have vested interests in not rocking the boat – not least the British and the French, who are likely to fall out."**

Palestinian problem, but without starting the process. Once you start a viable peace process, this would allow the discussion of weapons systems and other things.

**Wood:** Is there a special responsibility for what one can loosely call middle powers? There was a lot of discussion, at the time of the writing of the Charter, about Security Council non-permanent membership? The concept of some special responsibilities of a group of states, apart from the permanent members, runs into some philosophical difficulty with the assumption of sovereign equality of all other members.

**Urquhart:** This was an extremely important, though not formalized view, in the previous period of considerable success of the UN which was the Hammarskjöld period. Hammarskjöld operated throughout the world through a very close, almost personal, relationship with what I think you call middle powers. He had an ex-

**Urquhart:** The real trouble in the UN is to get a serious discussion going on basic subjects, which will actually have some effect. Let us suppose for a moment that this is a historical turning point – everybody keeps telling us it is – then I think it is terribly important to have that serious discussion, and I don't think you will get it started with the remaining superpower or any of the other permanent members of the Security Council. They all have a rather important vested interest in not rocking the boat and maintaining the status quo – not least the British and the French, who if they rock the boat are likely to fall out. On the other hand, there are the middle powers, which I call the sensible countries. They were once mobilized by one very remarkable person with extraordinary success. This was the basis of everything that Hammarskjöld did. And it actually had some quite abiding institutional consequences.

There is now quite a considerable group of sensible countries which is extremely interested in really reforming the organization and its leadership. It has grown up in the last year, and they are a group of very intelligent, active, permanent representatives, of whom we have two here today.

I don't know whether it is possible to start this kind of conversation on the issues we were talking about here today. I maintain that if you don't do that, there is going to be a huge element of fraud in all the self-congratulations about what is happening in the UN now. We are going to get into the next crisis just as unprepared as we were for this one. It is not good for the United States to be out front on all these things. The other side of that is that if the United States isn't out front, nobody is, and therefore you have a whole lot of things which are simply left.

**“Most African and Asian states feel intense interest in the sanctity of boundaries, however irrational, however drawn by heinous colonial forces.”**

**Wood:** You've said sensible countries enough times, that I have to stress that some of us analyze this as being a situation where you have countries which have enough human capabilities that they can muster an appreciation and some leverage and some influence. They tend to have enough interests internationally, that their vital stakes are in play, but of course they cannot have any illusion that most of the time they can handle them unilaterally. Therefore, they are bound to multilateral cooperation from a self-interested point of view.

**Schoettle:** Not every middle-range power has always met the higher standard of being a sensible power. A very important definitional, operational requirement is that the middle power, in order to be sensible, has to undertake to bury its interests in these larger multilateral arrangements. Because it is precisely some of the middle powers, the larger ones, that have also had the capacity within their own regions to act as regional hegemony. One has to describe the set in terms not only of abstract population, but also in terms of behaviour.

**Franck:** That is what I would say in favour of the Japanese proposal, which is the expansion of the Council to bring those countries in on a permanent basis, albeit without a veto. But bear in mind that the French and the British haven't used their vetoes for twenty-five years or so now. It has been a very long time since France, China, and Britain have exercised a sole vote against to kill a resolution. They have not formally crossed the route, that is not to say they will never do it, but they really go out

of their way not to do it. That is another example of amendment through practice rather than an amendment through formal reopening of the Charter. So these are the legitimacy factors to be thought of in terms of broadening the Council in a formal structural way. I realize that is not at all what Brian had in mind. His point was that the best way to achieve this was by a dynamic system of consultation.

What's to be said against it, is that the present system has plenty of leeway to make the middle powers *primus inter* their particular *pares* and that is the blocs. The bloc system to a large extent now makes very little sense. If

you're Czechoslovakia it makes no sense for you to be in a bloc with Albania and Bulgaria and the Soviet Union. And Czechoslovakia did in fact try to get out. They formally made an attempt to join the Western Europeans and others, and were quietly told, no we don't want you in

our bloc, stay in your bloc, you can do more good there and also you can have more good there. It is a point which I think they now understand. Czechoslovakia could be quite influential as an Eastern European country because Eastern Europeans still have their two members of the Security Council and various other proportionate participation in other bodies of the UN system.

The present system makes for a kind of a consultation process, which does not work very well, but at least has a potential for working better. That is, if Nigeria were always on the Council, there would be no need for Nigeria to consult and try to develop an African consensus. Now whether the Nigerians are on the Council or not, they enjoy a degree of importance that is concomitant with their power within the African bloc. Oddly enough, when they are off the Council they are more powerful than they look. When they are on the Council they are less powerful than they look because they can't simply cast a vote off the tops of their heads. They must – as the Canadians have formulated, vote as you please, but vote in good company. And the good company requires a certain amount of consultation. It would be a pity if that were lost.

**Urquhart:** One of the reasons that the international system and UN doesn't evolve in a

very striking way is an extraordinary lack of intellectual input or curiosity. There have been very few new ideas put into the UN since the Charter was written. The debate in the UN on its future is incredibly arid and not very interesting. That is something which the countries like Canada could do a great deal about. After all, you have in most of these countries, institutions which actually think about these kinds of things. It is time for an infusion of ideas and also an effort to bring the thing up to date a little. The UN in many respects is in the Middle Ages still, it is pre-industrial. And it is very frustrating if you work there.

**Franck:** One of the problems with the way the UN system is set up is that it manifests the Thatcher syndrome: the more successful it becomes the more you have a machine in operation which is removed from any kind of direct public accountability. And absent any direct public accountability, the public imagination is not going to be particularly fired. Somehow the UN has to get its roots into the political soil of the constituent parties of the system. In a recent paper I wrote, the most bizarre and imaginative thing that I could suggest was an elective second chamber in the General Assembly – directly elected, much like the Strasburg Parliament. That would certainly interest the Toronto newspapers if you had people running for the General Assembly.

**Urquhart:** There is a two-dimensional quality about the UN which is extremely deadening. It is predominantly an inter-governmental organization. “We the people” appears once in the Charter then vanishes totally – bye bye, after the first words and not mentioned again. This is one of the reasons why it is so difficult to bring life into this organization. It isn't just

**“Somehow the UN has to get its roots into the political soil of the constituent parties of the system.”**

“the people” either because the truth of the matter is that the forces that are going to shape the future are not controlled by governments anymore. They are controlled, if at all, by private industry, scientists, transnational corporations, the media, communications. It is a very, very complicated subject, extremely easy to raise, and incredibly difficult to do something about.

# STILL AT YEAR ZERO

*Optimism that Cambodia's ordeal can at last be ended  
is hard to come by.*

BY GÉRARD HERVOUET

THE CAMBODIAN ACTORS SEEM TO REPEAT SCENES ENDLESSLY from a tragedy that intertwines unbearable memories of the Khmer Rouge repression with hopes for better days to come. The conflict drags on, and prospects for a settlement slip away each time they come within reach. Is it fate? – perhaps. Are Cambodians resigned to it? – clearly not.

The plethora of initiatives and counter-proposals, and the diplomatic circumlocutions surrounding the Cambodian problem, are so complex that even well-informed observers can be misled. Without recapitulating the entire chain of events since the quasi-failure of the August 1989 Paris conference, a few key points in the affair, since 5 June 1990, do bear closer scrutiny.

This was the day the Prime Minister of Cambodia, Hun Sen, and the former head of state, Prince Sihanouk demonstrated in Tokyo, their ability to blow simultaneously hot and cold on the hopes they had raised when they signed an entente. Both had agreed to a cease-fire or, more specifically, to the recognition of the need for "voluntary restraint to the use of force by all Cambodian parties." Hostilities were to cease before the end of July.

Moreover, the communiqué stated that a Supreme National Council (SNC) – vested with Cambodia's sovereignty during the transition period – would consist of "an equal number of representatives of both parties." Sihanouk proposed that the government side have six representatives, the Son Sann opposition faction three, and the other three would be reserved for his own party, the National United Front For An Independent, Neutral, Peaceful and Cooperative Cambodia – FUNCINPEC. Euphoria was short-lived, however, since the Khmer Rouge did not attend the proceedings, and so shortly after, Sihanouk and Hun Sen agreed that the war would probably continue.

After the fifth meeting of the five permanent members of the UN Security Council (hereafter "the Five") in Paris, on 16 and 17 July, the US government announced that it would no longer recognize the coalition government of Cambodia, set up in 1982 as an unlikely alliance between the various factions fighting the regime in Phnom Penh: the Khmer Rouge, Son Sann and Prince Sihanouk. This decision marked a watershed in US policy in South-East Asia, especially since it came with a US proposal to open dialogue with Vietnam and send humanitarian aid to Cambodia.

DESPITE SURPRISE EXPRESSED BY MEMBERS OF THE ASSOCIATION OF SOUTH East Asian Nations (ASEAN) bloc – the chief architects of this alliance – the international community heralded the US decision. Like the Americans, they had come to realize that the previous policy had favoured the most powerful member of that coalition, the Khmer Rouge, and increased the risk of its returning to power.

On 28 August, after much bargaining and consultation, the Five agreed on the substance of a document entitled: "A Framework For a Comprehensive Political Settlement of the Cambodian Conflict." The agreement states that Cambodia should be placed under UN supervision.

It defined the terms and conditions for the establishment of the Supreme Council, and laid down the military arrangements for the transition period leading up to free elections. The Five also undertook to guarantee the security of a neutral Cambodian state, and to this end, the Soviet Union and China agreed to stop supplying weapons to the government of Phnom Penh and the Khmer Rouge respectively.

In Jakarta on 9 and 10 September, the Cambodian factions accepted the document prepared by the Five for the UN. Most importantly, they appeared to acquiesce in the plan's description of the structure and functions of the SNC. As an indication of their resolve to transcend historical antagonisms, the parties agreed on five central points:

- The SNC is the unique legitimate body and source of authority in which throughout the transitional period, the independence, sovereignty and unity of Cambodia is embodied;
- the SNC is composed of representative individuals with authority among the Cambodian people and reflecting all shades of opinion among them;
- the SNC will represent Cambodia externally and occupy the seat of Cambodia at the United Nations, in the UN specialized agencies and in other international institutions and international conferences;
- the SNC at the time of signature of the comprehensive settlement will delegate to the UN all powers necessary to ensure the implementation of the comprehensive agreement, including those relating to the conduct of free and fair elections and the relevant aspects of the administration of Cambodia;
- all decisions of the SNC will be made by consensus among its members.

Geoff Githner

ALL PARTIES AT THE JAKARTA MEETING ACKNOWLEDGED that a peaceful settlement was within their reach. Even the leader of the Khmer Rouge declared that "a significant step towards peace ha[d] been taken," adding that the Khmer Rouge was "wholeheartedly" in support of the plan. Hun Sen, for his part, declared that the document was "the best that we've ever produced."

But once again, initial enthusiasm was dampened by the inability of the twelve delegates to the SNC to choose a chair. With six members from the opposition and six from the Phnom Penh government, there was a lot at stake. While it appeared that Sihanouk might become the thirteenth member and chair, Hun Sen proposed that the Prince would be acceptable as chair only if he occupied one of the six seats allotted to the opposition, or if a seventh representative from the government side was added. Regardless of the outcome, there would be deadlock.

This bickering over numbers underscores the deep mutual suspicions evident from the start of the transition period. Because of the wrangling over the chair, the first meeting of the National Council in Bangkok from 17 to 19 September was a failure. But the very next day in New York, the Security Council accepted the framework agreement formulated by the Five at the end of August, and adopted it as resolution 668. The Security Council specifically urged the opposing factions to proceed as quickly as possible with the election of a chair.

The UN plan was finalized during the seventh meeting of the Five on 15 and 16 October, and at a meeting held in Jakarta (at which the Cambodian factions were not present) in November. A comprehensive scheme for the implementation of a peace settlement, it proposes: the establishment of the United Nations Transitional Authorities in Cambodia (UNTAC); defines the agency's mandate; outlines conditions for a cease-fire, for free elections and for repatriating refugees; and lays down fundamental principles for a new Cambodian constitution.

On 21 and 22 December in Paris, the two co-chairs of the Paris Conference on Cambodia (France and Indonesia) hosted a meeting of the members of the SNC and of the United Nations to formally adopt the plan. The three opposition factions accepted "most of the fundamental points," but the Phnom Penh government voiced strong reservations on three items: demobilization of military forces, disarmament and, in its words, the "mention of the genocide" perpetrated by the Khmer Rouge regime between 1975 and 1978.

AT THE RISK OF OVERSIMPLIFYING A COMPLEX DOCUMENT, there are a few central elements of the plan worth highlighting: it is, first of all, a precarious and delicate structure, held together with very elaborate diplomatic language, which creates the illusion of reconciling all parties to the dispute. While the agreement is the product of considerable efforts on the part of the international community, it will succeed only to the extent that the same sizable resources are applied to carrying out its many detailed provisions.

The whole structure depends on Cambodians ironing out their differences, and on the future of the Supreme National Council. And in turn, an effective SNC under an impartial Chair is necessary for productive and credible collaboration with UNTAC. The interminable disagreements about the SNC and inability to pick a chair, deprive the country of representation in the United Nations, where its seat remains vacant.

During negotiations, all sides seem to have taken it for granted that harmony was achievable. However, since the meeting in Paris at the end of December, the representatives from Phnom Penh have once again voiced reservations. These lingering concerns may seem only technical, but they raise fundamental issues. The Hun Sen government insists that somewhere in the final agreement, there should be mention of the Khmer Rouge genocide. More than a matter of principle, such a clause leads to the following question: how can one allow the perpetrators of genocide to participate in a government or take part in elections held under the supervision of the United Nations? On this point, Hun Sen was very specific:

Despite the participation of the Khmer Rouge in the SNC, our official position remains unchanged: in whatever case, in whatever solutions, there must be a guarantee for the non-return of the genocidal Pol Pot regime.

Other fundamental questions concern the thorny issues of the demobilization and disarmament of existing military and guerilla forces. The UN plan is quite explicit on these points, outlining a step-by-step process that can be adjusted as circumstances warrant. Nevertheless, the end of hostilities depends on the good will of the parties involved. The plan dictates that upon signing a final agreement, each party would provide UNTAC with a comprehensive and detailed list of its military equipment, bases, weapons caches, etc. All troops would have to report – together with weapons, ammunition and other equipment – to designated assembly areas from which they would be escorted to camps, demobilized and returned to civilian life. Hun Sen's reluctance on this particular point is understandable:

It is easy to disband Cambodian government troops ... but can anyone provide a sure answer that this is the same with Pol Pot troops and their weapons, and those of Pol Pot's allies in the Dangrek mountains or in the jungles? No one can give this answer. In this case, do not try to disband government troops because this would pave the way to the Pol Pot regime's return.

It would be naive to deny that the Phnom Penh regime has legitimate fears. The UN plan can certainly be improved upon, but the ability of the different factions in finding common ground has been overrated. Unfortunately, the Cambodians' implacable hate is deeply rooted, and there are no indications that this will change.

The Khmer Rouge constitute an enormous stumbling block. Cautious and clever, they play the UN card in order to achieve new respectability. They no longer want to be called Khmer Rouge, but rather "Democratic Kampuchians." And with elections looming on the horizon, they have attempted to recast their image into that of a nationalist party. They have drawn up a constitution, and set up a judicial system and a police force to administer the territory under their control. They court the peasantry by playing up the strong anti-Vietnamese feelings that run through the country, and "democracy" is being tried out in some of their refugee camps in Thailand.

The Khmer Rouge undoubtedly represent a real threat. Kept in check for the moment by the Phnom Penh government, there are widespread fears that the Hun Sen regime could be weakened or even shattered by the presence of the UN transitional authority.

All this is happening as if the solution to Cambodia's internal problems no longer depended on external realities. The unanimity of the Five and the acquiescence of the states in the region would seem to support this. Yet, the Chinese government has yet to indicate its real designs – this despite a certain rapprochement with Vietnam, and reassuring noises about cutting off military aid to the Khmer Rouge.

Hanoi remains Phnom Penh's most faithful ally. Vietnamese troops have repeatedly crossed the border to join in the government's sporadic skirmishes with the Khmer Rouge. Thailand – in accordance with ASEAN's policies – is playing a patient game that gives it control, not only over the supply of Chinese weapons, but also over the Khmer Rouge guerillas in the refugee camps – and those of the other two guerilla factions as well.

OR THE INTERNATIONAL COMMUNITY TO PASSIVELY WAIT ON the sidelines for Cambodia's factions to work out a compromise, betrays an indifference to the fate of this small country – one of the ten poorest in the world. While China and Vietnam are still very much involved, neither can be really trusted, since neither has gone through a *perestroika* comparable to that of the Soviet Union or Eastern Europe. The bitterness of their rivalry is matched only by the decrepitude of their regimes. It is hard to imagine leaders as politically ossified as these questioning their own determination to fight it out to the last Cambodian.

The international community could still bring pressure to bear on both Hanoi and Beijing to obtain – *prior* to the signature of any internal agreement in Cambodia – a commitment not to intervene. In the meantime, the task of rebuilding Cambodia has to begin. Massive international assistance remains, for the time being, the only way of dealing with the great social and economic disparities which fuel the cause of the Khmer Rouge.

It is possible to help the Cambodian people reestablish an infrastructure that will ensure their survival, without endorsing, at the diplomatic level, the current Phnom Penh government. Such assistance could work both to validate the UN plan and reassure the leaders in Phnom Penh. Assuming the international community is not overwhelmed by indifference, what with the Cambodian conflict relegated to the back pages because of the Gulf War, one can imagine a kind of Marshall Plan supported by the nations of the Pacific Rim. Current attempts to bring structure and stability to this rapidly expanding region of the world would be enhanced by a concerted and united effort in Cambodia.

# FROM BUST TO BOOM

*The Gulf War threatens to re-kindle international arms sales.*

BY CHRIS SMITH

**T**HE GULF WAR HAS EMERGED AT A CRUCIAL juncture for the international political system and the global trade in arms.

The short-lived post-Cold War, pre-Gulf War era presented nations with a rare but brief opportunity to consider how best to exploit a new and less threatening security environment. However, any positive outcomes are undoubtedly threatened by a major war, the technical and political lessons of which will be closely watched.

The coalition forces cannot lose the war – in the coming months Saddam Hussein will be forced out of Kuwait, his capacity to wage war will be destroyed and he is unlikely to survive the political chaos and disintegration in Iraq that will result. Yet, pundits are already questioning the allies' ability to win the peace – a goal more important than a return to the *status quo ante*.

Over the past fifteen years, Arab and Israeli forces have been allowed to increase their military capabilities to awesome levels by playing off the Soviet Union against the United States, by manipulating the divisions between Western allies, notably West Germany, France and the United States, and by individual firms exploiting loopholes in national controls over defence exports. Partly as a result, regional security problems and power struggles have assumed new dimensions since the 1973 Yom Kippur war – conventional forces are much stronger and long-range missiles have been acquired, as may have chemical and nuclear weapons to go with them.

A REDUCTION OR STABILIZATION OF MILITARY capability is pointless on its own, particularly if, by definition, it is imposed from the outside. President Jimmy Carter attempted and failed to achieve this in the late 1970s when he pledged that the US would not be the first country to introduce new technologies into volatile areas. There is simply too much economic and political pull within the Middle East, too many new suppliers outside Europe and North America, and national controls over defence sales remain too weak. Clearly, reducing or controlling military capability in this region can only come through altering patterns of both supply and demand.

While much may change in the future, there are already signs that arms sales will retain their primary role in Middle Eastern affairs. The Pentagon has already laid contingency plans to increase the military capability of Kuwait, Saudi Arabia and the Gulf states, together with an allied peacekeeping force if Saddam Hussein is only partially defeated.<sup>1</sup>

The inevitable surge in the future demand for defence equipment throughout the Middle East will have mixed fortunes for the major suppliers. While California and Massachusetts quietly rejoice, a recent French report has claimed that "we will soon be reduced to gathering the crumbs swept aside by our trans-atlantic allies."<sup>2</sup> In particular, the *Patriot* anti-missile missile and the *Tornado* ground-attack aircraft have both performed extremely well.

As with the French *Exocet* anti-ship missile following the Falklands War, "combat proven" status works veritable wonders for future sales. On Wall Street, the price of a share of Raytheon, the manufacturer of the *Patriot* missile, rose \$ 4.50 the first trading day after its initial combat success, and export orders for the *Patriot* are expected to reach \$ 2 billion next year. Similarly, the *Tomahawk* cruise missile now has a new lease on life.<sup>3</sup> Destined for cancellation in 1992 prior to the war, production will now presumably be extended. The success or failure of the *Challenger* tank in the ground war will likely decide whether Britain remains a tank producer in the future.

During a period when the international defence market is severely depressed, when oil costs look set to rise above pre-2 August invasion levels to cover the costs of both war and peace, and when the main combatants will be looking to arms exports to reduce the economic costs of rearmament, the temptation to continue to use military means to suppress political problems will be strong.

IN LATE 1989, MIKHAIL GORBACHEV DID MORE than allow the liberation of Eastern Europe, he

also threw in the Soviet towel and with it, most political claims to superpower status. These actions brought a collapse of the contest which had determined the shape of the post-WWII world. The benefits of a new era of détente have been quick to manifest themselves, particularly in Europe. Nuclear and conventional arms control, the disintegration of the Warsaw Pact, the unification of Germany and additional opportunities to exploit the Single European Act have opened a new and promising chapter in European history and, potentially, for the Third World as well.

SOUTH ASIA AND PARTS OF AFRICA HAVE ALSO benefitted; in mid-1990, growing tension between Pakistan and India over Kashmir failed to develop into a full-scale conflict in part because both superpowers decided that armed conflict was in the interests of neither. While regional, ethnic and religious problems persist and are invariably exacerbated by failures in economic development, the new emphasis on resolving conflicts and a tendency on the part of the major powers to avoid meddling in the internal affairs of weaker countries for Cold War purposes is a significant and positive change.

On defence questions, equally profound changes are on the horizon. In Europe, the Soviet Union and the United States there is a growing acknowledgement that distinct political and fiscal limits have been reached regarding what had been an open-ended commitment to the pursuit of advanced military technology. The end of the Cold War offers an opportunity to pursue both the conversion of defence production and the partial dismantling of national defence bases.

Although the French remain somewhat equivocal, most European defence enterprises now recognize that the long-term future lies in cost sharing and co-production arrangements. Prior to and during the build-up to the Gulf conflict, the US Congress was busy cutting billions out of the US defence budget in a desperate effort to address the nation's economic problems, most notably the federal deficit. Much the same was true in the Soviet

1. For Your Eyes Only, 24 December 1990.

2. Defence Marketing International, 16 November 1990.

3. The Independent, "US Defence Industry on a High," 26 January 1991.

Union, although the conversion of weapons production has faltered of late.

While these changes taking place throughout the Northern industrialized nations had yet to extend to new approaches to the international arms trade as a whole, changing patterns of demand for weapons did suggest that progress might be attainable in the future. So too had the United Nations adopted a fresh approach in this quarter, the first sign of the new concern being the convening of expert committees and academic conferences on greater transparency in the international arms trade.

PRIOR TO THE IRAQI INVASION OF KUWAIT, declining oil prices had depressed the arms market throughout the Middle East, although demand was still high in relation to other parts of the Third World – witness the scale of the multi-billion dollar *al Yamamah* deal between Britain and Saudi Arabia involving the sale of *Tornado* and *Hawk* aircraft, and other military equipment and facilities. Through the Gulf Cooperation Council, several oil-rich states such as Oman and Saudi Arabia had begun a process of rationalizing their weapons procurement to avoid duplication and waste.

On the other hand, poorer Third World countries had started to discover that the attainment of a broad and multi-faceted military capability was impossible without vast quantities of foreign exchange increasingly available only to oil-producing states and certain newly-industrialized countries like South Korea. Pakistan, for example, realized that the American commitment to economic and military aid was far from open-ended once the Soviets quit Afghanistan. And India's rampant defence spending through the 1980s petered out prematurely, creating large gaps in defence capability and, more recently, led to a government defence review. In the case of India, the lesson was simple – a major arms build-up which dwarfed even the Saudi effort in recent years, could not be sustained with only three weeks foreign exchange in the bank.

Equally significant, defence sales to Latin America have been exceptionally depressed, only partly because of growing indigenous weapons production capabilities. Indeed, in recent years, the most promising location for arms sales has been the Far East. Against this backdrop of rising external debt, global recession and post-Cold War politics, the international arms market was set for further retrenchment.

THE GULF WAR THREATENS TO CHANGE ALL THIS as armed forces and governments draw their own conclusions from unfolding events. At the political level, the resolve on the part of the US to avoid another Vietnam has led to a most dev-

astating example of overwhelming military intervention – during the first two days of the war, the allied forces dropped as many bombs on Iraq as the Anglo-American air forces did on the city of Dresden in the closing weeks of the Second World War. The relative impotence of Iraq will provide a sombre lesson for other aspiring Third World powers, such as India and Iran, which possess similar military capabilities.

Finally, the Gulf crisis will have a more subtle and long-term effect upon the international system. Prior to the attack on 17 January, the voices in favour of alternative security regimes – “non-provocative defence” and “defensive defence” – were beginning to make headway in Europe, both intellectually and politically, even among professionals. However, the initial allied success in the Gulf is a powerful endorsement of advanced military technology and its ability to delay the commitment of troops on a large scale and reduce collateral damage in the form of civilian deaths.

EQUALLY IMPORTANT, AND EVEN TO THE SURPRISE of the allied commanders, the technology is functioning well in hostile conditions. Although the central mission may not have been achieved in the expected fashion, even the military commanders have appeared a little surprised at the relative lack of technical failure. Hitherto, many of the arguments in favour of alternative defence regimes had used the limitations and shortcomings of advanced military technology as a major argument against gold-plating and the type of military industrial practice which sent prices soaring and returned only marginal increases in defence capability. However, the low-level attacks performed by *Tornado* aircraft, the accuracy of the *Patriot* missiles, and the superb quality of intelligence gathering and targeting, will do much to mute the Luddite view of modern military technology.

One can hope, however, that there will be much to gain from this dialectic, not least at the level of practical policy formulation. Much of the alternative defence debate always appeared in the shape of unreal policies geared to defeat – the idea being to leave a country's borders open to invasion and ensuring that the negative aspects of territorial occupation outweighed the possible gains.

THE GULF WAR IS SURELY A TURNING POINT in the history of the region for all concerned. Following Iraq's defeat, the international system, in facing up to the demand side of the problem, must force itself to resolve, or at least regulate, in tandem with Israel and the Arab states, the ongoing political crisis in the region. This peace process can only begin if Israel and the United States accept the inevitability of a regional peace conference which includes on

the agenda the Palestinian question and Israel's de facto borders. Thereafter, whatever fragile consensus emerges will also require a regional arms control regime to ensure its survival.

It is difficult to be sanguine about the future following a war which was made inevitable by a complete lack rather than a failure of foreign policy. If this approach comes to define the future of the region, the Middle East will remain unstable, volatile and heavily armed. Certainly, a kind of negative peace may prevail and this would be good news for the major arms producers and exporters.

Elsewhere, however, the associated effects would be catastrophic. Rising oil prices, a higher US deficit, increased arms imports and declining foreign aid – Britain has already refused to provide extra aid to the Sudan because of the costs engendered by the Gulf crisis – will exacerbate economic problems in Latin America, Sub-Continental Africa and South Asia. The price as measured in failed economic development and rising political tensions will be severe. In the future, subtle or blunt defence planning may prevent another war in the Middle East. However, a “no war, no peace either” situation may exacerbate conflicts and crises in other regions of the world. □

# LAST BEST HOPE FOR PERU?

*Peru's new president takes on the country's three-headed scourge of cocaine, corruption and a decade of vicious insurrection.*

BY SHARON STEVENSON

**F**OR A MULTITUDE OF HISTORICAL REASONS PERU IS AN ECONOMICALLY, morally, and socially sick nation – and the new President, Alberto Fujimori, knows it. Corruption has been bred within incoherent, debilitated national institutions and fattened on dollars generated by the illegal drug trade. The greatest challenge to Fujimori is the reform of government: making it a constructive and just force in people's lives. He must convince Peruvians to help their government go after narcotrafficking, insurgents and the corruption which permeates all.

The hidden weapon in Peru's drug war is political will or rather, lack of it. The major foreign player, the United States, accuses Peru of not demonstrating the political will to fight America's number one problem, drugs. The US, still under the shadow of Vietnam, shows no political will to get involved with what Peruvians see as their number one problem: a two-headed insurgency, fought by the Khmer Rouge-like *Sendero Luminoso* (Shining Path) and the Castroist Revolutionary Movement Tupac Amaru (MRTA), both of which flourish in the coca growing areas.

After his inauguration in July 1990, Fujimori, born in Peru of Japanese parents and nicknamed the "Karate Kid," came out swinging. He lambasted the Catholic church for its resistance to birth control, and lashed out at the justice system, calling its seat the "Palace of Injustice," and its judges "jackals." After four years of self-imposed isolation and disastrous economic policies directed by the outgoing President, Alan Garcia, Fujimori initiated a gruelling austerity programme to stabilize the economy and reinsert Peru into the international financial community.

Garcia had left behind a bankrupt treasury and a "narcoeconomy," where coca exports bring in an estimated US \$1 to 2 billion in uncontrolled and untaxed revenues (legitimate exports from Peru in 1989 were \$3.5 billion), resulting in a distorted economy and wreaking havoc with the dollar exchange rate. The fight against drugs and subversion had taken a back seat.

PERU IS THE SUPPLIER FOR SOME SIXTY PERCENT OF THE COCA PLANT leaves<sup>1</sup> which feed the US cocaine habit and increasingly that of Europe. The Upper Huallaga valley in northeastern Peru became notorious in the early 1980s. It produces the finest quality coca plants and became the distribution and business centre for flying out cocaine to Colombia. It also became the anti-drug operations headquarters financed by the US which had funded several years of low-level interdiction and the physical eradication of coca plants in the Upper Huallaga. In 1989, agents of the US Drug Enforcement Administration (DEA) and the anti-drug police they advise set up a new base there and expanded their operations.

The US drug policy in Peru, which even knowledgeable sources admit is in "tatters," has been based in self-delusion and fear: self-delusion that they can cut off the drug supply without getting involved in Peru's main problem, a gruesome subversion, and fear that doing so would in-

volve the US in "another Vietnam" or even El Salvador. However, in refusing to meet the wrenching complexity of Peru's coca growing regions head on, the current US see-no-hear-no-speak-no-counterinsurgency attitude runs against both Peruvian and American interests.

In September 1989, President Bush and the US Congress unilaterally decided that Andean countries should receive military aid for the drug fight – \$35.9 million was set aside for Peru. The programme was designed to entice its armed forces into doing "something" in the drug fight – "isolating" the Huallaga by cutting the flow of coca products, and the chemicals necessary for processing them, by land, river and air.

Although the Peruvian constitution forbids the armed forces to fight drugs – nominally a police matter – naval and air forces can justify anti-drug operations to reestablish Peruvian control over its own riverways and airspace. The US Congress and administration wedded themselves to the politically safe, if twisted, logic that the army could, in the words of US spokespersons in Lima "provide security for anti-drug operations" in the valley, but would only "control" and keep the two armed guerrilla movements there off balance. In fact, by law, the funds allocated could only be used for counternarcotics purposes, and against subversion only where allied with narcotrafficking.

*SENDERISTAS*, HOWEVER, ARE NOT JUST "NARCO-TERRORISTS." THEY ARE dedicated revolutionaries whose primary objective is the political takeover of Peru. The organization has, indeed, received a great funding boost in the last two years through its protection racket with narcos and the "war taxes" they impose on coca growers and anyone else they can intimidate. And increasingly, there are indications *Sendero* would like to take over the distribution system itself.

Typically, they establish their political dominance in "liberated" areas with a "bad-guy, good-guy" approach in which they brutally torture and slaughter anyone who resists them or represents the capitalist system. They often force villagers to turn their children over to the guerrilla army, then offer a "justice" system, to control stealing and adultery. They also appoint ruling "delegates" and "committees" at gunpoint.

Alberto Fujimori, an agronomist and university professor who came from nowhere to win the presidency last year, is no political fool. Like his predecessor, he refused to sign the military aid agreement with the US before the deadline, and so forfeited the \$35.9 million. He was being pushed into accepting American aid which would exacerbate an already militarized counterinsurgency strategy, without providing the carrot for what counterinsurgency experts call "the other war" – the war for hearts and minds. American aid with no coordinated, political, economic, social and psychological effort, would only inflame nationalist anti-American sentiment exploitable by the insurgency, leading Peru into its own disastrous Vietnam or El Salvador.

Fujimori's greatest battle will be to reconstitute his government's moral legitimacy in the eyes of Peru's rural, peasant population – largely Andean and Amazonian peoples who have historically been abandoned

1. For millennia, *Erythroxylum coca* has been an integral part of the lives of Quechua and Aymara speaking communities in Peru and Bolivia. The coca leaf is chewed routinely by millions of people in the Andes and Amazonia to suppress the sensations of hunger, thirst and fatigue. The leaf also fulfils medicinal and religious purposes.

by the white coastal government. Reacting to US charges that Peru was soft on drugs for not accepting the aid, Fujimori replied unequivocally,

For us, narcotrafficking is a cancer and we want to eradicate it. But we want the law enforcement aspect to be approached in a global context, taking into consideration the concrete possibilities of the farmers in the present coca zones and the potential to develop economic alternatives.

FUJIMORI TOOK THE INITIATIVE, WEAVING TOGETHER THREE STRAINS OF experience into the "Fujimori doctrine." He was closely advised by Hernando de Soto, the flamboyant director of the private Institute for Liberty and Democracy, and author of a best-seller, *The Other Path*, an analysis of Peru's vast informal, grey-market economy.

First, the coca farmers would no longer be regarded as criminals for growing coca, they would have legal title to the land – an idea well-received in Washington. The second element recognizes the need to get better prices for producers of legal crops by clearing away bureaucratic hassles, as well as the state and oligarchical monopolies on export markets.

This emphasis on the *campesinos* right to participate in crop-substitution came from Iban De Rementaria, an idiosyncratic, shaggy, grey-haired Frenchman, who worked with the United Nations crop-substitution programme in the Upper Huallaga valley. The UN programme encourages *campesinos* to form grassroots organizations based on community production committees. Such organization makes agricultural technical help easier to administer and, more importantly, gives uneducated farmers in a virtually lawless area the strength to defend themselves from unscrupulous leaders of the cooperatives which market their crops.

The third and most influential part of Fujimori's programme comes from General Alberto Arciniega, a full-speed ahead army officer, appointed by Alan Garcia in March 1989 to clean up subversion in the valley. Arciniega settled his headquarters in what he labelled "the worst of the worst," the town of Uchiza, a major hub of subversion and narco-distribution, where he lived in a bare room in a small army post. "If it can be done in Uchiza, it can be done anywhere," he said.

His was a classic counterinsurgency policy. He hit the guerrillas hard, based on intelligence provided by a populace won over to his side in part because he stopped the eradication of coca plants. But he also preached that the *campesinos* had to look to their future. "Coke is a fad," he said; they needed to switch over. He persuaded the UN to do a soil study with some 5,000 farmers and convinced them that cash crops and agro-industry would offset the gradual loss of coca. He also made it clear that when there was an economically viable alternative to coca, the coca fields of those those who did not switch would be subject to eradication.

THE BRAIN TRUST FOR FUJIMORI'S DOCTRINE IS THE INDEPENDENT AUTONOMOUS Commission for Alternative Development charged with designing a drug policy from which to negotiate with the US and other countries interested in contributing to the drug fight. Creating the right mix of economic development, anti-drug and anti-subversion elements in the integrated policy will be a major challenge if Peru hopes for US funding. While the Bush administration has come around to accepting the need for development to offset the coca, most US officials are still dubious about working with the *cocaleros* (coca farmers) on crop substitution for fear of being tainted by association with "criminals" who only want to get the DEA off their backs.

The *cocaleros*, for their part, say they are not against interdiction, but they resent the anti-drug police who they assert steal dollars in house-to-

house searches. The head of the Uchiza *cocaleros*, twenty-three year old Cesar Valdizan, says, "We aren't against [the police] fighting narco-trafficking, but let them fight the *firmas* [the narco-trafficking organizations] ... not the people who produce the coca." An agronomist who has worked with the *cocaleros* agrees; there must be a stick along with the carrot. "You have to have serious, selective, effective law enforcement [against the narcos] parallel to any alternative development."

The *campesinos* also say they are willing to switch crops because they are fed up with the violence. The majority of the long-time residents and the new "coca-rush" immigrants from all over Peru, endure pressures from a bewildering mix of "interests." Where there is coca (and narcos), there are guerrillas – and common thieves posing as guerrillas, as police and as soldiers – US-funded anti-drug police, US-trained anti-subversion police, miserably-paid and corrupt military officers, and perhaps those most abhorred by *campesinos*, national investigative police who routinely rob them, they say.

Corruption may well be the Achilles heel of any drug strategy in Peru. An anti-corruption campaign is set to begin in March to unblock bureaucratic bottlenecks which frustrate people into offering bribes to get through the system. The question is whether the campaign will be able to reach into the security forces. At least one US official has issued a veiled threat to a military officer that the defoliators will

have their way in Peru if nothing is done about the army letting Colombian planes land at municipal airports and protecting them at clandestine airstrips in the valley. At the time of this writing, US participation in a Support Group<sup>2</sup> to help Peru pay its IMF obligations, was in effect being held hostage to Peru's acting concretely to control the drug traffic at legal airfields.

In the emergency zones awash with coca dollars, the meagre salaries of the police and military literally force them to steal in order to live. The going "bail" for a captured guerrilla in the Huallaga is \$1,000, half goes to the head of the police and the rest to the prosecuting attorney. A top army general makes only \$230 a month, and commanders receive the price of a beer in town to feed one soldier for a day. A few honest military men are deeply concerned about the extent of corruption, "If we do something about corruption, I think we could wage a very effective war against *Sendero*," said one.

FUJIMORI HAS SHOWN HIS GOOD INTENTIONS TO REINSERT PERU INTO THE international financial system, and to insist on a realistic, integrated fight against terrorism and drugs – one that will be expensive by any measure. In July 1989, the Group of Seven Declaration of Paris urged greater emphasis on bilateral and United Nations programmes for the conversion of illicit cultivation in the producing countries. In February 1990, at the meeting of Andean presidents in Cartagena, Colombia, George Bush agreed that developing economic alternatives to coca was important. But virtually nothing has been done to help coca farmers.

The international community will have to summon its own political will to look honestly at the complexity of Peru's symbiotic scourges of coca, subversion and corruption and decide whether it is worth the risk to go beyond symbolism and lend a significant hand – in time.

2. According to the Peruvian embassy in Ottawa, industrialized countries are coming together to raise the \$800 million bridge loan necessary for Peru's eligibility for further IMF loans. The US, Canada, Japan, Germany, France, Italy, Spain are said to be part of this incipient group, the UK having withdrawn.

Shiraz Haniffa

IT NOW SEEMS CLEAR — ALMOST trite to say — that the post-War order of almost a half century has crumbled. Less clear is the shape of the new order replacing it. Much less clear again is the thinking that will underlie that order.

What have been the orthodox post-WWII Canadian perceptions? The Americans and Russians are strong. Japan and Europe (and Canada) are weak. The United States is our friend; the USSR is our enemy. Military force is the currency of world politics. Soviet expansionism and nuclear war are the major threats, thus NATO is essential. Europe and Germany are and will be, for a long time, divided. The Third World is poor and weak. And the UN is needed but ineffective.

Thus, the essential goals of Canadian foreign policy, it could be said, were to keep the Yanks friendly, the Russkies away, the defences up (as much as possible), the troops in NATO, the UN operating, the peacekeepers standing by, and the foreign aid flowing (but not too freely). With these basic policies the Canadian public, for the most part, concurred. The question is whether they still do. Or is there any evidence of a new thinking about the new order?

THE CONVENTIONAL SCHOLARLY (AND OFFICIALS') WISDOM IS THAT MOST people pay little attention to international relations, have relatively little understanding of these events, and could care less. One possibility, then, is that the Canadian public has been largely tuned out and their attitudes are currently not much different than they have been for decades, at least not yet.

Another possibility is that conceptual order has been replaced by disorder. Even in less extraordinary times, most people find the buzz of events in world affairs a trifle confusing. But the recent blitzkrieg of peaceful change has not only out-paced our policies but over-run our psychological defences. The Berlin Wall is opened overnight. Soviet policy seems to shift daily. Iraq, a far-away country smaller than Canada, suddenly becomes the focus of concern in the world. The thinking of the mass public, perhaps no less than that of foreign policy elites, is thus perhaps in understandable disarray.

The annual public opinion surveys of the Canadian Institute for International Peace and Security, now dating back four years, provide a rich basis for evaluating whether consistency prevails, confusion now reigns, or a new coherence is emerging.

Polls from the early 1970s show a solid majority of Canadians regarded the USA as the strongest country militarily and economically. About the same number still regard the United States as the strongest military power, but only about half as many choose the USA as the strongest country in economic terms today.

In contrast, while only one in six (15%) pointed then to Japan as the strongest economic power, a majority (50%) now regard it as such. The

post, post-War period.*

BY DON MUNTON

European Community comes in a distant third at 11%. Significantly, most Canadians now also regard economic factors as more important than military ones in the exercise of national power.

CIIPS SURVEYS SINCE 1987 HAVE tracked warming perceptions of the United States and the Soviet Union. Those with considerable or great confidence in the ability of the US to deal wisely with world problems increased from 37% in 1987 to 47% in 1988 to 67% in 1989, and now amount to fully 75% of Canadians. Canadians' confidence in their southern neighbour was thus higher in fall 1990 than at any time since the early 1970s, but may well have suffered because of American pursuit of the Gulf War.

Those with considerable or great confidence in the USSR rose steadily from only 28% in 1987 to 42% in 1988 to 52% in 1989 and to 62% in 1990. This is almost certainly a record high level of

confidence in Soviet policies internationally, but is not entirely unprecedented. While Mikhail Gorbachev and his reforms have undoubtedly done much to improve Western publics' perceptions of the Soviet Union in recent years, the USSR image among Canadians has only in the past eighteen months surpassed that held in the early 1970s, around the time of the first US-USSR Strategic Arms Limitation Treaty.

No major country, including the USSR, is regarded by more than one in four Canadians as a military threat. While five years ago 40% agreed that the USSR was "an expansionist power that threatens Western security," only 5% do so now.

On the other hand, two countries stand out in Canadians' minds as serious economic threats. One is the United States, named by no less than two out of three (68%). The other is Japan, named by almost as many (65%). A unified Germany was named as an economic threat by fewer than these two but by more than any other source (43%). Perceiving the US as an economic threat to Canada may seem inconsistent with the high levels of confidence in the US noted earlier, but is not. Canadians, or at least the roughly half of them who are neither consistently negative nor consistently positive in their perceptions of the US, apparently have confidence in American ability to deal with world problems, but, at the same time, apprehensions about *bilateral* Canada-US economic relations.

CONCERN ABOUT THE POSSIBILITY OF A NUCLEAR WAR IS DOWN. In 1987, prior to the signing of the Intermediate-range Nuclear Force (INF) treaty and the warming in US-USSR relations, one in two Canadians (55%) perceived much danger of nuclear war. Only one in three (33%) do so now.

On the other hand, perceptions of the danger of "world war" are relatively high; indeed, they seem as high as those of the early 1960s. Four in ten respondents (41%) to the present survey believed, in the month following the Iraqi invasion of Kuwait, that there was much danger of a world war. (This concern undoubtedly increased in the subsequent months of speculation about a direct military conflict with Iraq. Canadian attitudes to specific wars in which Canada has participated, including the Gulf War, are explored on page 16.)

*The 1990 public opinion survey, as those from 1987 through 1989, was designed by Don Munton and Institute staff, funded by the Institute, and carried out in September and October 1990. 1,275 people responded to the questionnaire, an overall response rate of 62%. The margin of error with samples of this size is approximately  $\pm 3\%$ , 95 times out of 100.*

While the possibility of a war remains real for many, the anticipated cause of such a war has shifted radically in the last few decades. Today, the vast majority of Canadians (69%) think a world war would be caused by countries other than the USSR or US; less than one in four (23%) thought so in a 1961 Gallup poll. Only 2% now believe a war would come about as a result of Soviet action. Thirty years ago, the figure was 41%. By contrast, more, although only about one in seven (13%), currently expect the US to be the cause.

When asked last year, the month before the Berlin Wall was opened, whether the Cold War was over, few Canadians (6%) were so optimistic. After a dramatic year of events in Eastern Europe, significantly more are optimistic (21%) but most remain cautious. Fully two-thirds (66%) say that the Cold War is lessening but not over.

CANADIANS IN RECENT YEARS HAVE CONSISTENTLY SUGGESTED THAT THE greatest military threat to world peace is either the spread of nuclear weapons to smaller countries or a regional conflict, most likely in the Middle East. Thus, many Canadians would not have been surprised either by the outbreak of war in the Persian Gulf or by speculation that such conflicts might involve nuclear or non-conventional weaponry.

Canadians are changing their conceptions of security threats. As first demonstrated in last year's CIIPS poll, these threats now feature environmental and economic problems as well as more traditional military threats.

When asked to rank five major environmental issues (global warming, toxic waste, acid rain, ozone depletion, and water pollution) in terms of seriousness as international problems, the CIIPS respondents did not come up with a clear top priority. Two issues, however, did stand out. Almost one in three (30%) pointed to depletion of the ozone layer as the most serious. In second spot was the pollution of lakes and oceans (24%). Further back were toxic waste (16%), global warming (15%), and acid rain (12%).

The Canadian public has clearly begun to re-think their country's NATO commitment. For the first time in recent decades, support for NATO has plunged dramatically. On the October 1989 CIIPS survey more than one in two (52%) ranked Canada's continued membership in NATO as very important. Only one in every three (32%) now give it a very important rating. In short, there has been a 20-point drop in the perceived salience of the alliance.

While this drop might be explained as a response to the decline of the old Soviet threat, the effort to reform the Soviet Union along liberal democratic and free market lines, the collapse of the communist regimes of Eastern Europe, and the expectation of the demise of the Warsaw Pact, the extent of the drop is all the more striking in that it precedes any notable public discussion of this issue.

Declining support for NATO force commitments appear to be part of a general decline in the importance afforded the alliance. A slim majority of Canadians (50%) still supports keeping Canadian forces in Europe at their present levels. But the number who would reduce the size of those forces has roughly doubled since last year. In the 1989 CIIPS poll, only 10% favoured a reduction (of unspecified size). The proportion is now 21%. In 1989, 14% favoured outright withdrawal of Canadian forces from Europe. Now 20% favour it.

The post Cold War shift from East-West matters and military "solutions" has notably not prompted greater interest in solving North-South problems. The importance for Canada of providing aid to developing countries has slumped; while 39% rated it very important on a 1984 External Affairs survey, only 22% do so now. A similar decline has occurred on the priority for "helping reduce hunger and poverty around the world"; those giving a high ranking have dropped from 62% (on a 1985 Decima survey) to 41% now.

In contrast to the declining importance of aid, Canadians continue today to afford roughly the same priority as in 1984 to such commitments as participating in the United Nations and in UN peacekeeping efforts, perhaps a reflection of concerns about the Gulf conflict. Also, in contrast, almost nine in ten (87%) rate protecting Canada's oceans and offshore resources as very important.

Canadians' opinion has not been inert. Nor is it incoherent and confused. The incredible international events of the late 1980s have clearly and already had a significant impact on the thinking of the Canadian public.

CANADIANS APPEAR TO PERCEIVE A WORLD IN which the superpowers are becoming less dominant and more cooperative; those with burgeoning economies like Japan are assuming greater importance (and becoming economic threats); military force is playing less of a role; NATO's future is uncertain; the Cold War, if not over is at least on the wane; the dominant conflicts are North-South rather than East-West; and instability and militarism in the Third World are emerging as serious international, not just regional, problems, as are such global ecological issues as depletion of the ozone layer. In short, Canadians see themselves entering a more complex, multipolar and interdependent world.

Is there an overall pattern to the policies Canadians want in response to this new order? At the risk of being both simplistic and speculative, the thrust seems to be toward withdrawal rather than greater involvement. A growing mood among Canadians may be to turn away not only from the problems of Europe, which have been solved, but also from those of the Third World, which seem insoluble, and to harbour our own resources and address our own problems.

### CANADA AND THE WORLD

*Very important for Canada to:*

**C**ANADA'S WARS HAVE NEVER been wildly popular affairs. Duty has called, but more clearly in some cases, such as World War II, than in others. In the present Gulf War the call is less clear than perhaps ever before.

The British Empire war in South Africa against the Boers, from 1899 to 1902, divided francophones and anglophones deeply and bitterly. Historian C.P. Stacey describes English Canadians as "for practical political purposes ... a bloc in favour of the war." But there were, he notes, significant pockets of resistance outside Quebec at a time when imperial sentiment was perhaps at its peak.

As the 1914 European crisis deepened, the cabinet of Conservative prime minister Robert Borden assured London that "if unhappily war should ensue the Canadian people will be united in a common resolve." When war came, the prime minister recorded in his diary that there was "great excitement in all Canadian cities. Crowds on streets cheered me." There was surely some enthusiasm and excitement, but there was not unity of resolve.

Enlistment figures show the war was much more popular in English Ontario and in British Columbia than in relatively non-British Saskatchewan or in francophone Quebec. Veterans and others now recall more a sense of duty than of enthusiasm. Their country and the Empire needed them; thus many went. But from Quebec and many rural areas of Canada, many did not. Conscription, protests and a crisis election followed.

There was perhaps less debate about fighting Hitler. The most astonishing fact about the public opinion studies which were born during World War II is that none apparently asked Canadians whether they supported it. Whether such questions were not permitted or were deemed inappropriate, one did not talk about them. The Canadian Gallup organization, established in 1941, polled throughout the rest of the war but never once reported on support for it.

THE PUBLIC WAS ASKED, FOR EXAMPLE, WHETHER they thought Canada was "doing all it could to help win the war" (most did, throughout), whether they personally "could be of more use to [the] country" if they did some other work (more did than not), and if Germany's civilian population should be bombed (most approved). Perhaps the closest to a measure of support is found in a 1942 poll when 86 percent of Canadians rejected the idea of negotiating a status quo peace with Hitler.

The pattern suggests consistent and strong support, but not unanimity, especially from Quebec. The fears were clear although some-

# FROM PAARDEBERG TO THE PERSIAN GULF

## *Canadians' Opinions About Canada's Wars*

times exaggerated. In July 1945, three months after Hitler had in fact committed suicide, Gallup asked if Canadians thought he was dead; almost 60 percent did not.

The closest historical parallel for Canada's Gulf War involvement is undoubtedly the Korean War. An act of aggression was followed by an American-led response with political support marshalled through the United Nations. When Canadians were polled just after the war broke out in June 1950, only 13 percent opposed US action. On the other hand, 23 percent opposed Canada sending equipment, and an additional 16 percent disapproved of sending troops – a total of almost 40 percent at a time when few did not believe in stopping communism.

A year or so after the Korean War had stalemated around the old boundary line, 40 percent agreed it had become an "utterly useless war" and about 30 percent thought Canada's involvement had been a mistake. One in every two said it had not been. Presumably some thought worthwhile the original objective of resisting aggression against South Korea but looked on the current fighting as pointless.

The current war against Iraq has profoundly divided Canadians. Not only are opponents more numerous, they are also more vociferous. Most Canadians support sending forces to the Persian Gulf, according to an Angus Reid poll series. The level of support has varied, however, from 69 percent in September, soon after Ottawa's decision, down to 60 percent in December as the UN-imposed 15 January deadline approached, and then up to 75 percent after the US-led coalition air attacks began. Some observers credited this post-outbreak rise to skilful war news management by a special government task force; it is more likely a reflection of a modest-sized and natural

"rally-round-the-troops-and-flag" feeling.

Two points bear emphasis. First, support for Canadian involvement in the Gulf is, in fact, higher than these figures imply. When the Reid poll differentiated between Canadian forces actively fighting against Iraq, taking a solely defensive role, and being withdrawn, less than 10 percent opted for withdrawal. Clearly, half or more of those opposed to the August decision to send Canadian forces do not now want that decision reversed.

Second, many Canadians are clearly saying that UN sanctions enforcement was one thing, going to war against Iraq is another. Polls consistently show only about a third support Canadian troops going into battle. As the government was cautiously, but steadily

scaling up the Canadian forces' fighting role through December and January, there was no evident increase in public support for going into combat. In contrast, American public support for carrying the fighting to Saddam Hussein has jumped in recent months.

At the same time, most Canadians (73%) in January supported President Bush's decision to use force to get Iraq out of Kuwait. This level of approval is, of course, partly support for a war, but is also a reflection of unusually high Canadian trust in the president (shown in CIIPS polls) and a traditional deference toward our neighbour and ally.

WARS DO NOT GAIN IN POPULARITY WITH TIME. If the ground struggle in the desert becomes a stalemated carnage, the present level of support for the fighting, by American or Canadian forces, is almost certain to decline. Fighting on and on without prospect would only confirm the strong belief of most Canadians (reflected in CIIPS polls) that military force rarely achieves political solutions.

Duty still calls, but is this Canada's war? Just as opponents of earlier conflicts saw them as British wars, opponents already see the Gulf War not as Canada's or the UN's, but as America's. And the more American generals go on TV and the less one hears of the United Nations, the more this will become, in the minds of more Canadians, America's war. The Gulf conflict might have been not only a test case of the UN, but also the first test case of Canadians' new sense of a duty, of a willingness to support true collective security and forge a new world order. Instead, and unfortunately, it is becoming yet another test of familiar sense of duty, of Canadians' willingness to support old friends, right or wrong.

– DON MUNTON

## DEFENCE NOTES

### Satellite Reconnaissance and the Gulf War

Over the past twenty-five years both the Soviet Union and the United States have come to rely increasingly on satellite reconnaissance for strategic warning and assessment of the size and character of a ballistic missile attack. Other satellites play a key part in communications and navigation. Both countries have also used satellites to monitor military deployments and verify compliance with arms control agreements. In the Gulf, a variety of advanced US satellite systems are being used to assess damage, provide intelligence on Iraqi military activities, and give warning of attacks by mobile Iraqi *Scud* missiles.

Initial detection of *Scud* launches has been the responsibility of the United States Air Force Space Command, operating at least two satellites equipped with infra-red telescopes. These satellites have been manoeuvred into geosynchronous orbits to permit maximum viewing of *Scud* firing points. Some sources indicate that the rotation of the telescope permits viewing of Iraq every twelve seconds, a time lag which would be decreased if more than one satellite is involved. Although the infra-red telescopes were designed to detect and image the much larger heat plumes from Soviet ICBMs, they appear to be able to both detect and provide approximate tracking data for the relatively short-range *Scuds*.

At the outset of the Gulf War, warning data from the satellites was transmitted both to a ground station at Alice Springs, Australia, and Space Command Headquarters at Colorado Springs. After analysis at both locations, trajectory and impact data was then sent

via satellite communications to *Patriot* batteries in Israel and Saudi Arabia. Out of a total *Scud* flight time of six to seven minutes, the determination of the impact area took 120 seconds, and the alerting of the defences another two to three minutes, thus providing at first around ninety seconds notice to the defending *Patriot* batteries. Subsequently, Air Force Space Command has been able to directly link the detection satellites with the *Patriot* batteries, thus extending the warning time to between four and five minutes.

The United States was reported also to have repositioned advanced reconnaissance satellites to view Iraq and Kuwait. One of these, the *Lacrosse*, produces imagery using radar rather than visible light photography, and is capable of all-weather imagery. Several "Keyhole" satellites are also in place, which are able, in theory, to identify objects about six inches in size.

Together with navigation and communications satellites, these space-based systems give the US and its coalition partners a decisive intelligence and battlefield advantage. Aerial reconnaissance and targeting have also involved the most advanced US systems. At the end of January, two advanced target selection aircraft were also en route to the Gulf. The E-8A Joint Surveillance Target Attack Radar System (J-STARS) is designed to detect low-flying helicopters, surface ships and tanks at a range of 200 kilometres and to direct attacks by friendly aircraft.

The enormous advantage conferred by satellite systems, however, has raised broader questions about access to satellite intelligence. Canada is in a special situation because our participation in the NORAD combat operations centre at Colorado Springs provides access to some but not all data from US military satellites. Others are not so fortunate.

The Europeans, for example, are overwhelmingly dependent on the US for satellite intelligence, but have been reluctant to fund the deployment of an independent system. Recent proposals for a satellite system owned and operated by a consortium of news and media outlets may also be reinforced by the decision of the French commercial SPOT satellite system to withhold photographs of Kuwait and Iraq. In addition, the increasing reliance on satellite systems indicates the military value of anti-satellite weapon systems, which are not currently constrained by arms control agreements and are relatively easily deployed by both the United States and the Soviet Union.

### Patriots and Star Wars

Close on the heels of the *Patriot* successes in the Gulf War, on 29 January, the US Department of Defense conducted a successful test of an anti-ballistic missile. The interceptor – the Exo-atmospheric Reentry Vehicle Interceptor System (ERIS) – was fired from Kwajalein Island in the Pacific and intercepted a *Minuteman* dummy warhead about 160 kilometres into space. Although there is very little connection between the task of the *Patriot* and that of ERIS – an intercontinental ballistic missile flies about five times faster than the *Scud*, and the reentry vehicle presents a much smaller target – it seemed clear that together the twin successes would provide a boost to the Strategic Defence Initiative (SDI). This appeared to be confirmed in President Bush's State of the Union message on 31 January, when he called for renewed emphasis on SDI research aimed at protection against small-scale ballistic missile attacks "no matter what the source." As opposed to the massive strategic exchange which a full-blown ballistic missile defence would be required to defeat, a number of prominent spokesmen in the US

have proposed that SDI concentrate on a limited protection against accidental launch or "third party" attack. About twenty nations are expected to have ballistic missiles by the turn of the century.

### Renewal of NORAD

With attention focussed on the Gulf War, the impending renewal of the North American Aerospace Defence Agreement has received relatively little attention in Canada and none in the United States. However, there may well be a new development to add to the agenda. In late January, US media reports, subsequently confirmed by officials from Canada's Department of External Affairs, indicated that the Pentagon is considering a drastic restructuring of its major military commands. One consequence of this would be the disbandment of the current Unified Space Command, of which NORAD is one element, and its replacement by a "strategic force command." This would combine the surveillance assets and interceptor defences, to which Canada contributes under the NORAD agreement, and the offensive forces now under Strategic Air Command (SAC). If the restructuring proceeds, the place of Canada in such a revised command system would be the subject of considerable discussion and debate.

### Old But Useful Ships

Despite their age, the three Canadian naval vessels in the Gulf made their mark before hostilities began. More than twenty-five percent of all naval interceptions to enforce sanctions were carried out by the Canadian vessels. Since the outbreak of hostilities, the Canadian commander of the Naval Task Group has been responsible for the coordination of allied combat logistic supply ships, and controls the allied destroyers and frigates designed to protect the supply ships. □

– DAVID COX

## REPORT FROM THE SECURITY COUNCIL

### The Gulf War

The outbreak of hostilities in the Gulf on 17 January was preceded by intense diplomatic activity both inside and outside the UN. On 27 October, Soviet ambassador Yuli Vorontsov told the Security Council that a special envoy from his country was in Iraq and that there were great hopes for the success of his mission and a peaceful solution to the crisis.

During the same meeting, the Kuwaiti representative told the Council of Iraqi human rights violations in his country. He demanded that those involved be tried in the future as "war criminals." The Council took no action aimed at laying the groundwork for a tribunal, but on 29 October the Security Council adopted resolution 674 which stated that Iraq is liable for loss, damage or injury caused to foreign nationals and corporations in Kuwait. Resolution 674 invited member states to collect information regarding claims against Iraq with a view to establishing future arrangements for restitution or financial compensation.

On 27 November, Kuwait presented testimony of atrocities it said were committed by Iraqi troops against its citizens. The following day, the Council unanimously condemned Iraq's attempt to alter Kuwait's demographic composition by destroying its civil records. Britain charged Iraq with attempting to destroy the national identity of Kuwait. By adopting Resolution 677, the Council also voted to authorize the Secretary-General to take custody of a computerised copy of certified population records that had been

smuggled out by the Kuwaiti resistance.

On 29 November, the Council adopted the most momentous resolution of the crisis. Resolution 678 authorized the use of "all necessary means" in order to force Iraq out of Kuwait. Twelve countries voted in favour, Cuba and Yemen were against, and China abstained.

Sponsored by Canada, France, Rumania, the USSR, the UK and the US, the document gave Iraq "one final opportunity" – until 15 January – to comply. Further underlining the historic nature of the resolution was the presence of the foreign ministers of thirteen out of the fifteen nations represented on the Council, including External Affairs Minister Joe Clark.

During his speech to the Council, Clark touched on an issue that had dogged the Persian Gulf crisis – the need to find a solution to the Middle East problem. The issues had become intertwined after Iraqi leader Saddam Hussein directly linked a withdrawal from Kuwait to an Israeli withdrawal from the Occupied Territories. The linkage was strongly opposed by the US which argued that to accede would merely reward Iraq's aggression.

Clark noted that one of the consequences of the Gulf crisis could be a "window of opportunity" to solve other regional problems:

If we can sustain our collective determination, then a just, lasting and comprehensive solution to the Arab-Israeli dispute, which Canada views as necessary and urgent, may be within our grasp. This is a matter than can only be addressed, however, separately from the current crisis.

However, both Hussein and events in the region kept bringing the two issues together. On 7 November, the Council met to consider recommendation by the

Secretary General that a meeting of the high contracting parties to the 1949 Fourth Geneva Convention relative to the Protection of Civilian Persons in Time of War be held to discuss what additional measures could be taken as a result of Israeli practices in the Occupied Territories. Israel opposed such a meeting.

On 9 November, the Observer for Palestine played a videotape of the violence at the Temple Mount (al Haraam alShareef) on 3 October, and said it proved contrary to claims by Israel that Israeli lives were threatened by Palestinians – the opposite had been true. He argued that the action by Israeli authorities was premeditated and aimed at causing a large number of Palestinian casualties.

On 16 November, non-aligned members of the Council introduced a draft resolution that proposed convening an international Middle East peace conference. The draft sparked intense and protracted negotiations. Throughout, the US was at pains to avoid using its veto and thereby alienate Arab members of the international coalition arrayed against Iraq. On the other hand, it did not want to anger Israel by seeming to endorse an international conference, a move it also feared would be seen as caving in to Iraqi demands.

The Council voted on 8, 10 and 12 December to defer a vote on a draft resolution calling for an international conference. Finally, on 20 December, after a series of exhausting rounds of negotiations, the Council unanimously adopted a diluted version of the original draft calling on the Secretary General "to develop further the idea" of convening a meeting of the signatories of the Fourth Geneva Convention.

Resolution 681, made no mention of an international conference. However, in a symbolic gesture, the US agreed to have the president of the Council read a non-binding statement that such a conference, "at an appropriate

time, properly structured, should facilitate efforts to achieve a negotiated settlement and lasting peace in the Arab-Israeli conflict."

### Final Canadian Initiative

The Cyprus issue, dominated Canada's final efforts on the Council. On 14 December, the Council voted to extend the mandate of the United Nations Force in Cyprus (UNFICYP) for six months – Canada abstained. The vote was a reflection of Canadian frustration that UNFICYP's expenses were paid by voluntary rather than assessed contributions. In a statement to the Council, Canada said that this had resulted in a number of countries failing to volunteer money, and troop-contributing countries like Canada were left to carry an inordinately heavy share of the costs. Since 1964, the cost of UNFICYP had totalled an estimated \$ 2 billion and that 149 men and women had died in the service of the UN in Cyprus.

A draft resolution calling for assessed contributions was presented to the Council but both France and the USSR were said to oppose the draft. On 21 December, the Council unanimously adopted a watered-down resolution in which it agreed to "examine" the costs and problems of financing and report back by 1 June on alternative arrangements which "could" include the use of assessed contributions.

In a final speech to the Council, Yves Fortier expressed regret that some permanent members (the Soviet Union, France) had threatened to veto the original draft resolution and that the final resolution did not solve the problem.

December 31 saw the end of Canada's two-year term on the Security Council.

– TREVOR ROWE

## REPORT FROM THE HILL

### The Gulf War

The prospect of war in the Persian Gulf absorbed much of Parliament's attention to peace and security issues during the autumn. On 25 October, External Affairs Minister Joe Clark told the House of Commons, that while the government preferred offensive action against Iraq to have UN Security Council endorsement, lack of unanimity in the Council would not restrain Canada from joining in a show of force. Opposition parties immediately labelled Clark's words inflammatory. NDP Leader Audrey McLaughlin suggested that the Minister's statements could "have serious consequences for the safety of Canadians being kept hostage in Iraq." The same week an additional 250 Canadian Forces communications and command specialists were dispatched to the Gulf region to support the UN-sponsored embargo against Iraq, raising the total number of Canadian personnel there to 1,700.

On 19 November, an informal delegation of MPs visited Baghdad in a personal appeal for release of the Canadians. Initially, the government opposed the idea, but ultimately a Conservative Member, Robert Corbett, was permitted to join Liberal Lloyd Axworthy and Svend Robinson of the NDP in the unofficial mission. Their task proved frustrating and often tedious, but it did result in the announcement on 28 November, that five of the forty-five hostages would be released.

Joe Clark began an official visit to the region on 23 November. He stopped in Turkey, Jordan, Egypt, and Israel (where meetings were arranged with both government and Palestinian leaders). The Min-

ister reported briefly on his trip to the House on 28 November as part of a more comprehensive speech moving a resolution in support of UN efforts to ensure Iraqi withdrawal from Kuwait. In the lengthy debate which ensued, both the Liberals and NDP offered amendments opposing the use of force against Iraq, at least (in the Liberals' case), until further consultation with Parliament. The emergency debate came on the eve of an emergency UN Security Council session on 29 November (where Joe Clark represented Canada), which authorized (Resolution 678) the use of whatever means were necessary to remove Iraq from Kuwait.

Resolution 678 was subsequently endorsed by the House of Commons the same day (29 November) by a vote of 111-82, over strong objections from both opposition parties. One of their principal concerns was that Parliament should be consulted about any decision by the government to participate in offensive military action.

On 10 December, Mr. Clark appeared before the House External Affairs Committee. He indicated that the government would carry out "the speediest possible consultation with Parliament with regard to any development." The Minister also allowed that "there are a series of issues that have been made more urgent by Iraq's act of war against Kuwait." These included the type of regimes in many of the states of the Arab world, extraordinary differences in income between the poorest and the richest people in the region, competition among different rulers for leadership of the Arab world, and the question of the Palestinians. But he rejected any precise linkage between the crisis and the Palestinian question.

Parliament adjourned on 19 December until 18 February. As the deadline for Iraqi compliance with UN Resolution 678 drew closer, the Cabinet's special new "war committee" decided to reconvene

Parliament for an emergency session on 15 January. The Prime Minister immediately moved, "That this House reaffirms its support of the United Nations in ending the aggression by Iraq against Kuwait."

The lengthy debate which followed featured the first appearance in the Commons since his December by-election win of Liberal Leader Jean Chretien. On 15 January, he proposed an amendment by adding to the final phrase of the government's resolution: "through the continued use of economic sanctions, such support to exclude offensive military action by Canada at this time." More significantly, Mr. Chretien declared that the minute war broke out, Canadian troops should be called back – that they were there only to enforce the embargo. The following day, his predecessor as Leader, John Turner, argued strongly in the House that Parliament had a duty to support the UN resolutions and, therefore, the resolution the government had proposed.

Immediately before Mr. Turner spoke on 16 January, both the Liberal and NDP amendments to the government's original resolution were defeated. The NDP had proposed a sub-amendment to that of the Liberals which deleted all the words after the word "sanctions" and substituted: "such support to exclude the involvement by Canada in a military attack on Iraq or Iraqi forces in Kuwait." The NDP sub-amendment was defeated 210-39, with the Liberals voting against it, while the Liberal amendment was defeated 134-116.

The debate reflected an intense and somber consideration of the issues. It continued through the actual outbreak of hostilities on 16 January at 7 p.m. Eastern Standard Time. In the evening session, following remarks by the Prime Minister acknowledging the latest development, Mr. Chretien announced that "all Canadians have the obligation to stand united

under the circumstances" in backing up the Canadian troops. He was followed by NDP Leader Audrey McLaughlin who also indicated support for the troops, but insisted that they should only be used in humanitarian actions and not in combat.

In a 22 January vote on the government's main motion, almost all of the Liberal MPs were in support, while almost all of those opposed were NDP members. They were joined by four Liberals, three Bloc Quebecois MPs and an independent – the motion passed by a vote of 217-47.

### Committee Work

The House Defence Committee issued a report on 8 November entitled, *Maritime Sovereignty*, which recommended the government purchase conventionally-powered submarines and install sonar sensors in Arctic waters to help guard Canada's northern sovereignty. The NDP's defence critic, John Brewin, questioned the need for submarines, suggesting instead that Canada lease submarines from another country, pending a full review of future defence needs.

The House of Commons External Affairs Committee struck a Sub-Committee in the fall, under the chairmanship of Walter McLean, to consider the question of the renewal of the North American Aerospace Defence (NORAD) Agreement between Canada and the United States, which expires in May 1991. Irreconcilable differences prevented both the Sub-Committee and the full Committee from concluding a report about the period and terms of a renewal. The only recommendation made to the government concerned the need for a comprehensive public review of Canada-US defence cooperation in the first two years of any renewal period.

— GREGORY WIRICK

## ARMS CONTROL DIGEST

### Global Weapons Summit

In separate speeches on 8 February dealing with the post-war period in the Gulf, Prime Minister Mulroney and External Affairs Minister Clark called for the UN to convene a "Global Summit on the Instruments of War and Weapons of Mass Destruction." Its purpose would be "to mobilize political will and to re-energize international efforts" already under way to prevent the proliferation of conventional and non-conventional weapons, and delivery systems. The summit would seek to produce a "comprehensive programme of action" under which "individual proliferation concerns [would] be addressed in those multilateral forums set up to deal with them."

Among specific measures called for were: an early commitment by NPT signatories to its indefinite extension in 1995; formal reaffirmation by the nuclear weapon states of their commitment to pursue further nuclear disarmament measures; expanded participation in the current Missile Technology Control Regime, to include the USSR and others, while expanding its guidelines to include missiles with smaller payloads and longer ranges; enhancing the provisions of the 1975 Biological Weapons Convention; a commitment by members of the Conference on Disarmament to conclude negotiations on a global Chemical Weapons Convention by the end of 1992; expanding the membership of the "Australia Group" of states controlling exports of chemicals that can be used to produce chemical weapons; action on an information exchange system to promote the "transparency" of conventional arms transfers; and a commitment by the CFE signatories "to ensure that arms affected

by the accord are not exported to regions of tension."

### Conventional Forces in Europe (CFE) Treaty

As expected, a CFE Treaty was signed in Paris on 19 November. Negotiated in only twenty months, it has been described by a senior US official as "the most ambitious arms control treaty ever concluded." Under its terms, within forty months of entry into force (ten days after ratification by all twenty-two parties), the total number of tanks on each side (NATO and the Warsaw Pact) is to be limited to 20,000; armoured combat vehicles to 30,000; artillery, 20,000; combat aircraft, 6,800; and attack helicopters, 2,000. Overall, more than 50,000 weapons in these categories will have to be destroyed or converted to "non-military" purposes, most of these by the USSR and its former allies.

Critics have charged the USSR with violating the spirit of the Treaty by shifting tens of thousands of such weapons east of the Ural mountains, outside the geographic zone covered by the agreement, just prior to its signature. Both Soviet and Western officials explained that much of the transfer was accounted for by previously announced unilateral and bilaterally negotiated Soviet troop withdrawals from Eastern Europe. According to the chief US negotiator, then Soviet Foreign Minister Eduard Shevardnadze gave assurances that the bulk of the equipment withdrawn prior to the Treaty's signature would be destroyed or converted. However, new disputes arose almost immediately after the official data exchange on 18 November. The US and its NATO allies have charged the USSR with under-reporting its equipment holdings as of that date by 20,000 or more; identifying less than half the number of military sites to be inspected than had been indicated earlier (which affects the number of inspections

it would be obliged to accept); transferring undeclared weapons outside the region after the Treaty was signed, contrary to its terms; and seeking to exempt three regular Army divisions by designating them as units of naval infantry, which the West insists are still covered by the Treaty.

American officials have made it clear that they will not submit the Treaty for Senate ratification until the disputes over data and interpretation have been settled. The parties have a period of ninety days after signature in which to "readjust" the data they have submitted.

The CFE Treaty provides for follow-on negotiations leading up to the March 1992 Helsinki Review Conference of the CSCE. Known as CFE-1A, these negotiations, intended to focus on personnel limitations and the details of an aerial inspection regime, began in Vienna on 29 November.

A new agreement on confidence- and security-building measures (CSBMs) in Europe was also signed at the Paris Summit in November. Building on the notification measures and information exchanges required by the 1986 Stockholm Accords, the new agreement adds provisions for annual information exchanges on troop strength and major weapon systems down to the level of brigade or regiment, the deployment of major weapon and equipment systems, and military budgets; and a "consultation and cooperation" mechanism for "unusual military activities." Despite the long-standing insistence of the Eastern and non-aligned states, it did not include CSBMs for independent naval and air exercises.

### Strategic Arms Reduction Talks

Senior US and Soviet officials continued to report progress on outstanding START issues in the lead-up to a "ministerial meeting" between Soviet Foreign Minister Shevardnadze and US Secretary of State Baker in Houston on 10 and 11 December. After the

meeting, it was reported that only technical verification issues remained. President Bush announced "great progress" on the Treaty and declared his hope that it would be signed at a US-Soviet presidential summit in Moscow on 11 February. However, after the surprise resignation of Mr. Shevardnadze, the beginnings of a Soviet crackdown in the Baltic republics, and the resumption of hostilities in the Persian Gulf, doubts arose over whether the START Treaty (said to amount to 500 pages) would be ready for signature in time, and whether the summit would be held at all.

In Washington on 28 January, the new Soviet foreign minister Alexander Bessmertnykh and Secretary of State Baker announced that the summit was to be postponed to a later date, sometime before 30 June. The announcement cited the Persian Gulf war and unfinished business in the START agreement as reasons for the postponement.

### PTBT Amendment Conference

A conference to convert the 1963 Partial Test-Ban Treaty into a Comprehensive Test-Ban (CTB) was held in New York from 7 to 18 January. The three depositary states (the US, UK, and USSR) were forced to convene the conference after being requested to do so by a third of the 117 parties to the Treaty, even though two of them (the US and UK) currently oppose negotiations on a CTB and enjoy a veto over any amendment of the earlier agreement. In the end, the conference approved by a vote of 74-2-19 (with Canada abstaining), a "draft decision" mandating the President of the Conference to "conduct consultations with a view to ... resuming the work of the Conference at an appropriate time." However, since the US made it clear that it would not attend such a follow-on conference, it is unlikely that it will ever be held.

## REVIEWS

### Official Secrets: The Story Behind the Canadian Security and Intelligence Service

Richard Cleroux

Toronto: McGraw-Hill Ryerson, 1990.  
321 pp., \$25.95 cloth

It is now almost seven years since Canada embarked on a painful and controversial policy to reorganize its security services dealing with counter-espionage and counter-terrorism. The reorganization was painful because the RCMP, until 1984 combining regular police work with counter-intelligence, resented the diminution of its mandate when the Canadian Security and Intelligence Service (CSIS) was created as a separate agency. It was controversial because the powers given to CSIS appeared to many to threaten the rights of Canadian citizens by giving sweeping powers of investigation to the new agency.

A book which promises to tell the story behind the first six years of CSIS, therefore, is in principle a welcome contribution to a subject which goes to the heart of democratic government. Unfortunately, the actual story told by *Official Secrets* offers only brief glimpses of mainly trivial issues in the life of CSIS. Balancing the temptation to obtain a corporate hotel rate against the probability of running into all the other agencies taking advantage of hotel discounts should no doubt occupy somebody's time, but this and similar issues, such as where to park CSIS vehicles in Toronto, is unlikely to rivet the attention of either the John Le Carré fan or the reader concerned about the abuse of governmental powers.

To recognize the dilemma faced by the author, a book which focusses on CSIS' conduct of operations is certain to run straight into

the fetishism with secrecy in which, by virtue of their mandate, all security service are allowed to indulge. The strength of the book, therefore, is that, on the basis of limited and sometimes dubious sources, Mr. Cleroux has been able to raise some individual cases which may give the reader a sense of the murky side of "national security."

He describes in some detail, for example, the case of Patrick Chang, a Taiwan businessman in Ottawa acting, with the tacit consent of the Canadian Government, as an unofficial consul for Taiwan. According to Cleroux, Mr. Chang organized excellent swan trips for Tory caucus members to Taiwan and South Korea, only to be rewarded for his generosity with an abrupt refusal to extend his visa. A national security risk, or a risk of public scandal to the Tory hierarchy? Once CSIS invokes national security there is little or no scope for outsiders to challenge the evidence.

Cleroux attempts to base his book on a series of such exposés. The limits of his knowledge and evidence, however, suggest that short of the emergence of a bona fide deep throat in CSIS, we would be better served by analyses which do not depend on exposés. In particular, the institutional watchdog of CSIS, the Security and Intelligence Review Committee (SIRC), has signalled many issues which are only fleetingly dealt with in this book.

One of the most fundamental is the representativeness of CSIS. Would it be so easy for CSIS to blunder into special investigations of "native activism" if Canada's native communities were fairly represented in the ranks of CSIS. Would the bizarre preoccupations of the secret service with sexual behaviour continue if its members more accurately represented the accepted range of Canadian values and behaviour? And as security threats to Canada change, is CSIS sufficiently flexible in attitudes

and orientation to shift its focus of operations? The answers to such questions cannot be found in this book. The episodes discussed, however, may encourage others to continue watching Canada's security service. — *David Cox*

*Mr. Cox is a member of the faculty of political studies at Queen's University and regular contributor to Peace & Security.*

### The Burning Season: The Murder of Chico Mendes and the Fight for the Amazon Rain Forest

Andrew Revkin

Boston: Houghton Mifflin, 1990.  
317 pp., US\$19.95 cloth

Chico Mendes did not want to die. He always said "living people achieve things — corpses, nothing." Sadly, his death proved him wrong. The murder of Chico Mendes focussed even more world attention on the Amazon rain forest and the need to protect it. World attention and powerful allies were not enough to protect Mendes from a bandit's bullet — but they did help him accomplish some of his goals, posthumously. In a powerful book that combines excellent science reporting with good storytelling, author Andrew Revkin tells us that Mendes wasn't always comfortable in the role that environmentalists cast for him, that of the Amazon's chief ecologist. Reeling under the pressure of frequent death threats, Mendes once protested that he was not trying to save the Amazon because they were the "lungs of the world," but "because there are thousands of people living here who depend on the forest — and their lives are in danger every day."

Revkin, senior editor of *Discovery* magazine, writes of the confluence of world events that brought a single man to international attention — a man who didn't start out to change the world, but did. Mendes was a *nordestino* — his grandfather moved the family from northeastern Brazil to the Amazon in 1925 to harvest rubber, hoping, like thousands of others, to better his life. Within a few decades a

culture evolved among the rubber tappers, and with it, a fierce loyalty to the trees and the ecosystems they support.

Mendes received an unconventional education when in 1956 he met a Marxist who was hiding out in the Amazon to avoid persecution from Brazil's rightist rulers. Mendes went on to organize the rubber tappers for better pay, and later, fought hard to protect them and their trees from outlaw ranchers who were razing the forest at an alarming rate. Brazil's jungles began to resemble the wild west, and the ranchers might have won had it not been for the powerful allies Mendes made outside the country. They helped him convince the world that the interests of the rubber tappers, and its indigenous forest dwellers, coincide with the interests of people everywhere.

Like Mendes, Revkin fell in love with the Amazon — a wonderland where twenty percent of all bird species in the world hang out, where a single tree harbours 1,500 species of insects, and where fish actually swim among the treetops during the rainy season. These are good reasons for saving the Amazon rain forest, but there's much more. A view of the Earth from the space-shuttle *Discovery* in 1988 confirmed what scientists feared most, that the demise of the Amazon trees presaged the world's demise.

Revkin warns us that Brazil doesn't want the Amazon to become a "green Persian Gulf," protected as though a resource of the US and Europe. Instead, he suggests, international efforts must be directed towards helping Brazil's poor achieve a better standard of living, without sacrificing the Amazon in the process. That's the cause Mendes died for. — *Marie Wadden*

*Ms. Wadden is a writer and broadcaster based in St. John's, Newfoundland. Her book on the Innu of Labrador will be published in 1991 by Douglas & McIntyre.*

Reviews of French language publications can be found in the *Paix et Sécurité* "Livres" section.

## NEWS FROM THE INSTITUTE

### Research Fellows

In June and October 1989, the Board of Directors adopted a medium-term plan whereby the Institute would concentrate its work programme in six defined areas: *the non-proliferation of weapons of mass destruction; Canadian defence and security policy; measures for strengthening international systems of peace-keeping, peacemaking and peace-building; regions of conflict and potential conflict; Arctic security and cooperation; and new approaches to international security.* Institute staff continue to monitor other areas within the mandate, and programmes to respond to research and public discussion initiatives from other organizations have been maintained at the same levels as in the past.

During 1990, the Institute engaged in an intensive search for research staff who would take responsibility for these areas. As of 2 January 1991, all new Research Fellows were in place:

**Mark Heller** is Senior Research Fellow and Research Coordinator. Educated in Political Science and Economics at the University of Toronto, Dr. Heller also holds an MA in Middle Eastern Studies and a PhD in Political Science from Harvard University. He is on leave from Tel Aviv University, where he is Senior Research Associate at the Jaffee Center for Strategic Studies. In 1986-87, he was visiting Associate Professor of Government and Research Fellow at Cornell University, and in 1982-83, a Visiting Scholar at the Center for International Affairs at Harvard. Dr. Heller specializes in foreign policy and security studies, with particular reference to the Middle East.

**Shaukat Hassan** holds a Masters degree from the University of Colorado and a PhD in International Relations from Australian National University. He arrived at CIIPS in early January from the International Institute for Strategic Studies in London where he wrote a forthcoming *Adelphi Paper* on environmental issues and security in South Asia. His area of concentration at CIIPS is new challenges to international security including environmental, ethnic and other sources of conflict.

**Ross Mallick** arrived in the fall to work in the field of regional conflicts and their resolution. Dr. Mallick, who has an MA from York, an M.Litt in Politics from Oxford and a PhD in Political Science from Cambridge, has special expertise in South Asia as well as in problems of development.

The non-proliferation of weapons of mass destruction is the particular area of expertise of **Jean-François Rioux**. He holds an MA in Political Science from Université Laval and has a PhD pending from Carleton University. His doctoral dissertation concentrated on the question of nuclear proliferation and Canadian foreign policy between 1943 and 1990. Between 1983 and 1990, Mr. Rioux was a lecturer at the University of Ottawa and at Carleton, and in the Department of Public Administration at the Université du Québec à Hull.

**Karen Ballentine**, who holds an MA from Carleton University in Soviet and Eastern European studies, joined the Institute in the fall, shortly after her return from a special study programme in Estonia.

She is a specialist on issues of ethnic minorities in the Soviet Union and Eastern Europe. She is also working on questions related to the reduction of the military-industrial sector in the Soviet economy.

The new research team joins research staff members who will concentrate their work on a number of areas. **Roger Hill** is working primarily on Canadian defence and security policy. **Ron Purver** concentrates on arms control and disarmament issues, and focusses on security and cooperation in the Arctic as well as on naval arms control. **Deirdre Collings** has primary responsibility for the Institute's project on Lebanon, and also monitors other conflicts in the Middle East. **Robin Hay** is concentrating on new institutions for peacekeeping, peacemaking and peacebuilding.

There are now three part-time visiting Fellows in residence. For the 1990-91 academic year, **Ron Fisher** from the University of Saskatchewan, is at Carleton University part-time and at the Institute two days a week. He remains responsible as editor of a book on the Cyprus conflict, and will arrange a series of seminars on developments in the field of conflict studies and conflict resolution. **George Lindsey** is undertaking a study on the qualitative dimensions of arms control. **Fr. William Ryan S.J.**, recently completed his term as secretary of the Canadian Conference of Catholic Bishops, prior to which he was Jesuit Provincial for Upper Canada and formerly Director of the Center of Concern in Washington, DC. He

will be at the Institute part-time looking at the role of religion in conflict and conflict resolution.

### Board of Directors

On 14 January, the Secretary of State for External Affairs, the Right Honourable **Joe Clark**, announced the appointment of five Directors to the seventeen-member Board of Directors of the Institute. The new directors are:

**Robert Cameron**, Ottawa. Mr. Cameron joined the Department of External Affairs in 1947 and retired in 1985. He held a variety of positions, including that of Ambassador to Poland and Yugoslavia. He was Assistant Under-Secretary of State for External Affairs from 1980-83, during which time he was responsible for international security and arms control affairs.

**André Donneur**, Montreal. Dr. Donneur is a Professor of Political Science at the Université du Québec à Montréal. He has a PhD from l'Institut universitaire de hautes études internationales in Geneva. He specializes in international relations and has written on Canadian foreign and defence policy.

**Hélène Pichette**, Montreal. Ms. Pichette is head of the news section at Télé-Métropole, with primary responsibility for the principal newscast. During 1988-89, she held a Southam Fellowship at the University of Toronto, and prior to that was a producer for Radio Canada's *Le Point*.

**Betty Plewes**, Ottawa. Ms. Plewes served with CUSO in Nigeria and in Zimbabwe, and held a number of positions in Ottawa with the organization, most recently that of manager of programme operations.

**Gen. Gérard Thériault**, Ottawa. General Thériault is president of AEG Canada, a position he has held since 1987. He joined the RCAF in 1952 and served in many capacities in the Canadian Armed Forces. In 1983, he was appointed Chief of the Defence Staff, a position he held for three years before he retired in 1986. □

## LETTERS TO THE EDITOR

### Arab Distortions and Zionist Propaganda

The "Letter from Hebron" (Autumn 1990) was Orwellian propaganda which turned black into white and victim into murderer. With Jean-François Lépine serving as Middle East correspondent for the CBC and SRC, it is not surprising that some Canadians have a distorted and hostile picture of Israel.

There are no Israelis in his letter; only Arabs and their all-too-familiar myths and distortions. The suffering of the Arab residents is skillfully reported, but nowhere do we see the anti-Israeli hatred and racism which fuels the *intifada* or the cries of "death to the Jews" which none who pass near Hebron and the rest of the West Bank can escape. Mr. Lépine's Arab informants apparently did not see fit to tell him that Jews have lived in Hebron for three thousand years, sharing the holy sites with the Moslems, or that this unprotected community was cruelly massacred by Arab mobs in 1929.

The Israeli military is portrayed as being "armed to the teeth" and the source of all evils, but Mr. Lépine does not seem to know that this army is sitting in Hebron because the Palestinians and their Arab allies sought and continue to seek to destroy the Jewish people in their historic homeland. The Arabs, including the residents of Hebron, enthusiastically support Saddam Hussein and his threats to "incinerate half of Israel." If Mr. Lépine read or understood Arabic, he would know that the PLO, which has very wide support in Hebron, has declared that it has

not abandoned its policy of destroying Israel in stages. If they have a state, it would become a staging ground for Iraqi troops in a new and deadly war against Israel.

For Mr. Lépine, the Israeli efforts to limit terror may be "routine stupidity," but one doubts that he would have the same view if he were on the receiving end of these weapons. For some reason, the number of Arabs who have been murdered by other Arabs in the name of the *intifada* is also not discussed.

The source of the tragedy of the Arab-Israeli conflict and the suffering of both peoples is not found in the absurd myth of a "mighty Israeli army" trampling on innocent Arab victims. Israel is a tiny country, facing a number of Arab states, armed with an arsenal of thousands of tanks, missiles, and chemical weapons, financed by billions of dollars in oil revenues. Rather, the tragedy is the result of the continued Arab belief that they can eliminate the Jewish people and the State of Israel. Militarily defeated, the Arabs now conduct their war through the press and with propaganda, hoping to isolate and weaken Israel.

The tragedy is compounded by the unwillingness of the Arabs to admit their past mistakes, including the refusal to compromise, or to accept the legitimacy of Jewish claims to a piece of the Land of Israel. Finally, the violence is encouraged by the eagerness with which many in the media take up the Arab cause, spreading their propaganda and their racist hatred.

Publication of propaganda as "Letter from Hebron" damages the prospects for peace. It demonstrates to Israelis that the rest of the world is eager to believe anti-Israeli lies and distortions, and that international fora will con-

tinue to be biased and unable to play a useful role in ending this terrible conflict.

Gerald M. Steinberg, Bar Ilan  
University, Ramat Gan, Israel

I was surprised to see Jim Lederman making the statement (Winter 1990/91):

The latter argument [the Palestinians being against the American double standard of supporting Israeli occupation of the West Bank and Gaza while opposing Iraq's similar conquest of Kuwait] made little impression on the Israelis who recalled that they did not launch the war that led to the capture of the West Bank.

It has been lately made repeatedly by Zionist propagandists in North America, and goes unchallenged. It suffers from only one flaw, the facts.

It is not even controversial that it was Israel which attacked Egypt in 1967. On Monday 5 June, waves of Israeli bombers and fighters launched an attack on Egyptian air fields virtually destroying the entire Egyptian Air Force, while it was still on the ground. Israel's ground forces then marched into Sinai and the Gaza strip. This took place to thwart the planned meeting between President Johnson and the Egyptian Vice-President Mohieddin, intended to achieve a negotiated settlement.

Jordan and Syria, which had a mutual defence pact with Egypt, joined in the war after Egypt was attacked, much as Britain and France went to war in 1939, after Germany attacked their ally Poland.

Ismael Zayid, M.D.,  
Dalhousie University, Halifax

### Who Called the Troops Out When?

Your last issue (Winter 1990/91) seems to me to be in error regarding the use in 1970 of the Armed Forces and the National

Defence Act. Jane Boulden states that in (October) 1970, the Armed forces were not called in by the civilian authorities under the National Defence Act. She is mistaken. I was at the time Chief of Staff (Administration) for Mobile Command in Saint-Hubert and had received the request from Quebec under that very Act shortly after it arrived in our offices. I sent it immediately to my commanding officer, but not without reading it first to ensure it complied with the requirements of the Act. It was signed by Jérôme Choquette, presently mayor of Outremont, and then the Attorney General for the province of Quebec.

As for the proclamation of the War Measures Act mentioned by Ms. Boulden, this occurred a couple of days later. Provincial and municipal police forces as well as the RCMP, implemented the measures taken thereafter; the Armed forces were not involved in any way.

As your publication is intent on being thorough, I feel a clarification on this matter would be appropriate in a future issue.  
Marcel Richard, Brig.-Gen. (Ret.),  
Quebec

### Editor's Note:

The correspondent is substantially correct, and Peace & Security regrets any confusion created by imprecise wording in our last issue. In 1970, the use of the armed forces to aid the civil power and the invoking of the War Measures Act were two separate events. The request for aid under the powers of the National Defence Act was made by the government of Quebec on 14 October 1970. On 16 October, the government of Canada invoked the War Measures Act.

## FROM THE DIRECTOR

*Debating war and peace, morality and order*

**W**E ARE BACK INTO THE UGLY, PRIMITIVE business of war. Every thinking person is grappling with revulsion, horror and bitter disappointment – the end of the Cold War had led us all to hope for better. In open societies, people are also wrestling openly with agonizing questions about the lead-up to war, its conduct and termination, and its aftermath.

In all decency, Canadians should begin by recognizing that while this is the first time that we have been at war in nearly forty years, much of the planet has suffered devastating conflict over that same period, at immeasurable human, economic and ecological cost. Even in the present conflict, the direct exposure of Canadians is limited. Our sheltered position should lead Canadians to exercise humility in our debate of the issues involved.

Our national debate since 2 August has done us no credit as a people. Some critics believe that they have seen a “bloodlust” unleashed, although by the standards of past conflicts, this has so far been quite muted in Canada. From the other side of the debate, critics of the coalition’s policies and Canada’s support, have widely been portrayed as merely emotive or viscerally anti-American, when in fact, the critics and the criticisms cover a wide spectrum.

**N**O ONE WAS READY FOR THIS CRISIS, EXCEPT possibly Saddam Hussein who triggered it. Nevertheless, few could argue that the post-Cold War world could simply have ignored such a frontal challenge to the most basic rule of international order – the non-acquisition of territory by force. But from the earliest days of August, too much of the public discussion focussed on side issues: other violations had gone unchecked in the past; the Kuwaiti regime was more plutocratic than democratic; the borders in question were “unnatural”; the outside world had armed Saddam Hussein; or that the world’s stake in the region’s oil supply somehow invalidated the world’s concern for order.

Worst of all, there was a gut reaction of many North Americans, Europeans and Japanese, that the conflict had nothing to do with us.

The growth of interdependence in recent decades should have led to a strengthening of the sense of collective security, yet somehow the idea of a responsibility of all nations to come to the aid of one that is a victim of aggression seemed to have fallen into disuse. The debates of the 1930s were replayed as though the Second World War and the UN had never happened.

We have all seen that when the international community, through the UN Security Council, is faced with a case of clear-cut aggression, it can set in motion machinery which – though long unused – amounts to a policing process with teeth. At the penultimate stage of this path toward military enforcement, the imposition of non-military sanctions, there was a widespread perception that these were “soft” measures, in contrast with military action. Comprehensive sanctions are coercive measures one step short of war, and are designed to hurt, frequently without discriminating between the guilty and the innocent.

The argument can be made that non-military sanctions should have been allowed to run much longer, but no one can claim that there was any assurance that by themselves they would work, or that the sanctions or the coalition would not be broken. Thus a judgement had to be made, for good or ill, and it was made most – under the authority of the UN Security Council – by those who had contributed most to confronting the aggression.

**O**NE CAN PROPERLY QUESTION THE JUDGEMENTS or tactics of the decision-makers, but one cannot legitimately assume that they were insensitive to the moral weight and the competing moral claims in their decisions. Those who criticize the UN’s approach of confronting Saddam Hussein because it has led ultimately to large-scale hostilities, are possibly not conscious how deeply held is the moral conviction, on the other side, against sacrificing small states to aggressors.

None of this holds, of course, if one is an absolute pacifist and would not countenance the use of force under any circumstances, against any threat, and under any auspices. However, such absolute pacifists are obliged to distinguish themselves from others who oppose involvement in this particular war on other bases.

Of the four broad types of pacifists identified by Elise Boulding, the three groups other

than the “absolutists” are deeply torn by this war. The “internationalists” have long recognized the enduring reality of lawlessness and aggression, and have called only for the exercise of legitimate restraining force under the auspices of the UN. While the prior arrangements necessary to follow the Charter’s procedures to the letter were not in place in this case, the world has come closer than ever before. The anti-war persons who oppose only some wars, see in this case that the Baghdad regime began the aggression, and refused to reverse it. They also see Saddam’s appalling record of internal and external brutality. Some can advance extenuating arguments, but many cannot. Finally, there are those pacifists who refuse personal involvement in war on grounds of conscience, but acknowledge the legitimacy of democratic governments, and so accept alternative service. This option has not yet arisen on any scale in this war, although some seem to prescribe that Canada as a nation adopt a similar kind of “non-combatant” status. This raises entirely different issues.

**A**LL MEMBER STATES OF THE UN ARE BOUND by international law to apply non-military sanctions against Iraq, and the progression of coercive measures toward military compellence is clear in the Charter. As a respected member of the Security Council, Canada was directly involved in each decision. Conscious of the need to avoid abdicating the UN’s work to any one power, Canada was one of those nations that chose to send its ships to participate directly in enforcing the sanctions – in effect, an act of war – as authorized by the Security Council.

Canada then sent its fighter squadron to help protect the ships enforcing sanctions, and those aircraft have since been authorized to help protect other enforcement actions by the coalition. The debate over “offensive” and “defensive” roles is irrelevant in any war zone. It is the capabilities of the Canadian aircraft and their crews that shape what they do.

Canada can play a full role in efforts to bring hostilities to an end, and in post-war peacekeeping and reconstruction, as well as new cooperation and security arrangements in the region. Baghdad’s attacks on the UN testify that in the eyes of the violators, and their few supporters, the law and all its agents are now suspect. But for the rest of the world, there is an unprecedented consensus on which we can and must build for the future.

– BERNARD WOOD

## NOTE DE LA DIRECTION

Guerre et paix, moralité et ordre

**N**OUS VOILÀ REVENUS DANS L'AFFREUX CON-

texte primitif de la guerre ! Tout être pensant éprouve répugnance, horreur et déception amère : la fin de la Guerre froide nous avait fait entrevoir des perspectives meilleures. Dans les sociétés libérales, on s'interrogeait ouvertement et avec angoisse sur ce qui a conduit à la guerre, sur la façon dont elle est menée et dont elle se terminera, et sur ses conséquences.

Les Canadiens et Canadiennes doivent tout de même reconnaître que, même si c'est la première fois en près de quarante ans que leur pays est en guerre, maints endroits de la planète ont subi des conflits dévastateurs au cours de la même période : sur les plans humain, économique et écologique, le coût en a été incalculable. Même dans le conflit actuel, la menace pesant directement sur le Canada est limitée. Leur position privilégiée doit inciter les Canadiens à faire preuve d'humilité quand ils discutent des questions en cause.

Le débat national que nous avons tenu depuis le 2 août ne nous fait pas honneur. Certains observateurs ont cru voir une soif de sang se manifester, bien que, d'après les normes établies lors de conflits antérieurs, ce phénomène ait été relativement restreint chez nous. Quant à eux, ceux et celles qui ont décrit les politiques de la coalition et l'appui accordé par le Canada ont été largement décrits comme étant émotifs ou profondément anti-américains, alors qu'en fait, ces opposants offrent un vaste éventail d'opinions.

**P**ERSONNE NE S'ATTENDAIT À CETTE CRISE, SAUF peut-être Saddam Hussein, qui l'a provoquée. Néanmoins, on aurait dû mal à faire valoir que le monde d'après la Guerre froide aurait pu tout simplement fermer les yeux sur une violation aussi flagrante de la règle la plus fondamentale de l'ordre international, soit celle qui interdit de s'approprier un territoire par la force. Mais dès les premiers jours d'août, le débat public a par trop porté sur des questions secondaires : d'autres violations avaient eu lieu impunément dans le passé ; le régime koweïtien était plus démocratique que Saddam Hussein ; les frontières contestées n'étaient pas « naturelles » ; le monde extérieur avait armé pour le monde les approvisionnements de pétrole autre le souci de préserver l'ordre.

Américains, Européens et Japonais se sentaient incertains que le conflit ne les concernait en rien.

Le sentiment d'interdépendance, qui avait grandi au cours des dernières décennies, aurait dû entraîner un renforcement du sens de la sécurité collective ; pourtant, sans que l'on sache trop comment, l'ensemble des nations a semblé oublier la responsabilité lui incombant de prêter main-forte à l'une d'elles tombée sous les coups d'un agresseur. Les débats des années 1930 ont repris, comme si la Seconde Guerre mondiale et l'ONU n'avaient jamais existé.

Nous avons tous constaté que, quand la collectivité internationale, par l'intermédiaire du Conseil de sécurité, se trouve en présence d'un cas d'agression pure et simple, elle peut mettre en marche des mécanismes qui, même s'ils n'ont pas servi depuis longtemps, s'assimilent à un processus de maintien de l'ordre avec un certain moralisme. Les sanctions globales correspondent à des mesures de coercition très voisines de la guerre, et elles visent à faire mal, souvent sans distinguer entre le coupable et l'innocent.

On pourrait faire valoir que les sanctions non militaires aident à être appliquées plus longtemps, mais personne n'aurait pu garantir qu'elles auraient produit à elles seules les résultats escomptés, ni qu'elles n'auraient pas été entraînées à des hostilités de grande envergure, ne conduisant à des hostilités de grande envergure, ne se rendant sans doute pas compte de la profonde conviction morale animant leurs adversaires qui refusent de sacrifier les petits États à la convulsivité de leurs agresseurs.

**O**U LES TACTIQUES DES DÉCIDEURS, mais personne n'est autorisé à supposer que ceux-ci n'ont pas pris en compte la dimension morale du dilemme et les divers arguments moraux ayant pesé dans la balance. Ceux qui reprochent à l'ONU d'avoir affronté Saddam Hussein, parce que cette démarche a conduit à des hostilités de grande envergure, ne se rendent sans doute pas compte de la profonde conviction morale animant leurs adversaires qui refusent de sacrifier les petits États à la convulsivité de leurs agresseurs.

Rien de tout cela ne vaut, bien sûr, aux yeux du pacifiste inconditionnel qui n'approuve jamais le recours à la force, peu importe la nature de la menace ou le drapage sous lequel sont enroblés les troupes. Cependant, ces pacifistes sont obligés de se distinguer d'autres qui s'opposent pour des motifs différents à toute participation à cette guerre. Elise Boulding désigne quatre types de pacifistes : mis à part les inconditionnels, les trois autres groupes sont profondément divisés par cette guerre. Les « internationalistes » reconnaissent depuis longtemps l'existence persistante de

La anarchie et de l'agression, et ils ont préconisé un recours limité et légitime à la force sous la gouverne de l'ONU. Les mécanismes nécessaires pour que l'on suive à la lettre la procédure établie par l'ONU n'étaient pas en place cette fois-ci, mais le monde n'a jamais respecté d'aussi près le libellé de la Charte.

Les pacifistes qui ne s'opposent qu'à certaines guerres ont vu ici que le régime Hussein avait bel et bien porté le premier coup et qu'il avait ensuite refusé de faire marche arrière. Ils sont aussi au courant des effroyables actes de brutalité commis par le dirigeant irakien tant dans son pays qu'à l'étranger. D'aucuns évoquent des arguments attentionnés, mais beaucoup en sont incapables. Enfin, il y a des pacifistes qui refusent, pour des motifs de conscience, de participer personnellement à la guerre, mais ils reconnaissent la légitimité des gouvernements démocratiques et ils acceptent par conséquent de jouer un autre rôle. Cette option ne s'est pas encore manifestée dans cette guerre, bien que certains semblent la Charte est très claire quant à la gradation des mesures de coercition vers le recours à la force militaire. En sa qualité de membre respecté du Conseil de sécurité, le Canada a participé à la prise de chaque décision. Conscient de la nécessité de ne pas laisser à une seule puissance le soin de faire tout le travail de l'ONU, le Canada a compté parmi les pays qui ont choisi d'envoyer des sanctions (cela équivaut, en fait, à un acte de guerre), conformément aux directives du Conseil de sécurité.

Le Canada a ensuite dépêché un escadron d'avions de chasse pour aider à protéger les navires appliquant les sanctions, et depuis, il a autorisé le déploiement de ces appareils pour protéger d'autres opérations menées par la coalition. Le débat sur les rôles « défensifs » et « offensifs » est hors de propos dans toute zone de guerre. Ce sont les capacités des avions et des équipages canadiens qui déterminent leurs rôles.

Le Canada peut s'affirmer pleinement dans tout effort fait pour mettre fin aux hostilités, puis, après la guerre, pour voir au maintien de la paix et de la reconstruction, ainsi qu'à la mise en place de nouveaux mécanismes régionaux de coopération et de sécurité. Les alliés de Bagdad contre l'ONU attestent qu'aux yeux des agresseurs et de leurs partisans peu nombreux, la loi et tous les agents du monde, il existe un consensus sans précédent qui doit nous servir de fondement pour l'avenir. □

Arabes, déformation des faits et propagande sioniste

J'ai été étonné de voir que Jim Lederman avait fait la déclaration suivante (Hiver 1990-1991) : «Ce dernier argument (le fait que les Palestiniens étaient contre les Américains qui appliquaient deux poids deux mesures en appauvrissant Israël malgré l'occupation de la Cisjordanie et de Gaza, mais en s'opposant à l'occupation du Koweït par l'Irak) n'a guère convaincu les Israéliens qui ont rappelé qu'ils n'avaient pas commencé la guerre qui s'était soldée par la prise de la Cisjordanie.»

Cette affirmation a été maintes fois reprise en Amérique du Nord par les tenants de la propagande sioniste et elle n'est récusée par personne. Elle n'a qu'un seul défaut : elle est contraire aux faits.

On ne conteste même pas que c'est Israël qui a attaqué l'Égypte en 1967. Le 5 juin de cette année-là, des vagues de bombardiers et de chars israéliens se lancèrent à l'attaque des terrains d'aviation égyptiens et détruisaient au sol la quasi-totalité des forces aériennes égyptiennes. L'armée israélienne envahissait ensuite le Sinaï et la bande de Gaza. Ces opérations visaient à compromettre la rencontre que devait tenir le président Johnson et le vice-président égyptien Moubarak pour parvenir à un règlement négocié.

La Jordanie et la Syrie, liées à l'Égypte par un pacte de défense mutuelle, entrèrent en guerre après que l'Égypte eut été attaquée, un peu comme la Grande-Bretagne et la France étaient entrées en guerre en 1939 après l'attaque de leur allié, la Pologne, par l'Allemagne.

Ismaïl Zayid, MD  
Université Dalhousie, Halifax

Propagande digne d'Orwell, la «Lettre de Hébron» (Automne 1990) transforme le mal en bien et la victime en meurtrier. Avec Jean-

François Lépine comme correspondant de la CBC et de la Société Radio-Canada au Moyen-Orient, il n'est pas surprenant que certains Canadiens aient une image déformée et défavorable d'Israël. Il n'est pas fait mention d'Israéliens dans sa lettre ; on n'y parle que d'Arabes, des faits qu'ils défendent et de leurs mythes bien connus. Les souffrances des résidents arabes sont habilement décriées, mais pas un mot sur la haine et le racisme anti-israéliens qui alimentent l'infidélité pas plus que sur les cris de «mort aux Juifs» que quiconque passait près de Hébron et du reste de la Cisjordanie ne peut pas ne pas entendre. Apparemment, les informateurs arabes de M. Lépine n'ont pas jugé bon de lui dire que les Juifs vivent à Hébron depuis trois mille ans, qu'ils partagent les lieux saints avec les Musulmans, ni que cette cruellement massacrée par les foules arabes en 1929.

Les forces israéliennes sont décrites comme étant «armées jus-qu'aux dents» et présentées comme la source de tous les maux, mais M. Lépine semble ignorer que si cette armée se trouve à Hébron, c'est parce que les Palestiniens et leurs alliés arabes ont cherché, et cherchent encore, à détruire le peuple juif dans un pays qui est sa patrie depuis toujours. Les Arabes, y compris les résidents de Hébron, soutiennent avec enthousiasme Saddam Hussein qui menace d'«incendier la moitié d'Israël». Si M. Lépine lisait ou comprenait l'arabe, il saurait que l'OLP, qui bénéficie d'un large soutien à Hébron, a déclaré qu'il n'a pas renoncé à détruire peu à peu Israël. Si l'on donnait à l'OLP un État, celui-ci deviendrait une zone de rassemblement des troupes israéliennes qui pourraient alors entreprendre une nouvelle guerre à mort contre Israël.

Pour M. Lépine, les efforts faits par les Israéliens pour limiter la terreur ne sont peut-être que «bêtise routinière», mais il changerait sans doute d'opinion si c'était contre lui que ces armées étaient dirigées. Par ailleurs, mais il ne dit pas pourquoi, il ne parle pas non plus des nombreux Arabes qui ont été assassinés par d'autres Arabes au nom de l'infidélité.

Quand et par qui la Loi sur la défense nationale a-t-elle été invoquée ?

Votre dernière livraison (Hiver 1990-1991) contient ce qui me semble être une erreur à propos des Forces armées et de la Loi sur la défense nationale en octobre 1970. Jeanne Boulden dit qu'en (octobre) 1970, votre dernière livraison contenait ce qui me semble être une erreur à propos des Forces armées et de la Loi sur la défense nationale en octobre 1970.

Les articles de propagande tels que la «Lettre de Hébron» comprennent les perspectives de paix, le reste du monde est prêt à croire les contre-vérités et les mensonges internationaux continueront d'être partiels et incapables de jouer un rôle utile pour mettre fin à ce terrible conflit.

Cette tragédie est aggravée par la réticence des Arabes à admettre leurs erreurs passées et, notamment, par leur refus d'accepter un compromis ou de reconnaître la légitimité des revendications des Juifs sur une portion de la terre d'Israël. Enfin, l'empressement avec lequel, dans ces médias, de nombreuses personnes embrassent la cause arabe en répandant leur propagande et leur haine raciste.

Ce n'est pas dans le mythe absurde d'une «puissante armée israélienne» qui foulerait aux pieds d'innocentes victimes arabes que l'on trouvera la cause du conflit tragique opposant Arabes et Israéliens et l'origine des souffrances de ces deux peuples. Israël est un petit pays qui fait face à de nombreux millions de chars, de missiles et d'armes chimiques payé à même les milliards de dollars des recettes du pétrole. Il serait plus juste de dire que cette tragédie vient du fait que les Arabes ont toujours cru qu'ils pourraient anéantir le peuple juif et l'État d'Israël. Vaincus militairement, les Arabes font maintenant leur guerre par la presse et la propagande, en espérant ainsi isoler et affaiblir Israël.

Notre correspondant a en grande partie raison, et nous déplorons la confusion créée par l'imprécision du texte paru dans notre dernier numéro. En 1970, le recours aux Forces armées pour prêter main-forte aux autorités civiles et la mise en œuvre de la Loi sur les mesures de guerre ont été deux événements séparés. L'appel à l'aide lancé par le gouvernement du Québec en vertu de la Loi sur la défense nationale a eu lieu le 14 octobre 1970. Le gouvernement canadien a invoqué la Loi sur les mesures de guerre le 16 octobre. □

1970 les Forces armées ne sont pas intervenues à la suite d'une demande des autorités civiles en vertu de la Loi sur la défense nationale. Elle fait erreur. À l'époque, j'étais le chef d'état-major (administrateur) des Forces mobiles, à Saint-Hubert, et j'avais reçu la demande du Québec conformément à la même Loi peu après sa réception à mon commandant dans les meilleurs délais, mais non sans la lire et m'assurer qu'elle était conforme aux exigences de la Loi. Elle l'était et était signée par M. Jérôme Choquette, aujourd'hui maire d'Outremont, mais alors Procureur général de la province de Québec. Quant à la proclamation de la Loi sur les mesures de guerre dont parle Mme Boulden, elle a eu lieu à peu près deux jours plus tard. Ce furent les forces policières provinciales et municipales ainsi que la GRC qui appliquèrent les mesures prises ensuite, et les Forces armées n'eurent rien à voir avec ces dernières.

Vu la rigueur que vise votre publication, je crois qu'une mise au point à ce sujet dans une prochaine livraison serait à propos.

## NOUVELLES DE L'INSTITUT

Chargé(s) de recherche

En juin et octobre 1989, le con-

seil d'administration a adopté un

plan à moyen terme en vertu duquel

l'Institut axera son programme de

travail sur six thèmes précis : la

non-prolifération des armes de des-

truction massive ; la politique du

Canada en matière de défense et de

sécurité ; les mesures à prendre

pour renforcer les régimes inter-

nationaux de maintien, d'établisse-

ment et d'édification de la paix ; les

régions de conflit et de conflit po-

lentiel ; la sécurité et la coopération

dans l'Afrique ; et les nouvelles

voies à suivre pour garantir la secu-

rité internationale. Le personnel

de l'Institut continuera de se renseil-

guer sur d'autres thèmes relevant

du mandat, et il poursuivra comme

dans le passé les programmes vou-

lus pour répondre aux efforts de

recherche et aux débats publics

amorçés par d'autres organismes.

En 1990, l'Institut a entrepris

des recherches intensives pour trouver

des chercheurs(e)s qui s'occuperaient

d'étudier ces thèmes. Le 2 janvier

1991, tous les nouveaux chargé(e)s

de recherche avaient pris leurs

fonctions.

Mark Heller est chargé de re-

cherche principale et coordonnateur

de la recherche. Il a fait des études

en sciences politiques et écono-

miques à l'Université de Toronto et

il détient aussi une maîtrise en étu-

des sur le Moyen-Orient, ainsi qu'un

doctorat de l'Université Harvard en

sciences politiques. Il est en congé

de l'Université de Tel Aviv, où il est

agréé de recherche principal au

Jaffee Center for Strategic Studies.

En 1986-1987, il a été maître de

conférences en études gouvernement-

ales et chargé de recherche à l'Uni-

versité Cornell ; en 1982-1983,

il a fait un stage au Centre des af-

aires internationales de Harvard.

M. Heller est spécialiste de la poli-

tique étrangère et des questions de

sécurité, et il mène particulièrement

l'accent sur le Moyen-Orient.

Shaukat Hassan détient une ma-

îtrise de l'Université du Colorado et

un doctorat en relations internatio-

nales de l'Université nationale de

l'Australie. Il est arrivé au début jan-

vier de l'International Institute for

Strategic Studies, à Londres, où il a

personnel de recherche existant qui

fera porter ses efforts sur divers sec-

teurs. Roger Hill s'intéresse surtout

à la politique du Canada en matière

de défense et de sécurité. Ron

Purver concentre ses efforts sur la

limitation des armements et le dé-

sarmement, sur la sécurité et la

coopération dans l'Afrique ainsi

que sur la limitation des armements

postes, dont celui d'ambassadeur du

Canada en Pologne et en Yougos-

lavie. Il a été sous-secrétaire d'Etat

adjoint aux Affaires extérieures de

1980-1983, période où il s'occupait

des questions intéressant la sécurité

internationale et la limitation des

armements.

André Donneur, de Montréal,

M. Donneur est professeur de scien-

ces politiques à l'Université du

Québec à Montréal. Il détient un

doctorat de l'Institut universitaire

des hautes études internationales

(Genève). Il est spécialiste des rela-

tions internationales et il a publié

des documents sur la politique

étrangère et la politique de défense

du Canada.

Hélène Pichette, de Montréal,

Mme Pichette dirige le service des

nouvelles de Télé-Métropole, et elle

s'occupe surtout du principal bul-

letin de nouvelles. En 1988-1989,

elle a bénéficié d'une bourse Sou-

tham à l'Université de Toronto ;

auparavant, elle a été réalisatrice de

l'émission *Le Point* diffusée sur les

ondes de Radio-Canada.

Betty Plewes, d'Ottawa,

Mme Plewes a servi au sein de

CUSO au Nigéria et au Zimbabwe,

et elle a occupé divers postes à

Ottawa dans cet organisme ; plus

récentement, elle a été gestionnaire

des programmes.

Le général Gérard Thériault,

d'Ottawa. Le général Thériault est

président d'ABG Canada, poste

qu'il occupe depuis 1987. Il s'est

détenu de nombreux postes au sein

des Forces canadiennes. En 1983,

il a été nommé Chef de l'état-major

de la Défense et il s'est acquitté de

cette charge pendant trois ans, soit

jusqu'en 1986, année où il a pris

sa retraite. □

### Concours «Paix et Sécurité» : procédure et échéancier

Le Fonds pour les Concours «Paix et Sécurité» attribue une aide financière deux fois par année. Prière de communiquer avec le Fonds pour obtenir l'ensemble des critères mis à jour et des formulaires de demande. Prière de prendre note des échéances suivantes :

le 30 juin, pour la sélection d'octobre

le 30 novembre, pour la sélection de mars

# CONDENSÉ SUR LA LIMITATION DES ARMEMENTS

## Sommet mondial sur les armements

Dans deux discours différents prononcés le 8 février sur l'après-guerre du Golfe, le premier ministre Mulroney et le ministre des Affaires étrangères, M. Joe Clark, ont exhorté l'ONU à convoquer un « Sommet mondial sur les instruments de masse » afin de mobiliser ainsi la volonté politique et de relancer les efforts internationaux déjà entrepris pour prévenir la prolifération des armes conventionnelles et celle de leurs vecteurs. Le sommet aurait pour objectif d'élaborer un programme d'action complet en vertu duquel on établirait des tribunes multilatérales pour examiner les divers problèmes de prolifération.

Parmi les mesures particulières proposées, citons les suivantes : exhorter les signataires du TNP à soutenir sans tarder sa prorogation indéfini en 1995 ; solliciter de la part des États dotés d'armes nucléaires une réaffirmation formelle de leur engagement à rechercher la mise en oeuvre d'autres mesures de désarmement nucléaire ; encourager d'autres pays à adhérer au Régime de contrôle des technologies appliquées aux missiles (RCTM) ; rendre plus efficace la Convention de 1975 sur les armes biologiques ; inciter les membres de la Conférence du désarmement à s'engager à une clôture, d'ici la fin de 1992, les négociations sur une convention complète et détaillée sur les armes chimiques ; précéder l'accroissement du nombre de membres du Groupe de l'Australie pour limiter l'exportation de produits chimiques susceptibles de servir à la fabrication d'armes chimiques ; favoriser la mise en oeuvre d'un système d'échange d'informations dans le domaine des transferts d'armes ; et proposer que les signataires du Traité sur les FCE s'engagent « à faire en sorte que les armes visées

## Le Traité sur les forces armées conventionnelles en Europe (FCE)

Comme on s'y attendait, un Traité sur les FCE a été signé à Paris le 19 novembre. Il n'aura fallu que vingt mois pour le négocier ; un haut fonctionnaire américain a d'ailleurs dit de ce document que c'était l'accord de limitation des armements le plus ambitieux jamais conclu. En vertu du Traité, dans les quarante mois qui suivront son entrée en vigueur (soit dix jours après sa ratification par les vingt-deux parties), le nombre total de chars de part et d'autre (OTAN et Pacte de Varsovie) doit tomber à 20 000 ; celui des véhicules blindés de combat, à 30 000 ; celui des pièces d'artillerie, à 20 000, et celui des avions de combat et des hélicoptères d'attaque, à 8 000 et à 2 000 respectivement. En tout, pour tout, plus de 50 000 armes de ces catégories devront être détruites ou converties à des usages « non militaires », dans la plupart des cas, par l'URSS et ses anciens alliés.

Des observateurs ont accusé l'URSS d'avoir violé l'esprit du Traité en ramenant des dizaines de milliers de systèmes d'armement à l'est de l'Oural, soit en dehors de la région géographique visée par l'accord, juste avant sa signature. Des porte-parole de l'URSS et de l'Occident ont précisé que la majeure partie de ces transferts étaient attribuables au fait que l'URSS avait déjà annoncé des retraits de troupes d'Europe de l'Est en vertu de décisions unilatérales et d'accords bilatéraux négociés. Selon le négociateur en chef des États-Unis, M. Edouard Chevardnadze, alors ministre soviétique des Affaires étrangères, avait garanti que la plus grande partie du matériel retiré avant la signature du Traité serait détruit ou converti. Cependant, de nouveaux différends se sont faits jour presque immédiatement après l'échange officiel de ratifications le 18 novembre. Les États-Unis et leurs alliés de l'OTAN ont accusé l'URSS d'avoir rayé de ses inventaires plus de 20 000 éléments à cette date ; d'avoir désigné moins de la moitié des emplacements militaires à inspecter par rapport à ce qui avait été indiqué antérieurement (cela influe sur le nombre d'inspections qu'elle serait obligée d'accom-

## Les pourparlers sur la réduction des armements stratégiques

Des hauts fonctionnaires américains et soviétiques continuaient d'évoquer les progrès accomplis vers le règlement de questions litigieuses relatives au START, tandis qu'approchait la date d'une réunion entre le ministre soviétique des Affaires étrangères, Edouard Chevardnadze et son homologue américain James Baker, à Hounston, les 10 et 11 décembre. Après la réunion, il fut annoncé qu'il ne restait plus à régler que des questions techniques intéressant la vérification. Le président Bush fit savoir que de « grands progrès » avaient été accomplis et il exprima l'espoir que le Traité serait signé au sommet présidentiel de Moscou, le 11 février. Cependant, après la démission soudaine de M. Chevardnadze et avec le début de la répression soviétique dans les républiques baltes et des hostilités dans le golfe Persique, on a commencé à douter que le Traité START (qui compterait 500 pages) serait prêt à temps, voire, que le sommet aurait effectivement lieu.

A Washington, le 28 janvier, le nouveau ministre soviétique des Affaires étrangères, M. Alexandre Bessmertnykh, et le Secrétaire d'État américain, M. James Baker, ont annoncé que le sommet serait reporté et qu'il se tiendrait d'ici le 30 juin. Pour expliquer cette décision, ils ont cité la guerre du Golfe et la nécessité de régler certains détails afférents à l'accord START.

Une conférence, dont l'objet était de transformer le Traité de 1963 sur l'interdiction partielle des essais d'armes nucléaires (PTBT) en une interdiction complète des essais (ICE), a eu lieu à New York du 7 au 18 janvier. Les trois États depositaires (URSS, Royaume-Uni et Royaume des Pays-Bas) ont été obligés de convoquer la conférence, après qu'un tiers des 117 parties au Traité l'eurent demandé, même si Washington et Londres s'opposent actuellement à la tenue de négociations sur une ICE et sur toute modification de l'accord sur toute modification de l'accord.

Les pays de la région de la signature du Traité et contrairement aux termes de ce dernier ; et d'avoir cherché à exclure trois divisions de l'Armée régulière en les désignant comme étant des formations d'infanterie navale, lesquelles sont visées par le Traité aux dires de l'Occident.

Les porte-parole américains ont bien précisé que le Traité ne sera pas déposé devant le Sénat aux fins de ratification, tant que les litiges au sujet des données et de l'interprétation du libellé n'auront pas été réglés. Les parties ont quatre-vingt-dix jours, à compter de la signature du Traité, pour « rectifier » les données qu'elles ont soumises.

Le Traité sur les FCE prévoit la tenue de négociations de suivi devant aboutir à la Conférence d'examen de la CSCE, qui est censée avoir lieu à Helsinki en mars 1992. Ces pourparlers, appelés « FCE 1A » et axés principalement sur la limitation des effectifs en personnel et sur les détails d'un régime d'inspections aériennes, ont commencé à Vienne le 29 novembre.

Un nouvel accord sur les mesures propres à accroître la confiance et la sécurité (MPACS) en Europe a été signé au sommet de Paris en novembre. Aux mesures de notification et aux échanges d'informations existants par les Accords de Stockholm (1986), le nouvel accord ajoute des dispositions concernant les échanges annuels de renseignements sur les principes de systèmes d'armes jusqu'au niveau des brigades no des régiments, sur le déploiement des gros équipements et armements, et sur les budgets militaires ; est également prévue l'adoption d'un mécanisme de consultation et de coopération en ce qui regarde les « activités militaires inhabituelles ». Les pays de l'Est et les États non alignés réclamaient depuis longtemps des MPACS relatives aux manœuvres navales et aériennes indépendantes, mais l'accord reste muet sur ce sujet.

## Conférence d'amendement du PTBT

Une conférence, dont l'objet était de transformer le Traité de 1963 sur l'interdiction partielle des essais d'armes nucléaires (PTBT) en une interdiction complète des essais (ICE), a eu lieu à New York du 7 au 18 janvier. Les trois États depositaires (URSS, Royaume-Uni et Royaume des Pays-Bas) ont été obligés de convoquer la conférence, après qu'un tiers des 117 parties au Traité l'eurent demandé, même si Washington et Londres s'opposent actuellement à la tenue de négociations sur une ICE et sur toute modification de l'accord sur toute modification de l'accord.

Les pays de la région de la signature du Traité et contrairement aux termes de ce dernier ; et d'avoir cherché à exclure trois divisions de l'Armée régulière en les désignant comme étant des formations d'infanterie navale, lesquelles sont visées par le Traité aux dires de l'Occident.

Les porte-parole américains ont bien précisé que le Traité ne sera pas déposé devant le Sénat aux fins de ratification, tant que les litiges au sujet des données et de l'interprétation du libellé n'auront pas été réglés. Les parties ont quatre-vingt-dix jours, à compter de la signature du Traité, pour « rectifier » les données qu'elles ont soumises.

Le Traité sur les FCE prévoit la tenue de négociations de suivi devant aboutir à la Conférence d'examen de la CSCE, qui est censée avoir lieu à Helsinki en mars 1992. Ces pourparlers, appelés « FCE 1A » et axés principalement sur la limitation des effectifs en personnel et sur les détails d'un régime d'inspections aériennes, ont commencé à Vienne le 29 novembre.

Un nouvel accord sur les mesures propres à accroître la confiance et la sécurité (MPACS) en Europe a été signé au sommet de Paris en novembre. Aux mesures de notification et aux échanges d'informations existants par les Accords de Stockholm (1986), le nouvel accord ajoute des dispositions concernant les échanges annuels de renseignements sur les principes de systèmes d'armes jusqu'au niveau des brigades no des régiments, sur le déploiement des gros équipements et armements, et sur les budgets militaires ; est également prévue l'adoption d'un mécanisme de consultation et de coopération en ce qui regarde les « activités militaires inhabituelles ». Les pays de l'Est et les États non alignés réclamaient depuis longtemps des MPACS relatives aux manœuvres navales et aériennes indépendantes, mais l'accord reste muet sur ce sujet.

Des hauts fonctionnaires américains et soviétiques continuaient d'évoquer les progrès accomplis vers le règlement de questions litigieuses relatives au START, tandis qu'approchait la date d'une réunion entre le ministre soviétique des Affaires étrangères, Edouard Chevardnadze et son homologue américain James Baker, à Hounston, les 10 et 11 décembre. Après la réunion, il fut annoncé qu'il ne restait plus à régler que des questions techniques intéressant la vérification. Le président Bush fit savoir que de « grands progrès » avaient été accomplis et il exprima l'espoir que le Traité serait signé au sommet présidentiel de Moscou, le 11 février. Cependant, après la démission soudaine de M. Chevardnadze et avec le début de la répression soviétique dans les républiques baltes et des hostilités dans le golfe Persique, on a commencé à douter que le Traité START (qui compterait 500 pages) serait prêt à temps, voire, que le sommet aurait effectivement lieu.

A Washington, le 28 janvier, le nouveau ministre soviétique des Affaires étrangères, M. Alexandre Bessmertnykh, et le Secrétaire d'État américain, M. James Baker, ont annoncé que le sommet serait reporté et qu'il se tiendrait d'ici le 30 juin. Pour expliquer cette décision, ils ont cité la guerre du Golfe et la nécessité de régler certains détails afférents à l'accord START.

## La guerre du Golfe

novembre, les libéraux et les démocrates ont proposé des amendements qui réglaient l'usage de la force contre l'Irak, du moins tant que le parlement n'aurait pas été consulté de nouveau (proposition des libéraux). Le début d'urgence a lieu la veille d'une réunion extraordinaire du Conseil de sécurité le 29 novembre (à laquelle M. Clark a représenté le Canada, réuni au cours de laquelle le Conseil a autorisé (résolution 678) l'utilisation de tous les moyens nécessaires pour obliger l'Irak à se retirer du Koweït. La Chambre des communes a appuyé la résolution 678 plus tard le même jour (29 novembre) par 111 voix contre 82, malgré les protestations énergiques des deux partis d'opposition. L'un des principales préoccupations de ces derniers était que le gouvernement doit consulter le parlement avant de décider de participer à une action militaire offensive.

Le 10 décembre, M. Clark a comparu devant le Comité des affaires extérieures de la Chambre. Il a indiqué que le gouvernement consultait le parlement le plus rapidement possible au fur et à mesure des événements. Il a également admis que diverses questions avaient été rendues plus urgentes du fait de l'occupation du Koweït par l'Irak, notamment : la nature des régimes arabes, les disparités extraordinaires existant entre les revenus des plus pauvres et ceux des plus riches dans la région, la concurrence que les différents dirigeants se livrent pour dominer le monde arabe, et la question palestinienne. Mais il a rejeté l'idée d'un lien précis entre la crise du Golfe et le problème palestinien.

Le 19 décembre, le parlement s'est ajourné jusqu'au 18 février. Comme l'échance donnée à l'Irak pour se conformer à la résolution 678

Pendant l'automne, la perspective d'une guerre dans le Golfe a attiré pratiquement toute l'attention du parlement lorsqu'il s'agissait de la paix et de la sécurité. Le 25 octobre, le ministre des Affaires extérieures, M. Joe Clark, a informé la Chambre des communes que le gouvernement préférait qu'une action défensive contre l'Irak soit approuvée par le Conseil de sécurité de l'ONU, mais qu'une absence de limite n'empêcherait pas le Canada de participer à une démonstration de force. Les partis d'opposition ont immédiatement qualifié les propos de M. Clark d'incendiaires. Le chef du NPD, Mme Audrey McLaughlin, a estimé que les déclarations du Ministre pourraient avoir de graves conséquences pour la sécurité des Canadiens et des Canadiennes gardés en otage en Irak. La même semaine, 250 autres militaires canadiens spécialisés des communications et du commandement ont été dépêchés dans le Golfe pour appuyer l'embargo des Nations Unies contre l'Irak, faisant ainsi passer les effectifs canadiens présents dans la région à 1 700 membres.

Le 19 novembre, une délégation non officielle de députés s'est rendue à Bagdad pour demander la libération des otages canadiens. Intéressamment, le gouvernement a rejeté l'idée, mais, en fin de compte, le député conservateur Robert Corbett a reçu l'autorisation de se joindre au libéral Lloyd Axworthy et au démocrate Svend Robinson pour effectuer la mission non officielle. La tâche s'est avérée déprimante, souvent ennuyeuse, mais le 28 novembre, les autorités irakiennes ont annoncé que cinq des quarante-cinq otages seraient libérés.

Le 23 novembre, M. Clark a entamé une visite officielle dans la région. Il s'est rendu en Turquie, en Jordanie, en Égypte et en Israël (où il a rencontré des dirigeants tant

## Activités des comités

Le 8 novembre, le Comité de la défense de la Chambre des communes a publié un rapport intitulé *La souveraineté maritime*, qui recommandait au gouvernement d'acheter des sous-marins à propulsion conventionnelle et d'installer des capteurs sonars dans les eaux arctiques pour aider à préserver la souveraineté du Canada dans le Grand Nord. Le critique du NPD en matière de défense, M. John Brown, a remis en question la nécessité d'acquiescer des sous-marins et il a proposé plutôt que le Canada en loue un autre pays en attendant que ses besoins en matière de défense soient complètement examinés.

À l'automne, le Comité des

— GREGORY WIRICK

proche, le nouveau «comité spécial de guerre» du cabinet a décidé de convoquer à nouveau le parlement le 15 janvier pour une session d'urgence. Le premier ministre a immédiatement proposé que la Chambre sanctionne de nouveau les mesures prises par les Nations Unies pour mettre fin à l'agression de l'Irak contre le Koweït. Au cours du long débat qui a suivi, on a noté les interventions du chef libéral, M. Jean Chrétien, qui se présentait pour la première fois aux Communes depuis son élection en décembre. Le 15 janvier, M. Chrétien a proposé un amendement en ajoutant à la dernière phrase de la résolution gouvernementale les termes suivants : «par le biais de la continuation des sanctions économiques ; cet appui exclut une action militaire offensive de la part du Canada pour le moment». Qui plus est, M. Chrétien a déclaré que, si la guerre éclatait, il faudrait immédiatement rapatrier les soldats canadiens qui n'étaient dans le Golfe que pour veiller à l'application de l'embargo. Le lendemain, son prédécesseur à la tête du Parti libéral, M. John Turner, a soutenu fermement en Chambre que le parlement a le devoir d'appuyer les résolutions de l'ONU et, partant, la résolution proposée par le gouvernement. Le 16 janvier, immédiatement avant l'intervention de M. Turner, les amendements proposés par les libéraux et les non-démocrates ont été rejetés. Le NPD avait proposé un sous-amendement à celui du Parti libéral, éliminant tous les mots après le mot «sanctions» et les remplaçant par «un tel appui exclut la participation du Canada à une attaque militaire contre l'Irak ou contre les forces irakiennes au Koweït». Le sous-amendement a été rejeté par 210 voix contre 39, les libéraux ayant voté contre. L'amendement libéral, quant à lui, a été rejeté par 134 voix contre 116. Le débat témoignait d'un examen intense et sombre des questions en cause. Il s'est poursuivi après le début des hostilités, le 16 janvier à 19 heures, heure normale de l'Est. Pendant la séance du soir, après que le premier ministre eut pris des dernières nouvelles, M. Chrétien a annoncé que «tous les Canadiens et Canadiennes ont l'obligation de rester unis en cette circonstance».

# À L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

## La guerre du Golfe

Le début des hostilités dans le Golfe le 17 janvier a été précédé d'une intense activité diplomatique tant à l'intérieur qu'à l'extérieur des Nations Unies. Le 27 octobre, l'ambassadeur soviétique, M. Yuli Vorontsov, a informé le Conseil de sécurité qu'un envoyé spécial de son pays se trouvait en Irak et qu'il y avait bon espoir qu'il réussit dans sa mission et que l'on trouvait une solution pacifique au conflit.

Au cours de la même réunion, le représentant du Koweït a fait état de violations des droits de la personne auxquelles l'Irak se livrait dans son pays. Il a exigé que les coupables soient jugés à l'avenir comme des «criminels de guerre». Le Conseil n'a pris aucune mesure pour jeter les bases d'un tribunal, mais, le 29 octobre, il a adopté la résolution 674 stipulant que l'Irak était responsable des pertes, blessures ou dommages infligés aux ressortissants et intérêts étrangers au Koweït. Cette résolution invitait les pays membres à réunir des informations sur les revendications contre l'Irak en vue de prendre des dispositions dans l'avenir pour la restitution des biens ou l'obtention d'une compensation financière.

Le 27 novembre, le Koweït a présenté un témoignage sur les atrocités qui, selon lui, avaient été commises par les soldats irakiens contre des Koweïtiens. Le lendemain, le Conseil a unanimement condamné la tentative faite par l'Irak de modifier la composition démographique du Koweït en détruisant les registres civils de ce pays. La Grande-Bretagne a accusé l'Irak d'essayer de détruire l'identité nationale du Koweït. En adoptant la résolution 677, le Conseil a également voté pour autoriser le Secrétaire général à prendre la garde d'une copie informatisée de registres.

Toutefois, tant le président Hussein que les événements survenus dans la région ne cessaient de corrompre le lien existant entre les deux questions. Le 7 novembre, le Conseil s'est réuni pour étudier une recommandation du Secrétaire général invitant les hautes parties contractantes de la Quatrième Convention de Genève relative à la protection des personnes civiles en

tres démographiques certifiées que le 29 novembre, le Conseil a adopté la plus importante résolution relative à la crise. Il s'agit de la résolution 678 qui autorisait l'usage de «tous les moyens nécessaires» pour obliger l'Irak à se retirer du Koweït. Douze pays ont voté pour, Cuba et le Yémen ont voté contre, et la Chine s'est abstenue.

Le document était parvenu par le Canada, la France, la Roumanie, l'URSS, la Grande-Bretagne et les États-Unis et il donnait à l'Irak une «dernière chance» de céder ; jusqu'au 15 janvier. Pour souligner le caractère historique de la résolution, les ministres des Affaires étrangères de treize des quinze pays représentés au Conseil de sécurité étaient présents, y compris le ministre canadien, M. Joe Clark.

S'adressant au Conseil, M. Clark a abordé une question omniprésente dans la crise du Golfe, c'est-à-dire la nécessité de trouver une solution au problème du Moyen-Orient. Cette question a été liée au conflit à partir du moment où le président irakien, Saddam Hussein, a déclaré que l'Irak ne se retirerait du Koweït que si Israël quitte les territoires occupés. Les États-Unis se sont énergiquement opposés à cette idée, estimant que l'accepter reviendrait à récompenser l'Irak pour son agression.

M. Clark a souligné que la crise du Golfe pourrait offrir une occasion de régler d'autres problèmes dans la région :

Si nous pouvons maintenant noter la détermination collective, nous pourrions peut-être alors trouver une solution juste, complète et durable au conflit israélo-arabe.

La résolution 681 ne mentionne aucunement la conférence internationale. Néanmoins, dans un geste symbolique, les États-Unis ont accepté que le président du Conseil invitat le Secrétaire général à éduquer le projet initial, qui a adopté à l'unanimité une version négociations épuisantes, le Conseil le 20 décembre, après une série de conférences internationale. Enfin, la résolution 681 ne mentionne la Convention de Genève.

La résolution 681 ne mentionne aucunement la conférence internationale. Néanmoins, dans un geste symbolique, les États-Unis ont accepté que le président du Conseil invitat le Secrétaire général à éduquer le projet initial, qui a adopté à l'unanimité une version négociations épuisantes, le Conseil le 20 décembre, après une série de conférences internationale. Enfin, la résolution 681 ne mentionne la Convention de Genève.

Le 9 novembre, l'observateur représentant la Palestine a montré un film vidéo sur la violence survenue à la colline du Temple (al Haram al Charaf) le 3 octobre. Selon lui, le film infirmait les déclarations israéliennes selon lesquelles les Palestiniens avaient alors mené la vie d'Israéliens ; en fait, c'est le contraire qui s'était produit. Il a enfin dit que l'action des autorités israéliennes avait été préméditée et qu'elle avait visé à faire un grand nombre de victimes palestiniennes.

Le 16 novembre, les membres non alignés du Conseil de sécurité ont soumis un projet de résolution proposant la convocation d'une conférence internationale sur la paix au Moyen-Orient. Cette proposition a suscité des discussions intenses les membres arabes de la coalition internationale déployée contre l'Irak. D'autre part, ils ne voulaient pas essayer la colère d'Israël en dominant l'impression d'appuyer une conférence internationale, geste qui aurait pu faire croire qu'ils cédaient aux exigences de l'Irak.

Les 8, 9 et 10 décembre, le Conseil a décidé de reporter un vote sur un projet de résolution relatif à une conférence internationale. Enfin, le 20 décembre, après une série de conférences internationale, le Conseil a adopté à l'unanimité une version négociations épuisantes, le Conseil le 20 décembre, après une série de conférences internationale. Enfin, la résolution 681 ne mentionne la Convention de Genève.

Le 31 décembre, le mandat de deux ans du Canada au Conseil de sécurité a pris fin. □

— TREVOR ROWE

La question de Chypre a dominé les derniers efforts du Canada au Conseil. Le 14 décembre, ce dernier a voté pour prolonger de six mois le mandat de la Force des Nations Unies chargée du maintien de la paix à Chypre (UNFICYP) ; le Canada s'est abstenu. Par cette abstention, il exprimait sa déception parce que le financement de l'UNFICYP se faisait au moyen de contributions volontaires au lieu de contributions mises en recouvrement. Dans une déclaration adressée au Conseil, le Canada a estimé qu'à la suite de cet état de fait, certains pays ne contribuent plus, et des pays donateurs comme lui se retrouvaient avec un fardeau excessivement lourd.

Depuis 1964, l'UNFICYP a coûté 2 milliards de dollars environ, et 149 hommes et femmes sont morts au service de l'ONU à Chypre.

Un projet de résolution réclamant l'établissement de contributions mises en recouvrement a été pré-senté au Conseil, mais la France et l'URSS s'y seraient opposées. Le 21 décembre, le Conseil a adopté à l'unanimité une résolution diluant les problèmes relatifs au financement de la Force et de présenter, avant le 1<sup>er</sup> juin, des solutions de

La reconnaissance par satellite et la guerre du Golfe

Au cours des vingt-cinq dernières années, l'Union soviétique et les États-Unis en sont venus à compter de plus en plus sur les satellites de reconnaissance pour l'alerte stratégique et l'évaluation de l'ampleur et de la nature de toute attaque de missiles balistiques lancée contre eux. D'autres satellites constituent des maillons clés dans les réseaux de communications et de navigation. Les deux pays ont également utilisé des satellites pour surveiller des déploiements militaires et vérifier l'observation d'accords sur la limitation des armements. Dans le Golfe, la coalition recourt à divers satellites américains perfectionnés pour évaluer les commandages, recueillir des renseignements sur les activités militaires irakiennes et donner l'alerte en cas d'attaque par missiles militaires irakiens *Scud*. C'est le *Space Command* de l'Aviation militaire américaine qui a été chargé de détecter la mise à feu des engins *Scud*, grâce à au moins deux satellites munis de télescopes infrarouges. Ces satellites ont été placés sur orbite géosynchrone pour avoir le meilleur point de vue possible sur les lieux de lancement des *Scud*. D'après certaines sources, la rotation du télescope permet de balayer l'Irak toutes les douze secondes, délai qui lui serait possible de réduire en employant plus d'un satellite. Les télescopes infrarouges ont été conçus pour détecter et reconnaître la signature thermique beaucoup plus considérable des ICBM soviétiques, mais ils semblent pouvoir aussi repérer les *Scud* à portée relativement courte, et fournir des données approximatives sur leur trajectoire. Au début de la guerre du Golfe, les satellites communiquaient l'alerte tant à une station terrestre installée à Alice Springs, en Australie, qu'au quartier général du *Space Command* à Colorado Springs. Une fois l'analyse faite aux deux endroits, les données sur la trajectoire et le point d'impact étaient

Les Européens, par exemple, dépendent beaucoup des États-Unis

gation et de communications, ces systèmes spatiaux jouent aux Etats-Unis et à la coalition un avantage décisif en matière de renseignement et de tactique. On s'est aussi servi de moyens aériens américains pour la reconnaissance des objectifs spatiaux et la désignation des objectifs. A la fin de janvier, deux avions performants de détection d'objets étaient en route pour le Golfe. Le Radar interarmes de surveillance et d'attaque E-8A (J-STARS) est conçu pour repérer à 200 kilomètres de distance les hélicoptères volant à basses altitudes, les navires et les chars de combat, et pour diriger contre eux des avions amis.

Les satellites à cependant suscité de nombreuses questions plus vastes au sujet de l'accès aux renseignements ainsi recueillis. Le Canada bénéficie d'un traitement spécial, car, du fait de sa présence au centre des opérations de combat du NORAD, à Colorado Springs, il a accès à certaines des données obtenues grâce aux satellites militaires américains. Mais nous n'ont pas la même chance. Les Européens n'en ont aucune.

à quatre ou cinq minutes. Les États-Unis auraient par ailleurs déplacé des satellites de reconnaissance perfectionnés pour pouvoir observer l'Irak et le Koweït. L'un d'eux, le *Lacrosse*, produit des images au moyen d'un radar au lieu d'utiliser la photographie dans le visible, et il peut donc prendre des clichés par tous les temps. Plusieurs satellites *Keyhole* sont également déployés et ils sont en théorie capables d'identifier des objets ne mesurant pas plus de six pouces. Combinaisons aux satellites de nav-

transmises par satellite aux batteries de *Danior*. Le temps de vol d'un *Scud* est de six à sept minutes : il fallait au début 120 secondes pour calculer les coordonnées de la zone d'impact, et de deux à trois minutes pour alerter les systèmes de défense, ce qui laissait environ quatre-vingt-dix secondes aux batteries de *Danior* pour intercepter les engins ennemis. Par la suite, le *Space Command* a réussi à relayer directement les satellites de détection aux batteries de *Danior*, ce qui a porté la période d'interception

On nous soumet donc de part en part deux documents nouveaux émanant de l'Initiative de défense stratégique (IDS). Voilà qui a traversé clairement du discours prononcé par le président Bush le 31 janvier, quand il a préconisé de mettre de nouveau l'accent sur la recherche d'objets, dans le cadre de l'IDS, à pour-  
suivre la protection contre les attaques de moindre envergure par les missiles balistiques, quelle qu'en soit l'origine. Écartant la perspective d'une alliance stratégique massive qu'un système complet de défense antimissiles balistiques devrait bloquer, divers porte-parole connus aux États-Unis ont proposé que le pays se concentre plutôt sur l'acquisition d'une protection contre les lancements accidentels aux

Peu après les premières « vic-toires » remportées par les engins *Parot* dans la guerre du Golfe, le ministre américain de la Défense a effectué avec succès, le 29 janvier, l'essai d'un missile anti-missile baptisé « L'intercepteur » — le système d'interception exoatmosphérique des véhicules de rentrée, ou ERISS — à été lancé de l'île Kwajalein dans le Pacifique et a intercepté une ogive fautive *Minuteman* à environ 160 kilomètres dans l'espace. Il existe très peu de rapport entre le rôle du *Parot* et celui de l'ERIS : en effet, un missile balistique inter-continental vole environ cinq fois plus vite que le *Scud*, et le véhicule de rentrée constitue une cible beaucoup

## Les *Patriot* et la Guerre des étoiles

pour ce qui est des renseignements glanés par satellite, mais ils hésitent à financer le déploiement d'un système indépendant. En outre, la décision de l'entreprise française *SPOT* de ne pas divulguer les photographies du Koweït et de l'Irak pourrait bien renforcer les propositions récentes favorisant la mise en orbite d'un satellite que posséderait et exploiterait un consortium de médias. Par ailleurs, on compte de plus en plus sur les satellites, ce qui souligne la valeur militaire des armes anti-satellites, lesquelles ne sont actuellement visées par aucun accord de limitation des armements. Les Etats-Unis et l'URSS déploient actuellement de telles armes sans trop de difficulté.

La reconduction de l'accord  
du NORAD

raques déclenchées par une « tierce partie ». On s'attend à ce qu'une vingtaine de pays soient munis de missiles balistiques d'ici la fin du siècle.

L'attention de tous étant tournée vers le golfe Persique, la reconduite prochaine de l'Accord sur la défense aérospatiale du continent nord-américain a relativement suscité peu d'intérêt au Canada, et elle est passée complètement sous silence aux États-Unis. Cependant, il pourrait bien y avoir des surprises. À la fin de janvier, des rapports émanant des médias américains, rappellent que les porte-parole du ministère canadien des Affaires étrangères ont par la suite confirmés, ont révélé que le Pentagone envisage une réforme importante de ses grands commandements militaires. Il en résulterait notamment la dissolution de l'actuel *Unified Space Command*, dont le NORAD fait partie, et son remplacement par un «commandement des forces stratégiques». Pareille mesure regrouperait les systèmes de surveillance, les moyens d'interception, auxquels le Canada contribue en vertu de l'accord du NORAD, et les forces offensives relevant maintenant du *Strategic Air Command* (SAC). Si la restructuration a lieu, le rôle du Canada au sein d'un tel réseau revêt de commandements alimentaires certainement des débats animés.

## Des navires vétustes, mais utiles

de l'actuel *Unified Space Command*, dont le NORAD fait partie, et son remplacement par un «commandement des forces stratégiques». Partelle mesure reconnaîtrait les systèmes de surveillance, les moyens d'interception, auxquels le Canada NORAD, et les forces offensives relevant maintenant du *Strategic Air Command* (SAC). Si la restructuration a lieu, le rôle du Canada dans le réseau révisé de commandement s'alimenterait certainement des débats actuels.

L'attention de tous étant tournée vers le golfe Persique, la reconquête prochaine de l'Accord sur la délimitation des frontières du continent nord-américain a relativement suscité peu d'intérêt au Canada, et elle est passée complètement sous silence aux États-Unis. Cependant, il pourrait bien y avoir des surprises. À la fin de janvier, des rapports émanant des médias américains, rappo-rtant que les porte-parole du ministère canadien des Affaires extérieures ont par la suite confirmés, ont révélé que le Pentagone envisage une réforme importante de ses grands commandements militaires. Il en résulterait notamment la dissolution

La reconduction de l'accord du NORAD

- DAVID COX

navires de guerre canadiens déployés dans le Golfe ont démontré leurs capacités avant le début des hostilités. En effet, ils ont à leur crédit plus de 25 p. 100 de toutes les interceptions navales exécutées en vertu du régime des sanctions. Depuis l'éclatement de la guerre, le commandant canadien du groupe-ment opérationnel naval s'est chargé de coordonner les mouvements de tous les navires de ravitaillement alliés (soutien logistique au combat) ; il dirige par ailleurs les destroyers et frégates alliés ayant pour mission de protéger les navires de ravitaillement.

importance est d'autant plus remarquable qu'il s'est produit avant même que cette question ait fait l'objet de débats publics sensibles.

Le déclin du soutien accordé aux forces de l'OAN semble correspondre au déclin général de l'importance concédée à l'Alliance. Une faible majorité des Canadiens (50 p. 100) reste favorable au maintien aux niveaux actuels des forces canadiennes stationnées en Europe. Mais le nombre de ceux qui voudraient réduire la taille de ces forces a pratiquement doublé depuis l'année dernière. Au cours de l'enquête de 1989, 10 p. 100 seulement des répondants étaient partisans d'une réduction (d'une amplitude non précisée). Cette proportion est maintenant de 21 p. 100. En 1989, 14 p. 100 étaient en faveur d'un retrait total ; ils sont maintenant 20 p. 100.

IL EST REMARQUABLE DE CONSTATER QUE LE CHANGEMENT INTERVENU APRÈS la Guerre froide, en ce qui concerne les affaires Est-Ouest et les « solutions » militaires, n'a pas suscité un intérêt accru pour la recherche de solutions aux problèmes Nord-Sud. Le sondage d'accord de l'aide aux pays en développement déclarait que c'était une question très importante, lors d'un sondage réalisé en 1984 par les Affaires extérieures, il n'y en a plus que 22 p. 100 maintenant à être de cet avis. Le même déclin s'est produit au sujet de la contribution à apporter pour réduire la faim et la pauvreté dans le monde ; le nombre de ceux qui plaçaient cette question parmi les grandes priorités du moment est passé de 62 p. 100 (lors d'un sondage Decima de 1985) à 41 p. 100 aujourd'hui.

Par contraste avec l'importance moins grande accordée à l'aide extérieure, les Canadiens continuent d'attribuer à peu près la même priorité qu'en 1984 à des engagements tels que la participation à l'ONU et aux opérations de maintien de la paix, ce qui est peut-être une façon d'exprimer leur inquiétude à propos de la guerre du Golfe. Par contraste également, près de neuf répondants sur dix (87 p. 100) réservent une place très importante à la protection des océans du Canada et des ressources situées au large de ses côtes.

L'opinion des Canadiens n'est pas une marque d'immobilisme. Ce n'est pas non plus une opinion incohérente ni confuse. Il est évident que les événements incroyables qui se sont produits à la fin des années 1980 à l'échelle internationale ont déjà eu une incidence considérable sur l'opinion du public canadien.

LES CANADIENS ET CANADIENNES, SEMBLER-IL, considèrent que, dans le monde actuel, les préoccupations ne jouent pas un rôle aussi prépondérant qu'autrefois et qu'elles couvrent davantage entre elles : les pays dont l'économie est en expansion, comme le Japon, tiennent une plus grande importance (et consistent une menace sur le plan économique) ; les forces militaires ne jouent plus un aussi grand rôle ; l'avènement de l'OTAN est incertain ; la Guerre froide, si elle n'est pas terminée, est, en tout cas, moins intense ; les principaux conflits ont lieu entre le Nord et le Sud plutôt qu'entre l'Est et l'Ouest ; l'instabilité et le militarisme qui régnaient dans le tiers-monde apparaissent comme de graves problèmes internationaux et non pas simplement régionaux, et il en va de même de questions écologiques de l'intérêt mondial telles que la dégradation de la couche d'ozone, par exemple. Bref, la population canadienne se voit au seuil d'un monde plus complexe, multipolaire et interdépendant. Les politiques sont évaluées par les Canadiens pour faire face à cet ordre nouveau obéissant-elles à un plan d'ensemble ? Au risque de paraître simplistes et de nous adonner à des suppositions, disons que la tendance semble être au retrait plutôt qu'à une participation accrue. Les Canadiens ont peut-être envie de se détacher non seulement des problèmes européens, qui ont été résolus, mais aussi de ceux du tiers-monde, qui semblent insolubles, de garder leurs ressources et de s'occuper de leurs propres problèmes.

## LE CANADA ET LES ÉTATS-UNIS

*Une grande confiance ou confiance considérable en l'habileté des États-Unis à s'occuper prudemment des problèmes mondiaux :*

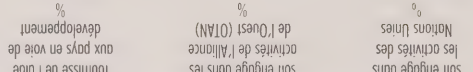

*Au cours des dix prochaines années, les États-Unis représenteront une menace :*

## LE CANADA ET LE MONDE

*Il est très important que le Canada :*

l'Irak, que le risque d'une guerre mondiale était grand. (Cette inquiétude s'est sans doute aggravée dans les mois suivants, lorsqu'on se demandait si un conflit direct avec l'Irak était possible. On trouvera à la page 16 une étude sur l'attitude adoptée par le public canadien envers les guerres auxquelles le Canada a participé, et notamment envers la guerre du Golfe.)

Même si la possibilité d'une guerre reste bien réelle pour beaucoup de gens, les causes probables d'un tel conflit ont radicalement changé au cours des dernières décennies. Aujourd'hui, la grande majorité du public canadien (69 p. 100) estime qu'une guerre mondiale serait provoquée par d'autres pays que les États-Unis ; moins d'une personne sur quatre (23 p. 100) était de cet avis lors d'un sondage Gallup en 1961. Deux pour cent seulement des personnes interrogées croient maintenant qu'une guerre pourrait être la conséquence d'une initiative soviétique. Il y a trente ans, ce chiffre était de 41 p. 100. Par contraste, davantage de personnes pensent maintenant que les États-Unis en seraient la cause, bien que ce ne soit qu'une personne sur sept (13 p. 100) environ.

Lorsque, l'année dernière, au cours du mois ayant précédé l'ouverture du mur de Berlin, on demandait aux Canadiens si la Guerre froide était finie, peu d'entre eux étaient aussi optimistes (6 p. 100). Après une année fertile en événements dramatiques en Europe de l'Est, un nombre sensiblement plus élevé se déclarait optimistes (21 p. 100), mais la plupart restent persuadés que la Guerre froide n'est pas terminée.

Ces dernières années, les Canadiens ont consommé déclaré que la plus grande menace militaire contre la paix dans le monde était soit la prolifération des armes nucléaires dans les petits pays, soit un conflit régional. L'idée que les Canadiens et Canadiennes se font des menaces contre la sécurité est en pleine évolution. Comme l'a révélé pour la première fois le sondage effectué l'année dernière par l'Institut, ils mentionnent à présent les problèmes environnementaux et économiques, aussi bien que les menaces plus classiques d'ordre militaire.

Quant on leur avait demandé de classer, en fonction de leur gravité, cinq grands problèmes internationaux ayant trait à l'environnement (réchauffement de la planète, déchets toxiques, pluies acides, dégradation de la couche d'ozone et pollution de l'eau), les répondants n'avaient pas indiqué clairement qu'elle était la principale priorité ; deux problèmes, cependant, avaient été mis en relief. Une personne sur trois (30 p. 100) avait désigné la dégradation de la couche d'ozone comme étant le problème le plus grave. En second lieu venait la pollution des lacs et des océans (24 p. 100), puis les déchets toxiques (16 p. 100), le réchauffement de la planète (15 p. 100) et les pluies acides (12 p. 100).

DE TOUTE ÉVIDENCE, LE PUBLIC CANADIEN A commencé à repenser à l'engagement pris par son pays envers l'OTAN. Pour la première fois depuis des dizaines d'années, le soutien accordé à l'OTAN a diminué d'une façon spectaculaire. Au cours de l'enquête effectuée par l'ICPSI en octobre 1989, plus d'un Canadien sur deux (52 p. 100) avait déclaré qu'il était très important que le Canada reste dans l'OTAN. À présent, un sur trois seulement portance accordée à l'Alliance s'est traduite par une chute de vingt points dans les sondages. Bien qu'il soit possible d'expliquer ce recul par le déclin de la vieille menace soviétique, la démocratie libérale et de l'économie de marché à l'État soviétique, l'effondrement des régimes communistes d'Europe de l'Est et la disparition attendue du Pacte de Varsovie, son

institut canadien pour  
la paix et la sécurité internationales

L SEMBLE MAINTENANT EVIDENT que l'ordre qui a régné pendant près d'un demi-siècle a disparu. Moins claire, en revanche, est la forme du nouvel ordre qui va le remplacer. Et beaucoup moins claire encore est la philosophie qui fondera cet ordre. Quelle était donc l'opinion tradi-

Canadiens après la guerre ? Les Américains et les Russes étaient froids. Le Japon et l'Europe (et le Canada) étaient faibles. Les États-Unis étaient nos amis : l'URSS était notre ennemi. La politique mondiale était fonction des forces militaires. L'expansionnisme soviétique et la guerre nucléaire constituaient les principales menaces : l'OTAN était donc indispensable. L'Europe et l'Allemagne étaient divisées et le restaient encore longtemps. Le tiers-monde était pauvre et faible. L'ONU était nécessaire mais impuissante.

politique étrangère canadienne visant essentiellement à conserver l'amitié des Américains, à tenir les Russes à l'écart, à ne pas baïsser la garde du pays (dans la mesure du possible), à garder ses troupes dans l'OTAN, à soutenir l'ONU, à être prêt à assurer le maintien de la paix et à poursuivre l'aide extérieure (mais pas trop). La majorité des Canadiens et Canadiennes s'occupaient aux grandes lignes de cette politique. La question qui se pose maintenant est de savoir s'ils sont toujours d'accord, ou si il existe une divergence que le nouvel ordre des choses a inspiré une pensée originale. Avec leur sagesse officielle, les experts et les hauts fonctionnaires essaient de la plupart des gens ne s'intéressent guère aux relations internationales, comprennent relativement mal les événements mondiaux et ne s'en soucient pas. Il est donc possible que la population canadienne ait été en grande partie décomectée et que son attitude actuelle ne diffère pas beaucoup de celle qu'elle a été pendant des décennies ou, tout au moins, pas encore. Il est également possible que l'ordre imaginé ait fait place au désordre. Même lorsque l'époque n'est pas si extraordinaire, la plupart des gens trouvent que quelque peu déstabilisant le foisonnement des événements qui surviennent sur la scène mondiale. Mais la série de changements pacifiques intervenus récemment a révélé non seulement que nos politiciens étaient dépassés, mais que nos défenses psychologiques s'étaient effondrées. Le mur de l'Berlin disparaît en une nuit; la politique soviétique semble changer d'un tour à l'autre; l'Irak, un pays éloigné, plus petit que le Canada, devient quelquefois le point de mire du monde entier. On comprend, dans ces conditions, pourquoi l'opinion du public, tout autant peut-être que celle des experts en politique étrangère, est en plein désarroi.

Il est également possible que l'ordre magique ait fait place au désordre. Vient lorsque l'époque n'est pas si extraordinaire, la plupart des gens trouvent quelque peu décevant le foisonnement des événements qui surviennent sur la scène mondiale. Mais la série de changements pacifiques intervenus récemment a révélé non seulement que nos politiques étaient dépassées, mais que nos défenses psychologiques s'étaient effondrées. Le mur de Berlin disparaît en une nuit; la politique soviétique semble changer d'un jour à l'autre; l'Irak, un pays éloigné, plus petit que le Canada, devient soudainement le point de mire du monde entier. On comprend, dans ces conditions, pourquoi l'opinion du public, tout autant peut-être que celle des experts en politique étrangère, est en plein désarroi.

LES SONDAGES D'OPINION EFFECTUÉS CHAQUE ANNÉE PAR L'INSTITUT CANADIEN

Pour la paix et la sécurité internationales (il en est maintenant à son quar-tième) nous fournissons une moisson de données qui permettent de savoir la logique l'emporte, si c'est la confusion qui règne, ou si le nouveau système actuel présente une certaine cohérence.

Les sondages du début des années 1970 révélaient qu'une grande majorité des Canadiennes et Canadiennes considéraient les États-Unis comme le pays le plus puissant du monde sur les plans militaire et économique. Ils sont tous à peu près avariés à penser que les États-Unis sont la puissance militaire la plus forte, mais seulement la moitié de notre population déclare maintenant que c'est le pays le plus fort sur le plan économique.

Par contraste, une personne sur six (15 p. 100) désignait alors le Japon comme étant la puissance économique prépondérante, mais une majorité de

Par contraste, une personne sur six (15 p. 100) désignait alors le Japon maintenant que c'est le pays le plus fort sur le plan économique.

Les Canadiens et Canadiennes considèrent les États-Unis comme le pays où ils peuvent aller pour faire leur service militaire et économique. Ils sont toujours à peu près aussi enclin à penser que les États-Unis sont la puissance militaire la plus forte, mais seulement la moitié de notre population déclare maintenant que c'est le pays le plus fort sur le plan économique. Par contraste, une personne sur six (15 p. 100) désignait alors le Japon comme étant la puissance économique prépondérante, mais une majorité de

Par contraste, une personne sur six (15 p. 100) désignait alors le Japon maintenant que c'est le pays le plus fort sur le plan économique.

personne de l'Institut, il finança par ce dernier. Il a été réalisé en septembre et en octobre 1990. Au total, 275 personnes ont répondu au questionnaire, soit un taux de réponse de 62 p. 100. Avec des échantillons de cette taille, la marge d'erreur est, 95 fois sur 100, d'environ 3 p. 100 dans un sens ou dans l'autre.

LE SONDAGE D'OPINION REALISE PAR L'INSTITUT

personnes (50 p. 100) est maintenant de cet avis. La Communauté européenne vient loin derrière en troisième place (11 p. 100). Il est révélateur de constater que la plupart des Canadiens et Canadiennes estiment que les facteurs économiques sont plus importants que les facteurs militaires dans l'exercice du pouvoir national.

Les enquêtes effectuées par l'Institut à partir de 1987 montrent que les sentiments ressentis à l'égard des États-Unis et de l'Union soviétique sont devenus plus chaleureux. La proportion des personnes ayant très confiance, ou grande confiance, dans la capacité des États-Unis de régler judicieusement les problèmes mondiaux est passée de 37 p. 100 en 1987 à 47 p. 100 en 1988, puis à 67 p. 100 en 1989; elle représentait actuellement 75 p. 100 des Canadiens au moins. Le taux de confiance accordé par ces derniers à leur voisin du Sud était ainsi plus élevé en août 1990 qu'à n'importe quel moment depuis le début des années 1970, mais il est possible qu'il ait quelque peu souffert de l'engagement des États-Unis dans la guerre du Golfe.

1970, mais il est possible qu'il ait quelque peu souffert de l'engagement des États-Unis dans la guerre du Golfe.

ALISÉ PAR L'INSTITUT

1987, avant la signature du Traité sur les forces nucléaires à portée intermédiaire (FNI) et le réchauffement des relations américano-soviétiques, un Canadien sur deux (55 p. 100) estimait que le danger de guerre nucléaire était élevé. Il n'y en a plus maintenant qu'un sur trois (33 p. 100). D'un autre côté, un nombre relativement élevé de personnes estiment qu'il existe un risque de guerre mondiale; elles sont, en effet, aussi nombreuses qu'au début des années 1960. Quatre répondants au présent sondage sur dix (41 p. 100) estimaient, dans le mois suivant l'invasion du Koweït par

M. Fujimori a pris l'initiative en combinant trois types d'expérience pour

en faire la «doctrine Fujimori». Il a été conseillé de près par M. Hernando de Soto, qui dirige l'Institut privé pour la liberté et la démocratie et a publié un ouvrage à succès intitulé *The Other Path*, qui analyse la vaste économie informelle qui est le marché gris au Pérou.

PREMIÈREMENT, LES CULTIVATEURS DE COCA NE SÉRIERAIENT PLUS CONSIDÉRÉS comme des criminels parce qu'ils cultivent du coca. La terre leur appartiendrait légalement (une mesure approuvée à Washington).

Deuxièmement, on recommanderait d'obtenir de meilleurs prix pour les cultures licites en éliminant les tracaseries bureaucratiques et les monopoles étatique et oligarchique exercés sur les marchés de l'exportation. On doit cet accent mis sur le droit des *campesinos* à participer à la substitution des plantes à M. Ibán De Remencan, un Français qui a collaboré au programme des Nations Unies sur la substitution des plantes dans la haute vallée de la Huallaga. Ce programme encourage les *campesinos* à créer des organismes de base populaire autour des comités communitaires de production. De tels organismes facilitent l'administration, l'assistance technique agricole et, ce qui est plus important, ils offrent à la force de se défendre contre les dirigeants sans scrupules des coopératives qui commercialisent leurs produits. Comparativement, le programme de substitution de plantes géré par les États-Unis dans la Huallaga n'a jamais prospéré. À la fin de 1989, un haut responsable de la *US Agency for International Development* s'est vanté d'avoir aidé six agriculteurs seulement dans la région, tandis que l'ONU travaillait avec quelque 3 500 *campesinos*.

La troisième (et la plus impressionnante) partie du programme de M. Fujimori a été conçue par le général Alberto Arciniega, un officier très dynamique nommé par M. Alan García en mars 1989 pour mater la subversion dans la vallée. M. Arciniega a établi son quartier général dans ce qu'il appelle «le pire du pire», c'est-à-dire la ville d'Uchiza, un grand centre de subversion et de distribution de drogues, où il occupait un petit poste militaire. «Si on peut réussir à Uchiza, on peut réussir n'importe où», disait-il.

Il avait une politique anti-insurrectionnelle classique. Il infligeait des coups durs aux guérilleros grâce aux renseignements fournis par une population Mais il professait également que les *campesinos* devaient penser à leur avenir. «Le coca est une mode», disait-il. Il fallait cultiver autre chose. Le général Arciniega les Nations Unies d'effectuer une étude des sols avec quelque 5 000 agriculteurs, et il les a convaincus que les cultures marchandes et l'agro-industrie compenseraient la disparition progressive du coca. Il a également précisé que lorsque le coca serait remplacé par une solution de recharge économiquement viable, les agriculteurs qui n'auraient pas procédé à la substitution des plantes verraient leurs champs de coca détruits.

Le maître d'œuvre de LA DOCTRINE FUJIMORI EST LA COMMISSION AUTO-NOME pour un autre développement, organisme indépendant chargé de concevoir une politique antidrogues qui servirait de base à la négociation avec les États-Unis et d'autres pays désireux de participer à la lutte antidrogues. Pour obtenir un financement américain, le Pérou devra réaliser un tour de force dans l'élaboration de sa politique : concilier judicieusement le développement économique, la lutte contre les drogues et la lutte contre la subversion. Bien que l'administration Bush ait fini par accepter la nécessité de développer d'autres cultures pour éliminer le coca, la plupart des dirigeants américains sont toujours réticents à collaborer avec les *cocaleros* (les cultivateurs de coca) en matière de substitution de cultures, car ils craignent de leur crédibilité en s'associant à des «criminels» dont le seul souci est de débarrasser de la DEA.

Pour leur part, les *cocaleros* ne se disent pas contre l'interdiction, mais ils en veulent à la police antidrogues qui, selon eux, volent de l'argent lors des perquisitions domiciliaires. Le chef des *cocaleros* d'Uchiza, M. Cesar Valdivazo, âgé de 23 ans, déclare : «Nous ne reprochons pas à la police de lutter contre

le trafic de stupéfiants, mais elle doit s'attaquer aux *fijinas* (aux organisations responsables du trafic) et non aux cultivateurs de coca.» Cet avis est partagé par un agronome ayant travaillé avec les *cocaleros*.

Les *campesinos* ajoutent qu'ils veulent pratiquer la substitution des cultures parce qu'ils en ont assez de la violence. La plupart des résidents de longue date et les nouveaux immigrants venus de toutes les régions du Pérou pendant la «ruée vers le coca» subissent des pressions de la part d'un ensemble abrutissant d'«intérêts». Là où il y a du coca (et des «marcos»), il y a des guérilleros (et des voleurs qui se font passer pour des guérilleros), des policiers et des soldats), la police antidrogues financée par les États-Unis, la police anti-subversion formée par les États-Unis, des officiers militaires très mal payés et corrompus et la police nationale d'enquête qui les vole fréquemment (disent-ils) et que les *campesinos* abhorrent sans doute le plus. La corruption pourrait bien être le talon d'Achille de toute stratégie antidrogues au Pérou. Une campagne anti-corruption débutera en mars pour débloquer les goulots d'étranglement bureaucratiques qui frustrent les gens et pour pousser à offrir des pots-de-vin pour se frayer un chemin dans le système. La question est de savoir si cette campagne pourra atteindre les forces de l'ordre. Au moins un fonctionnaire américain a proféré une menace voilée à l'endroit d'un officier militaire, en déclarant que des défoliants seront utilisés au Pérou si rien n'est fait pour empêcher l'armée de laisser les avions colombiens attirer dans les aéroports municipaux et de les protéger sur les pistes d'atterrissage clandestines de la vallée. Au moment où nous rédigeons ces lignes, les États-Unis ont effectivement suspendu leur participation à un groupe de soutien visant à aider le Pérou à honorer ses obligations envers le FMI (Fonds monétaire international), afin d'inciter ce pays à prendre des mesures concrètes pour combattre le trafic de la drogue dans les aéroports légaux. Dans les zones d'urgence inondées de dollars provenant du commerce de coca, les policiers et les militaires, qui ont des soldes de misère, sont obligés de voler pour survivre. Dans la vallée de la Huallaga, la «caution» de libération d'un guérillero capturé est de 1 000 \$ ; la moitié de cette somme est versée au chef de la police et le reste au procureur de la poursuite. La solde mensuelle d'un grand général d'armée s'élève à 230 \$ seulement, et les commandants reçoivent le prix d'une bière en ration quotidienne d'un soldat. Quelques militaires honnêtes sont profondément préoccupés par l'étendue de la corruption : selon l'un d'eux, «si nous combattons la corruption, je pense que nous pourrions combattre très efficacement le *Sendero*.»

AU COEUR D'UNE RÉCESSION ÉCRASANTE, M. FUJIMORI A MONTÉ QU'IL VEUT vraiment réintégrer le Pérou au sein du système financier international et mettre l'accent sur la nécessité d'une lutte réaliste et intégrée contre le terrorisme et les drogues, lutte qui sera forcément coûteuse. En juillet 1989, dans la Déclaration de Paris, le Groupe des sept a préconisé que l'on ramène les programmes bilatéraux et ceux des Nations Unies pour remplacer les cultures illicites dans les pays producteurs. En février 1990, lors de la réunion des présidents des pays andins à Carthagène (Colombie), M. George Bush a avoué qu'il était important de trouver des solutions de rechange économiques au coca, mais presque rien n'a été fait pour aider les producteurs de cette plante. La communauté internationale devra faire appel à sa propre volonté politique pour examiner honnêtement la complexité des niveaux symbiotiques que sont au Pérou le coca, la subversion et la corruption, et pour décider si ça vaut la peine de dépasser les gestes symboliques pour accorder une aide substantielle — à temps.

1. Pendant des millénaires, l'Erythroxylum coca a fait partie intégrante de la vie des communautés parlant le quechua et l'aymara au Pérou et en Bolivie. Des millions de gens mâchent couramment la feuille de coca pour ne pas sentir la faim, la soif et la fatigue. Cette feuille est aussi utilisée à des fins médicinales et religieuses. 2. D'après l'ambassade du Pérou à Ottawa, un groupe de pays industrialisés est en train de se constituer pour offrir au Pérou un prêt relais de 800 millions de dollars qui rendra admissible aux prêts du FMI. Les États-Unis, le Canada, le Japon, l'Allemagne, la France, l'Italie et l'Espagne seraient membres de ce groupe naissant ; la Grande-Bretagne s'est retirée. 3. SECURITE PAIX ET SÉCURITÉ

Benoît Lacroix

# LA DERNIÈRE CHANCE DU PÉROU ?

Le nouveau président du Pérou s'attaque aux trois fléaux que sont la cocaïne, la corruption et une décennie de violentes insurrections.

PAR SHARON STEVENSON

OUR UNE MULTITUDE DE RAISONS HISTORIQUES, LE PÉROU EST UN PAYS malade sur les plans économique, moral et social, et le nouveau président, M. Alberto Fujimori, le sait. La corruption s'est installée dans des institutions nationales incohérentes et exsangues et elle s'est allentée de dollars provenant du trafic de la drogue. Le plus grand défi qui attend M. Fujimori est la réforme du gouvernement qu'il doit

changer en une force constructive et juste. Il doit convaincre les Péruviens d'aider leur gouvernement à combattre le trafic de narcotiques, les insurgés et la corruption généralisée.

Dans la guerre antidrogues que mène le Pérou, l'arme secrète est la volonté politique, ou plutôt l'absence de celle-ci. Les États-Unis, principaux acteurs étrangers dans cette guerre, accusent le Pérou de ne pas avoir la volonté politique de lutter contre le problème numéro un de l'Amérique, c'est-à-dire la drogue. Encore haïties par le Vietnam, les États-Unis s'efforcent actuellement la volonté politique de s'attaquer à ce que les Péruviens considèrent comme étant leur principal problème : une insurrection biciphale menée par le *Sendero Luminoso* (Sentier lumineux), organisation semblable à celle des Khmers rouges, et par le mouvement révolutionnaire castroïste *Inpac Amuru* (MRTA) ; japonais et surmomme le « Karaté Kid », s'est lancé dans un violent réquisitoire. En effet, il a sévèrement critiqué l'Eglise catholique pour sa résistance à la limitation des naissances, et il a justifié l'appareil judiciaire, qualifiant ces deux organisations prospères dans les zones de production du coca. Après son investiture en juillet 1990, M. Fujimori, né au Pérou de parents japonais et surmomme le « Karaté Kid », s'est lancé dans un violent réquisitoire.

M. Garcia avait laissé derrière lui un pays en faillite et une « narco-économie » dont les exportations de coca génèrent des recettes non contrôlées et non taxées d'environ un à deux milliards de dollars US (en 1989, les exportations légales du Pérou s'élevaient à 3,5 milliards de dollars), ce qui a déformé l'économie et détreillé complètement le taux de change du dollar. La lutte contre les drogues et la subversion passait au second plan.

Le Pérou FOURNIT ENVIRON 60 p. 100 DES FEUILLES DE COCA QUI ENTRENT dans la fabrication de la cocaïne consommée aux États-Unis et de plus en plus en Europe. La vallée de la haute Huallaga, située au nord-est du pays, est devenue célèbre au début des années 1980. Elle produit le coca de la meilleure qualité et est devenue le centre de distribution et de commercialisation d'où la cocaïne était exportée par avion vers la Colombie. La région est aussi devenue le quartier général des opérations antidrogues financées par les États-Unis. Pendant plusieurs années, ces derniers avaient financé des missions d'interdiction à faible intensité et la destruction physique de plantes de coca dans la haute vallée de la Huallaga. En 1989, les agents de la *Drug Enforcement Administration* (DEA) des États-Unis et la police antidrogues qu'ils conseillaient y ont établi une nouvelle base et ont intensifié leurs opérations.

Au Pérou, la politique antidrogues des États-Unis, que même des sources bien informées considèrent comme étant « un peu lambeaux », a été fondée sur l'illusion que la peur, l'illusion que l'on peut éliminer l'offre de drogues sans s'attaquer au principal problème du Pérou, à savoir une subversion épouvantable. Pour qu'en s'y attaquant, les États-Unis s'engageraient dans

de regarder en face la déchirante complexité des régions péruviennes pro-

«un autre Vietnam» ou même El Salvador. Cependant, en refusant

«Pour nous, le trafic de narcotiques est un cancer, et nous voulons l'éliminer. Mais nous voulons qu'en appliquant la loi, on prenne en compte le contexte global, c'est-à-dire les possibilités réelles des agresseurs dans les zones où l'on produit actuellement du coca et la possibilité d'élaborer d'autres options économiques.»

«judiciaire» pour faire échec au vol et à l'adulter.

M. Alberto Fujimori, agronome et professeur d'université venu de nulle part pour accéder à la présidence l'année dernière, n'est pas politiquement fou. Comme son prédécesseur, il a refusé de signer l'accord d'aide militaire avec les États-Unis avant l'échec de l'opération, perdant ainsi les 35,9 millions de dollars que ceux-ci lui destinaient. On l'incitait à accepter une aide américaine qui exacerberait une stratégie anti-insurrectionnelle déjà militarisée, et ce, sans lui fournir de «carotte» pour ce que les spécialistes de la contre-insurrection appellent «l'autre guerre», celle des cœurs et des esprits. Sans mesures coordonnées sur les plans politique, économique, social et psychologique, l'aide américaine ne ferait qu'enflammer les sentiments anti-américains des nationalistes.

Le plus grand défi de M. Fujimori consistera à rétablir la «légitimité morale» de son gouvernement aux yeux de la population rurale et paysanne. Ragrant aux accusations des États-Unis qui estimaient que le Pérou était complaisant en matière de drogues pour n'avoir pas accepté l'aide proposée, M. Fujimori a répondu sans équivoque :

12 PRINTEMPS 1991

James Muegel

raindre à trouver une solution ou du moins un ré-  
gime régional de limitation des armements.  
IL EST DIFFICILE D'AVOIR CONFIANCE EN L'AVENIR  
après une guerre devenue inévitable à cause  
de l'absence totale de toute politique étrangère  
et non de l'échec d'une telle politique. Si l'on en  
vient à déterminer l'avenir du Moyen-Orient dans  
cette optique, la région restera fragile, instable  
et lourdement armée. Bien sûr, une sorte de  
bonne nouvelle pour les gros producteurs et  
exportateurs d'armes.  
Alléguons, toutefois, les effets conjugués de cette  
situation seraient catastrophiques. La hausse des  
prix du pétrole, l'augmentation du déficit améri-  
cain, l'accroissement des importations d'armes et  
le ralentissement de l'aide étrangère (la Grande-  
Bretagne a déjà refusé de fournir une aide supplé-  
mentaire au Soudan à cause des frais engendrés  
par la crise du Golfe) sont autant de facteurs qui  
vont exacerber les problèmes économiques en  
Amérique latine, dans le sous-continent africain  
et en Asie du Sud. Le prix à payer à l'aune de  
l'échec du développement économique et de l'ac-  
croissement des tensions politiques sera lourd.  
À l'avenir, on pourra peut-être, grâce à une plani-  
fication habile ou dure en matière de défense,  
empêcher une nouvelle guerre au Moyen-Orient.  
Toutefois, dans une situation où il n'y aurait  
rien qu'un peu sursis de l'absence relative de de-  
fenses de techniques. Jusqu'ici, les participants des  
régimes de recherche étaient nombreux  
à invoquer surtout les limites et les défauts de  
la technologie militaire de pointe pour dénoncer  
les «duretés» et le genre de pratiques de l'indus-  
trie militaire propres à faire grimper les prix,  
mais sans produire plus qu'un accroissement  
marginal du potentiel de défense. Pourtant, les  
attaques à basse altitude lancées par les avions  
*Tornado*, la précision des missiles *Parrot* et la  
qualité extraordinaire des dispositifs de collecte  
d'information pour occulter l'opinion des «lud-  
distes» face à la technologie militaire moderne.  
On peut espérer, toutefois, qu'il y aura beau-  
coup d'avantages à retirer de cette dialectique,  
dont le moindre ne sera pas la formulation d'une  
politique réalisable. Jusqu'ici, le débat sur les  
régimes de substitution en matière de défense  
s'est en grande partie toujours traduit par des  
politiques chimériques axées sur la défaite, l'idée  
étant de laisser les frontières d'un pays ouvertes à  
l'invasion et de s'assurer que les aspects négatifs  
de l'occupation du territoire l'emporteraient sur  
les avantages possibles.

La guerre du Golfe marque à coup sûr un tour-  
nant dans l'histoire de la région pour tous les in-  
térêts. Après la défaite de l'Irak, le système  
international devra, au moment où il affrontera le  
problème sous l'aspect de la demande, se con-

Enfin, la crise du Golfe exercera un effet plus  
subtil et à plus long terme sur le système inter-  
national. Avant l'attaque déclenchée le 17 janvier,  
les participants des autres régimes de sécurité («la  
défense» et la «défense» et la «défense» et la  
«défense») commençaient à se faire entendre en Eu-  
rope, à la fois sur le plan intellectuel et politique,  
même parmi les professionnels. Cependant, les  
premiers succès des alliés dans le Golfe avais-  
sent le recours à une technologie mili-  
taire de pointe, qui se révèle être apte à retarder  
l'engagement de troupes à grande échelle et à  
réduire ainsi le nombre des victimes civiles.

À l'échelle mondiale et une politique de fin de  
guerre froide, le marché international des armes  
ne pouvait que subir de nouvelles compressions.  
La guerre du Golfe menace de modifier tout  
cela au fur et à mesure que les forces armées et  
les gouvernements en viennent à tirer leurs pro-  
pres conclusions des événements actuels. Au plan  
politique, la résolution prise par les États-Unis  
d'éviter un nouveau Vietnam a mené à une inter-  
vention militaire écrasante d'un type on ne peut  
plus dévastateur : pendant les deux premiers jours  
de la guerre, les forces alliées ont déversé autant  
de bombes sur l'Irak que les forces aériennes  
anglo-américaines sur la ville de Dresde dans les  
dernières semaines de la Seconde Guerre mondi-  
ale. La faiblesse relative de l'Irak va faire  
réfléchir d'autres puissances ambitieuses du tiers-  
monde, telles que l'Inde et l'Iran, qui possèdent  
un potentiel militaire comparable.

La situation en Union soviétique, sauf que la  
conversion de la production d'armements  
marquait le pas ces derniers temps.  
Bien sûr, il aurait encore fallu que les change-  
ments s'opèrent dans les pays industrialisés du  
Nord se concrétisent par de nouvelles démarches  
à l'échelle du commerce international des ar-  
mes tout entier, mais le changement des ten-  
dances de la demande en matière d'armements  
laisserait déjà espérer des progrès dans l'avenir.  
Ainsi les Nations Unies avaient, elles aussi,  
adopté une autre optique de ce côté-là, le premier  
indice de leurs nouvelles préoccupations étant  
la convocation de comités d'experts et la tenue  
de conférences spécialisées sur les moyens  
d'accroître la transparence dans le commerce  
international des armements.  
Avant l'invasion du Koweït par l'Irak, le marché  
des armements était languissant dans tout le Moyen-  
Orient à cause de la baisse des prix du pétrole,  
quoique la demande eût continué à être forte com-  
parée à d'autres parties du tiers-monde — comme  
entre la Grande-Bretagne et l'Arabie saoudite  
pour les missiles *Tornado* et d'autres équipements et installa-  
tions. Par l'intermédiaire du Conseil de coopéra-  
tion du Golfe, plusieurs pays riches en pétrole, tels  
que l'Oman et l'Arabie saoudite, avaient entrepris  
de rationaliser leur approvisionnement en armes  
afin d'éviter le double emploi et le gaspillage.  
Par ailleurs, les pays pauvres du tiers-monde  
avaient commencé à se rendre compte qu'il était  
impossible d'acquiescer un potentiel militaire vase-  
et varié sans disposer de grosses quantités de de-  
fenses étrangères, lesquelles étaient de plus en plus  
souvent à la seule disposition des États produc-  
teurs de pétrole et de certains pays nouvellement  
industrialisés, tels que la Corée du Sud, Le Pa-  
kistan, par exemple, comptant, une fois que les  
Soviétiques eurent quitté l'Afghanistan, que l'en-  
gagement pris par les États-Unis en matière d'aide  
économique et militaire était loin d'être illimité.  
Et les dépenses effrénées faites par l'Inde en  
matière de défense tout au long des années 1980  
s'arrêtèrent prématurément, laissant de larges  
brèches dans le potentiel militaire, ce qui incita,  
plus récemment, le gouvernement à se livrer à un  
réexamen de sa politique de défense. Dans le cas  
de l'Inde, la leçon n'était pas compliquée : un  
accroissement de l'arsenal militaire si important  
qu'il en éclipsait même celui de l'Arabie saoudite  
de ces dernières années ne pouvait se poursuivre  
avec, en tout et pour tout, trois semaines de  
disponibilités en devises étrangères à la banque.

LE ETAT ÉGALEMENT SYMPTOMATIQUE QUE LES

# DE LA DISETTE À L'ABONDANCE

La guerre du Golfe risque de relancer les ventes d'armes

aux pays du tiers-monde.

PAR CHRIS SMITH

**L**A GUERRE DU GOLFE EST SURVENUE À UN moment critique pour le système politique international et le commerce mondial des armes. La brève période qui s'est écoulée entre la fin de la Guerre froide et le début de la guerre du Golfe a donné aux nations l'occasion rare mais éphémère de s'interroger sur les meilleurs moyens de tirer profit des nouvelles conditions de sécurité moins menaçantes. Mais tout résultait tant soit peu positif est incontestablement menacé à présent par une guerre d'importance, dont les enseignements techniques et politiques devront être suivis de près.

Les forces de la coalition ne peuvent perdre la guerre — dans les mois qui viennent, Saddam Hussein sera chassé du Koweït, il verra son potentiel de guerre détruit et il aura peu de chances de survie au chaos et à la désintégration politiques qui en résulteront en Irak. Pourtant, les profits de la politique mettent déjà en doute l'aptitude des alliés à gagner la paix — un but plus important encore que le retour au *status quo ante*. Au cours des quinze dernières années, les forces arabes et israéliennes ont pu librement augmenter leur potentiel militaire jusqu'à un niveau impressionnant en jouant la carte soviétique contre la carte américaine, en provoquant des dissensions entre les alliés occidentaux, en particulier l'Allemagne de l'Ouest, la France et les États-Unis, et en profitant, par l'entremise de sociétés agissant individuellement, de tous les créneaux existant dans les contrôles nationaux des exportations de défense. C'est en partie à cause de cela que, dans cette région, les problèmes de sécurité et les luttes pour le pouvoir ont pris une nouvelle dimension depuis la guerre du Yom Kippour en 1973 — les forces conventionnelles sont beaucoup plus puissantes et il y a maintenant des missiles à longue portée et peut-être même des armes chimiques et nucléaires qui peuvent y être associées.

Il ne sert à rien de réduire ou de stabiliser le potentiel militaire en tant que tel, surtout si, par définition, cette action s'exerce de l'extérieur ; le président Jimmy Carter s'y était employé, sans succès, à la fin des années 1970, en promettant que les États-Unis ne seraient pas le premier pays à introduire des technologies nouvelles dans des régions fortement instables. Il y a une trop grande aspiration économique et politique au Moyen-Orient, un trop grand nombre de nouveaux fournisseurs en dehors de l'Europe et de l'Amérique du Nord, outre le fait que les contrôles exercés par les nations sur les ventes pour la défense con-

tinuent à être trop faibles. Dans cette région, le seul moyen de réduire ou de contrôler le potentiel militaire consiste visiblement à modifier les tendances de l'offre et de la demande. Bien que l'avenir nous réserve sans doute beaucoup de changements, il y a déjà des indices montrant que les ventes d'armes vont continuer à jouer un rôle primordial dans les affaires du Moyen-Orient. Le Pentagone a déjà établi des plans d'urgence pour accroître le potentiel militaire du Koweït, de l'Arabie saoudite et des États du Golfe et installer une force interalliée de maintien de la paix, au cas où Saddam Hussein ne serait que partiellement vaincu.<sup>1</sup>

CETTE POUSSÉE INÉVITABLE QUE VA CONNAÎTRE LA demande en matériel de défense dans tout le Moyen-Orient ne sera pas aussi bénéfique pour tous les gros fournisseurs. Tandis que la Californie et le Massachusetts s'en réjouissent tranquillement, la France, elle, a récemment fait savoir qu'elle en serait bientôt réduite à ramasser les miettes laissées par ses alliés d'Orient-Atlantique.<sup>2</sup> La palme revient tout partiellement au missile antimissiles français *Exocet* après la guerre des Malouines, dès que l'un matériel fait ses preuves au combat, l'effet qui en résulte sur les futures ventes est véritablement miraculeux. À Wall Street, le cours d'une action de Raytheon, le fabricant du *Patriot*, a gagné 4,50 \$ à la cotation qui a suivi le premier succès de ce missile au combat, et les exportations du *Patriot* devraient atteindre 2 milliards de dollars l'année prochaine. Il en va de même du missile de croisière *Tomahawk* qui repart maintenant pour un nouveau bail.<sup>3</sup> Alors qu'avant la guerre il était prévu de le supprimer en 1992, on va sans doute maintenir en prolonger la fabrication. Quant à la question de savoir si la Grande-Bretagne va rester ou non un producteur de chars, ce sera également le succès ou l'échec que connaîtra le *Challenger* dans la guerre terrestre qui en décidera. En des temps où le marché international de la défense est dans le marasme, où le prix du pétrole dépasse sans doute son niveau d'avant l'invasion du 2 août afin de couvrir les frais engagés par la guerre comme pour la paix, et où les principaux combattants vont se tourner vers les exportations d'armes en vue de réduire les coûts économiques du réarmement, la tentation sera forte de continuer à employer des moyens militaires pour supprimer les problèmes politiques. A la fin de 1989, Mikhail Gorbachev a fait plus que permettre la libération de l'Europe de l'Est, il a également jeté dans le ring la serviette soviétique, et avec elle la plupart des préférences politiques à un statut de superpuissance. Il a de ce fait mis fin au combat qui avait façonné le monde au lendemain de la Seconde Guerre mondiale. Les bienfaits de cette nouvelle ère de détente n'ont pas tardé à se manifester, surtout en Europe. La limitation des armements nucléaires et conventionnels, la désintégration du Pacte de Varsovie, la réunification de l'Allemagne ainsi que de nouvelles occasions de mettre à profit l'Acte unique européen ont inauguré un nouveau chapitre plein de promesses pour l'histoire européenne et le tiers-monde. Ces bienfaits ont également refléchi sur l'Asie du Sud et sur certaines parties de l'Afrique ; au milieu de 1990, si les tensions croissantes entre le Pakistan et l'Inde au sujet du Cachemire n'ont pas dégénéré en conflit d'envergure, c'est en partie dû au fait que les deux superpuissances avaient jugé qu'un conflit armé n'était dans l'intérêt d'aucune des parties. Bien qu'il continue à y avoir des problèmes régionaux, ethniques et religieux, invariablement exacerbés par les échecs en matière de développement économique, il y a eu un changement symptomatique et positif, à savoir la préférence nouvellement accordée au règlement des conflits et la tendance qu'ont les grandes puissances à s'abstenir de toute intervention dans les affaires intérieures des pays plus faibles pour les besoins de la Guerre froide.

POUR CE QUI EST DE LA DÉFENSE, ON VOIT POINdre l'horizon des changements tout aussi profonds. L'Europe, l'Union soviétique et les États-Unis admettent de plus en plus que la recherche d'une technologie militaire avancée, qui avait été jusqu'à l'objet d'un engagement illimité, a maintenant atteint des limites politiques et fiscales distinctes. La fin de la Guerre froide offre l'occasion de procéder à la fois à la conversion de la production de défenses et au démantèlement partiel des bases de la défense nationale. Quoique les Français continuent à avoir une apparence aux accords de partage des coûts et de co-production. Avant le conflit du Golfe et pendant le renforcement des forces militaires en

1. For Your Eyes Only, 24 décembre 1990.  
2. Defence Marketing International, 16 novembre 1990.  
3. The Independent, «US Defence Industry on a High», 26 janvier 1991.

Ce texte, révisé et adopté le 26 novembre à Paris par les Cinq, c'est, au moment de la rédaction du présent article, le projet le plus définitif destiné à couvrir tous les aspects d'un processus de paix au Cambodge. Il formule des propositions pour établir l'Autorité provisoire des Nations Unies au Cambodge (APRONUC), précise les conditions du cessez-le-feu, celles des élections et du rapatriement des réfugiés, et il énonce les principes d'une nouvelle constitution du Cambodge.

Enfin, les 21 et 22 décembre 1990, les deux co-présidents de la Conférence de Paris sur le Cambodge (la France et l'Indonésie) convoquent les membres du CNS et un représentant des Nations Unies pour faire adopter le document du 26 novembre. Les Cambodgiens des trois mouvements de résistance ont accueilli «la plupart des points fondamentaux», mais le gouvernement de Phnom Penh a émis de fortes réserves à propos de trois questions : celle de la démobilisation, celle du désarmement des forces en présence, et celle de «la mention du génocide» perçue par les Khmers rouges lorsqu'ils étaient au pouvoir (1975-1978).

SANS ÊTRE EN MESURE DE PROCÉDER ICI À UNE ANALYSE ARTICLE PAR ARTICLE et annexe par annexe du Plan de paix des Nations Unies, il importe, en simplifiant à l'extrême, d'en extraire quelques éléments clés. Le Plan offre en effet une synthèse fragile visant, par des formulations diplomatiques très élaborées, une illusoire réconciliation de toutes les parties au Cambodge. Il constitue une proposition acceptable dans la mesure où la communauté internationale est prête à l'appuyer par des moyens considérables.

Tout l'édifice repose sur la nécessité pour les Cambodgiens de s'entendre entre eux en premier lieu. Cette entente est fondamentale ; elle est indispensable pour que le CNS devienne, sous l'autorité d'un président impartial, un organisme efficace. L'autorité du CNS est aussi nécessaire dans la mesure où cet organisme est appelé à travailler en étroite collaboration avec l'APRONUC et où il doit, de ce fait, en garantir le bon fonctionnement et la crédibilité. Enfin, la permanence de la mésentente au sein du CNS et l'incapacité de s'entendre sur la présidence privent le Cambodge de sa représentation aux Nations Unies où son siège est désormais vacant.

Dans l'état actuel des négociations, toutes les parties ont agi en tenant pour acquis ou en faisant semblant de croire que le postulat de l'harmonie retrouvée entre Cambodgiens était envisageable. Or, depuis la réunion de Paris des 21 et 22 décembre 1990, les représentants de Phnom Penh ont réitéré leur scepticisme. Les points d'achoppement sont très circonscrits, mais ils touchent des questions de fond. Le gouvernement Hun Sen soutient que figure quel que part dans le document «la mention du génocide». Cette exigence va bien au-delà d'une question de principe, car, si elle était admise, on pourrait légitimement se poser la question suivante : comment tolérer que les auteurs d'un génocide participent au pouvoir et se présentent à des élections, de surcroît sous les auspices des Nations Unies ? Sur ce point, Hun Sen a été précis en déclarant dernièrement : «En dépit de la participation des Khmers rouges au Conseil national suprême (CNS), notre position officielle demeure la même : quel que soit le cas, quelles que soient les solutions, il importe fondamentalement de garantir que le régime génocidaire de Pol Pot ne revendra jamais au pouvoir.»

ES AUTRES POINTS FONDAMENTAUX TOUCHENT AUX QUESTIONS difficiles de la démobilisation et du désarmement des forces en présence. Le document des Nations Unies est assez précis et il établit des opérations par étapes distinctes, ce qui permet des ajustements possibles à chacune d'entre elles. Il reste que la fin des hostilités relève de la bonne volonté des parties. Le document postule, dès la signature du règlement final, un accord de toutes les parties pour fournir à l'APRONUC toutes les informations sur les dispositifs militaires, bases, caches d'armes, etc... Les parties s'engagent également à ce que toutes leurs forces se présentent avec leurs armes, munitions et équipements dans des aires de regroupement d'où elles seront escortées vers des cantonnements avant d'être démobilisées et retournées à la vie civile. Sur cette question, l'opposition de Hun Sen, on l'aura compris, est évidente, et il précisait sa pensée en déclarant : «... Il est facile de dissoudre les troupes gouvernementales cambodgiennes... mais peut-on garantir hors de tout doute qu'il en sera de même des troupes de Pol Pot et de leurs armements, et de celles de ses alliés cachées dans la chaîne des Dangrek ou dans la jungle ? Personne ne peut répondre à cette question. Par conséquent, n'essayez pas de dissoudre les troupes gouvernementales, car cela favoriserait le retour du régime de Pol Pot.»

Il resterait naïf de ne pas accorder une crédibilité certaine aux appréhensions du régime de Phnom Penh. Le document des Nations Unies est certes per- fectible mais ses auteurs pêchent encore par un excès de confiance dans la capacité des factions de trouver un terrain d'entente. Malheureusement, les factions demeurent figées dans leurs dissensions, leurs antagonismes his- toriques et leur haine implacable, et rien ne laisse entrevoir une modification de leurs attitudes respectives.

Les Khmers rouges demeurent une force incontournable ; prudents, avisés, ils jouent actuellement la carte des Nations Unies et s'emploient à se donner une respectabilité nouvelle. Ainsi, ils ne veulent plus qu'on les appelle les Khmers rouges mais plutôt les «démocrates kampuchéens» : ils se préparent à des élections démocratiques et envisagent de changer de nom pour devenir un parti nationaliste. Ils ont une constitution, un système judiciaire et une police pour administrer les territoires qu'ils contrôlent. Leur stratégie vise les masses paysannes et l'exploitation des sentiments anti-vietnamiens. Ils testent actuellement le «jeu» de la démocratie en l'appli- quant dans certains de leurs camps en Thaïlande. Ils représentent, on ne peut le nier, une force réelle que seul le pouvoir de Phnom Penh est actuelle- ment en mesure de contester. On peut comprendre dès lors les craintes de Hun Sen de voir son régime affaibli ou démantelé, comme le craignent certains observateurs, par la présence d'une Autorité provisoire des Nations Unies.

OUT SE PASSE DESORMAIS COMME SI LA SOLUTION AUX PRO- blèmes internes du Cambodge ne dépendait plus des éléments extérieurs. L'unanimité des Cinq, et la caution des États ré- gionaux devraient le confirmer. Or, rien n'est encore tout à fait assuré puisque le gouvernement chinois, malgré un certain rapprochement avec le Vietnam et des déclarations apaisantes sur la fin de son aide militaire aux Khmers rouges, n'a pas encore convenu les observateurs du caractère définitif de ses intentions. Hanoi demeure par ailleurs le soutien le plus fidèle et le plus sûr de Phnom Penh. À l'occasion des combats sporadiques qui se poursuivent, quelques unités vietnamiennes reviennent de temps en temps donner un coup de main aux troupes gouvernementales. Quant à la Thaïlande, tout en se conformant aux politiques de l'ASEAN, elle joue un jeu patent et subtil qui lui permet de contrôler sur son territoire non seulement l'acheminement des armes chi- noises mais aussi la présence des Khmers rouges dans les camps de réfugiés et celle des membres des deux autres factions.

Attendre passivement que les factions cambodgiennes parviennent à un compromis n'est une solution que dans la mesure où elle traduit l'indif- férence ou le calcul stratégique pour affaiblir encore plus ce petit pays qui figure parmi les dix États les plus démunis du globe. La Chine et le Vietnam sont encore des acteurs fondamentaux. Leurs bonnes intentions demeurent toujours quelque peu illusoirs, car aucun de ces deux pays n'a entrepris une *perestroïka* ni des changements comparables à ceux intervenus en Union soviétique ou dans les pays d'Europe de l'Est. L'appréhension de leur rivalité est aussi grande que la désillusion de leur régime politique, et l'on a peine à imaginer que les dirigeants actuels, pétrifiés dans des comportements traditionnels, puissent comme par enchantement remettre en question leur détermination à affronter par Cambodgiens interposés.

Il reste que la communauté internationale pourrait faire pression encore sur Hanoi et Beijing afin de leur arracher un engagement de non-intervention qui soit *préalable* à la signature d'un accord entre Cambodgiens. Dans l'in- tervalle, il convient d'entreprendre la reconstruction du Cambodge. Une aide importante demeure le seul moyen pour réduire les inégalités sociales que les Khmers rouges exploitent et continueront d'exploiter. Aider la popu- lation cambodgienne à retrouver une infrastructure minimale de survie n'équivaut pas nécessairement à la reconnaissance diplomatique du gou- vernement de Phnom Penh. Cette aide peut être conçue comme un moyen d'assurer le bien-fondé du Plan de paix des Nations Unies et de rassurer les dirigeants de Phnom Penh.

Enfin, si l'indifférence de la communauté internationale ne l'emporte pas et si la crise du Moyen-Orient ne relègue pas le Cambodge aux oubliettes, le conviendrait d'imaginer une sorte de plan Marshall qui serait mis en place par les États du Bassin du Pacifique. Dans les efforts actuels déployés pour structurer, institutionnaliser et stabiliser mieux encore une région du monde en plein essor économique, une action concertée à l'endroit du Cambodge représenterait une première contribution à la sécurité régionale.

# CAMBODGE :

## UNE PAIX ENCORE INACCESSIBLE

*Le rythme du processus de paix au Cambodge décourage l'optimisme et contredit les scénarios les plus documentés.*

PAR GÉRARD HERVOUET

ES ACTEURS CAMBODGIENS SEMBLENT RÉPÉTER INASSAUBLEMENT

ment les mêmes scènes d'une tragédie où s'entrecroisent les souvenirs de l'insupportable épreuve imposée par les Khmers rouges et les espoirs de jours meilleurs. Le conflit n'en finit plus de s'achever, et les perspectives d'un règlement s'éloignent aussitôt qu'on les sent à la portée des bonnes volontés.

Fatalté ? Peut-être. Résignation, certainement pas ! À en juger par la multiplication des initiatives et des actions, la gestionnaire diplomatique à propos du Cambodge est devenue si complexe que l'observateur même assez averti risque à tout moment l'égarement sur une fausse piste.

Sans reprendre la chronologie au lendemain du demi-échec de la Conférence de Paris sur le Cambodge en août 1989, c'est à partir du 5 juin 1990 que l'on procédera à une brève récapitulation des événements. À cette date, le premier ministre du Cambodge Hun Sen et le prince Sihanouk, réunis à Tokyo, illustrèrent leur capacité de souffler en même temps le chaud et le froid sur les espoirs que pouvaient faire naître l'entente qu'ils venaient de signer. Les deux acteurs cambodgiens avaient en effet conclu un cessez-le-feu, ou plus exactement un accord sur la nécessité «d'une retenue volontaire de l'usage de la force par toutes les parties cambodgiennes». L'arrêt des hostilités devait intervenir avant la fin-juillet. Le communiqué précisait aussi que le Conseil national suprême (CNS) — organisme dépositaire de la souveraineté du Cambodge pendant la période de transition — comporterait «un nombre égal de personnalités des deux parties». Sihanouk envisageait six membres pour le gouvernement actuel du Cambodge, trois membres pour la faction de Son Sann et les trois autres pour son propre parti, le Front uni national pour un Cambodge indépendant, neutre, pacifique et coopératif (FUNKINPEC). L'enthousiasme fut de courte durée, puisque les Khmers rouges s'étaient tenus à l'écart de cette entente. Peu de temps après, Sihanouk, comme Hun Sen, convinrent que la guerre allait continuer.

À l'issue de la cinquante-neufième rencontre des cinq membres permanents du Conseil de sécurité (C-59) les 16 et 17 juillet à Paris, le gouvernement américain annonça, le lendemain, qu'il ne reconnaissait désormais plus le gouvernement de coalition du Cambodge formé en 1982 par le prince Sihanouk. Le geste constituait un revirement considérable de la politique américaine puisque, dans le même temps, les États-Unis proposaient l'ouverture d'un dialogue avec le Vietnam et l'envoi d'une aide humanitaire au Cambodge.

Malgré la surprise des pays de l'ASEAN (Association des États de l'Asie du Sud-Est), principaux instigateurs de cette coalition, la communauté internationale appuya le geste américain, consciente comme lui que l'attitude antérieure du gouvernement de Washington favorisait les Khmers rouges, soit la faction la plus forte de la coalition, et qu'elle risquait de faciliter son retour au pouvoir à Phnom Penh.

Après de multiples tractations et consultations, les Cinq adoptèrent le 28 août 1990, un document substantiel intitulé : «Une formule-cadre en vue d'un règlement politique complet du conflit cambodgien». Le document définissait les modalités d'établissement du CNS, précisait les dispositions militaires de la période transitoire, avant la tenue d'élections libres ; les Cinq s'engageaient aussi à garantir la sécurité d'un Cambodge neutre. À cette occasion, l'Union soviétique et la Chine convinrent de cesser de fournir des armements, la première au gouvernement de Phnom Penh, et la seconde, aux Khmers rouges.

John G. Parnham

OUTRES LES PARTIES PRÉSENTES À DJAKARTA EN CE DÉBUT DE septembre furent unanimes à convenir qu'un véritable espoir de paix était désormais à portée de la main. Même le leader des Khmers rouges affirma qu'«un grand pas vers la restauration de la paix avait été effectué» ; il ajoutait que les Khmers rouges acceptaient «sans réserve» le Plan de paix adopté. Hun Sen pour sa part déclara aussi que «le document signé était le meilleur qu'on ait jamais produit».

Une fois encore, l'excès d'enthousiasme fut cependant très vite tempéré par l'incapacité des douze membres à s'entendre sur le choix d'un président pour le CNS. Avec six membres provenant de la résistance et six autres du gouvernement de Phnom Penh, la présidence devenait un enjeu de taille. Alors qu'on semblait s'être mis d'accord sur la possibilité que Sihanouk devienne le treizième membre comme président, Hun Sen proposa que le prince assume la présidence à condition qu'il remplace un des six membres de la résistance ou encore à condition que l'on ajoute un représentant de Phnom Penh, soit un quatorzième membre. Dans les deux cas, l'équilibre demeurait soit à six de part et d'autre, soit à sept. Bien entendu, la querelle des nombres soulignait l'acuité des méfiances réciproques dans l'appréhension d'une période de transition.

La question de la présidence fit échouer la première rencontre du CNS, convoquée à Bangkok, du 17 au 19 septembre. Le lendemain, à New York, le Conseil de sécurité acceptait les grandes lignes d'un règlement-cadre défini par les Cinq à la fin du mois d'août et adoptait la résolution 668. Celle-ci exhortait notamment les factions à s'entendre plus vite sur la nomination du président. À l'occasion d'une septième réunion des Cinq les 15 et 16 octobre, puis d'une rencontre les 9 et 10 novembre à Djakarta (à laquelle n'assistaient pas les factions cambodgiennes), on mit la dernière main au document des Nations Unies. Dans l'interim, l'Assemblée générale avait approuvé le Plan de paix, le 15 octobre.

Quelques jours plus tard, à Djakarta, les 9 et 10 septembre 1990, les factions cambodgiennes acceptèrent dans son intégralité le document des Nations Unies préparé par les Cinq. Plus important encore, elles parurent accepter toute la structure du Conseil national suprême et ses fonctions. À ce propos, elles convinrent des cinq points suivants qui, on le crut un moment, exprimaient à l'époque leur volonté de se situer désormais au delà des antagonismes historiques :

- le CNS représente le seul organe légitime et la seule autorité consacrant, pendant toute la période de transition, l'indépendance, la souveraineté et l'unité du Cambodge ;
- le CNS est formé de personnes ayant de l'autorité au sein du peuple cambodgien et représentant tous les courants d'opinion ;
- le CNS représentera le Cambodge à l'extérieur et il occupera le siège de ce dernier aux Nations Unies, dans les organismes spécialisés de l'ONU, et dans d'autres institutions et conférences internationales ;
- au moment de la signature de l'accord complet, le CNS déléguera à l'ONU tous les pouvoirs nécessaires pour en garantir l'application intégrale ;
- tous les aspects pertinents de l'administration du Cambodge ;
- toutes les décisions du CNS seront prises par consensus entre ses membres aux aspects pertinents de l'administration du Cambodge ;

■ tous les aspects pertinents de l'administration du Cambodge ;

■ tous les aspects pertinents de l'administration du Cambodge ;

Par contre, s'ils ne s'y mettent pas, personne d'autre ne le fait, et toutes sortes de problèmes restent sans solution.

**M. Wood :** Vous avez parlé plusieurs fois de pays «raisonnables», et je désire souligner que certains d'entre nous en déduisons qu'il y a des pays dotés de ressources humaines suffisantes pour pouvoir acquérir une certaine reconnaissance

## «La plupart des pays africains

et asiatiques sont viscéralement attachés à leurs frontières, fusseent-elles arbitraires, fusseent-elles tracées par d'abominables puissances coloniales.»

et exercer une certaine influence. Ils ont assez d'intérêts sur la scène internationale pour que leur avenir même soit en jeu, mais ils ne peuvent évidemment pas se faire d'illusions quant à leur capacité de se charger de tout unilatéralement. Ils sont donc obligés d'envisager une coopération multilatérale pour protéger ces intérêts.

**M. Schoellé :** On ne peut pas dire que toutes les puissances moyennes ont toujours satisfait aux critères de la définition de ce qu'est un pays «raisonnable». En effet, un aspect très important de cette définition et du comportement d'un pays raisonnable correspond à sa capacité de faire laire ses intérêts dans le contexte de cette vaste coopération multilatérale. Certaines puissances moyennes, les plus grandes, ont justement été capables de jouer un rôle de meneur dans leurs régions respectives. Il faut non seulement envisager la scène en fonction d'une population abstraite, mais aussi en fonction du comportement.

**M. Frank :** C'est ce que je dirais pour appuyer la proposition du Japon, qui préconise la participation permanente de ces pays au Conseil, sans droit de veto, toutefois. Il ne faut pas oublier, cependant, que depuis maintenant vingt-cinq ans environ, ni la France, ni l'Angleterre n'a exercé son droit de veto. Il y a très longtemps que la France, la Chine ou l'Angleterre a opposé seule son veto à une résolution. Sans affirmer pour autant qu'elles n'y auront jamais recours, pré-telle démarche, et elles font vraiment l'impossible pour l'éviter. C'est là un autre exemple remarquablement officiel de la Charte. Voilà donc les facteurs de légitimité qu'il faut considérer si l'on veut élargir la structure officielle du Conseil. Ce n'est évidemment pas du tout ce que Brian avait en tête : selon lui, un système de consultation dynamique aurait représenté la meilleure façon d'y parvenir.

En revanche, la structure actuelle permet aux puissances moyennes de devenir des *primus inter*

*pares*, par l'intermédiaire des blocs. Le système des blocs, en grande partie, n'a pas grand bon sens actuellement. Il n'est pas logique que la Tchécoslovaquie forme un bloc avec l'Albanie, la Bulgarie et l'Union soviétique. Elle a, de fait, tenté de s'en retirer. Elle voulait se joindre aux pays de l'Europe de l'Ouest et à d'autres, mais on lui a fait comprendre qu'elle n'était pas la bien-venue, que rester dans son propre bloc était plus

Après tout, il y a dans ces pays des institutions le Canada pourrait améliorer énormément. L'Organisation est incroyablement aride et dénuée d'intérêt. Voilà une situation que des pays comme le Canada pourraient améliorer énormément.

Après tout, il y a dans ces pays des institutions le Canada pourrait améliorer énormément.

**M. Frank :** L'un des problèmes qui surgit dans une structure comme celle de l'ONU tient au fait que le syndrome Thatcher s'y manifeste : plus elle connaît de succès, plus elle prend les caractéristiques d'une machine qui ne rend plus compte directement au public. Privez le public de ce contact, et son esprit imaginaire ne s'en trouve pas particulièrement éveillé. L'ONU doit trouver un moyen de prendre racine dans la politique des parties qui la constituent. Dans un des mes écrits récents, j'ai laissé flotter mon imagination et j'ai proposé la création d'une deuxième chambre de membres élus directement par l'Assemblée générale, comme le Parlement de Strasbourg. Que des personnes cherchent à se faire élire à l'Assemblée générale, voilà qui retientrait certainement l'attention des journaux torontois !

Le système actuel offre un certain cadre de consultation qui ne fonctionne pas très bien, mais qui peut au moins être amélioré. Par exemple, si le Nigéria siègeait toujours au Conseil, n'aurait pas besoin de tenir des consultations pour essayer de réaliser un consensus africain. A l'heure actuelle, qu'il fasse partie du Conseil ou non, le Nigéria jouit d'une certaine importance qu'il s'ajoute à son pouvoir au sein du bloc africain. Ce qui est étrange, c'est qu'il est plus puissant qu'il n'y paraît quand il ne siège pas au Conseil. Il a moins de pouvoir qu'on ne le croit

## «D'une manière ou d'une autre, l'ONU doit prendre racine dans le contexte politique de chacun des pays qui la constituent.»

lesquelles il est si difficile d'insuffler de la vie dans cette organisation. On ne peut plus parler simplement des «peuples», car à vrai dire, les forces qui vont façonner l'avenir échappent à la maîtrise des gouvernements. Si elles sont effectivement gouvernées, c'est par l'industrie privée, les médias et les services de communications. C'est une question extrêmement complexe et facile à soulever, mais incroyablement difficile à résoudre.

**M. Frank :** J'allais justement dire en réponse à Brian qu'un état d'ame est le seul Etat qui valie

nales, pour bon nombre d'entre elles, il faut beaucoup d'imagination pour les qualifier de

régionalistes. Toute organisation qui s'intitule ainsi et qui comprend la Turquie et la Colombie-

Britannique est manifestement une drôle d'organisation régionale, et on peut en dire autant de

laide, ou la Malaisie et l'Égypte. La notion d'organisation régionale s'est diluée. En fait,

communauté d'intérêts. En outre, l'OUA ne s'est pas révélée inutile.

Le conflit entre le Tchad et la Libye, dont je m'occupe actuellement, a été soumis à la Cour

internationale grâce aux pressions exercées par l'OUA. Ni les Libyens ni les Tchadiens n'est-

maint que c'était la façon idéale de trouver une solution mutuellement satisfaisante à leur dif-

férend. C'est finalement la proposition de l'OUA qui a prévalu, puisque les parties ont accepté de

révoquer pendant une année, puis, en cas d'échec, de s'en remettre au jugement de la Cour inter-

naionale. Il y a donc dans l'OUA une sorte de force, ce qui n'est pas négligeable.

**Mme Word :** J'aimerais poser une question à

Monseigneur l'Ambassadeur Moussa,

encore que je redoute une

réponse assez pessimiste. Il

est beaucoup question du

fait qu'une fois la

guerre du Golfe ter-

minée, il faudra plant-

fier non seulement des

opérations de maintien de

la paix, mais peut-être aussi une

limitation des armements. À votre

avis, quelles sont les chances de voir ce

genre de plan réussir ?

**M. Moussa :** Eh bien, merci de me poser une ques-

tion si épineuse. Tout accord relatif à la limitation

des armements, au désarmement ou à la non-

prolifération des armes nucléaires doit engager

tous les pays, et notamment Israël. Nous ne

l'Israël, en raison du conflit qui l'oppose au

Koweït, soit soumis à certaines obligations

comme de limiter ou d'éliminer ses armements

chimiques, biologiques ou autres ou encore qu'il

doive se soumettre à une supervision à ce propos,

alors qu'Israël ne subit aucune forme de con-

trôle. Toute espèce d'armements de destruction

massive devrait être bannie de la région. Tout

système de non-prolifération doit donc viser les

armes nucléaires, de manière qu'Israël soit tenu

de se conformer au Traité sur la non-prolifération

des armes nucléaires.

**Mme Word :** Israël est tout prêt à accepter

cela, mais quelle est, selon vous, la tendance de

l'opinion dans les États arabes ?

**M. Moussa :** Peut-être l'isoz-vous entre les lignes

que certains pays arabes, de petits pays, qui ne

se soucient pas vraiment de ce que possède pré-

sentement Israël, sont préoccupés par le cas

de l'Irak. Cependant, si vous poursuivez votre

sans la participation d'Israël, sans un contrôle

des armements que ce pays possède. Pour qu'un

système soit viable au Moyen-Orient, aucune

de ses principales puissances, arabe, perse, turque

ou juive, ne peut en être exclue.

**Mme Word :** Ce que vous dites, en fait, c'est

qu'une fois la crise du Golfe terminée, il ne

pourra y avoir d'accord de limitation des arme-

ments dans la région si l'on ne convoque pas une

conférence internationale pour régler les autres

problèmes.

**M. Moussa :** En effet, Israël refusera certainement

et les États arabes probablement de s'asseoir

autour d'une même table pour parler de limitation

des armements, si le problème palestinien n'est

pas réglé, que dis-je, si l'on a pas au moins

engagé un processus de règlement de la question

palestinienne. Une fois un processus de paix

viable amorcé, on pourra commencer à discuter

des systèmes d'armements et d'autres sujets.

**M. Urquhart :** Ce qui est difficile à l'ONU,

c'est d'arriver à un débat sérieux sur des ques-

tions essentielles, alors que ce serait fort utile.

Supposons, un instant, que nous sommes ?

un tournant historique, ce que tout

le monde s'accorde à nous

dire, alors il est extrême-

ment important, à mon

sens, de discuter

seraient importants, mais je

M. Mousa : Les systèmes régionaux qui sont nés vers la fin de la Deuxième Guerre mondiale sont voués à une sorte de hasco, tellement ils fonctionnent mal. La Ligue arabe, par exemple, n'a pas rempli les fonctions pour lesquelles elle a été conçue. Pour ce qui est de la paix et de la sécurité régionales, elle n'a joué aucun rôle. Peut-être, cependant, à propos du Liban, elle a joué un rôle, et si longtemps après le début de la guerre civile. Quel est le rôle de l'Organisation des Etats américains (OEA), par rapport aux grands problèmes que nous avons connus de la Grande au Panama en passant par Cuba, sans parler des problèmes économiques et sociaux accusés de l'Amérique latine ? Quant à l'Organisation de l'Unité africaine, l'OUA, elle pâtit des mêmes défauts.

Il y a du nouveau avec la CSCE (la Conférence sur la sécurité et la coopération en Europe). Mais le changement se produit en Europe, où la coordination est quasiment au point, où nous avons beaucoup de petits problèmes que nous estimons énormes dans le tiers-monde et sont relégués au second plan. Donc, la CSCE serait une nouvelle forme d'organisation régionale pour ce qui trait à la sécurité, à l'économie et au domaine social. Ce serait, en fait, une organisation plus souple. En fait, on pourrait même ne pas parler de tout d'organisation, puisque il s'agit d'une conférence régit par le consensus de ses participants.

M. Urquhart : Pour ce qui est de la CSCE, je ne sais pas. Cependant, cela paraît tellement plausible. La CSCE semble tenir plus de l'état d'esprit d'une organisation, et d'un état d'esprit qui est tombé à point nommé, étant donné les événements historiques survenus en Europe. Si nous devons essayer de procéder de manière similaire au Moyen-Orient, je ne peux guère imaginer comment cela se passerait, car il n'existe pas, dans cette région, d'état d'esprit commun.

M. Wood : Nous n'oublions pas que la CSCE a commencé ses travaux au coeur de rapports conflictuels qu'elle était censée apaiser. Son ordre du jour a été discuté, un camp insistait pour que les droits de la personne y occupent une part importante ; l'autre, pour que l'on traite surtout de la stabilité. Quant aux questions de sécurité à proprement parler, et aux mesures propres à accroître la confiance et la sécurité, il n'en a été question que plus tardivement. Par conséquent, ce n'est pas seulement quand la situation s'améliore que l'on peut engager des discussions.

as joué par une victoire de la coalition, l'aver-  
nisement découragera quiconque serait tenté  
d'imiter Saddam Hussein. La question sera alors  
de savoir s'il est possible d'institutionnaliser, par  
le biais de l'ONU, la réaction mondiale.  
Je n'exclus pas la possibilité de reformer plus  
ou moins la structure du Conseil de sécurité.  
Même au cœur de la Guerre froide, nous avons  
pu modifier la Charte pour élargir la composition  
du Conseil et lui apporter quelques transforma-  
tions. Il n'est pas totalement irréalisable de réfléchir  
à la proposition japonaise, qui est d'ajouter cinq  
membres permanents qui n'auraient pas de droit  
de veto. Cependant, il faudrait surtout songer à ce  
qui renforcerait la légitimité de ce Conseil.

« Le conflit Irak-Koweït est d'une clarté singulière, mais on ne peut pas en dire autant de l'attaque irakienne contre l'Iran, à propos de laquelle le Conseil de sécurité n'a absolument rien fait. »

pose dans l'article 99, c'est que si vous l'utilisez  
tation au lieu de l'ambassadeur, M. Hammarskjöld,  
qu'on estimait plus dynamique que les autres, ne  
l'a utilisée que dans le cas du Congo en 1960. Il ne  
l'a invoqué qu'après avoir invité tous les mem-  
bres du Conseil à un déjeuner au cours duquel  
il leur a dit, au moment du potage : Messieurs,  
voici une situation terrible. Si j'invoque l'arti-  
cle 99, êtes-vous prêts à agir ? Et tout ont ac-  
quiescé, y compris l'URSS, soit dit en passant.  
M. Waldheim y a recouru à propos des otages  
américains en Iran, sans le moindre succès. Le  
vrai problème en ce qui concerne l'article 99, ce  
n'est pas tant l'existence d'une menace contre  
la paix et la sécurité internationales que d'amener  
le Conseil de sécurité à intervenir.

Le Secrétaire général peut être très influent  
(pourvu qu'il ait une stature internationale)  
dans des situations inattendues qui nécessitent  
de formuler un avertissement. Tout le monde con-  
naissait le conflit entre l'Irak et le Koweït, car  
le premier a failli envahir le second en 1971  
(problème n'est donc pas nouveau). Par con-  
séquent, si le Secrétaire général avait invoqué  
l'article 99, je me demande ce qui se serait passé  
(pas grand-chose, à mon avis). Cela arrangerait  
entièrement la situation, et tout le monde a eu tort

pose dans l'article 99, c'est que si vous l'utilisez

membres permanents ne cautionneraient pas une opération contraire à leurs intérêts, je doute aussi que l'Inde, ou plutôt, je suis sûr que l'Inde n'aimerait pas mobiliser des troupes qu'elle ne contrôlerait pas et qui seraient utilisées, comme l'a dit M. Mousa, comme un instrument de la politique étrangère des Etats-Unis.

Dans la crise du Golfe, les Etats-Unis ont pu utiliser le Conseil de sécurité parce que l'agression était tout à fait flagrante. De toute évidence, c'est un cas d'agression d'un pays par un autre. La communauté internationale a unanimement estimé que cet acte était absolument

repréhensible et qu'il fallait donc y remédier. Je dois féliciter les Etats-Unis pour la manière professionnelle dont ils ont mobilisé l'appui international (avec beaucoup de réticence dans le cas de certains pays). Mais je me demande si les Etats-Unis pourraient utiliser le Conseil de sécurité comme instrument de leur politique étrangère. L'intention est tout à fait claire.

M. Urquhart : Je suis entièrement d'accord : l'emploi du mot «renaissance» est fort prématuré. En outre, je me méfie beaucoup de l'usage, actuellement très à la mode, de l'expression

## « Le Conseil de sécurité n'a rien de magique, c'est tout simplement un endroit où se joue une espèce de politique systémique. »

pakistanaise de 1965, la crise des missiles à Cuba, et même la guerre civile au Liban : à toutes ces occasions, le Conseil n'a pas voulu prendre de mesure préventive. Il ne voulait pas de problèmes. Le BRCI (Bureau de recherches et de collecte des informations) (créé après mon départ, et auquel je me suis toujours opposé) est un

de maintien de la paix ne serait plus seulement un groupe de soldats aimables et coiffés de casques bleus qui se comportent extraordinairement bien dans des situations difficiles. Si on leur marchait sur les pieds, on risquerait gros. Tant que les gouvernements ne seront pas prêts à étudier ce genre de questions, il est inutile

## « Le Conseil de sécurité est en train de devenir le bras politique de la politique étrangère des Etats-Unis, tout comme le FMI et la Banque mondiale »

très gros organisme bureaucratique qui n'aborde pas le vrai problème. En ce qui concerne la transformation du Conseil de sécurité en un système préventif, le vrai problème, c'est l'attitude des gouvernements. Pour diverses raisons, la plupart d'entre eux ne veulent pas agir avant que les événements se produisent.

Il est très facile pour les Etats-Unis de dire que nous sommes en train de préparer un nouvel ordre mondial ; mais, comme par hasard, cet ordre-là leur convient très bien. Que se passerait-il si un événement survenait ailleurs qui ne les arrangeait pas tant que cela ?

M. Wood : Les avocats du diable ont dit qu'il y a plus de hiérarchie que jamais, et que tous les membres permanents ne sont pas égaux ; qu'en fait, il y a un super membre permanent, et que tous les autres se rangent ensuite dans diverses catégories. Mais je n'ai entendu personne dire qu'il est temps de rouvrir la Charte pour essayer de définir une structure moins hiérarchique.

M. Mousa : Cela se produirait automatiquement si le débat était ouvert et si nous débattions sincèrement de la question. Alors, nous y parviendrions. Mais nous ne devons pas oublier que bien des pays, et surtout les petits pays, nous les avons du tiers-monde, sont opposés à ce qu'on ouvre de nouveau la Charte pour l'amender : ils craignent l'élimination de certains principes, de certaines garanties qu'elle comporte : ils redoutent que nous ne soyons plus capables de parvenir à un consensus sur ces principes. Par conséquent, la réouverture de la Charte est une opération très grave et très dangereuse.

Pour ce qui est de l'action préventive, que prévoit l'article 99 (qui donne au Secrétaire général le droit de convoquer une réunion du Conseil chaque fois qu'il considère que la paix et la sécurité internationales sont menacées) ? Si le Secrétaire général avait obtenu des informations, des informations fondées, de la part des Etats-Unis, de l'URSS, de la France ou de toute autre source, selon lesquelles des services secrets avaient établi que les forces irakiennes se déplaçaient de façon à attaquer le Koweït, le Secrétaire général serait-il intervenu à ce point, en invoquant l'article 99 ?

L'un des problèmes du Conseil est que les différents volets de son fonctionnement ont toujours été séparés jusqu'à présent. Il y a un volet diplomatique, puis ce qu'on appelle des missions de maintien, puis ce qu'on appelle leurs bons offices d'autres personnes d'offrir leurs bons offices dans divers conflits ; ensuite, il y a le maintien de la paix et enfin, l'action collective, que l'on a toujours bien séparés, surtout en ce qui concerne le maintien de la paix et l'action collective, et ce, pour des raisons politiques. Maintenant, il n'y a aucune raison qui tienne.

Je pense qu'un système consisterait à combiner ces quatre activités principales de façon qu'elles soient complémentaires. Par exemple, si un gouvernement empêche sur une opération de maintien de la paix, comme c'était le cas pour les forces de l'ONU au Sud-Liban en 1982, cela devrait déclencher automatiquement une action collective de la part du Conseil de sécurité. Alors, une force

«nouvel ordre mondial». Je crois que tout, ou presque, reste à faire avant que nous puissions donner un sens à ces deux termes.

Koweït est d'une clarté singulière. Sauf l'attaque de l'Irak contre l'Iran, face à laquelle le Conseil de sécurité, soit dit en passant, a choisi de ne rien faire, dans l'un de ses moments les moins glorieux.

Les pré-allocations et les actions préventives ne posent pas réellement un problème de bureau-cratie ou d'organisation. J'ai passé quelque quarante années à l'ONU avec divers secrétaires généraux qui essayaient d'attirer l'attention du Conseil sur des événements qui, manifestement, se préparaient. Par exemple, la guerre indo-

soûtable) pour l'utilisation d'un mécanisme de sécurité collective consistant à constituer progressivement une force préventive qui décongestionnerait quiconque de faire le genre de mauvais calcul que Saddam Hussein a fait. Ce serait une

M. Wood : Il est très intéressant de constater que, dans notre pays, une grande partie de la population confond l'évolution du maintien de la paix et les fonctions de sécurité de l'ONU. Quand on a effective- ment mis en oeuvre la sécurité collective telle qu'elle est définie dans la Charte, beaucoup ont été choqués et horrifiés : « nous n'avions jamais imaginé que cela se passerait ainsi ».

M. Gharekhan : Je doute que les pays non alignés veuillent conclure un accord quelconque avec le Conseil de sécurité pour lui fournir des troupes qui seraient utilisées pour défendre les intérêts des puissances détentrices du droit de veto. À cause de ce droit, les cinq

## AU COEUR DE LA CHARTE DE L'ONU

le chapitre VII, intitulé Action en cas de menace contre la paix, de l'acte d'agression, porte sur la «sécurité collective» et sur le rôle du Conseil de sécurité international dans les cas où le Conseil de sécurité constatait l'existence d'une menace contre la paix.

et d'entreprendre, au moyen de forces aériennes, navales ou terrestres, toute action qu'il juge nécessaire au maintien ou au rétablissement de la paix et de la sécurité internationales. Cette action peut comprendre des démonstrations, des mesures de blocus et d'autres opérations exécutées par des forces aériennes, navales ou terrestres, restes de membres des Nations Unies.

les articles 43 à 47 prévoient que, sur l'invitation du Conseil de sécurité, les membres des Nations Unies s'engagent à mettre à la disposition du Conseil les armées, l'assistance et les installations nécessaires au rétablissement de la paix et de la sécurité. Les plans pour l'emploi de la force armée sont établis par le Conseil de sécurité sur l'aide du «Comité d'entraînement» décrit à l'article 47. Le Conseil de sécurité n'a jamais mis les articles 43 à 47 en application depuis la fondation des Nations Unies. □

M. Thomas Frank : On a parlé de l'avocat du diable ; moi, je parlerai de coupe à mortie pleine. A mon sens, tout dépend de vos critères de comparaison. Oui, les Etats-Unis ont exercé beaucoup de pressions et ont pesé de tout leur poids politique pour conserver une majorité des voix au Conseil de sécurité et constituer une coalition de forces contre l'Irak.

du 15 janvier).  
Le Conseil de sécurité n'a rien de magique : c'est tout simplement un endroit où se joue une espèce de consensus, la puissance des pays non alignés (notamment les pays non membres du 15 janvier).  
Les armées et de la sécurité n'a pas de rôle à jouer.

# «UN» NOUVEL ORDRE MONDIAL, PLUSIEURS DEFINITIONS

Le sens à donner au «nouvel ordre mondial» et le rôle qu'y jouera l'ONU sont loin de faire l'unanimité.

## TABLE RONDE

### LES MEMBRES DU GROUPE

THOMAS FRANK  
est professeur de droit et directeur du  
Center for International Studies  
Oxford University Press, un livre intitulé  
The Power of Legitimacy Among Nations.

C. R. GHAREKHAN

est représentant permanent de  
l'Inde à l'ONU. Son pays vient  
d'entamer un mandat de deux ans  
au Conseil de sécurité.

AMRE MOUSSA

est représentant permanent de  
l'Égypte à l'ONU.

ENID SCHOETLE

est le directeur du Programme des  
affaires internationales à la  
Ford Foundation (New York).

BRIAN URQUHART

est chercheur invité à la  
Ford Foundation (New York).  
Il a été sous-secrétaire général de l'ONU  
pour les affaires politiques spéciales.

OLIVIA WARD

est journaliste au Toronto Star.  
Elle est spécialiste de l'ONU et des  
questions internationales.

crise du Golfe, mais remonte à bien avant, au moment où les deux superpuissances ont com-  
mencé à collaborer. Vous vous souviendrez d'un  
beaucoup de pays non alignés regardaient d'un

La table ronde a eu lieu le 23 janvier, à New  
York. Elle était présidée par M. Bernard Wood,  
Directeur général de l'Institut canadien pour la  
paix et la sécurité internationale.

M. Bernard Wood : Sans plonger dans les événe-  
ments d'aujourd'hui, je voudrais faire un pas en  
arrière pour examiner l'évolution du rôle du Con-  
seil de sécurité et de l'ONU en matière de paix  
et de sécurité. Dans quelle mesure les activités  
actuelles de l'ONU sont-elles conformes à  
l'esprit de la Charte ? En outre, devons-nous  
envisager de mettre en place l'autre mécanisme  
prévu par la Charte pour appuyer le Conseil ?  
Devons-nous avoir un comité d'état-major en-  
tièrement opérationnel ? Et devons-nous mettre  
sur pied une force permanente de manière qu'en  
cas d'autres crises où l'agression serait aussi  
flagrante que cette fois, nous puissions appliquer  
les dispositions de la Charte une à une, puisque  
toute l'infrastructure serait en place ?

M. Brian Urquhart : On a beau parler énormément  
de la renaissance de l'ONU, en réalité, nombre  
de ses mécanismes sont aux oubliettes depuis  
quarante ans. De plus, on a accordé beaucoup  
aux préparatifs que l'on est censé faire en vue de  
son application qu'à tout autre chapitre. La crise  
actuelle l'a démontré on ne peut plus clairement.  
Une fois que nous en serons sortis, il sera ex-  
cess de se considérer comme un dernier recours  
ou un fillet de sécurité pour essayer de devenir  
un mécanisme systématique de maintien de la  
paix et de la sécurité internationales.

M. C.R. Gharekhan : À mon avis, nous devons  
tous reconnaître que c'est grâce à la convergence  
des intérêts des États-Unis et de ceux des mem-  
bres permanents, surtout des deux plus impor-  
tants d'entre eux, qu'on a pu réactiver le Conseil  
de sécurité. Cette convergence ne date pas de la

Nous devons reconnaître un fait : c'est essen-  
tiellement grâce aux efforts des États-Unis que  
le Conseil a fonctionné comme il l'a fait. Ce sont  
les États-Unis qui ont mobilisé le Conseil et la  
communauté internationale. D'aucuns pensent  
que les Américains sont en train d'acquiescer une  
influence disproportionnée par rapport à leur  
puissance économique. Mais ils sont les seuls  
capables de lancer les opérations que la commu-  
nauté internationale a engagées dans le Golfe.  
Par conséquent, même si l'on envisage de pro-  
céder à des réformes institutionnelles au sein du  
Conseil, je doute que nous puissions vraiment  
remanier la Charte, car toute proposition qui  
équivaldrait à un amendement ouvrirait la boîte  
de Pandore.

M. Amre Moussa : Je vais jouer l'avocat du diable.  
Je crois que la renaissance de l'ONU est une  
fausse renaissance. En effet, ce qui s'est passé  
au Conseil de sécurité au cours des derniers mois  
était le résultat de l'influence croissante des  
États-Unis, qui restent la seule superpuissance,  
comme l'Ambassadeur Gharekhan l'a dit. Si  
tel n'avait pas été le cas, le Conseil aurait été  
paralysé. Deuxièmement, la réactivation du  
Conseil a été et demeure liée à une question :  
celle du Golfe. Quand on passe de la crise du

## SOMMAIRE

### 2 UN NOUVEL ORDRE MONDIAL, PLUSIEURS DÉFINITIONS

TABLE RONDE

Un «nouvel ordre mondial» et le rôle qu'y jouera l'ONU.

### 8 CAMBODGE : UNE PAIX ENCORE INACCESSIBLE

PAR GÉRARD HERVOUEL

De plus en plus, on doute que le drame cambodgien tire à sa fin.

### 10 DE LA DISETTE À L'ABONDANCE

PAR CHRIS SMITH

La guerre du Golfe risque de relancer les ventes d'armes aux pays du tiers-monde.

### 12 LA DERNIÈRE CHANCE DU PÉROU?

PAR SHARON STEVENSON

Le nouveau président du Pérou s'attaque aux flics de la cocaïne, de la corruption et des insurrections.

### 14 CHANGER SON FUSIL D'ÉPAULE

PAR DON MUNTON

L'option canadienne dans l'après-après-guerre.

ET UN RAPPORT SPÉCIAL :

### DE PAARDEBERG AU GOLFE PERSIQUE

L'opinion des Canadiens et Canadiennes sur les guerres livrées par leur pays.

Gérard Hervouel est professeur de sciences politiques à l'Université Laval, à Québec, et directeur d'*Études internationales* ; Chris Smith est chercheur à l'*Institute of Development Studies*, à l'Université du Sussex ; Sharon Stevenson est rédactrice pigiste à Lima (Pérou), et elle fournit souvent des articles au magazine *Time* et au *Miami Herald* ; Don Munton est professeur de sciences politiques à l'Université de la Colombie-Britannique à Vancouver.

NOUVELLES PUBLICATIONS  
DE L'INSTITUT  
PARUES DANS LE  
DERNIER TRIMESTRE

L'ordre mondial : deux  
poids, deux mesures ?  
Paix et Sécurité, 1990-1991.  
1990, par Bernard Wood,  
Directeur général, décembre  
41 pages. Une fois l'an, le  
Directeur général de l'Institut  
examine les tendances et les  
récents développements dans  
le domaine de la paix et de la  
sécurité et leurs incidences sur  
la politique canadienne.

Le Canada et la transfor-  
mation des économies en  
Europe de l'Est. Les défis  
politiques des années 1990.  
par Carl H. McMillan.  
Exposé n° 35, 8 pages.

Surveillance over Canada.  
par George Lindsey et  
Gordon Sharpe. Document  
de travail n° 31, 81 pages.

Indian Naval Expansion.  
par Paul George. Document  
de travail n° 32, 45 pages.

Le Commonwealth.  
Fiche d'information n° 15,  
janvier 1991.

Prêt de remplir la carte-  
commande à l'intérieur du  
magasin pour obtenir plus de  
détails sur ces publications et  
sur les titres énumérés ci-haut.

Autres publications de  
l'Institut : Cahiers • Exposés  
Documents de travail • Fiche  
d'information • Guide annuel  
sur les politiques du Canada  
Revue annuelle du Directeur  
général • Rapport annuel  
de l'Institut.

Prudent vis-à-vis cet état de fait et il  
affirme qu'il est nécessaire pour les  
résultats des quatre dernières années  
et il établit des comparaisons. Il e  
intéressant de noter que beaucoup  
de Canadiens et de Canadiennes (q  
«change leur fusil d'épaule» quant  
l'opinion qu'ils ont de l'OTAN et e  
l'aide aux pays en développement.

Dans un rapport spécial,  
M. Munton fait état de toutes les  
guerre auxquelles le Canada a pa  
ticipé, de Paardeberg en Afrique c  
Sud (guerre des Boers) jusqu'à la  
guerre du golfe Persique. Le pup  
canadien n'a jamais vraiment mor  
tré beaucoup d'enthousiasme pou  
la guerre dans le passé. Et c'est  
encore le cas pour la guerre du  
Golfe qui a profondément secoué  
l'opinion canadienne.

— Hélène Samis

Comment envisager le monde  
une fois que tout se sera «lassé»  
au Moyen-Orient? Et quel rôle  
jouera l'ONU dans tout cela?  
Voilà quelques-unes des questions  
auxquelles tentent de répondre six  
experts qui ont participé à une table  
ronde organisée par l'Institut à New  
York, le 23 janvier dernier.  
Le processus de paix au Can-  
bodge ne fait plus la une des jour-  
neaux depuis quelques mois. C'est  
le creux de la vague. Gérard  
Hervouet affiche un optimisme très

Dans le présent article de Paix et  
son quatrième sondage d'opinion.  
en novembre 1990, les résultats de  
la sécurité internationale a publié,  
L'Institut canadien pour la paix et  
substantielle au Pérou.

Sharon Stevenson trace les grandes  
lignes de la «doctrine» Fujimori et  
explique comment il est encore  
possible pour la collectivité interna-  
tionale d'accorder à temps une aide  
substantielle au Pérou.

La corruption, la cocaïne et de  
violentes insurrections. Voilà trois  
fléaux avec lesquels doit compter  
le nouveau président du Pérou,  
M. Fujimori. Celui-ci n'est cepen-  
dant pas le dernier venu. Il a élaboré  
un plan qu'il entend mettre en ap-  
plication pour sauver le Pérou.

## NOTE FROM THE EDITOR

When reading this issue's cover story, the roundtable on the consequences of the Persian Gulf War, it is useful to register the way in which the French equivalents of the English words "nation" and "state" perform differently when compared to their English counterparts. Check *Oxford*, and you will find these two words are essentially synonymous. Check *Robert*, and you will discover that the first three definitions of *nation* have no formal political, legal or juridical meaning at all – instead *nation* refers to: a group of individuals of common origin; a large

group of people who are conscious of their own unity and want to live together; and finally and simply, "people" or the people. *État* is the word for country and state defined by politics and borders.

The *State Breaking, Nation Building* title for our roundtable emerged quite unexpectedly from the central and recurring theme of the discussion. The war in the Persian Gulf and its tragic after-effects, have underscored the widening gap between the rewards and responsibilities we confer on countries, and the feeble attention given to groups (*nations* or *peuples*) that aren't lucky enough, numerous enough or powerful enough to have a state to call their own.

Such are the advantages of having a state, that peoples and nations will go to almost any length, including violence on a large scale, to get one of their own, or keep an "enemy" from getting one for itself. And then there are the terrible costs the world occasionally, but regularly, imposes on stateless peoples.

In the world we currently run, being a country is about the only way to be a player, or for peoples to keep themselves safe. It is the

most exclusive club membership on earth, and at the moment, it is really the only way we know to organize things. As our roundtable illustrates, there are hints, some reassuring and others definitely not, that these cosy club rules have almost run their course.

Also in this issue, **Jeremy Paltiel** looks at the Persian Gulf War from the perspective of China's leaders; **Tamar Hermann** answers the question, "whatever happened to Israel's peace movement?"; **Keith Krause** describes the many obstacles in the way of slowing the global trade in military hardware; **François Lafrenière** reports on electioneering in the Himalayas; **Jane Boulden** leads us through one of the most complex (twenty-two countries and a mountain of documents) and elegantly simple (saw the barrel off that tank) arms control agreements ever reached; **Vera Murray** visits Bucharest and describes the grim handiwork of the late, unlamented Nikolai Ceausescu; and finally, **Bernard Wood** writes about an admiral's resignation and the need for a Canadian defence policy.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

**The Norad Renewal Issue.** Report of the Special Panel to the Sub-committee of the House of Commons Standing Committee on External Affairs and International Trade considering the question of renewing in May 1991 the North American Aerospace Defence Agreement. Working Paper 33, 65 pages, March 1991.

**After the Persian Gulf War.** The Potential for Economic Reconstruction and Development in the Persian Gulf Region. By Mehran Nakhjavani. Working Paper 34, 23 pages, March 1991.

# STATE BREAKING, NATION BUILDING

## Enduring Legacies of the Persian Gulf War

### ROUNDTABLE

#### THE PANELISTS

##### MARK HELLER

is Senior Research Fellow and Research Coordinator at the Canadian Institute for International Peace and Security. He is on leave from Tel Aviv University where he is Senior Research Associate at the Jaffee Center for Strategic Studies. He is author most recently of, *Between Old Thinking and New: The Changing Dynamics of Soviet Policy in the Middle East*, (Westview, forthcoming).

##### SHIREEN HUNTER

is Deputy Director of the Middle East Program at the Center for Strategic and International Studies in Washington, D.C. She is author most recently of, *Iran and the World: Continuity in a Revolutionary Decade* (IUP, 1990).

##### BAHGAT KORANY

is Professor of Political Science at Université de Montréal. He is principal contributor to and editor of, *How Foreign Policy Decisions Are Made in the Third World* (Westview, 1986).

##### JANICE GROSS STEIN

is Professor of Political Science at the University of Toronto and co-author (with Richard Ned Lebow) of the Institute Occasional Paper, *When Does Deterrence Succeed and How Do We Know?*.

*This roundtable is based on a discussion held in Ottawa on 15 April. The moderator was Michael Bryans, Editor of Peace&Security magazine.*

**Michael Bryans:** First question: once we are out from under the noise of the past six months, what will look special ten years from now? What will be unique about what has happened since August?

**Shireen Hunter:** There are bound to be some significant internal changes, and that would apply to all of the countries in the Persian Gulf region. One of the things that determines how this whole situation is going to look in ten years is the uncertainties that exist in regard to the Soviet Union. Some countries, I am thinking mostly of Iran and Turkey, are going to be extremely vulnerable to changes in the Soviet Union. I don't believe that the Union is going to last in the way it is currently structured.

If the disintegration of Soviet empire happens rapidly and in a less orderly fashion, I frankly do not exclude territorial and linguistic, or ethnic realignments in that region. It is not a foregone conclusion that there is never going to be Kurdish state. What is going to happen with the Soviet Azerbaijan, for example? Is it going to go to Turkey, Iran? Are they going to have irredentist claims towards Iran?

**Bryans:** So you are talking about new borders?

**Hunter:** Drawing new borders may cause tremendous disruption, but there are certainly going to be different economic, political, linguistic realignments. Ideally, the region should go the road of federalism, and then gradually towards regionalism, otherwise we are going to have wars from the Caucasus all the way to South Asia.

**Mark Heller:** There is a story about a visit of a French delegation to the Chinese Academy of Sciences. They were taken around to meet their counterparts and they asked who in the Academy was responsible for researching the

French Revolution and were told that there was nobody who did it. The French were astonished and said well why is this, this is a major historical event. And the Chinese said, well, not enough perspective yet.

If we think back to 1981, which wasn't such a long time ago, the Gulf area and the Middle East as a whole did not look all that different than they do now in terms of basic forces at work. If we want to get a sense of where things are tending, we have to think in longer terms, and about the socio-economic trends, that eventually may express themselves in political terms.

The regimes on the Arab side of the Gulf, in particular, are increasingly out of joint with the nature of social and economic change. The kinds of societies that exist there are no longer accurately reflected in these regimes. But at what point the disjuncture becomes intolerable is very difficult to predict.

If I try to think of the consequences of developments in the last ten or fifteen years, the crudest way to sum it up is that was a tremendous waste of opportunity for fundamental processes of state building and nation building, and economic and social modernization. Partly because of the distractions of politics, and especially wars – the Iran/Iraq war and the Gulf War – there was a tremendous waste of resources caused particularly by an over-reaching in the realm of Arab nationalism, which resulted in the case of Iraq, in its virtual destruction.

I would expect that in the next ten years we will have seen a relative strengthening of the non-Arab forces on the periphery of the Gulf, the resurgence of Iran, possibly the emergence of Kurdistan, and quite probably the re-emergence of Turkey as a major actor in the Middle East, at the expense of the Saudis and the Iraqis.

**Bahgat Korany:** Let me look at some trends that I think we have to watch closely. One is the

erosion of the Arab system. A watershed event in the last thirty or forty years was the distinction between Arabs and non-Arabs. The battle around the Baghdad Pact was over that. The pact was organized by Britain and the US, and was centred on Iran, Turkey, Pakistan and one Arab country, Iraq. There was a coup d'état in Iraq in 1958, and the first act of the new government in Baghdad was to withdraw from the Pact. From there on, there was a distinction between Arabs and non-Arabs in the Middle East.

There was another important change about twenty years later – Sadat's peace with Israel. That was the first breach in the distinction between Arabs and non-Arabs in the Middle East. For the first time a big Arab state said there is peace, there are diplomatic relations.

Then towards the end of the period there was the Iranian revolution, with a huge impact on Arab masses. And some started looking to Teheran as the new model of the future. With the Iraq/Iran war, some Arab countries took the side of Iran against an Arab brother, a further erosion of the distinction between the Arabs and non-Arabs. What Mark was saying about the rise of non-Arabs – Turkey, Iran and the their role in the Gulf – shows the further erosion of this distinction. We are reverting to a Middle Eastern system rather than just an Arab system. And the rise of Islamic militancy tends in the same direction – eroding the distinction.

The second trend which consolidates this tendency, is that for the first time there are threats to Arab countries from other Arab countries. Before this, the military threat was either Israeli or from Western countries. Kuwait had to ask non-Arabs to help it against Arabs.

A third trend is what I call the rise of civil society. People use the term "democratization," and I think that is a bit misleading. I would call it pluralism within Arab society. In the last few years we had the omnipresence of the state; the state was too strong. And the debate we see about the status of the royal family in Kuwait and the possibility of enlarging the political elite, is part of the price of civil society.

**Janice Stein:** What is unique about this war, is that it was the world's leading military power that organized the coalition forces from a very weak economic base, and was not able to fund the war that it organized. Those who are powerful in the military sense, which is the traditional way we've looked at power in the Middle East, are quite different from those who are economically strong.

There is one state that had the potential to be both. Had it had a different system, it might have been Iraq. But that opportunity has been lost. Egypt which is a potential military power, has a weak economy. Israel has a fundamentally weak economy. Those whose prospects are best economically, however, can never exer-

cise the kind of military power in the region which will enable them to set the agenda.

Historically, when we look back at earlier periods when there has been this disjunction between economic and military power, those are usually very dangerous times. I would suspect that it would be more dangerous in the Middle East, than in the international system. In the Middle East, the use of force is still a legitimate instrument, unlike among the global industrialized powers.

Why I'm pessimistic about the future is that one of the ways that these two systems will be

## TO THE EXTENT THIS WAR WAS FOUGHT TO PRESERVE STATE SOVEREIGNTY, IT MAY BE A HISTORICAL CURIOSITY.

connected will be through the export of arms to the Middle East. And this is particularly useful for the US and for other economies that are not as strong. It's not the Japanese who are likely to be the major arms exporters in the next ten years. It is the weaker industrialized economies that are likely to get tangible benefits from a Middle East that is unstable, and in which there are real security fears. I would expect that the Middle East over the next ten years is going to be the region for weapons proliferation.

There are social and economic reasons for the strength of the state in the Arab Middle East in a time of social engineering. While political currents are working in favour of pluralism, or of a larger number of voices that are authentic and find some institutional way to be heard, that kind of proliferation of weapons strengthens the state at the hands of civil society. To the extent that the state is strengthened relative to civil society, and you have at the same time pent up political pressure to find legitimate avenues for political expression, what you get is pressure from below, which exacerbates these kinds of insecurities and instabilities.

**Hunter:** Bahgat's distinction between the Arab and non-Arab actors in the Middle East was a bit too stark. The Middle East system has always been interactive, and the countries on the periphery, if you want to call it that – like Iran and others – have, at least indirectly, been major players in Arab politics. Look, for example, at the alliance of convenience between the Saudis and the Iranians against Nasser of

Egypt. They didn't particularly like one another, but Iran was brought in to be a counterweight to Egypt, and now Egypt is trying to be a counterweight to Iran.

There has been a kind of romanticization of the fact that Arabs don't invade Arabs, but Arabs have used military force against one another. For example, Egyptian involvement in the Yemen civil war was a major military expedition. You have had Libyan and Egyptian wars, and Morocco and Algeria fighting in Sahara.

As far as the resurgence of non-Arabs, the whole notion of Iran re-emerging is a little bit like Islam reviving. Islam was never dead to revive, and Iran was always there.

I would submit that during the 1980s, even though weakened as far as the impact on the underlying forces of the region were concerned, it was much more significant simply because it was acting in a broad Islamic context. Although Iran may be emerging as an actor internationally, Iran may be going back and becoming much more Iranian, and hence its environment of activity is becoming much more limited. I believe that Iran has been traumatized in many ways by the reaction of the rest of the Islamic and, certainly, Arab world.

**Bryans:** It has been evident in writings over the past year – like the "Roots of Moslem Rage" in *Atlantic* magazine – that some people believe there is a fundamental conflict between the West and the Arab world, the West and the Islamic world. Is there such a thing as an Islamic world, or an Arab world, that is in conflict with the West, and is that even a sensible way to think about it?

**Korany:** One Arab state swallows another Arab state and says it does not exist any more. This is the first time. How will this affect relations between Arabs or Moslems, and non-Arabs? There was a distinction before, *we* and *they*, which is no longer applicable, because some of *we* can be a threat, and we can count on some of them to help us.

Islam and the West is a perennial battle. One of the prevalent theories in the region about the origins of the Gulf War – a conspiracy theory – is that the whole thing was a trap, by the imperialist powers, to finish off the important regional power that could reach the West and Israel. The sequel to the conspiracy theory is that now that Iraq is finished, the West is going after the next regional power, which is Syria, in order to maintain its domination of the region. People are very selective in the data they choose to confirm their point of view.

Some people feel that Hussein is the Third World voice against the return of imperialism. This might be justified or not, but people act not on the situation as it is, but on how they define it. Perceptions here are very important, and I feel that the gulf between Islamic

countries and the non-Moslems has increased after the Gulf War.

**Heller:** I certainly agree that Islam is viewed as some kind of identity delimiter in relations between Islamic peoples and non-Islamic peoples. But I'm very skeptical that it goes very much beyond that in terms of either a determinant, or a predictor of political behaviour. The most salient divide sometimes appears in the case of a direct conflict or clash between a non-Islamic society and an Islamic civilization, in which case, the natural impulse is for other Moslems to feel sympathy or solidarity on primordial grounds. But very rare are cases in which that ultimately determines the kinds of policies that governments of Islamic countries pursue. I would go further and say that it is not even a reliable indicator of sentiment among Islamic publics.

In fact, in extreme cases we can see the most anomalous kinds of behaviour, at least at the popular level, in which other kinds of considerations of identity or other kinds of social cleavages will lead to precisely the opposite kind of behaviour that you would expect if you were judging solely on the basis of Islam. The events of the last few weeks tend to confirm this. Iraqi Kurds would feel much less solidarity with the ostensibly Islamic government in Baghdad, though they themselves are Moslems, than with non-Moslem powers in the area or further afield who might be useful in promoting their immediate objectives.

A most graphic example, and I don't know how much of this is information or disinformation, is the picture of Iraqi Shia begging the US armed forces to stay in the territory of Iraq to protect them from the government of Iraq. I wonder if the processes that we are seeing lately are not accelerating the movement in the opposite direction, that if in some indefinite time in the future Islam will be of no more psycho-political relevance than the concept of Christendom – which at one point in the middle ages meant something, and means nothing any more.

Bahgat is absolutely right that the uniquely unequivocal character of Iraqi behaviour with respect to Kuwait, and the total defeat that resulted from it, leads to the discrediting of what could have been termed the integrationist impulse of pan-Arabism, over the last thirty or forty years. We were talking before about the contradiction between state and civil society. The dominant ideology in the region, since the collapse of the Ottoman empire, has been the denial of the sovereignty of the individual, the denial of the legitimacy of the autonomy of the part against the whole. There may be incipient signs that the integrationist impulses are also coming under challenge.

The impact of the international system, wittingly or unwittingly, is to retard or stop whatever devolutionary processes may be taking place within states. It does it by strengthening the institutions of the state as against the individual or sub-sectors of society. It does it in the intellectual sense through the dominant myth of the international order, which is the primacy of state sovereignty. I think the myth of state sovereignty, and the way that it is manifested in international law and in the performance of international institutions such as the United Nations, creates an intellectual and institutional strength for states against societies which they would not otherwise be able to sustain in a different kind of world.

**Stein:** What was unique about this war if you look at it with proper historical perspective, may be that it was a war fought to defend the principle of state sovereignty. And that wasn't only important to the Arab governments, it was important to almost all governments in the Third World who face similar kinds of problems. That is an important part of the explanation for why it was possible to assemble an international coalition.

On the relationship between Islam and the West, from inside the Middle East, one of the really crucial questions over the next decade is what the appropriate models of social and economic change within each state are going to be. In the post-war period in the Middle East, there have been different kinds of experiments

## IT IS A LONG TIME SINCE ANYONE SERIOUSLY BELIEVED HE COULD BUY ENDURING POLITICAL INFLUENCE BY TRANSFERRING WEAPONS.

and they reflected what was happening in the international system. In the fifties, the Nasserite experiment was enormously attractive, not only in the Arab Middle East but in other parts of the Third World as well. It reflected both an attempt to build the state, not only to strengthen it against internal society, but also to engage in social and economic engineering.

For reasons that are not relevant here, that experiment was discredited. The prior experiment that Nasser discredited – and we forget this – was the so-called Western liberal model which had an earlier run in the thirties. The third interesting experiment, and that is why it was

so powerful and its impact went far beyond Iran itself, was an attempt in Iran to create an Islamic revolution, which was a social and economic revolution, as well as a political revolution.

So what are the alternatives? Where do we look inside the Middle East, for models of social and economic change? It is not only external aid that strengthens the state, the state plays a role which is built-in, to the extent that there are fundamental economic problems, which only the state is capable of addressing. That is in conflict with, what I call, the state breaking, nation building tendency – which we face in Canada.

To the extent that this may have been a war which was fought to preserve state sovereignty, it may be a historical curiosity. The war ended by the UN taking action with respect to the Kurds, no matter how limited or circumscribed. That was unprecedented. So the war may have started with one overarching principle, but the end is just as interesting as the beginning.

It is not only that these state breaking impulses are going to conflict with established state structures, but they are up against absolutely crucial and tough processes of how social and economic change is going to be managed. That is where Saddam Hussein touched a very important cord, on the issue of redistribution of wealth. But who redistributes wealth? States – both externally and internally.

**Hunter:** My sense is that the traditional unitary, centralized Jacobin sort of state will eventually have to change in the Middle East, if it is going to succeed. For Iraq to remain Iraq it will have to try to accept diversity and perhaps a loose confederation. Maybe Iran will have to have similar things in place among certain parts of the population.

**Stein:** What Shireen's just been saying and what I have been arguing is a reflection of two broad tendencies in global and international systems. On one hand you see a move toward federation. But what do you see in central Europe? State breaking, which is a result of nationalism from below, the destruction of state structures.

**Bryans:** Lurking off-stage in this conversation and over the last eight months, is Israel. Where are these state breaking, nation making forces there? Or is Israel a special case?

**Korany:** When you discuss with Moslems and say to them, we are in the twentieth century, you can't just look at everything as a function of a religion which was established in the seventh century, they'll usually point to Israel, and Judaism as a religion. If you have a religious basis on one side, you can't deny it to the other. From this point of view, what we do with the Palestinian issue will determine a lot about the

strengthening or weakening of Islamic groups within various states.

**Bryans:** Why is the disposition of the Palestinian question so determinant on how the religious question will work itself out?

**Korany:** Because for many Moslems the question is still between Jews and Moslems.

**Heller:** It is not a religious prism when they talk about Jews and Moslems. It is the same kind of identity delimiter that we were talking about before, a communitarian boundary, if you will. It has nothing to do with the religious content of the state, or of state legislation, or legitimacy of boundaries. Jews is another way that people in the Middle East refer to Israelis. I have the same difficulties Michael does in understanding the reasoning behind the statement that the disposition of the Palestinian issue will determine the relative success or failure of Islamic movements in the Arab world.

**Korany:** The importance of the Palestinian issue is that it brings within its confines many things at the same time. Certainly for some Islamic militants it is a religious issue, Jews and Moslems. But the Palestinian issue is considered, also, as a remnant of the colonial issue: Israel as part of the West and, in fact, almost a plot of the West – here, again, the conspiracy theory. But an issue which will come up again and again, and which could endanger many of governments in the Gulf, is that of double standards. Once you have been so strict in applying international law and UN resolutions, you can't be selective.

**Stein:** The Palestinian issue is salient because it involves the intersection of so many of the themes that we have already talked about. There is the religious dimension of it. The second is the association of the colonial past. That is the historic way that issue was interpreted in the Arab Middle East. The Iraqi/Kuwaiti conflict is interesting in that respect, because what was affirmed here were colonially drawn borders, and that is when the we/they distinction broke down. It was the explicit acknowledgment in the Arab Middle East that colonial borders are legitimate. The process of drawing them was not legitimate, but their existence is now legitimate. They are not open for change, irrespective of how they were drawn. So in a curious way the colonial association might recede in the next decade.

The third way that this is an important issue and has to play into Arab politics is in the state breaking/nation building perspective. To the extent that we are talking about broader processes in the Arab world which are going

to legitimate nationhood, even if they are not co-determinous with state boundaries, the Palestinian issue and the relationship between Israeli nationalism and Palestinian nationalism flows very much into that debate.

The double standard issue I would turn on its head. It is a double-edged sword, a problem for the whole Arab Middle East, and it is a litmus test. What are the standards for dealing with national minorities across state boundaries in the Middle East generally? That issue has never been on the agenda in the post-war period, other than in the Palestinian case. It will now be on the agenda.

## WHAT WAS UNIQUE ABOUT THIS WAR WAS THAT THE WORLD'S LEADING MILITARY POWER WAS NOT ABLE TO FUND THE WAR...

**Korany:** Can the Helsinki model [Conference on Security and Cooperation in Europe, CSCE] be applied to the Middle East? Can we go beyond the state and try to organize democratic transformation and human rights and all of that?

**Stein:** Helsinki did not talk directly at all about changes in the forms of government. It raised the question on a wholly different issue – the level of human rights, dissent against established governments, and the extent that you extend these to cultural rights and to the tolerance of minorities. In retrospect, I suspect that Helsinki had enormous impact on what we are currently seeing in Eastern Europe and Soviet Union, because it was approached that way. The logical conclusion down the historical road was fundamental political change. To put the form of government at the top of the agenda, is to put the cart before the horse. The issue is, in fact, individual rights against the state, and cultural rights for minority groups.

**Heller:** It would be naive to insist on institutional forms of the liberal democratic state. The problem, as I said, was that since the collapse of the Ottoman empire, the idea of the sovereignty of the individual and the autonomy of the part from the whole has not had legitimacy in much of Middle Eastern political thought. No one would ever accuse the Ottoman empire of having been a liberal democratic state. But it did create much more manoeuvre room for individuals and for autonomous cultural or

communitarian groups than have ever existed in post-colonial states in the Middle East.

**Bryans:** One observation that one can make about how the process has unfolded in the last eight months is that the system and the various parts of it, whether it is the coalition or the UN, seemed to be pretty good at protecting nation states from each other and protecting state sovereignty. But as we've seen from particularly egregious examples of the past – whether it is the Holocaust or the Cambodians against the Khmer Rouge, and we now see it with the Kurds, and then there are some examples that are not quite so sharp, such as the Palestinians and the

Israelis – the system is very bad at protecting people from their governments.

The UN club has always said state sovereignty is supreme and everything else is sacrificed to that. So the

Kurds have no voice. Is there something positive that can come out from all of this that can begin to help people that don't have a seat in this club of nation states?

**Heller:** It is not just starting now. It is not by accident that Bahgat pointed to Helsinki as some kind of seminal breakthrough, because there was a process there of enshrining the legitimacy of discussions about human rights within somebody else's state, as a beginning of the kind of delegitimization of this notion that state sovereignty is the ultimate value of the system. The same thing happened, incidentally, with respect to South Africa. If we had been playing by the rules, which say that you don't interfere in somebody else's internal affairs, there could never have been any kind of international action against South Africa, but there was. The problem is that there are more discouraging precedents about failure to do anything in the most atrocious cases.

**Hunter:** I had my UN years, and sat in on innumerable sessions of human rights commissions and the sub-committee on the protection of minorities, and what have you. I saw the cynicism of the great powers. There are some rules and regulations in regard to gross and systematic violations of human rights. After Halabja [the Kurdish town subject to gas attack by the government of Iraq in 1988], there was a motion in the human rights commission to do something against Iraq, and I have to say, shamefacedly, that the US government prevented that. Over the years, human rights have been basically used as a political propaganda tool. I saw this during the Carter administration when I was at the UN. It was done by putting pressure on the Soviets. Every time you are against some country you say they are abusing human rights. We don't need to change the Charter, we have to put our money where our mouth is. Apply these existing principles and strengthen the UN system.

**Stein:** One would expect, following Shireen's analysis, that one would have seen almost no action with respect to the Kurds – given the anticipated American desire to end the war neatly in a military context and ignore the wider political ramifications. One would have expected that it would play into domestic American public opinion which has always emphasized, "bring the boys back home."

What happened, in fact, is that the administration was overwhelmed by public opinion in the United States, responding to visual images of Kurds, pushing the administration into a position that the administration had no intention of taking. I don't care what we call it, or whether it comes from England or from the US, when you talk about safe havens or enclaves or whatever the euphemisms are, it does, in fact, involve intervention in Iraq's internal affairs.

**Bryans:** What is going to be the role of arms sales in the near and medium-term future, and what do you make of the argument that it is people's insecurity and the fact that they want to fight wars that makes them buy weapons?

**Heller:** I might be wrong, but I don't know of a single case in which somebody was forced to buy weapons he did not want to buy, where the supplier said you take these guns or I will shoot you. The basic point is true that the arms trade is essentially demand-driven. However, that is not to say that certain suppliers, most suppliers I guess, have not played into the demand or made it easier to satisfy than it would otherwise have been, for purposes related to their own strategic or commercial interests. I think the strategic interests in the post-Cold War era may be diminishing. There may be a few diehards in the Stavka of the Red Army or in the KGB or somewhere in the State Department, but by and large, it is a long time since anyone seriously believed he could buy enduring political influence by transferring weapons.

If anything, the commercial interests in recent years have intensified and may intensify even more, if and when the CFE agreements [conventional force agreements in Europe] ever get implemented. Therefore, there will be strong commercial pressures in most of the arms exporting countries to respond to the demands generated by regional conflicts, and particularly to the effective demand generated by the money available. Of course, the effective demand is still greatest in the Middle East, although there are some resource constraints tied to the price of oil in the last couple of years. But even that is not likely to prove an insuperable obstacle if they get some creative financing packages together. Therefore, to think that you can achieve any kind of effective

results by waiting for change in the demand side is absolutely utopian. The only way to have any effect at all is from the supply side.

**Stein:** Mark put it all far too politely for purposes of this discussion. The demand side is huge and enduring, and it is on two levels. One is the security threats that each government perceives from another, and that will endure for the foreseeable future. But that is not the only purpose for arms transfer. It relates to all the other issues that we talked about, it is the state versus society too, which is the hidden agenda in a lot of this.

Now on the supply side, what do we see? If we assume that the transition in the Soviet Union works under optimistic assumptions, and the fragmentation is limited rather than extensive, the major source of hard currency for the Soviet Union in the foreseeable future will be CFE-related products that are no longer useful. And the major place to send them will be to regions like the Middle East where there is an enduring demand. The Soviet Union has diamonds, oil and used tanks.

There is an autonomous independent benefit for the Western world to sell to the Middle East. Saddam Hussein was not a Soviet creation, despite a great deal of the myth making that went on in Western capitals. Much of what he got,

## ...WE AND THEY, IS NO LONGER APPLICABLE. SOME OF WE CAN BE A THREAT, AND WE CAN COUNT ON SOME OF THEM TO HELP US.

and much of what was most lethal, was supplied by Germany, and France, and paid for by Saudi Arabia. Those dynamics are going to continue.

In terms of delivering political outcomes in the Middle East, the capacity of the US is no greater than it ever has been – despite a lot of the rhetoric that we are hearing. To the extent that the US continues to stay involved, a primary instrument of that involvement will be military sales. It is therefore going to be impossible to get an effective suppliers' agreement, when you build in all these factors. The future is frightening.

**Korany:** I don't believe the whole idea, floated at the end of the Gulf War, about arms control in the region. Events now confirm this. You have lots of stocks that are now not used at the end of the Cold War and you have to sell them somewhere. Second, there are economic needs,

France and Great Britain, their economies are based on arms sales to the Middle East – the Middle East takes about sixty percent of all arms imported to the Third World. They are demand-driven in the following sense: arms races are not the cause of wars, they are symptoms of conflicts. As long as the bases for arms purchases are not treated, people will go through the black market. They will use all means to violate agreements for arms control even when these agreements can be reached.

**Hunter:** A footnote about the nature of governments in the Middle East. Most Middle Eastern countries are, in one form or another, military regimes. And the military is self-perpetuating. So we cannot say it is only conflict and that it has nothing to do with the development of huge military establishments. When you strip them, both Turkey and Egypt are basically military governments; the military determines what goes on. Syria has a military-run government.

The US and other governments' influence is basically with the military, and they have to keep their clients happy. Turkey wants to have an indigenous military industrial complex, and they are defining their relationship, and the health of the relationship, in terms of the willingness of US to give them the kind of sophisticated arms they want. Egypt wants more arms. And obviously if they get them then there is a dynamic interaction, other countries are also going to get them. The militarization of many regimes in the Third World is a spur to the arms race.

**Bryans:** Switching the subject once again, I am personally interested in this because we published an article by one of the people around the table two issues ago, which dealt with the run-up to the Gulf War, and Ambassador April Glaspie, and her contradictory testimony. I am wondering what the state of the art of revisionist history is about the run-up, and who did what to whom?

**Heller:** Diplomats' accounts to their own foreign offices of what they said do not always and necessarily reflect what they said. It is an ex post facto reconstruction of a conversation. The original analysis [of Glaspie's pre-war conversation with Hussein] is consistent with the whole tone of the American appeasement of Saddam Hussein for several years before.

I think it is a non-argument, but at the more general level I think what we are seeing is the acceleration of history writing. Because normally we get a conventional wisdom and then four, five, six years down the line we get the rise of the revisionist school and then another four or five years down the line after that, we get the dialectical synthesis. This has all happened within six weeks.

**W**HEN THE BERLIN Wall collapsed in late 1989, taking the Warsaw Pact with it, China was in the international doghouse because of the Tiananmen massacre. China's leaders warned Western countries that they needed China's friendship more than they appreciated, so with the Gulf crisis came an opportunity for China to recoup some lost international stature. By supporting American-led actions in the UN Security Council, China regained access to World Bank loans, saw an end to European Community sanctions, and went ahead, more or less unhindered, with secret trials of the democracy activists.

The "new world order" is, however, not entirely to Beijing's liking.

In the first place, the end of the Cold War has dissolved the "strategic triangle" within which Beijing has routinely manoeuvred. China is used to leaning towards one superpower or another in order to assure her own security and evade capture by any one bloc. While the Bush administration has been extraordinarily sensitive to Beijing – for the sake of maintaining close ties, the US has sidestepped its own policies stemming from the events of 4 June – China's role in the current Middle East crisis has been marginal.

Beijing has a few interests in the region. Not only did it supply arms to Iraq (as well as to Iran, Saudi Arabia and now Syria), but in recent years, Iraq was the principal purchaser of Chinese construction labour for its military and civilian infrastructure. China lost billions of dollars in hard currency because of the sanctions imposed on Iraq, and is now unlikely to recover debts dating back to the Iran-Iraq war. However, Beijing's most important misgivings stem from the strategic implications that flow from the war.

BEIJING MAY HAVE OBTAINED CONCESSIONS IN RETURN FOR ITS SUPPORT IN the UN and abstention on the all-important resolution 678, but it did not gain in the long run. Beijing clearly preferred a peaceful "Arab" solution to the crisis, and while urging Iraq to withdraw from Kuwait, it continued to express this preference even after the coalition assault began in January. Now China faces the alarming prospect of a "Pax Americana" – a triumphant United States as sole superpower overshadowing any distinctive "Third World" perspective in world affairs.

Chinese foreign minister Qian Qichen, during a recent visit to Europe, emphasized China's self-styled role as "the world's largest developing country," and analyzed the Gulf crisis in terms of the North-South problems which the Cold War had obscured. Deng Xiaoping has publicly blamed the US for the disturbances at Tiananmen. He reportedly exclaimed, "we did nothing at all to you, and look what you did to us." In his mind, a Pax Americana will inevitably put even greater pressure on China's socialist system.

As vindication of their own steadfast opposition to the democracy activists, he and his colleagues seized upon Mikhail Gorbachev's rightward shift in domestic policy. As one Communist Party document put it, the violent unrest and evolution of some socialist countries further proves that the decisions and measures taken in our country to suppress the counter-revolutionary rebellion in 1989 were totally correct."

With Gorbachev placing limits on reform, they see him as a more reliable ally in the strategic competition. China has offered the Soviet Union a large commodity loan valued at one billion Swiss Francs. This deal sends desperately needed Chinese foodstuffs and consumer goods to the Soviets. In return, the USSR is ready to sell China Sukhoi-27

the Persian Gulf.*

BY JEREMY PALTIEL

fighter aircraft. In addition to upgrading defence capabilities, the sale symbolically challenges the Americans, who, after Tiananmen, suspended an earlier agreement to provide advanced avionics for Chinese military aircraft.

A steady stream of high-ranking Soviet officials has visited Beijing in recent months. In February, Gorbachev dispatched Deputy General-Secretary of the Communist Party, Vladimir Ivashko to Beijing. The General Secretary of the Chinese Communist Party, Jiang Zemin, visited Moscow in return. Chinese Premier Li Peng expressed his "sincerest hopes" for the

stable development of the USSR in another meeting with a Politburo member, and finally on 1 April, Soviet Foreign Minister Bessmertnykh announced, with some satisfaction, that Sino-Soviet relations were now "completely normalized." To underscore this new degree of cooperation, in early May, Dimitry Yazov made the first visit in nearly thirty years of a Soviet Minister of Defence to the People's Republic.

China's recent refusal to cooperate with Hong Kong over building a new airport, and a truculent attitude towards American concerns over China's massive trade surplus, signal a hardened attitude towards the West. According to Mao Zedong's theory of contradictions, the US now represents the greater threat to Chinese interests, a perspective which would make a united-front strategy with the Soviets appropriate. Efforts at rapprochement with Moscow can also be seen as an attempt by China to preserve the socialist "community of nations."

THE OVERWHELMING DOMESTIC DIFFICULTIES CONFRONTING THE USSR, and China's own latent instability, could well make these moves irrelevant. China faces not only an ascendant US, but also the rising strength of Japan. While Chinese policymakers might hope that US-Japan trade frictions will preoccupy the two economic giants to China's advantage, they must be concerned about Japanese efforts to establish Asia as its own sphere of economic influence. For this reason, even the prospect of a smaller Soviet Union or a revived Russia will not derail improvements in Sino-Russian relations.

Under former External Affairs Minister Joe Clark, Canada cautiously accepted a longstanding Soviet initiative for creating an Asia-Pacific security system – a project towards which the US is lukewarm at best. Exploratory talks on the issue were held in Victoria in April. The Japanese have made it clear that they want no part of such an arrangement, and Soviet "new thinking" has yet to find favour in Tokyo. Gorbachev's long-anticipated visit to Japan in April, ended without agreement over outstanding territorial disputes. China was not displeased by this eventuality, since it will remain a privileged locus for Japanese investment, while retaining a pivotal political and security role between the Soviet Union and Japan.

Opposition to hegemony is a cornerstone of Chinese foreign policy. When the sovereignty of Kuwait was at issue, China was cooperative at the UN. However, the prospect of a new American pre-eminence alarms her much more. Mao Zedong preferred chaos over order, and the aging rulers in the Forbidden City will reject the "new world order" also. From where they sit, a divided world still provides the best security for China and for themselves.

# GUN CONTROL FOR THE WORLD

*All through history, efforts at controlling which countries get which weapons have failed. What do we have to do to get it right?*

BY KEITH KRAUSE

IN THE WAKE OF THE CARNAGE OF THE PERSIAN GULF WAR, POLICY makers, scholars and journalists are debating how to control the global trade in weapons. The dispute turns on differing views of the fundamental nature of international politics. On one hand, those in the "never again" tradition proclaim the birth of a "new world order" that will address the underlying factors believed to have caused or exacerbated the conflict. On the other, pessimists see the reassertion of American global ascendancy and the resort to military means to resolve conflicts as illustrating the "same old anarchy."

From the US administration, contradictory signals mirroring both positions have emerged. Secretary of State James Baker argued in early February for "much tighter supply restraints on the flow of weapons" into the Middle East. But in March, the White House made public its intention to sell US \$18 billion of weapons to its Persian Gulf allies, and to use Export-Import Bank credits to finance arms exports around the world.

The Canadian position has at least the virtue of greater consistency. Both Prime Minister Brian Mulroney and former Minister of External Affairs Joe Clark argued during and after the war that "the world must learn from this war that an unrestricted arms trade in this region is no longer acceptable," and coupled these views with a concrete proposal for a "world summit on instruments of war and weapons of mass destruction."

But are we likely to see the successful control of the diffusion of modern weapons? Are these efforts sincere, or merely a means for governments to satisfy the public unease over the arms trade in the aftermath of the Persian Gulf war? Several international initiatives to control the arms trade were already receiving attention behind the scenes, and have now become more prominent. A new international non-governmental agency, "Armswatch," is being established in Europe to monitor and publicize the arms trade. This fall, the United Nations will release a proposal to increase the "transparency" of arms exports. And the US Office of Technology Assessment is studying the diffusion of military technologies and military production.

THESE INITIATIVES AND DIPLOMATIC ENERGY OR GOODWILL ALONE DO NOT guarantee success. With more than \$40 billion in arms being traded each year between almost fifty suppliers and more than a hundred recipients, the scale of the required efforts is vast. Controls on the arms trade will ultimately succeed only if they take into account the forces that lead states to buy and sell weapons and weapons-producing technologies.

There are good reasons to be gloomy over the prospects for successful control of the arms trade. The US continues to use arms transfers to friendly states as a foreign policy tool, as evidenced by the proposed \$18 billion sale, and the Soviet Union sees arms sales as one of its new sources of hard currency. Lesser producers, such as Britain and France, rely on exports to keep their defence industries at the technological forefront (up to half of the arms produced in both countries in the 1980s were exported), and producers in the developing world such as South Korea are eager to expand exports for their industries' survival.

Arms recipients too have shown little interest in restrictions, seeing such efforts as another bid to freeze a global distribution of military power which runs against them. Although eighty percent of the weapons traded *between* states go to the developing world, it "consumes" no more than twenty percent of the roughly \$280 billion of annual world weapons production. Most military hardware is produced by the US, USSR, UK, France and other major powers for their own forces.

It is not surprising then that controlling the arms trade without controlling arms production and procurement is seen by the developing world as hypocritical discrimination against states unable to produce arms for themselves. Overcoming this perception, therefore, requires that control measures be rooted in recipient states' own interests in managing or resolving their conflicts.

THE HISTORY OF ATTEMPTS TO CONTROL THE ARMS TRADE REINFORCES A pessimistic view. As far back as Charlemagne, rulers have tried to prohibit or restrict the export of weapons that could be used against them, almost always to no avail. In 1574, Queen Elizabeth I of England ordered arms exports to be halted after it was pointed out that the export of English cannon meant that "yor enimie is better furnished with them than or own country ships ar." Heavy fines were imposed for unauthorized exports, but the trade continued.

In the late nineteenth century, the European colonial powers sought via the Brussels Act (1890) to restrict the flow of weapons into Africa, in order to preserve their political and military control. But again, arms continued to be sold throughout Africa wherever commercial and political advantages outweighed immediate dangers.

Twentieth century initiatives have enjoyed equally little success. Between World Wars I and II, the League of Nations launched comprehensive multilateral negotiations to reduce the arms trade. Conspiracy theories about the role of shady arms dealers in triggering wars in the Balkans and elsewhere fuelled public sentiment against the arms trade, but governments could not agree on concrete measures. All that was accomplished was the establishment of a short-lived (and highly inaccurate) voluntary register of the trade in arms and ammunition.

The most recent attempt at control, the American-Soviet Conventional Arms Transfer Talks (CATT), foundered on growing superpower suspicion and competition in the developing world in the late 1970s. Although ambitious, CATT did not address specific regional concerns, did not engage other major producers, and did not involve recipient states. The eight-year long Iran-Iraq war virtually eliminated all talk of partial controls on the arms trade, and was a bonanza for smaller arms producers willing to supply the weapons that major producers were (at least initially) reluctant to sell.

If new attempts to control the arms trade are to succeed, lessons must be extracted from this history of failure. The most prominent lesson seems to be that the problem must be broken into more manageable pieces. There are three strategies to accomplish this:

Concentrate on specific regions or sub-regions that are excessively over-armed and conflict-prone. Although the Middle East stands out (the

Persian Gulf alone accounted for almost one-quarter of global arms transfers between 1980 and 1988), it is not the only region that suffers from the burden of armaments. Military spending and arms acquisitions in Central America and parts of Sub-Saharan Africa have also outstripped the economic resources of states and fuelled regional conflicts.

Control can mean *regulation* as well as *restraint*. Regulation acknowledges the legitimate security requirements of recipients, and the dependence of some suppliers on exports either as a tool of foreign policy or to maintain defence industries for national security reasons. Recipients unwilling to forego advanced weapons permanently may be amenable to medium-term regulation in the interests of regional security.

Focus on preventing the spread of destabilizing or costly weapons systems into specific areas of the globe. It matters little to Peru if Saudi Arabia acquires more F-16 fighters, as long as its neighbours do not! Several high profile modern weapons, such as cruise missiles, advanced multi-role fighters (such as the F-15 or MiG-29) or sophisticated main battle tanks (such as the M-1) are not now in wide circulation, and steps to keep them out of particular regions might be more acceptable to both recipients and suppliers. The perilous state of most developing world economies offers a unique opportunity, as simple penury forces states to consider alternatives to continued arms buildups as a means to guarantee national security.

WHILE EFFORTS TO CONTROL THE PROLIFERATION OF HIGH-PROFILE WEAPONS such as ballistic missiles or chemical and nuclear weapons are well advanced, an exclusive focus on these exceptionally frightening weapons would be a mistake. In the long run, it is probably more important to control "ordinary" conventional weapons: tanks, aircraft, and helicopters are capable of wreaking immense destruction all on their own.

A more troubling future problem is the diffusion of technologies for producing arms. Today, eight developing world states can build fighter aircraft, six can make main battle tanks, and six can manufacture military helicopters. Up to fifteen states in the developing world may be able to produce missiles by the year 2000. Between ten and twenty-five states possess chemical weapons. Most of these weapons are not at the forefront of modern technology, but producers of them could well upset any future control arrangements.

Most arms producers in the developing world have had their ability to import arms restricted at some point: India and Pakistan during their clashes in the 1960s and early 1970s; China after its break with the Soviet Union; Brazil during the late 1970s; Israel after the 1967 war, and South Africa under the UN embargo. Iraq, after its embargo experience in the early stages of the Iran-Iraq war, launched a multi-billion dollar effort to produce its own ammunition, artillery, ballistic missiles and chemical weapons. It would be a bitter irony if attempts to control the arms trade merely resulted in a vast expansion of arms production in the developing world.

Controlling the diffusion of arms-producing technologies is much more difficult. As far back as the fifteenth and sixteenth centuries, England and the Italian city-states tried to control the diffusion of new technologies for manufacturing cannon by restricting the migration of skilled workers. Today, technology is transferred not by migration, but through license and co-production arrangements with major producers willing to trade away their technological monopoly in order to win the contracts they need to sustain their defence industries. Controls on technology transfers have had mixed success, however, in part because it is often impossible to distinguish between civilian and military technologies.

At least one good precedent exists for efforts to control the diffusion of arms producing technologies: the 1987 Missile Technology Control Regime. It began with seven Western states agreeing to restrict exports

of technologies that could be used to produce ballistic missiles, and now includes sixteen states.\* It is an informal agreement, requiring only the coordination of national policies. It does not contain demanding verification or reporting requirements. Unfortunately, it neither includes all possible suppliers of ballistic missile technology (the most notable omissions being the Soviet Union, China, Brazil and North Korea), nor involves recipient states; it is thus only a partial model to follow. But its rapid expansion in membership and the informal agreement of states such as Sweden to follow its guidelines are hopeful signs for future efforts.

CANADIAN INITIATIVES TO CONTROL THE ARMS TRADE HAVE BEEN somewhat quixotic. Although Canada may export up to two billion dollars worth of arms (mostly components) each year, more than eighty percent of this goes directly to the US. This low level of participation in the global arms market allows Canada to pursue a relatively restrictive export policy while maintaining a defence industry.

But as a consequence, Canadians do not always take seriously the motives driving states to export or acquire weapons, and often promote technical or apolitical solutions that ignore these powerful political or economic considerations.

Supplier-only controls, or efforts to subject the arms trade to more public scrutiny (via a UN register), must be coupled with attempts to address the regional conflicts that ultimately fuel Third World arms races. The link between arms control and the

underlying conflicts or insecurities, so clear in the East-West context, is at work just as much elsewhere in the world.

Certainly pious pronouncements against the arms trade or for increased transparency of exports will not alone win points among friends and allies, as suggested by President George Bush's public rebuff, during his March visit to Ottawa, of the Canadian initiative for a weapons summit. Canada cannot single-handedly spearhead such major international initiatives, but it can pursue more limited initiatives in fora such as the Conference on Security and Cooperation in Europe, the UN and the Missile Technology Control group to expand or enhance the scope of existing measures. In every case, the guiding principle should be to promote actions that will be effective and cumulative, not merely to settle for cosmetic gestures that reap diplomatic brownie points.

Further, Canada needs to link its efforts to control the arms trade with its broader involvement in peacekeeping and conflict management around the world. Certain regions are thus more appropriate foci for Canadian initiatives: Central America because of geographic proximity; the North Pacific because of concerns with stability and arms buildups in the region; Sub-Saharan Africa because of Canada's position within la Francophonie and the Commonwealth.

None of these efforts will eliminate the commerce in weapons. The arms trade is a consequence of the "self-help" nature of international politics: states see themselves locked into a permanent struggle to survive or improve their position in the global hierarchy. This can only change if there are alternative means to achieve security. Regulation of the arms trade could at least help create a space in which these means can flourish.

\* For more on this subject see Marie-France Desjardins, "Ballistic Missile Proliferation," Background Paper 34, CIIPS, Ottawa, September 1990.

# SALVAGING A SWEET DEAL

*Were the Soviets trying to cheat on the European arms control treaty? Does it matter?*

BY JANE BOULDEN

**O**F ALL THE SYMBOLS OF THE NEW Europe, one with some of the most tangible and immediate consequences will be the Treaty on Conventional Forces in Europe (CFE). The treaty, signed in Paris on 19 November 1990, codifies the new military reality in Europe by requiring the two military alliances\* to destroy some fifty thousand pieces of heavy military hardware. However, the treaty was in trouble almost before the ink was dry because of what appeared to be Soviet efforts to evade the full consequences of its terms.

Since the signing, doubts about Soviet behaviour over the treaty have become so serious that they have brought activity in almost all other areas of arms control to a standstill, and threaten the agreement itself. The Bush administration decided to postpone sending the treaty to the US Senate for ratification – an essential step before its terms are put into effect – and Canada and other NATO countries made joint and individual formal protests to the Soviet Union about its actions.

In an effort to overcome the potentially fatal problems, in March, George Bush initiated a private exchange of letters with Mikhail Gorbachev which could lead to a compromise solution for resolving the difficulties. At the time of writing, what remains is for Gorbachev to indicate Soviet acceptance of the terms, and to guarantee that his military establishment will abide by them.

THE IRONY OF THIS DEAL, IF INDEED IT COMES off, is that it would see the United States and the North Atlantic alliance acquiescing – with some appropriate compensatory movement by the Soviets – to precisely the type of behaviour that ten years ago would have vindicated the most alarmist fears put about by the Reagan administration concerning Soviet trustworthiness. But the reality is that the treaty is too good

for the West and for NATO, to allow it to collapse without exhausting all efforts to save it – even if this involves accepting questionable Soviet behaviour as a *fait accompli*.

The CFE Treaty requires NATO and the Warsaw Treaty Organization to reduce their conventional armaments in five categories of weapon systems: tanks, artillery pieces, armoured combat vehicles, combat aircraft and attack helicopters. It does not restrict the numbers of soldiers or other military personnel. In February 1990, before the treaty was signed, the US and the Soviet Union had agreed at an arms control meeting in Ottawa to limit their armed forces to 195,000 each in central Europe.

HOWEVER, AS THE NEGOTIATIONS ON THE CONVENTIONAL ARMS TREATY progressed, it became clear that the agreed number was simply too high: the Soviet Union was in the process of withdrawing virtually all of its troops from Eastern Europe anyway; and for budgetary and other reasons, the US would soon be well below that number as well. As it became increasingly probable that the two sides would be unable to agree on new personnel limits in time for the November deadline for completing the CFE treaty, they agreed in September that the personnel issue would be put aside for another time. So troop limits, along with aerial inspection measures, are to be negotiated in what is now known as CFE 1A – so called to indicate that these measures were really intended to be part of the CFE treaty.

The treaty operates as follows: the overall ceilings on the five categories of equipment apply to the two alliances (although the language of the treaty refers to “groups of states parties”). There are also sub-ceilings which establish certain regional limits and which ensure that no one state will maintain an overwhelming percentage of the forces allotted to each alliance as a whole. The treaty affects a geographic zone which is referred to as “Atlantic to the Urals.” This includes a portion of the Soviet Union extending as far east as the Ural mountain range, and all of the territory of the European alliance members (with the exception of a small portion of Turkey). US and

Canadian forces in Europe are subject to the terms of the Treaty but their national territories are not.

Both sides must reach the agreed levels forty months after the treaty enters into force. All equipment in the zone as of 19 November 1990, the date of signature, is subject to the terms of the treaty, wherever the equipment might be located after that date. The day before the signing, all countries involved exchanged thick packages of data with each other – providing information on the types, numbers, location, and technical specifications of equipment and their associated military units, within the zone. Exchanges like these will continue over the life of the treaty to monitor the reductions, and later to maintain the agreed limits on numbers.

According to very specific methods established in the treaty, equipment in excess of the agreed limits must be destroyed or converted to other purposes. A variety of options for carrying out the destruction are available. For example, tanks can be destroyed by severing specified key parts, by deforming them according to established procedures, or simply by blowing them up – again only according to methods established in the Treaty which, in the latter case, even specifies where in the tank the explosive charge should be placed. All destruction and conversion of equipment can be observed and inspected by other parties to the treaty.

IT IS THE SHEER SCALE OF THE REDUCTIONS THAT makes the treaty so valuable to the West. The Soviet Union will be required to reduce its equipment holdings by twenty-six percent or 18,840 pieces. Other Warsaw Pact members will reduce their equipment by an additional 18,223 pieces or almost forty-two percent. Following the reunification of Germany, East German equipment now counts as part of the West's inventory, so NATO will eliminate 13,586 pieces of equipment or almost fifteen percent. But without counting East German holdings, NATO reductions would be on the order of just under five percent.

The problems that arose to threaten all this have to do with Soviet behaviour in three areas.

\*Although the Warsaw Treaty Organization will formally cease to exist, for the purposes of the treaty former WTO states will be treated as a group and will jointly and separately continue to be bound by the terms of the treaty.

Prior to the signing of the Treaty in November, it became evident that the USSR was transferring large numbers of tanks and other equipment beyond the Ural mountains. While not strictly speaking a violation, the action quickly generated concern about Soviet intentions, specifically those of the Soviet military establishment.

The Soviet government said the transfers were part of previously announced planned withdrawals from Eastern Europe and that much of the equipment was slated for destruction. The US, too, has removed equipment from Europe which it planned to destroy, and has also moved equipment and troops from Europe to the Persian Gulf. However, in contrast to the Soviets, the Americans said that all of this equipment will be counted against the treaty ceilings.

The second area of concern surfaced after the initial exchange of data. The information provided by the Soviet Union differed significantly from US intelligence estimates of Soviet holdings: the Soviets' numbers were much lower than expected in each category. Subsequent revisions to US estimates brought the differences down to more reasonable levels, although they did not eliminate discrepancies.

PROBLEMS WITH DATA SETS OF THIS KIND ARE not unusual and the treaty gives states ninety days to correct their initial submissions – Germany and the UK have also submitted such corrections. However, in conjunction with the large-scale transfer of equipment out of the zone, the Soviet submission came as a particular shock to the West, indicating that total Soviet reductions would be on the order of three to four times less than preliminary NATO estimates in January 1990. A number of Western government officials involved in the treaty process have speculated that the data submitted by the Soviet Union was based on the levels it expected to be able to achieve – but that for various reasons failed to meet – by 19 November or by the beginning of the initial inspections.

Where the agreement threatened to come

unstuck was over the question of treaty interpretation: dubbed a "treaty-buster" by some. The Soviet Union has recategorized three motorized rifle divisions, previously under the jurisdiction of the army, as naval coastal defence units and claim that

the equipment associated with these units is not "treaty-limited-equipment" (TLE) subject to the numerical restrictions in the treaty.

Similarly, the Soviets claim that equipment held by the Strategic Rocket Forces and naval infantry divisions are not subject to the treaty's terms. The equipment now claimed to be outside the limits includes an estimated 800 tanks, 900 armoured combat vehicles and some 800 artillery pieces – with some estimates putting the total number of pieces at 3,500.

THE PROBLEM OF INTERPRETATION CENTRES ON Articles II and III, which provide definitions of terms used in the treaty, and establish the rules for counting pieces of military hardware. Article III outlines the only instances in which equipment within the zone may be exempt from the treaty's ceilings. The view held by other governments is that all equipment (as defined by Article II) within the zone of application, is subject to the limits of the treaty, with the specific exceptions outlined in Article III. Article III does not give naval forces an exemption. Alone in its position, the Soviet Union argues that the treaty can indeed be interpreted as excluding these forces.

This final matter led to the postponement of the ratification process in the US and put other arms control negotiations on hold. The Soviet Union has been so intransigent on this question that their behaviour suggests that it is not treaty interpretation which is at issue, but rather that the Soviet military has simply decided not to give up those forces. There are several possible motives for Soviet actions.

The Soviets may be seeking to avoid the high cost of destroying the equipment, or, for domestic political purposes of saving face, they may be trying to minimize the political impact of dramatically disproportionate reductions. In addition, during the negotiations the Soviet Union sought NATO agreement to allow equipment to be converted to civilian or paramilitary use rather than destroyed outright. NATO aversion to this idea (although the West eventually agreed to limited arms conversion) may have

prompted the Soviets to begin moving the equipment to avoid its demolition.

More ominously, it is evident that there is a split between the political and military elements of the government. The Soviet military has made it clear that it believes that Gorbachev and the Soviet Foreign Ministry have simply given up too much in negotiations with the West. One Soviet diplomat stated that the decision to move equipment beyond the Ural mountains was taken by military authorities and "came as a surprise to us diplomats." Other diplomatic observers have speculated that the event was one of the contributing factors in Soviet Foreign Minister Shevardnadze's decision last December to resign.

This experience makes clear that the internal problems in the Soviet Union are extensive enough to affect the arms control process. In this instance, the Soviet Union has interpreted the treaty to its own advantage, and played fast and loose along the margins of the agreement. The US attempt to salvage the treaty by developing a compromise solution, which at least in part accepts some of these Soviet actions, is exceptional, but then so are the circumstances.

WHEN THE TREATY EVENTUALLY ENTERS INTO force, NATO will not only benefit from Warsaw Pact reductions, it will also gain an ability to monitor conventional Soviet military activity in an "on-site," close-up way that has been impossible heretofore. In the bargain, the US and the West are helping to shore up Gorbachev at a time of great domestic crisis by accepting certain actions of the Soviet military as water under the bridge, thereby avoiding a messy dispute which would cast a pall over arms control talks at all levels.

Even if the attempt at compromise succeeds, the treaty will not yet be out of the woods. Before entering into force, it will need to pass through the very difficult ratification processes in the US and the Soviet Union – not to mention all the other signatories. Even then, and especially in light of its difficult start in life, its ultimate success will depend on strict compliance by all parties.

The advantages of the treaty, considerable as they are, will not sustain indefinitely a willingness in the West to accept Soviet behaviour that skirts the edges of legality. A healthy and successful life for CFE may depend as much on internal events in the USSR, as on international desire to see the treaty through.

# ISRAEL'S PEACE MOVEMENT, DOWN BUT NOT OUT

*Internal squabbling, wavering policies and a severe identity crisis have robbed Israel's peace activists of much of their influence during the Palestinian Intifada.*

BY TAMAR HERMANN

THERE IS SOLID HISTORICAL EVIDENCE THAT PEACE MOVEMENTS TEND to stay silent or even fall into disarray in times of war. Israel played only a passive role in the Persian Gulf war, during which the Israeli peace movement seems to have almost faded away. Iraqi missiles aimed at civilian targets and the ensuing Palestinian applause sharply increased the collective Israeli sense of vulnerability and stirred a general rallying around the flag.

Israel's peace activists were not oblivious to these events. After long, difficult years of dissent, many now seem eager to carve out a place for themselves within the national consensus. However, this "homecoming" was only in part fostered by the war. The drive to return to the national fold is rooted mainly in the growing frustration of many peace activists over their apparent, albeit perhaps unavoidable, failure to meet the challenge of the *Intifada*.\*

The Israeli peace movement emerged as a mass campaign in the late 1970s and peaked, in terms of participation and perceived effectiveness, between 1982 and 1984, when it led the protest against the Lebanon War. It has since consisted of one large organization – Peace Now – and a growing number of small, even tiny, groups. However, the hard core of the movement never exceeded 500 to 750 activists, and even the more optimistic estimates put the number of supporters at around 150,000.

Despite these relatively small numbers, the movement had high visibility. Intensive and generally positive media coverage magnified the movement's size and impact in the eyes of supporters and rivals alike. Moreover, the movement's socio-demographic composition located it quite close to the centre of power – most groups being dominated by young, highly educated, middle-class, Jewish, urban people of European origin. In the Israeli context, this is a profile which offers a promising entrée into the political arena.

Thus the Israeli peace movement in general, and Peace Now in particular, had considerable potential for making a political breakthrough. Yet, by the time the *Intifada* broke out in December 1987, it was already clear that this potential had not been realized. By the mid-1980s, powerful centrifugal forces left it ailing and divided along the margins of the national consensus, and it was unable to fulfill its natural mission as an emissary between Israelis and Palestinians.

THE MOVEMENT'S FAILURE TO MOBILIZE PUBLIC SUPPORT, ITS LACK OF INFLUENCE with those in the decision-making apparatus who could help change official Israeli policy and its inability to maintain credibility with the two sides or to reduce the mutual violence, can be attributed to the following factors, in ascending order of importance:

First, peace activists, no less than other Israelis, were caught off guard by the outbreak of the *Intifada*, as well as by its intensity and endurance. Despite warnings as early as the late 1960s, by some leaders of early

peace groups, of the perils of a prolonged occupation of the territories and the consequent consolidation of a Palestinian national identity, the actual event revealed the gap between the intellectual expectation of such an uprising and the genuine tactical surprise Palestinians achieved.

While the issue of the historical clash between the aims of the Zionist movement and Palestinian national interests had been the focus of heated debates in Peace Now and other groups since their emergence, it took about six months for the movement to respond to the new situation. Even then, it offered neither innovative insight into the problem nor an elaborated plan for peace. Most of the peace movement's actions were restricted to protests against the harsh measures taken by the military. The same tired slogans which had been used against the first Likud prime minister, Menachem Begin, a decade before, were aimed at Labour's Yitzhak Rabin, minister of defence in the National Unity government. The few efforts to present new peace agendas, the manifesto formulated by the radical Red Line group, for example, were too intellectual and impractical in character to be productive.

SECOND, POLITICAL ACTIVISM OUTSIDE THE OFFICIAL PARTISAN CHANNELS has never been a popular way of operating in Israeli politics. Many Israelis have come to regard antiwar demonstrations and petition drives, like those initiated during the Lebanon War, as showing a lack of patriotism and civil responsibility. These negative images were reinforced by the more radical peace factions' advocacy of the individual's right to refuse military service in the West Bank and Gaza, or to take any part in the suppression of the uprising. Such calls provoked public outcry by explicitly contradicting most Israelis' sense of basic civic obligation to take part in the defence of the nation, regardless of personal political convictions, and threatened to undermine the whole movement's status, as a legitimate participant in the national security debate.

The largest part of the movement had already reduced its own options by declaring more than once that despite its rejection of official policies it stood essentially on the same side of the barricades as the Israel Defence Forces. Actions which implied confrontation with the soldiers were in effect, declared off-limits. The question of what actions could be taken without undermining this basic claim to patriotism became more acute as Palestinians turned more violent and the military response harsher.

Third, far from contributing to a consensus within the peace movement regarding its ultimate goals and tactics, the escalation of violence during the *Intifada* brought in its wake new internal dissension. Dozens of new peace groups formed, each advocating a slightly different solution to the Palestinian problem. Radical groups like There is a Limit, Women in Black, Stop the Occupation, and Red Line advocated civil disobedience and the boycott of products manufactured by the West Bank settlers – provocative tactics that yielded minimal results, but which aroused sharply negative public reaction. Peace Now, which had struggled to sustain its public legitimacy by following a relatively moderate course – for example, by refraining, until late 1988, from openly

\* Editor's Note: *Intifada* is most often translated from the Arabic as "uprising," although it literally means "shaking up." As a discrete event, the Palestinian *Intifada* is generally understood to have begun in December 1987 as a series of spontaneous disruptions which spread from refugee camps in the Gaza Strip across the West Bank, in the wake of the violent deaths of one Israeli and four Palestinians in Gaza.

advocating the creation of a Palestinian state – was accused by the more radical factions of being too soft on the security establishment.

Peace Now struck back by portraying the radicals' moves as unrealistic and, indeed, counterproductive as far as the goal of mobilizing public support for a compromise was concerned. This internal strife severely eroded the leading status of Peace Now, which had most of the material resources, as well as the best network of external contacts, both inside Israel and abroad. In sum, factionalism hindered the peace activists' effort to offer a viable alternative policy, wasted energy and detracted generally from the movement's credibility as a rational and effective force.

Fourth, the peace movement was caught between the conflicting expectations of Jews and Arabs. The Israeli Jewish public demanded that the activists' primary loyalties be clearly expressed. Peace activity was tolerated only if the movement declared itself an integral part of the Israeli collective and subordinated any other interests to the national consensus. Open identification with the Palestinian cause was considered disloyal or even treasonous.

Palestinians, for their part, expected too much from the peace movement. They underestimated the effect on peace activists of the pressure to submit to the national consensus, and failed to see where the movement's fundamental loyalties actually lay. The more moderate Palestinian leaders in the West Bank, with whom the movement had carried on a prolonged dialogue, became increasingly impatient with its hesitation and apparent hyper-cautiousness. The peace movement, in turn, found it difficult to deal with the Palestinians' silence that followed terrorist acts.

Palestinians were also disappointed by the refusal of most peace groups to support their demand for a total and unconditional Israeli withdrawal from the West Bank and Gaza, and for the immediate creation of a fully sovereign Palestinian state.

Moreover, many Palestinians anticipated that the *Intifada* would spark a huge wave of protest within Israel, similar to that during the Lebanon War – an expectation that came to nothing.

In the beginning, Palestinians ascribed the restrained support of their potential Israeli allies to the relatively few Israeli casualties and the fact that the confrontation was confined to the occupied territories. Eventually, however, they realized that the major reason for the limited protest was that for Israelis, the Palestinian issue strikes at the very core of the Israeli state, and that stronger action would threaten their connection to the national consensus. Thus Palestinians – like the Israeli mainstream – asked that the peace movement take a clear stand. Since the vast majority of the movement's activists considered themselves to be Zionists first, even if they rejected the majority view of the Palestinian problem, there was really only one side they could choose.

FIFTH, THE ISRAELI PEACE MOVEMENT FOUNDERED ON THE ROCKS OF ITS own self-image. Comparing the worldviews of the Israeli peace movement to those of its Western counterparts is misleading. The core themes of Western peace activism: post-materialist counter-culture, anti-statism, environmentalism and anti-nuclearism do not play a major role in Israel. Neither are internationalist and pacifist convictions to be found on the Israeli agenda. Peace – which in the Israeli context means the absence of war – although desirable per se, is advocated by most Israeli peace activists primarily for its anticipated contribution to the security and the well-being of the nation – core beliefs which do not differ significantly from those of the political mainstream.

Moreover, like the largest segment of the Israeli body politic, the peace movement argues for political realism and simultaneously claims to be guided by universal moral principles. While its members reject

several of the main tenets on which official foreign and security policies are based – the portrayal of the Israeli-Arab conflict as a zero-sum game, the fundamental imperative for Israel to maintain extensive territorial security margins and the perception that Israel's room for manoeuvre is perilously small – the peace movement seems nevertheless incapable of cutting the cord which connects it to the political mainstream. It remains torn between its powerful need to belong and a sincere desire to change the gloomy reality.

THE STRENGTH OF THIS PRIMORDIAL ATTACHMENT IS REFLECTED IN THE highly emotional reactions of some of the movement's prominent figures to the escalation of Palestinians' anti-Israeli attitudes following the outbreak of the Persian Gulf crisis. Knesset Member Yosi Sarid, regarded by many as the personification of the movement, responded sharply to Palestinian support of Saddam Hussein, indicating that he would not be available for further dialogue in the near future. His statement regarding this turnaround goes a long way to explaining the movement's ambivalence towards the Palestinians:

I don't feel betrayed or cheated, for I never believed in them.... What I did believe was that they had reached a sufficient level of maturity to understand where their own interest really lay.... I thought that through a rather painful process they had realized that it was in their own interest to accept and recognize the existence of the state of Israel.... What actually happened was that they acted in total contradiction to their own fundamental cause and by doing so caused all of us enormous damage.... By their senseless, nasty behaviour they turned the wheel back to where it had been ten or twenty years ago.<sup>1</sup>

Sarid's new position was given lot of attention, but was not embraced by all peace activists. Shulamit Aloni, a politician also associated with the movement, dismissed Sarid's argument and encapsulated the peace movement's central dilemma:

Why should I be disappointed with the Palestinian posture? Have I done something for them? The Israeli Left is nothing if not an integral part of the Israeli government, of the establishment.... We tried to raise a moral voice. We were the opposition, asked questions and tried to change the agenda. We shouted and inquired.... However, de facto we accomplished nothing.

The government has continued to dominate the territories,

to ignore human rights there, to destroy and to kill, and we are part of that because we did not rebel. We are law-abiding citizens. We serve in the army. We do not break the law which prohibits meetings with PLO officials. Therefore we are part of it. The Palestinians owe us nothing. There has been no love affair between us. I have always said that they are the enemy, and it is with the enemy that one should talk.<sup>2</sup>

Despite a political impact which is considerably reduced, Israel's peace movement lives on. Long periods of hibernation and even silence are typical for social movements in general and peace movements in particular. Discrete events, like Anwar Sadat's visit to Israel or the 1987 Lebanon War, are more likely than prolonged phenomena, like the *Intifada*, to stimulate a resurgence. But even in its present condition, the peace movement presents a visible challenge to the prevailing security ethos, and invests the domestic political debate with real content. Its repeated denunciation of atrocities and official misconduct continues to highlight the moral dilemmas presented by Israel's ongoing occupation.

Berita Eisenstein

N INDIA, THEY HAD GANDHI, and now, at last, it's our turn with Ganesh Man Singh," cried out a very excited, elderly Nepali when on 9 April 1990, a large, rejoicing crowd flowed onto *Durbar Marg* (The King's Alley) in the country's capital. This celebration in the sunny streets of Kathmandu followed days of twenty-four-hour curfews, and marked the end of several weeks of tension and violence between Nepal's popular movement in favour of a multiparty system, and the government. Following the fatal shooting of dozens of protestors by the armed forces, the monarch of the Hindu Kingdom of Nepal, King Birendra, proclaimed only hours later and in the same location, the legalization of the country's political parties, abolished more than twenty-five years earlier.

Ganesh Man Singh, the respected and venerable leader of the Nepali Congress Party (NCP), has been perceived by many as the political soul of the multiparty movement. While clearly affiliated with the NCP, Ganesh Man Singh has always endeavoured to stay clear of partisan electoral dealings, struggling only against the "opponents of democracy."

The open, multiparty election of 1959, the only one in Nepal's history, brought the NCP to power and B. P. Koirale, its leader at the time, headed His Majesty's government for eighteen months. In 1960, King Mahendra, father of the present king, repudiated the multiparty system, threw out the government, and replaced it with a non-party regime, the *Panchayat*. A Sanskrit word that literally means "council of five members," village *Panchayats* were created as local instruments of government through which the palace could secure its control of the country. In 1980, a referendum with results that favoured maintaining this setup, led to accusations of vote-rigging from various quarters. And it was this same corrupt regime which collapsed under popular pressure in the spring of 1990.

INSPIRED IN PART BY THE SUCCESS OF SIMILAR MOVEMENTS IN EASTERN Europe, the clandestine political parties of Nepal launched their combined action in February 1990. Clashes, first with the police, and then with the armed forces, became more widespread. The movement now has forty-three official martyrs, and the government is completing its investigations into other disappearances and deaths which occurred during that period.

A few days after the legalization of political parties, a caretaker government was formed, whose main task was to submit a proposal for a new constitution and to organize elections. As was the case with Vaclav Havel in Czechoslovakia, most of the ministers, including the prime minister Krishna Prasad Bhattarai, had spent years in prison.

The constitutional changes finally accepted by the king are regarded by the various political parties as a big step towards democracy. The new constitution explicitly stipulates, among other things, that Nepal's constitutional monarchy is a multiparty system. Although some leftist parties would have preferred a completely secular state, the nation, with a population of close to twenty million, remains a "Hindu Kingdom" (King Birendra is regarded as the reincarnation of Vishnu, a Hindu deity). All religious faiths are tolerated, but active promotion of religious conversion is an offence.

The king retains his power to dissolve parliament in an emergency, and although formally the army answers to a National Defence Council, as a practical matter, it owes its allegiance to the palace. Most Nepalis seem satisfied with the new constitution, although for some it does not go far enough towards a complete guarantee of freedom of expression. "A good constitution, but there is room for improvement," is the way the English-language Kathmandu magazine *Himal* put it.

# POLITICS IN HIGH PLACES

*The people of Nepal go to the polls, and hope democratic government will improve their lives.*

BY FRANÇOIS LAFRENIÈRE

Despite being implicated in the violent events of early 1990, the monarchy has regained some support, although its grip on legitimacy remains tenuous. The hostile, anti-monarchy slogans heard during the weeks preceding Birendra's legalization of political parties, have disappeared. While anti-monarchism still runs strong in various leftist factions, the major parties are aware of the King's popularity, particularly among rural people.

The symbol of unity in this Himalayan country of diverse

ethnic and linguistic groups, Nepal's monarchy sees itself as the guardian of Hinduism, and the protector of the country's sovereignty. The palace has accused various political parties of being too open to the political machinations of Nepal's two giant neighbours – the NCP towards India, and the various communist parties towards China. Since Nepal is dependent on vital trading links with India, it is under constant political and economic pressure from its southern neighbour, which opposes any rapprochement with China.

THE WHOLE COUNTRY WAS CAUGHT UP IN THE LONG-AWAITED 12 MAY election. It is Nepal's urban dwellers from the Kathmandu Valley – less than ten percent of the population – who constitute the majority of the pluralist movement's militants. Few of the remote villages are accessible by road, so parties sent "recruiters" on foot. The canvassing efforts created deep divisions within very small communities, and it was not unusual to find peasants holding several different party membership cards.

The solidarity of the many and various parties during their underground struggle disintegrated rapidly during the months following their legalization, with each trying to put distance between itself and potential rivals. The United Left Front, having first cooled its relationship with the NCP, broke into some ten different communist factions, dominated by the *Male* party. The NCP headed the caretaker, multiparty government, and has within its ranks numerous former elected representatives including some who were opposed to the *Panchayat* regime. The government that fell in 1990 also created a new bloc, the National Democratic Party, which in turn split into two factions. The most important of the regional parties is probably the *Terai* which contests the legitimacy of any central government in Kathmandu.

THE BIGGEST SURPRISES IN THE ELECTION RESULTS THEMSELVES WERE NCP's surprisingly poor showing in Kathmandu – the current caretaker prime minister and NCP leader Krishna Prasad Bhattarai lost his own seat – and the more or less complete rout of the factions representing the old *Panchayat* regime. The NCP did win a slim majority in parliament and will likely form the government. The communist *Male* party captured the next largest number of seats.

As for the patriarch Ganesh Man Singh, he opted not to run for parliament, but his wife and son both did in Kathmandu under the NCP banner, and both lost to communists. This now, somewhat tarnished family: has become the target of satirical cartoons portraying them as "father of democracy, mother of democracy, son of democracy."

The non-elected, caretaker government had been rendered practically ineffective because of its temporary nature. With the election over, the promise of real change, which lies invariably with the new government, has created expectations for economic development, nutrition, health and education that will be difficult to meet. Most Nepalis, without really knowing what the changes should be, are convinced that they will lead to better times.

## FROM THE DIRECTOR

### *Of Resigning Admirals and the Challenge of Making Defence Policy*

SOMETHING HAD TO GIVE – WHAT WITH THE protracted stresses and strains on Canadian defence policy since the publication of the White Paper of 1987. Now the very public resignation of Vice-Admiral C.M. Thomas, Vice Chief of the Defence Staff, has brought some of the issues into the headlines, though it has not illuminated them all.

For those of us who have pressed for some time for an in-depth public debate of defence policy issues, the current openings should be constructively developed. We certainly hope that the government will not try again to design the “mother of all White Papers” – a fifteen or twenty-year plan, with elaborate re-equipment schemes costing many tens of billions of dollars. Annual White Papers, on the model now used by many other countries, would reduce the paralyzing enormity of the decision-making, and allow enough flexibility for the inclusion of major equipment purchases, along with adjustments to the policy framework.

The central issues now at stake relate to the role of the Canadian armed forces in the international security environment. The fact that that environment is no longer “dominated by the rivalry of East and West,” as it was still (erroneously) assessed in the 1987 White Paper, in no way diminishes the importance of maintaining a coherent defence policy. To the extent that there is any substantial, direct military threat to Canadian territory, of the sort that is the primary defence problem for most countries, the United States can be expected to defend against it as an extension of its own vital security interests. The main territorial defence questions for this country remain how, and how far, to cooperate in this continental effort.

Since 1939, however, Canadians and their governments have rejected a narrow territorial view of Canada's vital security interests, and accepted that these require our military participation in collective security and collective defence operations – those of the United Nations and NATO respectively. This philosophy was extended with the innovation of peacekeeping, of which Canada was one of the main architects and remains one of the most important participants. While the military dimensions and demands of NATO are declining substantially, UN

peacekeeping operations will continue to be needed. New forms of collective security and enforcement actions are more likely after the precedent of the action against Iraq. In addition, armed forces are called upon to play other roles, such as aid to the civil authorities in maintaining law and order, responding to natural disasters, or participating in coastal and airspace surveillance against violations of Canadian regulations on fisheries, pollution, immigration, contraband, narcotics, and so on.

When all this is added up, Canada appears transformed from a fortunate middle power relieved of the most compelling demands of military defence, to one faced with a range of serious military challenges, none of which embody the urgency of immediate national survival. In less happy lands, dire circumstances have the effect of simplifying the military choices. Complicating our task even further are the lead- and lag-time problems of acquiring major pieces of military equipment, and the politics of regional distribution of bases and expenditures – factors which are more sensitive than ever in the current, parlous state of the Canadian federation.

DEFENCE IS STILL A MAJOR ITEM IN THE “Discretionary” portion of federal expenditures, so we need to look at how much Canadians spend on defence, and what they spend it on. As the military historian, Desmond Morton recently pointed out:

Canadians are reminded so often of their meagre defence that they are surprised to find themselves, at \$12 billion, the sixth biggest military spender in NATO. For a little less money, as General Gerry Thériault argues, the Dutch get a well-equipped army corps, a small modern navy and a respectable little air force. Canadians get the best-paid, most rank-inflated military organization in the alliance.

Procrastination on defence issues is no longer an option. Amputations, rather than more dieting, are now inescapable, although the easiest answers are probably wrong. “Time to get out of Europe” would be just as foolish a slogan as “steady as she goes” – what with our troops sitting on a central front that no longer exists. American soldiers will almost certainly continue to be stationed in Europe to guarantee extended deterrence through NATO, so even a token Canadian military presence could yield some of the disproportionate political and diplomatic benefits that were long claimed for our larger contributions in the past.

These forces should probably no longer try to claim instant readiness for high-intensity

warfare. A nucleus left on the ground for potentially larger deployments might now be the appropriate commitment. Canada could pursue some special “niches” – for example, small numbers of military personnel in Europe focussed on verification of arms control agreements, and possibly even training and preparation for such peacekeeping functions as might emerge from the embryonic security frameworks being explored at the Conference on Security and Cooperation in Europe.

THE SIZE OF THE REGULAR ARMY IS LIKELY TO be reduced. The debate in the Thomas/de Chastelain correspondence about an “expeditionary force” will need to be clarified. What sizes and types of formation can Canada realistically plan on fielding internationally, with which weapons, and with what scale of transport capacity? To what extent will this capability also serve varying levels of peacekeeping, peace enforcement, and domestic requirements? How will the regular force and reserve resources be meshed, and what will it cost? Contrary to some widespread assumptions, neither lighter, air-transportable military formations, nor reliance on reserves, are necessarily cheaper options than what we do now, especially in the short term.

As for the maritime and air forces, there are basic debates about roles and equipment to be resolved. Admiral Thomas' letter expressed special concerns about the navy, focussing primarily on the extraordinarily long acquisition cycles for warships, and the need to invest today in equipment that might be needed fifteen or twenty years from now. This, just at a time when the first of Canada's six new frigates are coming into service. However, a simplistic and emotional debate about “blue water” and “coastal” navies is not going to satisfy taxpayers who want some reasonable explanation of the tasks for which the capabilities are supposed to be needed.

Canadians cannot have, will not pay for, and probably do not want the “balanced,” “combined arms” capabilities of a major military power. But going back to basics does not necessarily mean a narrow view of Canadian territorial defence – we are no more an isolated “fire proof house” than we were in the 1920s. In defence, as in many other issues, a new policy will require a much tougher approach to general economies, hard choices among competing possibilities, and some astute assessment of the appropriate niches for the Canadian military effort.

– BERNARD WOOD

## ARMS CONTROL DIGEST

### Conventional Forces in Europe

The dispute over the terms of the CFE Treaty, signed last November, continued to cast a pall over arms control negotiations during the period under review. Three issues stood out:

(1) concern by the West (as well as Asian states) over the last-minute Soviet shift of tens of thousands of pieces of "treaty-limited equipment" (TLEs) east of the Urals, to escape destruction under the Treaty;

(2) discrepancies between Western intelligence estimates and data provided by the USSR concerning equipment left behind in the zone of reductions. These discrepancies were said to have been "considerably reduced" as a result of revised intelligence estimates and new Soviet figures, however; and

(3) most important, Soviet claims that some 5,457 pieces of equipment were exempt from the Treaty limits because they had been "re-subordinated" to "coastal defence" or belonged to naval infantry, strategic rocket forces, or civil defence units. All twenty-one of the other CFE signatories insist that, under Article III of the Treaty, all ground-based equipment (with certain specified exceptions) is included, regardless of the military service to which it belongs.

In mid-February, President Bush reportedly offered a compromise whereby the Soviets, without disavowing their interpretation of the agreement, would conform to the numerical limits stipulated by the West. At first, the Soviets had offered only a pledge not to increase their naval ground weapons any further. Later, they reportedly offered to withdraw about half of the weapons in dispute, those associated with their "coastal defences."

In early April, after several letters between Bush and Gorbachev,

the American leader reportedly accepted a Soviet offer to withdraw the "coastal defence" weapons east of the Urals and destroy an equal number of older weapons there, but insisted that the naval infantry weapons be included as well, and that any destruction of the equipment outside of Europe be subject to Western inspection. The West would not require the destruction of some 1,700 TLEs in the Strategic Rocket Forces and civil defence units, or formal Soviet renunciation of its interpretation of the Treaty.

On 25 April, after meeting Secretary of State Baker at a resort in the Caucasus, Soviet Foreign Minister Bessmertnykh announced that the dispute had been settled and an American official confirmed that "the main obstacle" had been removed, apparently by Soviet agreement to include naval infantry equipment. However, the news proved premature, as it was reported on 7 May that Gorbachev would send General Mikhail Moiseyev, Chief of the Soviet General Staff, to Washington in an attempt to resolve the dispute. [For more on the CFE agreement, see page 10.]

### Strategic Arms Reduction Talks

For over a year, it has been reported that only relatively minor "technical" issues stood in the way of a START Treaty. However, neither side has appeared willing to make the necessary compromises to achieve final agreement. Meanwhile, in mid-March, the Bush Administration made it clear that it would not conclude a START Treaty until the CFE dispute had been settled. At the same time, it rebuffed Soviet overtures for another superpower summit until a START Treaty was ready to sign.

In Congressional testimony shortly after resigning as chief US START negotiator, on 17 April, Ambassador Richard Burt identified five outstanding issues: (1) the verification of heavy bombers and air-launched cruise missiles,

where the Soviets are concerned about a perceived US ability to quickly "break out" of the Treaty's limits; (2) monitoring and inspection of facilities for the production of mobile missiles, of greatest concern to the US; (3) the non-denial of missile test data, on which details remain unresolved; (4) the definition of a "new missile," with the US emphasizing the need for a "very clear demarcation between a new system and an old," so that a missile with only slight modifications could not escape the warhead limits placed on it; and (5) the question of "downloading," or permitting each side to reduce the number of warheads on a given type of missile, to reduce their concentration and thus, by making them less vulnerable, enhancing stability.

Burt characterized these as "second order but important issues" that could be solved "in the near future." To do so, he said, would "require some concessions on both sides." Fearing that increased Soviet military influence might enable the USSR to continue modernizing its nuclear forces at a time when the US was cutting back, he called for START to be "put back on the front burner."

### Disarming Iraq

The UN's Gulf ceasefire resolution of 3 April, formally accepted by Iraq three days later, called for the "destruction, removal, or rendering harmless" of all of its chemical and biological weapons, ballistic missiles with a range of over 150 km, and any nuclear weapons or "nuclear weapons-usable material," as well as research, development, support or manufacturing facilities for such weapons. In addition, all states were instructed to prevent the supply of any other types of weapons, military training, and related technical support services to Iraq, subject to review after 120 days, "taking into account Iraq's compliance with this resolution and general progress towards

the control of armaments in the region." Finally, Iraq undertook not to "use, develop, construct or acquire" any weapons of mass destruction or associated materials and facilities in the future.

As required by the resolution, Iraq on 18 April submitted information acknowledging that it possessed fifty-two ballistic missiles and fifty-three warheads, including thirty chemical ones; and large stocks of chemical weapons, including over 10,000 rocket and artillery shells and aerial bombs, and over 1,000 tons of nerve and mustard gas. It denied, however, that it had any biological or nuclear weapons or related items; and insisted that it was not engaged in nuclear weapons production, that all of its nuclear materials were already under international safeguards, and that all of its "peaceful" nuclear research and development facilities had been destroyed in Allied bombing. Iraq's accounting was immediately and widely denounced as incomplete and inadequate.

On 22 April, in response to an International Atomic Energy Agency (IAEA) demand for further details on its nuclear programme, Iraq revealed what was described by an American official as "an extraordinarily detailed account of the status, location and amount of all of the enriched material." It also revealed a number of nuclear research installations and stocks of fissile materials unknown to the West. However, the list was still criticized as incomplete for failing to include nuclear weapons development laboratories such as one at al Qaqaa.

Under the terms of the UN resolution, Secretary-General Perez de Cuellar will appoint a Special Commission to carry out on-site inspection of Iraqi biological, chemical and missile capabilities and oversee their destruction. The IAEA is to inspect nuclear facilities and dispose of all nuclear weapons-usable materials. □

— RON PURVER

## DEFENCE NOTES

### Post-Gulf War Defence Policies

The stunning success of the US-led coalition forces in the Gulf War has resulted in a number of national reappraisals of defence policy. In France, officials as well as defence critics have acknowledged that the war revealed the limitations of French ability to deploy conventional forces armed with sophisticated weapons in regional conflicts. In particular, Defence Minister Pierre Joxe publicly recognized the overwhelming dependence of the French forces on US intelligence: "It was the United States that provided — when and how it chose to — the most important information that we needed to prosecute the war."

The French have only one dedicated military satellite, and it cannot send detailed photographs to ground in sufficient time to provide immediate support to field commanders.

For satellite intelligence, the British forces appeared to rely entirely on the US. Despite favorable comparisons with the French performance, UK Minister of Defence Tom King announced that the British review of defence policy, *Options for Change*, would be placed on hold pending an assessment of the war.

In Washington, the exuberant response to military victory has not changed the long-term plan to reduce the size of the military. By 1995, the Army will comprise 18 divisions as compared to 28 in 1990, and the Air Force will be reduced from 36 to 26 fighter wings. These planned reductions are accompanied by a series of programme cancellations which include the Navy A-12 stealth fighter, and the decommissioning of two battleships, the Wisconsin and the Missouri, both of which saw service in the Gulf.

Despite the reductions, in testimony to Congress, Defense Secretary Dick Cheney has emphasized the need for US forces to be able to respond rapidly to "short-notice regional crises and contingencies that threaten US interests." In doing so, it is likely that considerable attention will focus on the advantages provided by military satellites. During the Persian Gulf War, US forces relied heavily on satellites designed to monitor Soviet territory for communications, warning of Scud attacks, and target locations (See *Defence Notes*, Spring 1991).

In the future, it appears that the new emphasis on regional conflict will be accompanied by the development of smaller, lighter satellites offering more flexibility and finely-tuned capabilities in support of expeditionary forces. These satellites will provide tailored intelligence analysis to field commanders, facilitate ground communications between different units even when they are in close proximity to each other, and incorporate further improvements to the Global Positioning System (GPS) which will not only allow ground units to precisely fix their own positions, but provide targeting data for precision-guided weapons and pinpoint accuracy to field artillery.

### A Canadian Admiral Resigns

In late April, it became evident that the long-awaited revision to the 1987 Defence White Paper had not awaited the outcome of the Persian Gulf War. On 24 April, Vice-Admiral Charles Thomas, head of Maritime Command and Vice Chief of the Defence Staff, submitted his resignation some months in advance of his planned retirement. In a letter to Chief of the Defence Staff, General John de Chastelain, and in subsequent statements to the press, Thomas took issue with the fifteen-year defence plan apparently submitted to the federal cabinet for approval in February, but not yet approved.

Thomas' letter of resignation, and de Chastelain's reply, referred frequently to the proposal before cabinet. The implication from the letters is that among the recommendations made were the following: the re-equipping of "an expeditionary force brigade group" (the nature and composition of which was not specified) as a "priority investment"; by indirect references in Thomas' letter and the response from de Chastelain, the long-term development of naval forces to comprise twelve new frigates, four modernized Tribal-class destroyers, and an unspecified number of corvettes as a substitute for future batches of the frigates (corvettes were not explained in the correspondence, but are normally patrol ships smaller and less capable than frigates); the twelve mine-sweepers promised to the Navy Reserve; and a "modest" conventional submarine replacement programme "within a few years."

Thomas' principal objections to this policy centred on the submarine and corvette programmes. The proposal to buy corvettes, he wrote, was "a wrong and expensive choice of less capable surface ships," and the delay in the submarine programme meant that Canada was surrendering its sovereignty over the undersea water space surrounding its territory. Thomas argued that the priority given to a new expeditionary brigade group was misguided, and called for a public debate on defence policy.

In his reply, which was supported by new Defence Minister Marcel Masse, de Chastelain took strong exception to Thomas' dismissal of the proposed new brigade group. In an unusual acknowledgement that the 1987 White Paper was "out of step with changing geopolitical circumstances and unaffordable," he argued that "we must offer the Government the broadest possible range of military options" to meet future security requirements. Specifically, de Chastelain noted that the Navy would receive forty percent of capital expendi-

tures over the fifteen-year period as compared to thirty-three percent for the Air Force and twenty-seven percent for the Army.

Implying that the funding base for the fifteen-year programme would follow the pattern of the last several years (suggesting, therefore, that planning is based on a constant defence budget with no after-inflation increases in defence spending), de Chastelain noted that the programme placed before cabinet was deemed to be ninety-five percent fundable over the planning period. An essentially zero-growth defence budget was reflected in the 1991-92 Main Estimates released in February. Excluding special funding for the Gulf task force and the Oka crisis, defence spending increased by a nominal five percent over the 1990-1991 budget, indicating a more or less constant budget after inflation.

### NORAD Renewal, Intermittent Radars

Whatever the future of the Canadian Navy, the Air Force will continue to operate within the framework of the North American Aerospace Defence Command. On 19 April, the government announced that the NORAD Agreement will be renewed for a further five-year period at the time of its expiry on 12 May.

Future North American radar surveillance, however, will need to make do with considerably reduced services from two OTH-B (over-the-horizon backscatter) radars, which the contractor, General Electric, turned over to the US Air Force in 1990 at a cost of \$1.2 billion. After an initial, controversial decision by the Air Force to dismantle, "pack and store," the radars, in early April, a compromise was reached. The East Coast OTH-B in Maine will be operated for forty hours each week (hostile aircraft will need to guess which forty hours), and the West Coast facility will be turned off and maintained by a skeleton crew.

— DAVID COX

## REPORT FROM THE HILL

### The Post-Gulf War World

The Gulf War moved to a speedy conclusion. Within six weeks of the opening of offensive military operations by the multinational coalition arrayed against Iraq, US President George Bush ordered their suspension on 27 February, declaring Kuwait liberated and Iraq's army defeated. On 3 March, Iraq accepted the UN Security Council resolution setting conditions for a permanent ceasefire.

The House of Commons adjourned on 22 January, following the vote in favour of the government's motion to support the United Nations "in ending the aggression by Iraq." It returned on 25 February, but in the meantime a specially-struck joint committee of the House Standing Committees on External Affairs and National Defence met regularly to hear from relevant Ministers and officials on the conduct of the war. Secretary of State for External Affairs Joe Clark appeared on 29 January and again on 6, 13, 21 and 22 February, while National Defence Minister Bill McKnight appeared on 31 January and on 12 and 20 February.

On 12 February, the government's proposal for a UN-sponsored global summit on "Instruments of War and Weapons of Mass Destruction" was passed to the UN Secretary-General. It was also discussed at some length the following day during Mr. Clark's appearance before the House joint committee.

On 6 March, Joe Clark tabled in the Commons and at the UN, Canada's first annual report on exports of military goods, fulfilling a commitment the Minister had made in a speech to the UN

General Assembly in September 1990, in which he emphasized the importance of making arms transfers and procurement as transparent as possible.

Mr. Clark visited Jordan, Israel, Saudi Arabia, Syria, Iran, Kuwait and the United States in the immediate aftermath of the war, reporting to the House on his trip on 15 March. He also briefed the House External Affairs Committee about the trip on 21 March. Mr. Clark viewed the Israeli-Palestinian issue as central to peace and security in the region and stressed that the next six to twelve months would be "a critical time in determining whether the war with Iraq will go down in history as the key that opened a whole new era in the Middle East."

Mr. Clark also briefed the House Defence Committee on 20 March on the government's arms trade proposals. There he admitted that officials had some reservations about the Canadian proposal for a world summit and described the reactions of other major powers on the UN Security Council as "skeptical." However, the Minister described Liberal External Affairs critic Lloyd Axworthy as "far too gloomy and far too alarmist" when the latter depicted a "re-igniting of the arms race in the Middle East."

### Rule Changes in Parliament

Parliament adjourned 12 April after passing a bill which amended the House rules by limiting MP's speeches to fifteen minutes (instead of twenty), cutting forty days from the Commons calendar and increasing the parliamentary work week by five hours. In addition, the bill restructured Commons committees by dividing the twenty Standing Committees into five envelopes: management (three committees); human resources (nine, including Employment and Immigration as well as Aboriginal Affairs); natural re-

sources (four, including Environment); economic (five, including External Affairs and International Trade); and departmental (five, including National Defence and Veterans Affairs). Each envelope will contain two Legislative Committees which can be asked by the government to review legislation.

The House was called back in third session with a Speech from the Throne on 13 May.

### Cabinet Changes

On 21 April, the Prime Minister announced a major shuffle of his cabinet. Among the more significant changes were the following: Joe Clark, Secretary of State for External Affairs since 1984, became Minister responsible for Constitutional Affairs and President of the Privy Council; Toronto area MP Barbara McDougall, took over External Affairs, leaving her previous portfolio of Employment and Immigration to Bernard Valcourt of New Brunswick; Michael Wilson left Finance to become Minister of Industry, Science and Technology, as well as Minister of International Trade; Jean Charest returned to the cabinet as Minister of the Environment; and Marcel Masse, long time Communications Minister, took over as Minister of National Defence.

### Committee Reports

On 21 March, the House External Affairs Committee presented its seventh report, which it adopted from its Sub-Committee on International Debt chaired by Walter McLean. The report, *Unanswered Questions/Uncertain Hopes*, appeared in Issue 105 of the regular proceedings of the Committee. Its subdued appearance belied a forthright rebuke to the government's November 1990 response to the Sub-Committee's earlier June 1990 report, *Securing Our Global Future* - "the response is dispiriting in its approach, especially in what it has evaded or managed not to say ... the Com-

mittee's recommendations are mostly rejected without any alternative initiatives being proposed in their place." It called on the government to bring forward bold and creative proposals on debt relief measures for lesser developed countries, "similar in political energy" to the Prime Minister's involvement in the Children's Summit and his proposal for a world summit on the arms trade.

On 25 March, the House of Commons Environment Committee under the leadership of its chairperson, David MacDonald, presented its third report to the House on global warming. Entitled *Out of Balance: The Risks of Irreversible Climate Change*, the report made some twenty-five recommendations, intended to change Canadians' views about "life as usual" which the report characterized as "much less efficient, more wasteful and more expensive than it need have been...." Among the recommendations: i) that immediate action be taken by Canada to reduce substantially the rate of greenhouse gas emissions, such that a twenty percent reduction in human-sourced carbon dioxide emissions by the year 2005 (compared to the 1988 level of emissions) would be the government's minimum interim objective; ii) that Canadian energy policy-making has, as its most immediate focus, the more efficient and conserving use of energy; iii) that the government use environmental considerations as a filter for its foreign aid and trade initiatives; iv) that the Auditor-General, working with the Departments of Environment and Finance, establish an environmental audit function to assure that all federal departments and agencies have implemented environmental assessment processes, and to monitor the effectiveness of environmental programmes. □

- GREGORY WIRICK

## REPORT FROM THE SECURITY COUNCIL

### The Persian Gulf War

On 11 April, the president of the Security Council handed a letter to Iraq's ambassador to the UN officially announcing a ceasefire in the Persian Gulf War. While the letter marked the formal end of hostilities, diplomats with an eye to history, were divided on the issue of the specific date that the conflict came to an end. Some argued that the ceasefire began on 27 February, when US President George Bush ordered his forces to halt their rout of Iraqi troops.

But other diplomats argued that the ceasefire formally took hold on 4 April, when the Council adopted Resolution 687, which laid out the conditions for an end to hostilities. Among other things, Resolution 687 called on Iraq to agree to destroy its chemical, biological weapons as well as most of its ballistic missiles. Iraq was also ordered to agree to:

the creation of a demilitarized zone along the 1963 boundary between Iraq and Kuwait; the creation of a fund to compensate those who suffered losses as a result of its 2 August invasion of Kuwait. The fund would be financed by appropriating an annual share of its oil revenues, the precise amount to be determined by the UN Secretary-General; renounce any attempts to acquire or develop weapons of mass destruction whether chemical, biological or nuclear. In return, while not ending sanctions, the Council allowed Iraq to import food and essential materials, a decision that would be reviewed every sixty days.

In a speech to the Council, Iraq's ambassador reacted angrily to the solution and said his country reserved the right to seek reparations of its own for the destruction wrought by the allies. He accused allied forces of indiscriminately

bombing military and civilian targets saying that 88,500 tons of explosives had been dropped on Iraq – the equivalent of “seven atomic bombs.”

A majority of the Council supported the adoption of Resolution 687, with Cuba against, and Ecuador and Yemen abstaining. In a speech that reflected the views of many, the Soviet delegate said that the international community had learned a bitter lesson similar to that of the 1930s, when an unchecked aggressor had seized one small nation after another. Resolution 687, he said, was a test of the new system of international relations, and in adopting it, the Council had proved its ability to restore international peace and security.

The adoption of Resolution 687 was preceded by intense diplomatic activity in order to force Iraq to acquiesce to allied and Security Council demands. Even before hostilities ended, the international coalition, as well as Iraq and its allies, had been in competition to secure the upper hand in the propaganda war.

On 13 February, the Council voted to meet privately to hear statements on the Gulf conflict. The procedural vote was a victory for US diplomacy which was concerned that a public discussion of the bombing campaign and a non-aligned proposal to order a ceasefire could embarrass Arab allies in the international coalition.

The minutes of the meeting were released twenty-four hours later. During the meeting, Philippe Kirsch, the acting Canadian ambassador, summarized Canada's position by saying that “the disappointing and painful recourse to force was the result of reaching the limits of diplomacy. The continuing recourse to force is clearly authorized by the legal and moral authority of the Security Council.”

The meeting was also remarkable for the shrill tone of some discussion, as well as for the personal animosities that had developed among Council members

during the months leading up to the conflict. Iraq's representative dismissed the meeting as “a private session for liars, pygmies and hypocrites.” In one of the most vicious personal attacks heard in the Council, he referred to Kuwait's ambassador as “the pygmy who sits to my right.”

The ambassador of Zaire subsequently objected to the use of “pygmy” as a pejorative term. He noted that his country counted a population of 400,000 pygmies and “I should like to say that pygmies are fully-fledged human beings and cannot be treated in a discriminatory fashion because of their size.”

Continuing the diplomatic pressure on Iraq, on 2 March, the Security Council adopted Resolution 686, with Cuba voting against, and China, India and Yemen abstaining. The document demanded that Baghdad implement all of the Council's twelve previous resolutions passed against it. Resolution 686 also demanded that Iraq rescind its annexation of Kuwait; accept liability for losses caused to individuals, corporations or countries as a result of its invasion; release all detainees and return all stolen Kuwaiti property.

On 3 March, just days after hostilities ended, the Council called on the sanctions committee to act promptly on requests for humanitarian assistance stemming from the war. It also dispatched a mission to the area to assess humanitarian needs.

On 20 March, Under-Secretary General Martti Ahtisaari reported that the war had relegated Iraq to a “pre-industrial age” and warned of “cataclysmic” conditions. He called for urgent humanitarian aid. In a separate report on Kuwait, he noted that the government appeared to be making progress in providing for basic needs and restoring essential services.

On 5 April, the Council adopted Resolution 688 demanding that Iraq end its repression of the Kurds

and other civilian groups inside Iraq. Cuba, Yemen and Zimbabwe voted against, while China and India abstained. All five of these countries argued that the resolution amounted to meddling in Iraq's internal affairs and, as such, was a violation of the UN charter. Resolution 688 also called on the Secretary General to “use all the resources at his disposal” to address the needs of the refugees.

On 29 April, the Council issued a “solemn appeal” for assistance to twenty-one countries affected by sanctions against Iraq. While the Council called for a positive response, it did not specify what this should be.

### Other Council Business

On 22 January, the Council urged the parties to the conflict in Liberia to continue to respect the ceasefire there and to cooperate with the efforts of the Economic Community of West African States to restore peace and security. In a statement by the president, the Council also appealed for humanitarian aid for Liberia.

On 30 January, the Council renewed the mandate of the UN Interim Force in Lebanon (UNIFIL) for six months. The next day it renewed the mandate of the Iran-Iraq Military Observer Group (UNIMOG) until 28 February after which it was disbanded.

On 27 March, the Council agreed to “deplore” the Israeli expulsion of four Palestinians from the Occupied Territories. It also said it was “gravely concerned” by the deteriorating situation in the territories.

On April 29, the Council adopted Resolution 690, which established the UN mission for a referendum in Western Sahara. The operation is another reflection of the UN's reactivated role in peacekeeping. The effort will cost \$200 million and involve close to 3,000 military and civilian personnel. As in most other major peacekeeping operations, a prominent role was reserved for Canada.

## NEWS FROM THE INSTITUTE

"Encouraging public discussion" about issues of international peace and security is a major part of the mandate of the Institute, and indeed, the justification for a good deal of its work. Publications, relations with the media, joint projects with other organizations, all fall within that general rubric. One audience receives particular attention – high school teachers and students – from one staff member – **Bradley Feasey**.

In early 1987, the Institute brought together a group of teachers, trustees, officials and members of non-governmental organizations, all of whom were involved in education, to discuss the demands which were being placed on the education system with regard to peace and security issues. What emerged from the discussion was a consensus that there was an increasing requirement for teachers to deal with these issues, and yet a corresponding lack of materials designed with young people and students in mind.

Because the Institute has expertise on many of these matters, it seemed logical to try to fill the gap. We were, and are, conscious that, as a federal Crown Corporation, we should not become involved in curriculum development: what we could do, however, was look at existing provincial curriculum guidelines, and within them, produce materials which would be useful for students and teachers. The nature of our areas of expertise – arms control, disarmament, defence and conflict resolution – suggested a concentration at the high school level.

Bradley Feasey, a staff member at the Institute, began this work and has brought to it both an understanding of the issues and

an ability to communicate, on paper and orally, with high school teachers and their students. A fortunate coincidence brought us in touch with **Geoff Irvine**, a history teacher in the Carleton school board and author of an Ontario sociology text and whom we were able to engage on contract.

Together they wrote the *Teachers' Handbook on Peace and Security*. The primary goal of the book is to provide students with a base of knowledge in the field of international peace and security which will help them to understand and interpret the many disparate pieces of information to which they are exposed. To do this, the information and lessons in the book are organized around three broad categories: foreign policy, security and international conflict. In each case, the authors have tried to impress upon the readers that the subjects are often contentious and that there are varying points of view on them. They have also sought to illustrate that the policies pursued in Canada and elsewhere are the result of decisions influenced by perception, priorities and values.

Because history and social studies – the courses where the subject matter of the *Handbook* is most appropriate – are not compulsory in all jurisdictions after a first course in high school, the authors geared the book to that level.

The *Handbook* is written with the needs of busy teachers in mind. Each topic is accompanied by strategies for the teacher as to how the topics might be introduced, presented, discussed and evaluated. The format allows it to be used as a whole, or in portions, selected by concept, individual topics or readings.

The first draft of the *Handbook* was written during 1987. It was field tested in a number of schools, and introduced to a group of teachers at a conference at the Ontario Institute for Studies in Education in the spring of 1988. A selected group of field testers met at the Institute in June 1989, and final revisions were completed in the following months. The present document is dated June 1990, with a French language version to be available in 1991.

The loose-leaf format allows

### The Teachers' Handbook on Peace and Security

*"there was an increasing requirement for teachers to deal with these issues, and a corresponding lack of materials designed with young people and students in mind"*

#### Peace and Security Competitions Fund Procedures and Deadlines

*For the semi-annual competitions with deadlines of 30 June and 30 November, 1991 and 30 June, 1992 the Fund will be interested in receiving applications to support projects that would make thoughtful contributions to issues related to international peace and security on the 125th anniversary of Confederation in 1992. It is our understanding that Canadians will be invited by Parliament to reflect in their various fields on the record of opportunity and achievement in that record and on challenges for the future.*

30 June for an October decision

30 November for a March decision

Peace and Security Competitions Fund  
360 Albert, Suite 900

#### Back issues of P&S on microform

Back volumes of this publication are available in microform (film or fiche). For further information, contact Micromedia Limited, 158 Pearl Street, Toronto, Ontario. M5H 1L3. Tel. 416-593-5211. 1-800-387-2689.

additions and revisions, as necessary. Since we decided to concentrate on concepts, with discrete facts used for illustration, the Handbook remains current despite the monumental changes which have taken place in international relations since the book was conceived.

Distribution of the *Handbook* (it sells for \$35.00) is handled through the Institute, and as more and more teachers know of it, demand is increasing. Bradley Feasey gives workshops at professional development days and at conferences organized by teachers and students. The Institute is inserting customized guides for the use of the *Handbook* in each province. So far we have completed the Ontario and Manitoba guides, and have commissioned others.

In 1992, we will begin a "Teacher-Fellow Programme" which will generate new classroom resources on an annual basis. The Institute will solicit proposals from teachers across Canada, examine each, choose a winner and bring the winner to Ottawa to work with Institute staff for several weeks during the summer. When the project is completed, the Institute will publish and distribute it, thereby providing fresh and innovative classroom resources.

Each week for twenty-six weeks a year, 130 high school students from across the country, arrive in Ottawa to spend a week together at the Terry Fox Centre as part of a programme called "Encounters with Canada." The Centre, a project of the Council for Canadian Unity, offers lectures, tours, theatre, recreation, discussion and debate. For the past four years, the Institute has sponsored, designed and presented a three to four hour session, each week, on issues of international peace and security. Bradley Feasey is the key staff person involved, and almost every week he spends time at the Terry Fox

Centre assisting in the discussion, debate or research being undertaken on international issues. During the winter of 1991, we amended the programme to take account of the Persian Gulf crisis and war. Bradley and **Rychard Brûlé** of the Institute's Peace and Security Competitions Fund, gave presentations on the war, students split up into groups for what were apparently spirited discussions, and resumed in plenary for reports.

High school students and teachers are the primary target audience of several other joint projects of the Institute – undertakings or programmes which we co-sponsor and/or organize in co-operation with external groups, and which are the primary responsibility of **Jill Tansley**. In May 1989, we co-sponsored a conference on peace and security education for teachers and students with Henson College at Dalhousie University; during 1989 and 1990 we undertook, with the London Regional Art Gallery and Historical Museum, a programme for students based on a retrospective of war entitled "Lest We Forget"; from 1988 to 1990 we contributed to the "Science for Peace" section of Expo-sciences, a pan-qubécoise science fair for students organized by the Conseil de développement du loisir scientifique.

Work with teachers and students builds the base of wider knowledge and understanding of issues of international peace and security – essential prerequisites for an informed public discussion. As students grow to adulthood in the interdependent world of the 1990s and beyond, their ability to understand the global dimensions of their world will figure prominently in their actions and reactions. □

— NANCY GORDON

### Barton Awards Programme

The Canadian Institute for International Peace and Security recently awarded nine scholarships (\$14,000) and two fellowships (\$30,000) to Canadians who wish to further their studies in the areas of international peace and security. These Awards are given annually under the Barton Awards programme of the Institute, named in honour of its first Chairman, William H. Barton, the distinguished former Ambassador to the United Nations in New York and Geneva.

The Award recipients come from different disciplines and will pursue a variety of studies.

#### Fellowship Recipients:

**Simon W. Dalby** is a resident of Vancouver, B.C. A Ph.D. graduate of Simon Fraser University, he will be conducting research at the Simon Fraser University's Centre for International Studies concentrating on the environmental dimensions of international security in the Pacific.

**Elaine M. Holoboff**, from British Columbia, will be completing her Ph.D. degree at King's College, University of London, England before commencing her post-doctoral research on Soviet security policies in a post-Cold War Europe. She will be conducting this research through York University in Toronto.

#### Scholarship Recipients:

**Stephen H. Baranyi** is from Toronto, Ontario. He is enrolled in Ph.D. studies at York University in Toronto, and is conducting field research in Latin America. His research is on the dialectics of defence development in Panama, 1968–89.

**Jean-François Bergeron** is a native of Quebec City, Quebec. He is pursuing his Ph.D. in Political Science at Laval University. He is concentrating his research on political transition and democratisation in South Africa as a result of political change under the leadership of F.W. deKlerk.

**Andrea Chandler** is from Halifax, Nova Scotia. She is pursuing her Ph.D. in Political Science at Columbia University in New York. Her dissertation research is on post-revolutionary statebuilding and the politics of border control in the Soviet Union.

**Garth Barclay Davis** of Vancouver, British Columbia will be pursuing studies at the School of Advanced International Studies of Johns Hopkins University in Washington, D.C. He intends to carry out independent research on Canada and security in the North Pacific with a review of threat analysis and policy prescriptions for the 1990s.

**Marie-France Desjardins** is from Montréal, Québec. She is continuing her Ph.D. studies with the Department of War Studies at King's College of the University of London, England. She is conducting research on confidence-building measures in Europe.

**Olgia Hlinovsky** from Hull, Québec, is a Ph.D. candidate in the Sociology Department at the Université de Montréal. For her dissertation research she is doing an analysis of war from a political perspective within society.

**Markus Ludwig Kreuzer** of Vancouver, British Columbia, is pursuing Ph.D. studies in the Political Science Department of Columbia University in New York. His dissertation research analyzes how the competitive process induced by political institutions constitutes a distinctly democratic contribution to the resolution of conflicts.

**David R. Mutimer** of Antigonish, Nova Scotia, is completing his Ph.D. in Political Science at York University in Toronto. His thesis topic is on the emerging new European security order as a study in international change.

**Ian Rowlands** is a native of Ottawa, Ontario. He is pursuing his Ph.D. in International Relations at the London School of Economics and Political Science. His research is on the effect of global environmental change on international relations, especially with regard to international cooperation and conflict in relation to ozone layer depletion and global warming.

## LETTERS TO THE EDITOR

### Questionable and Condescending

Your spring issue of *Peace & Security* contained a few questionable assessments of recent alternative defence debates. For one, Chris Smith argued in "From Bust to Boom" that "much of the alternative defence de-

bate always appeared in the shape of unreal policies geared to defeat – the idea being to leave a country's borders open to invasion and ensuring that the negative aspects of territorial occupation outweighed the possible gains." But Smith should recognize that this idea of leaving a country's borders open to invasion is unique to the field of civilian-based defence. It is not an idea shared in the field of non-provocative defence or defensive defence where numerous models entail border defence as well as defence in depth.

Moreover, whereas Smith alleges that the use of advanced military technology is downplayed in the work on alternative defence, in fact, many models actually place a premium on the use of light, mobile, precision-guided munitions and sophisticated air defences. Smith applauds the success of the Tornado aircraft and the Patriot missile systems for muting what he describes as this Luddite view. But the Tornado ran into a few troubles (four out of the seven planes lost went down in the first four days of the air war) and Patriot is a defensive system – a success that will inevitably be used to support the case for defensive defence. In short, it appears that Smith hasn't done his homework and his portrayal of a promising field can be seen as a condescending caricature.

Another amazing claim is found in Bernard Wood's "Debating war, peace, morality and order." He writes that "the debate over offensive and defensive roles is irrelevant in any war zone. It is the capabilities of the Canadian aircraft and their crews that shape what they do." Yet surely Wood recognizes the importance of political control and military restraint (even in war zones). Iraq was wise enough to avoid the use of chemical weapons; the Americans wisely avoided the use of nuclear weapons; and Canadian officials could have easily stipulated that the CF-18s were to remain on defensive missions flying combat air patrols over the Gulf.

The CF-18 is capable of both offensive and defensive operations but that doesn't mean it has to be used for both. Moreover, contrary to what Wood writes, it was hardly our aircraft or crews that determined Canada's military response; it was our government. And, as strange as the decision was to begin bombing missions in the last week of the war, few Canadian officials would countenance simply giving free reign to military and technological determinism in the field.

We can expect to hear a range of interpretations on the lessons of this war. Chris Smith's analysis leads to the conclusion that the Gulf War will help to justify business-as-usual and the demand for a wide range of advanced weapons to fight the wars of the future. On this point, Smith may be correct; some governments will resort to the old methods. However, in a recent statement to the Standing Committee on National Defence, Joe Clark wisely noted that the option to this grim scenario will be to promote military restraint, arms transfer restraint and defensive defence at lower cost. The Secretary of State for External Affairs recognizes that the choice is clear.

It may be, as Bernard Wood writes, "that our national debate since the 2 August has done us no credit as a people." Then again, the problem here may be simply one of perspective and perceived relevance. From another perspective, it is now encouraging that only a very few peace and security institutes consider the alternative defence debates to be irrelevant.

*H. Peter Langille, Ottawa*

### The Role of the Media in International Conflict

What did the Gulf War teach us about the power of the media? What was the relationship between journalists and the military? Between journalists and politicians and diplomats? What makes one war news and not another? Are journalists in danger of becoming part of a conflict?

These are some of the questions which will be addressed at a two-day conference sponsored by the Institute featuring many respected speakers from the media, military, government, and academe. Confirmed speakers include:

- Aileen McCabe**  
Southam News
- Colin MacKenzie**  
*Globe and Mail*
- Jim Travers**  
Southam News
- Akiba Cohen**  
Hebrew University  
of Jerusalem
- Florian Sauvageau**  
Université Laval
- Joe Schlesinger**  
CBC
- Jean Pelletier**  
*Journal de Montréal*
- William Solomon**  
Rutgers University
- Jeremy Kinsman**

## REVIEWS

### On A Hinge of History

Ivan L. Head

Toronto: University of Toronto Press,  
1991, 229 pp., \$35.00, cloth

Ivan Head has been a force in the way Ottawa thinks about international matters since he became Pierre Trudeau's special advisor on foreign affairs in 1970. In 1978, he was appointed president of the International Development Research Centre (IDRC) – a crown corporation with the mandate of “assisting developing countries in utilizing science and technology.”

Pierre Trudeau's first foreign policy speech as prime minister was written by Head and presaged many of the themes of this volume. “Never before in history has the disparity between the rich and the poor, the comfortable and the starving, been so extreme,” Trudeau said. “The name of peace is development.”

*On A Hinge of History* is an examination of the “global disequilibria and the resulting mutuality of vulnerability of societies in both the industrialized and developing regions of the world.” While Head recently left IDRC, the book is also the result of an institutional effort by IDRC. The author credits about a dozen senior scholars from across the country for their contribution to the research project that gave rise to the book, but does not indicate who contributed how much to which part, or provide many details about the nature and goals of the research. This ambiguity about the book's origins and purposes is no doubt at least partly responsible for its uneven quality. What Head does convincingly redecorate the mental stage on which international politics has

been played out for two generations. Rich industrialized peoples have been obsessed with East-West relations to the point where they have been blinded to what has really been going on around them. With the East-West struggle now off the agenda, they now have the opportunity to see clearly. One way Head forces the reader into this mental adjustment is by eschewing words like “Third World” and “developing country” – with all their judgemental, even racist baggage – in favour of “north” and “south.”

Head presents striking descriptions, metaphors, and statistics as he works his way through the international debt, agriculture, trade, environmental, demographic, and institutional crises:

the circle of denuded landscape around many African villages ... has a radius of 7 kilometres ... the distance that a person can reasonably walk in quest of firewood and return in a single day.

The [World] Bank's definition of the phrase [‘absolute poverty’] is so shocking as to remove it from the personal experience of virtually every single person in Canada. To exist in absolute poverty is to be so calorie-deficient that one lacks the energy needed to work.

[In the period 1955 to 1987] the global increase in world trade was 600 percent in real dollar terms. The [forty-five small low-income countries most of which are in sub-Saharan Africa] increased their exports by only 12.7 percent.

Given the credentials of the author, and the acknowledged institutional backup, *On A Hinge of History* ought to be a singular contribution to the knowledge and understanding of global economics and north-south politics. The compelling and very difficult question, after forty-five years of tragically bungled efforts with foreign aid and various experiments in development is: what are the overarching principles and models which emerge from this long experience that can help everyone move for-

ward? Here, at the pragmatic, public policy end of the problem, Head's book offers very little.

The language of the two final chapters which deal largely with the politics of the issue is vague, soft and overblown: “A new outlook is needed, one more subtle and all-embracing than in the past. A new form of social contract is required, one based on scientific reality and tempered by humanitarian constants.” Avoided entirely is serious grappling with some of the dilemmas which paralyze international and domestic systems.

One such puzzle is the conflict between individual and collective social needs. How do you get large numbers of people to do what they know they should do, but cannot or do not because for each individual making the decision the apparent costs are too high? We know that our future as comfortable northerners is inextricably tied to the welfare of southerners and that our personal patterns of consumption are destroying the planet. Yet, this knowledge is not, in itself, a guide to action.

The Leninists grabbed on to this puzzle from the wrong end by discarding liberal notions of individual good and imposing onerous collective rules on personal conduct. The Marxist experiment is now finally discredited, but then what to do? The poignancy of this key dilemma facing the management of human economic activity has been articulated by economist Fred Hirsch:

Individuals can perceive a need for themselves and their fellows and yet have no rational basis to act on it in isolation ... collective means may be necessary to implement individual ends ... [and] ... thought control remains the most horrifying threat in the collectivist intrusion. Yet if individual orientation is outside our area of influence, we are left with an impasse. We know what needs to be done and cannot or dare not do it.

Any writer taking on a subject like this starts with a serious handicap: most people likely to read this book, know the role the affluent and indifferent north has played in creating our current difficulties. What they don't know, and therefore, what is much more useful to explore, is what to do about it – a vastly more difficult exercise. Head tells us that his book is about “ethics” as a survival tool and “the obligation of one generation to the next.” It is not a “doomsday message,” he writes. However, the most effective and affecting parts of *On A Hinge of History* are the descriptions of our impossible mess.

As for ethics, they are an essential but insufficient condition for understanding where to go next.

### BRIEFLY NOTED

#### The Changing Soviet Union: Implications for Canada and the World

Peter Dobell, editor

Toronto: James Lorimer, 1991, 166 pp.,  
\$19.95 paper

This volume is the distillation of a three-day conference held in Ottawa in November 1990 which brought many of the best Soviet political scientists and economists together with an equally high-powered group of Western experts on the USSR. Major topics include: the development of civil society; the making of a market economy; cooperation in the Arctic; the utility of Western economic assistance; and implications for the world of the collapse of the Soviet empire. Among the conference participants were: Georgy Arbatov, Vladimir Popov, Andrei Kokoshin, Franklyn Griffiths, Martin Walker, Jacques Lévesque, and Irwin Cotler. (The Institute for Peace and Security was a co-sponsor of the conference on which this volume is based.)

Reviews of French language publications can be found in the *Paix et Sécurité* “Livres” section.

## LETTER FROM BUCHAREST BY VĚRA MURRAY

**Despite the putrid stench of tear gas,  
I could not take my eyes off the spectacle  
unfolding below: on one side, police armed  
with shields, standing motionless in close order.**

On the other, slogan-chanting demonstrators provoking them with rude gestures or attempting to put flowers down the backs of their uniforms. The situation is volatile. Suddenly, orders are given, and for a few minutes the crowd is shoved and jostled, then hit with electric cattle prods. No one really seems to get hurt, and then it starts all over again.

This sort of demonstration seems to define the current Romanian regime. It is April – just a few days after the visit of French President, François Mitterrand who thereby becomes the first head of state to effectively endorse those in power here – and this team which has a reputation to defend, has not quite succeeded in shaking off old repressive habits. The regime symbolizes, beyond question, the end of Ceausescu, but not the end of communism.

The throngs of students who went into the streets during Mitterrand's visit carried banners with very direct messages: "Mitterrand, your presence legitimizes this criminal regime!", "Long live François Marchais!"\*, "We haven't enough money to throw eggs at you!", and, alluding to the Romanian head of state, Ion Iliescu: "We don't want a bolshevik president anymore!"

The Romanian revolution of 1989, though initiated by the people, was soon engulfed in lies and pretence. Iliescu, an old communist, came to power through palace intrigues, and not on the basis of the popular uprising which moved us all on television. He has since then put himself, "above the law, by sending the miners in to brutally disperse the student demonstrators in Bucharest." These are the

words of Doina Cornea, one of the best known dissidents during Ceausescu's time, and who today is part of the opposition to the current regime.

The demonstration I can see from my balcony, marks the first anniversary of the seizing of University Square by the students on 22 April 1990. Fifty-three days later on 13 June, the government brought in trainloads of miners to Bucharest – good workers prepared to beat up a few intellectuals – to clean the place up.

### **These children are the product of the government's campaign against birth control – the most monstrous brainwave of the "genius of the Carpathians"**

The president of the students' union, Marian Munteanu, who was roughed up by the miners and arrested in June, claims that he is still followed, that his phone and apartment are bugged, and that his entire family receives frequent threats. How does he hope Romania's future will unfold? Coming from a student, his reply underscores the fact that the Balkans are a separate world which Westerners have for forty years quite wrongly placed in the same mental compartment as central European countries. "The best regime for Romania is a constitutional monarchy led by King Michael," he says. The old king lives in exile in Switzerland.

Hundreds of people converge on University Square in the early afternoon for the demonstration of 22 April. An immense cross made of flowers lies on the ground in commemoration of those who died during the revolution, and for those wounded in the many demonstrations which have since taken place

here. Groups of people are in lively debate all around the Square.

Some take advantage of the situation to do a little black market business. I see several people selling disposable syringes – in a country where the incidence of AIDS among infants is very high because of reusable needles, the disposable ones are worth their weight in gold. A line of flowers strewn on the ground forms the limit beyond which a group of policemen already waits. Two old men stand on guard close to the line with baguette sticks in place of rifles.

Three weeks ago prices went up two to three hundred percent. A litre of milk now costs 10 lei, a kilo of boneless beef, 270 lei: the average wage is 3,500 lei and in-

unemployment could reach half a million this year, out of a population of twenty-five million. The trade unions claim there are one and a half million people out of work.

Every day, scores of children spend the night in the Bucharest's main railway station, Gara de Nord, on cardboard mattresses; they represent a tiny fraction of the 130,000 children abandoned since Ceausescu's demise. They survive by panhandling and prostitution, and cushion themselves against the hunger and cold by sniffing glue. These children are the product of the government's campaign against birth control – the most monstrous brainwave of the "genius of the Carpathians" – which led to the disappearance from the market of all contraceptive devices, and made abortion a criminal offence.

Since last autumn, hundreds of Western couples have arrived to adopt children. They often "buy" directly from parents in the most deprived rural areas in the north where large families are still commonplace. A rabble of shady intermediaries makes a fortune in this trade.

Romania has received very bad press in the last year: the betrayal of the revolution, Iliescu's repressive measures and now the trafficking in babies. Many intellectuals I talked with in Bucharest consider international criticism of what has happened since Ceausescu unfair. They say the government has passed at least two "very valuable" laws on land reform and privatization. "The trouble is, because Iliescu is so identified with the previous regime, the changes are difficult to judge," they lament. "Romania faces an arduous task ahead," concludes one. "Nowhere else in this part of Europe has communism left such deep spiritual wounds."

*Věra Murray is the Moscow correspondent for the Québec magazine L'Actualité.*

*Translation by Veronica Baruffati*

\* The real Marchais, Georges, is the head of the French Communist Party.

\*\* On the black market the lei trades at about 200 for 1 US dollar.

**Malgré les relents de gaz lacrymogène  
qui montent jusqu'au balcon de ma  
chambre, à l'hôtel Intercontinental, je**

**continue à regarder le fascinant spectacle.**

Des policiers armés de boucliers, en rangées serrées, restent immobiles pendant de longs moments, tandis qu'en face d'eux, des manifestants scandent des slogans, gesticulent devant eux, ou essaient de glisser des fleurs dans le revers de leurs uniformes. La provocation dure à n'en plus finir. Tout à coup, l'ordre est donné d'intervenir : pendant quelques instants, la foule est poussée et frappée de coups de matras faisant voler des éclats de verre. Les manifestants se font blesser, mais ils ne voient jamais personne se faire blesser vraiment. Puis, tout recommence, la manifestation me semble être à l'image du régime roumain actuel. En ce mois d'avril 1991, quelques jours à peine après la visite de François Mitterrand, premier chef d'Etat occidental à cautionner ainsi l'équipe au pouvoir, cette dernière a une réputation à protéger, mais elle n'arrive pas vraiment à se défendre des habitudes de répression du passé. Elle symbolise, certes, la chute de Ceaurescu, mais non pas la chute du communisme.

Les étudiants de Bucarest, qui étaient très nombreux à sortir dans la rue à l'occasion de la venue du président français, ont porté des pancartes qui ne pouvaient être plus explicites : « Mitterrand, la présence légitime du régime criminel », « Vive François Marchais », « On n'a pas assez de tric pour vous envoyer des oeufs ! » et, en faisant allusion au chef de l'Etat roumain, Ion Iliescu : « Nous ne voulons plus de président bolchevique ! ».

La révolution roumaine, comme l'histoire nous le montre, est arrivée au pouvoir par une suite du soulèvement populaire dont les images nous avaient tellement émus à la télévision. Depuis, il s'est « mis hors la loi en envoyant les mineurs disperser brutalement les manifestants étudiants à Bucarest ». Ces paroles émanant de la plus

La manifestation que j'observe de mon hôtel est une commémoration du premier anniversaire du début de l'occupation de la Place de l'Université par les étudiants, le 22 avril 1990. Cinqante-trois jours plus tard, le 13 juin, le gouvernement faisait venir à Bucarest des trains entiers de mineurs – de bons travailleurs prêts à tabasser quelques intellectuels – pour « nettoyer » la place. Marian Munteanu, président de la Ligue des étudiants, passé à tabac par les mineurs, puis déchu en juin dernier, dit qu'il est encore suivi et placé sur table d'écoutes et que tous les membres de sa famille reçoivent

**«Le meilleur régime pour la Roumanie,  
dit Marian Munteanu,  
serait une monarchie constitutionnelle  
dirigée par le roi Michel.»**

Certains en profitent pour faire du marché noir. Je vois plusieurs individus vendant des serpillères jetables : dans ce pays où il existe chez les enfants de nombreux cas de Sida dus à l'emploi de seringues non stériles, cet article se vend à prix d'or. De l'autre côté de la Place, une ligne formée également de fleurs, marque la limite au-delà de laquelle attend déjà un groupe de policiers. Deux vieux montent la garde près de la ligne, avec des bouts de baguette en guise de fusil. Trois semaines se sont écoulées depuis l'entrée en vigueur des hausses de prix de 200 à 300 p. 100. Un litre de lait coûte maintenant 10 lei\*, et un kilo de boeuf sans os, 270 lei : le revenu mensuel moyen est de 3 500 lei et l'on s'attend à ce que l'inflation atteigne cette année 150 p. 100. Le montant mensuel d'une pension de retraite ne suffit plus pour acheter une paire de chaussures. Le ciel de Bucarest est obscuré par des centaines d'énormes oiseaux noirs, des grues qui ne bougent ja-

mais, symboles de la folie architecturale de Ceaurescu. Le Palais du peuple, un des bâtiments dignes du pire mégalomanie du monde, construit dans un pays au bord de la disette, est terminé de l'extérieur, ainsi qu'une partie de la avenue de la Victoire du socialisme, large de 120 mètres, qui y mène. Au-delà, se trouve un immense quartier fantôme avec des fondations déjà creusées, d'autres complètement debout, mais avec des fenêtres cassées et les portes arrachées. Selon les statistiques officielles, la construction a reculé de 28 p. 100 dans le pays depuis la révolution, et le produit national brut a chuté de 10 p. 100. Le nombre de chômeurs pourrait atteindre 500 000 cette année pour

*\* Il faut environ 200 lei pour acheter 1 \$ US sur le marché noir.*

**LETTRE DE BUCAREST** PAR VERA MURRAY

25 millions d'habitants : les syndicaux eux avancent le chiffre de 1,5 million.

Tous les jours, plusieurs dizaines d'enfants passent la nuit à la Gare du Nord de Bucarest, couchés par terre sur des morceaux de carton ; c'est là une infime partie des 130 000 enfants que l'on dit abandonnés dans le pays depuis la chute de Ceaurescu. Ils survivent en menant une existence de rue, et ils se protègent contre la faim et le froid en remuant des émanations de vertis. Ces enfants sont le produit de la politique nataliste de contrainte, la plus monstrueuse des inventions du «génie des Carpates». Dans le cadre de cette politique, les produits de contraception disparurent du marché, et l'avortement devint un acte criminel.

Depuis l'automne dernier, des centaines de couples occidentaux arrivent en Roumanie pour adopter des enfants, qu'ils «achètent» sous-vent directement chez les parents, nées du nord du pays, où les familles continuent à être très nombreuses. Une faune d'intermédiaires gagnent un pécule dans ce commerce.

La Roumanie a en effet très mauvaise presse depuis un an : la révolution, les méthodes répressives d'Iliescu et, maintenant, le trafic de le changement.

«La Roumanie, m'a dit en conclusion l'un d'eux, a devant elle un chemin particulièrement ardu à parcourir : nulle part ailleurs dans cette partie de l'Europe, les blessures à l'âme laissées par le communisme ne sont aussi profondes.» □

## Programme des prix Barton

L'Institut canadien pour la paix et la sécurité internationales a récemment offert neuf bourses d'études (14 000 \$) et deux bourses de recherche (30 000 \$) à des candidats ou candidates qui désirent poursuivre leurs études dans les domaines de la paix et de la sécurité internationales. Ces bourses sont accordées chaque année dans le cadre du programme des prix Barton de l'Institut, ainsi nommé en l'honneur de William H. Barton, ancien ambassadeur éminent auprès des Nations Unies, à New York et à Genève.

Les titulaires de ces bourses se spécialisent dans différentes disciplines et ils/elles feront de la recherche dans divers domaines.

### Titulaires des bourses de recherche

**Simon W. Dalby** habite à Vancouver (Colombie-Britannique) et est titulaire d'un doctorat de l'Université Simon Fraser. Au Centre des études internationales de cette université, il fera des recherches sur les dimensions environnementales de la sécurité internationale dans le Pacifique.

**Elaine M. Holoboff**, de la Colombie-Britannique, terminera son doctorat au King's College de l'Université de Londres (Angleterre) avant de commencer des recherches à l'Université York (Toronto) sur les politiques soviétiques de sécurité dans l'Europe d'après la Guerre froide.

**Stephen H. Baranyi** est originaire de Toronto (Ontario). Il est inscrit au programme de doctorat de l'Université York (Toronto) et fait actuellement une étude sur le terrain en Amérique latine. Ses recherches concernent la dialectique de l'évolution panaméricaine en matière de défense, de 1968 à 1989.

**Jean-François Bergeron** vient de Québec (Québec) et fait actuellement son doctorat en sciences politiques à l'Université Laval. Ses recherches sont axées sur la transition politique et la démocratie, soit que les changements politiques réalisés sous la direction de F. W. de Klerk ont entraînés en Afrique du Sud.

**Andrew Chindler** est originaire d'Halifax (Nouvelle-Écosse). Elle fait son doctorat en sciences politiques à l'Université Columbia (New York). Sa thèse doctorale porte sur l'édification de l'État soviétique après la révolution, et sur les politiques de l'URSS en matière de surveillance des frontières.

**Guth Barclay Davis**, de Vancouver (Colombie-Britannique), poursuivra ses études à la *School of Advanced International Studies* de la *Johns Hopkins University*, à Washington. Il a l'intention de faire des recherches sur le Canada et la sécurité dans le Pacifique Nord et d'y inclure une analyse des menaces et des recommandations en matière de politiques pour les années 1990.

**Marie-France Desjardins** est originaire de Montréal (Québec). Elle fait son doctorat au département de politique de l'Université de Londres (Angleterre) et des recherches sur les mesures propres à accroître la confiance entre les pays européens.

**Oleg Hinnovsky de Hill** (Québec) est candidate au doctorat au département de sociologie de l'Université de Montréal. Sa thèse portera sur l'analyse du phénomène guerre à partir de la dimension politique de la société.

**Markus Ludwig Kreuzer**, de Vancouver (Colombie-Britannique), fait son doctorat au département de sciences politiques de l'Université Columbia (New York). Dans sa thèse, il étudie comment la concurrence suscitée par les institutions politiques contribue, de façon ponctuelle et démocratique, au règlement des conflits.

**David R. Muttimer** (Nouvelle-Écosse) complètera son doctorat au département de sciences politiques de l'Université York à Toronto, par une étude sur l'émergence d'un nouvel ordre mondial.

**Ian Rowlands** est originaire d'Ottawa (Ontario). Il fait son doctorat en relations internationales à la *London School of Economics and Political Science*. Ses recherches portent sur les changements environnementaux à l'échelle mondiale et plus particulièrement sur la coopération internationale qui s'amorce pour régler les conflits possibles engendrés par la dégradation de la couche d'ozone et le réchauffement de la planète.

modifié le programme pour prendre en compte la guerre du golfe Persique. Bradley et Rychard Brulé (Fonds «Paix et sécurité» de l'Institut) ont fait des exposés sur la guerre, puis les élèves se sont divisés en groupes pour mener des discussions (amtiées, à ce que l'on dit), avant de se réunir en plénière pour présenter leurs comptes rendus.

Plusieurs autres projets conjoints de l'Institut sont eux aussi destinés principalement aux élèves et aux professeurs du secondaire; ce sont des entreprises ou des programmes de l'Institut ou organisés par les professeurs de l'extérieur et qui relèvent surtout de *Jill Tansley*. En mai 1989, l'Institut a parrainé, avec le Collège Henson de l'Université Dalhousie, une conférence sur l'éducation concernant la paix et la sécurité, à l'intention des professeurs et des élèves. En 1989 et 1990, l'Institut a réalisé, avec la *London Museum*, un programme qui a permis aux élèves une rétrospective sur la guerre; il s'intitulait «*Less We Forget*». En 1988, 1989 et 1990, l'Institut a contribué au volet de «La science au service de la paix» dans le cadre d'Expo-sciences, une exposition scientifique panquébécoise s'adressant aux élèves et organisée par le Conseil de développement de l'Institut.

En travaillant ainsi avec le personnel enseignant et étudiant, l'Institut accroit la connaissance et la compréhension des questions relatives à la paix et à la sécurité internationale; or, ce sont là des thèmes d'un débat public sérieux dans le domaine. À mesure que les élèves grandissent et deviennent des adultes dans le monde interdépendant d'aujourd'hui et de demain, leur aptitude à comprendre les dimensions planétaires de leur monde déterminera fondamentalement leurs actions et leurs réactions. □

— NANCY GORDON

besoins. Étant donné que nous avons mis l'accent sur les concepts, des faits ponctuels étant employés pour illustrer, le *Prix* demeure d'actualité en dépit des profonds changements survenus dans les relations internationales depuis sa conception. La distribution du *Prix* (il se vend 35 \$) se fait par l'intermédiaire de l'Institut; plus les professeurs sont mis au courant de son existence, plus la demande augmente. Bradley Feasey donne des ateliers dans le cadre des journées de perfectionnement professionnel et de conférences organisées par les professeurs et les élèves. L'Institut a mis au point des guides adaptés à chaque province sur la façon d'employer le *Prix*. Les guides destinés à l'Ontario et au Manitoba sont terminés, et d'autres sont en cours de préparation.

En 1992, l'Institut lancera un programme d'association avec le personnel enseignant, afin de promouvoir chaque année de nouveaux documents didactiques. L'Institut accueillera des propositions auprès des professeurs à l'échelle du pays, et les examinera toutes, il en choisira une et fera venir l'auteur à Ottawa pour qu'il ou elle travaille avec son propre personnel pendant plusieurs semaines au cours de l'été. Une fois le projet terminé, l'Institut en publiera et en diffusera les résultats pour offrir ainsi aux écoles de la documentation pédagogique nouvelle et novatrice.

Pendant vingt-six semaines de l'année, 130 élèves du niveau secondaire venus des quatre coins du pays viennent à Ottawa passer une semaine ensemble au Centre Terry Fox, dans le cadre d'un programme appelé «Rencontres Canada», à la faveur duquel le Conseil pour l'Unité canadienne offre des exposés, des visites guidées, du théâtre, des activités récréatives, des discussions et des débats. Depuis quatre ans, l'Institut prépare et présente chaque semaine une séance de trois à quatre heures sur des questions relatives à la paix et à la sécurité internationale. Bradley Feasey est le membre divoi de notre personnel dans ce

programme; presque chaque semaine, il se rend au Centre Terry Fox où il participe à la discussion, au débat ou aux recherches menées sur des questions internationales.

Pendant l'hiver de 1991, l'Institut a

## NOUVELLES DE L'INSTITUT

«Encourager la discussion pu-

bliques» des questions relatives à la

paix et à la sécurité internationales

constitue un volet important du man-

dat de l'Institut. En fait, c'est la jus-

tification d'une grande partie de ses

travaux. Les publications, les rela-

tiens conjoints avec d'autres

organismes, voilà autant d'aspects

qu'il faut classer sous ce grand titre.

Un groupe du public reçoit une at-

tention particulière d'un membre

de notre personnel, notamment

Bradley Feasey; il s'agit des élèves

et des enseignantes et enseignants

des écoles secondaires.

Au début de 1987, l'Institut a

rassemblé des enseignants, des ad-

ministrateurs d'écoles, des represen-

tants de commissions scolaires et

des membres d'organismes non

gouvernementaux pour discuter

avec eux de ce que l'on attendait du

système éducatif relativement

aux thèmes de la paix et de la secu-

rité. Tous ont alors convenu que le

personnel enseignant se devait de

plus en plus d'aborder ces questions

en classe, mais qu'il manquait de

documentation conçue expressément

pour les jeunes et les élèves.

Comme l'Institut possède des

compétences dans les domaines en

question, il semblait logique pour

lui de tenter de remédier aux lacunes.

L'Institut savait (et il en est toujours

conscient) qu'en tant que société de

la Couronne, il n'était pas autorisé à

intervenir dans l'élaboration des po-

grammes d'études; mais il pouvait

examiner les lignes directrices régis-

sant les programmes provinciaux

existants et produire, en fonction

des paramètres y étant énoncés, de

la documentation utile aux élèves et

aux enseignants. Vu la nature de nos

domaines de compétence (le désar-

memment, la limitation des arme-

ments, la défense et le règlement

des conflits), il convenait de mettre

l'accent sur le niveau secondaire.

Bradley Feasey, membre de l'Ins-

titut, a amorcé le travail et il a fait

prévoir d'une compréhension des

questions et d'une aptitude à com-

muniquer, tant par écrit que verba-

ment, avec les enseignants et avec

leurs élèves. À la faveur d'un

heureux concours de circonstances,

nous sommes entrés en rapport avec

Geoff Irvine, professeur d'histoire

à la Commission scolaire de Car-

leton et auteur d'une monographie

en sociologie (Ontario). Nous avons

pu l'embaucher à contrat.

Ils ont tous les deux rédigé le

*Précis de l'enseignant et de l'en-*

*seignante sur la paix et la sécurité.*

L'ouvrage vise principalement à

fournir aux élèves des connaissances

de base dans les domaines de la paix

et de la sécurité internationales, de

manière à les rendre capables de

comprendre et d'interpréter la multi-

tude d'informations leur étant trans-

mises. Pour atteindre cet objectif,

les auteurs ont réparti l'information

et les leçons sous trois grandes

rubriques : la politique étrangère,

la sécurité, et les conflits internatio-

naux. Dans chaque cas, ils se sont

efforcés de faire comprendre aux

lecteurs que les sujets sont souvent

interliés et qu'il existe divers points

de vue les concernant. Ils se sont

aussi soucés de montrer que les po-

litiques du Canada et d'autres pays

résultent de décisions prises en

fonction de certaines perceptions,

Comme l'histoire et les sciences

humaines (cours auxquels la matière

est la plus pertinente).

Comme il s'agit d'un classer à

feuilles mobiles, on peut apporter des

changements et des ajouts selon les

besoins.

La première ébauche du *Précis* a

été rédigée en 1987. Elle a été mise

à l'essai dans diverses écoles et

présentée à un groupe d'enseignants

et de conseillers, pendant une con-

férence tenue au printemps de 1988

à l'Institut des études pédagogiques

françaises doit être publiée en 1991.

# A L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

La guerre du Golfe

Le 11 avril, le président du Conseil de sécurité a remis à l'ambassadeur d'Irak auprès des Nations Unies une lettre annonçant officiellement un cessez-le-feu dans la guerre du golfe Persique. Même si cette lettre marquait la cessation officielle des hostilités, les diplomates étaient divisés, du point de vue historique, sur la date précise à laquelle les armes sont tombées. Certains prétendaient que le cessez-le-feu est entré en vigueur le 27 février, lorsque le président américain, M. George Bush, a commandé à ses forces de mettre un terme aux opérations qui avaient entraîné la déroute écrasante des troupes irakiennes.

Selon d'autres diplomates, toutefois, l'arrêt des combats est officiellement intervenu le 3 avril, lorsque le Conseil a adopté la résolution 687, qui précisait les conditions d'un cessez-le-feu. Conformément à cette résolution, l'Irak devait, entre autres, accepter de détruire toutes ses armes chimiques et biologiques, de même que la plupart de ses missiles balistiques. L'Irak devait, en outre :

- créer une zone démilitarisée le long de la frontière établie en 1963 en l'Irak et le Koweït ;
- créer un fonds destiné à indemniser les personnes qui ont subi des pertes résultant de l'invasion du Koweït. Le fonds serait alimenté moyennant un prélèvement annuel sur les revenus pétroliers de l'Irak, dont le montant exact serait déterminé par le Secrétaire général des Nations Unies ;
- renoncer à toute tentative visant à acquérir ou à fabriquer des armes de destruction massive, qu'elles soient chimiques, biologiques ou nucléaires. Sans pour autant lever les sanctions, le Conseil, en concertation, lui permettrait d'imposer les dépenses et matériels essentiels, décision qui serait révisée tous les soixante jours.

Dans un discours devant le Conseil, l'ambassadeur irakien a exprimé son mécontentement concernant la résolution, et il a déclaré que son pays se réservait le droit de réclamer

des dédommagements pour les destructions que les forces alliées lui ont infligées. Il a accusé ces dernières d'avoir bombardé, sans discernement, des cibles militaires et civiles, et il a ajouté que 88 500 tonnes d'explosifs avaient été larguées sur l'Irak, soit l'équivalent de «sept bombes atomiques».

La résolution 687 a été adoptée par la majorité des membres du Conseil ; Cuba s'est prononcé contre. L'Équateur et le Yémen se sont abstenus. Dans un discours qui rejeta l'option de nombreux commentateurs, le délégué soviétique a déclaré que la communauté internationale a tiré de cette guerre une leçon pénible, semblable à celle des années 1930, lorsque l'on avait laissé un agresseur s'emparer d'un petit pays après l'autre. La résolution 687, a-t-il ajouté, mettrait le nouveau système de relations internationales à l'épreuve et, qu'il était capable de rétablir la paix et la sécurité internationales.

Une activité diplomatique intense a précédé l'adoption de la résolution 687 pour forcer l'Irak à se plier aux demandes des alliés et du Conseil de sécurité. Même avant la fin des hostilités, la coalition internationale, ainsi que l'Irak et ses alliés, avaient tenté de prendre le dessus dans la guerre de propagande.

Le 13 février, les membres du Conseil ont décidé par un vote de se réunir à huis clos pour entendre des déclarations sur la crise du Golfe. Cette décision représentait une victoire pour la diplomatie américaine. Les États-Unis craignaient, en effet, qu'un débat public sur les bombardements et une proposition des États non alignés à l'ordonner un cessez-le-feu puissent placer les alliés arabes dans une situation embarrassante.

Le processus verbal de cette réunion a été rendu public vingt-quatre heures plus tard. On y a appris que M. Philippe Kirsch, ambassadeur du Canada par intérim, avait résumé la position du Canada en déclarant que les limites de la diplomatie ayant été atteintes, le recours à la force, si venu inévitable, et que le Conseil de sécurité était clairement investi de l'autorité juridique et morale pour autoriser ce recours à la force.

La réunion s'est caractérisée, en outre, par le fait que la force n'était pas nécessaire.

La résolution 688 a été adoptée par la majorité des membres du Conseil, il a parlé du «régime» les membres aient été témoins au personnel les plus vicieuses dont hypocrisie». Dans un des attaques privées pour mentes, pygmées et kien a qualité la réunion de «séance cède le conflit. Le représentant irakien a fait remarquer que son pays compte 400 000 pygmées, et que ce sont des êtres humains à part entière qui ne doivent pas être traités de façon discriminatoire en raison de leur taille.

Le Conseil de sécurité a continué d'exercer des pressions diplomatiques sur l'Irak en adoptant, le 2 mars, la résolution 686. Cuba s'est prononcé contre ; la Chine, l'Inde et le Yémen se sont abstenus. Aux termes de cette résolution, Bagdad devait se plier aux douze résolutions déjà adoptées contre elle.

En vertu de la résolution 686, l'Irak devait, en outre, annuler son annexion du Koweït, accepter la responsabilité des pertes subies par les particuliers, les entreprises et les États à cause de l'invasion irakienne, libérer tous les prisonniers et restituer au Koweït tous les biens volés.

Le 3 mars, quelques jours seulement après la cessation des hostilités, le Conseil a demandé au Comité des sanctions de répondre sans tarder aux demandes d'aide humanitaire qu'a engendrées la guerre. De plus, il a envoyé une mission sur place pour évaluer les besoins dans ce domaine.

Le 20 mars, le sous-secrétaire général, M. Martti Ahtisaari, a déclaré que la guerre avait ramené l'Irak à l'état préindustriel, et que la situation risquait d'atteindre des proportions «cataclysmiques». Il a demandé l'envoi de secours humanitaires d'urgence. Dans un autre rapport sur le Koweït, il a souligné que les efforts du gouvernement pour faire face aux besoins fondamentaux et rétablir les services essentiels semblaient en bonne voie.

Le 5 avril, le Conseil a adopté la résolution 688 exhortant l'Irak à exercer à l'égard des réfugiés et d'autres groupes civils à l'intérieur de ses frontières.

Le 29 avril, le Conseil a lancé un «appel solennel» pour que l'on vienne en aide aux vingt et un pays touchés par les sanctions prises contre l'Irak. Il espérait une réaction favorable, mais il n'a pas donné de précisions à cet égard.

Le 22 janvier, le Conseil de sécurité a adopté la résolution 687, qui précisait les conditions d'un cessez-le-feu et d'un respect de la liberté à continuer dans le conflit libyen à continuer.

Le 30 janvier, le Conseil a prolongé le mandat de la Force intermédiaire des Nations Unies au Liban (FINUL). Le lendemain, il a prolongé celui du Groupe d'observation militaires des Nations Unies en Iran-Irak (GOMNUI) jusqu'au 28 février, après quoi ce groupe a été dissout.

Le 27 mars, le Conseil a convenu de «débloquer» l'expulsion, par Israël, de quatre Palestiniens des territoires occupés. En outre, ses membres se sont dits extrêmement inquiets de la détérioration de la situation dans les territoires.

Le 29 avril, le Conseil a adopté la résolution 690, qui prévoit l'établissement d'une mission de l'ONU, à l'occasion d'un référendum, qui aura lieu au Sahara oriental. Cette opération est un autre exemple dans le maintien de la paix. Cette entreprise coûtera 200 millions de dollars et nécessitera la participation de près de 3 000 militaires et civils. Le Canada sera appelé à y jouer un rôle prédominant, comme dans la plupart des grandes opérations de maintien de la paix.

Le 29 avril, le Conseil a adopté la résolution 688 exhortant l'Irak à exercer à l'égard des réfugiés et d'autres groupes civils à l'intérieur de ses frontières.

## Le monde au lendemain de la guerre du Golfe

déroulée à un rythme essouffant. À peine six semaines après le début des opérations militaires offensives déclenchées par la coalition multinationale, les forces israéliennes ont délogé les combattants de la résistance à Gaza. Les opérations ont été menées par la force, sans négociation préalable, et ont entraîné la mort de milliers de civils. # CHRONIQUE DE LA DÉFENSE

## Politiques de défense de l'après-guerre du Golfe

Les succès étonnants des forces de la coalition que dirigeaient les États-Unis pendant la guerre du Golfe ont incité de nombreux pays à réévaluer leur politique de défense. En France, les dirigeants comme les critiques ont reconnu que la guerre avait mis en lumière la capacité limitée du pays de déployer des forces classiques munies d'armes hautement performantes. Plus particulièrement, le ministre de la Défense, M. Pierre Joxe, a reconnu publiquement que les opérations des forces françaises avaient dépendu énormément des services de renseignement américains. Selon lui, ce sont les États-Unis qui ont produit, au moment de la guerre, les renseignements les plus indispensables à la poursuite de la guerre.

Les Français ne possèdent qu'un satellite à la disposition de la guerre. Les Français ne possèdent qu'un bal (GPS) qui, en plus de permettre aux unités terrestres de calculer précisément leurs propres positions, fournit des données sur les objectifs vers lesquels on lancera les armes à guidage de précision et des renseignements d'une grande exactitude à l'artillerie de campagne.

**Démision d'un amiral canadien**  
À la fin avril, il est devenu évident que la révision tant attendue du Livre blanc de 1987 sur la défense s'était opérée avant que l'on connaît l'issue de la guerre du Golfe. Le 24 avril, le vice-amiral Charles Thomas, Chef du Commandement maritime et vice-chef de l'état-major de la Défense, a remis sa démission, quelques mois avant la date prévue de son départ à la retraite. Dans une lettre au Chef de l'état-major de la Défense, le général John de Chastelain, le général Thomas a déclaré qu'il fallait donner au gouvernement le plus d'outils militaires possibles pour répondre aux besoins de sécurité. Le général de Chastelain a précisé que sur une période de quinze ans, 40 p. 100 des dépenses en capital

Chastelain faisaient fréquemment allusion à ce plan. Toutes deux traitaient de certaines des recommandations qu'il contenait : le rééquipement d'une «groupe-brigade expéditionnaire» (dont on ne précise ni la nature ni la composition) en tant que «investissement primordial»; l'expansion à long terme des forces navales, sous-entendue dans la lettre de l'amiral Thomas et dans la réponse du général de Chastelain, comprennent l'acquisition de douze nouvelles frégates, de quatre destroyers de classe *Tribal* modernisés et d'un nombre inconnu de corvettes que l'on construirait au lieu de frégates dans l'avenir (les corvettes ne sont pas décrites dans les lettres, mais il s'agit habituellement de navires de patrouille plus petits que les frégates et possédant des capacités moindres que celles-ci), et de douze dragueurs à mines promis à la Réserve navale, ainsi qu'un «modeste» programme de remplacement des sous-marins classifiés «ici quelques années».

Les principales objections de l'amiral Thomas concernant cette politique portaient sur les sous-marins et les corvettes. D'après sa lettre, l'achat de corvettes côtières et ne représenterait pas un choix judicieux, puisque les capacités de ces bâtiments de surface sont limitées. En outre, en retardant le programme d'acquisition de sous-marins, le Canada renoncerait à sa souveraineté sous les mers baignant son territoire. L'amiral Thomas a ajouté que la décision d'accorder la priorité au groupe-brigade expéditionnaire était mal à propos, et il a demandé la tenue d'un débat public sur la politique de défense.

Dans sa réponse, que le nouveau ministre de la Défense, M. Marcel Masse, a sanctionnée, le général de Chastelain a vivement dénoncé les propos de l'amiral Thomas sur le nouveau groupe-brigade. Reconnaissant d'une façon inattendue que le Livre blanc de 1987 était dépassé par rapport à l'évolution de la conjoncture géopolitique et que sa mise en œuvre côtière trop cher, il a déclaré qu'il fallait donner au gouvernement le plus d'outils militaires possibles pour répondre aux besoins de sécurité. Le général de Chastelain a précisé que sur une période de quinze ans, 40 p. 100 des dépenses en capital

Chastelain faisaient fréquemment allusion à ce plan. Toutes deux traitaient de certaines des recommandations qu'il contenait : le rééquipement d'une «groupe-brigade expéditionnaire» (dont on ne précise ni la nature ni la composition) en tant que «investissement primordial»; l'expansion à long terme des forces navales, sous-entendue dans la lettre de l'amiral Thomas et dans la réponse du général de Chastelain, comprennent l'acquisition de douze nouvelles frégates, de quatre destroyers de classe *Tribal* modernisés et d'un nombre inconnu de corvettes que l'on construirait au lieu de frégates dans l'avenir (les corvettes ne sont pas décrites dans les lettres, mais il s'agit habituellement de navires de patrouille plus petits que les frégates et possédant des capacités moindres que celles-ci), et de douze dragueurs à mines promis à la Réserve navale, ainsi qu'un «modeste» programme de remplacement des sous-marins classifiés «ici quelques années».

**Renouvellement de l'accord du NORAD, et radars à fonctionnement intermittent**  
Quelles que soient les perspectives d'avenir de la Marine canadienne, l'Aviation, elle, continuera de fonctionner dans le contexte du Commandement de la défense aérospatiale de l'Amérique du Nord (NORAD). Le 19 avril, en effet, le gouvernement a annoncé que l'accord du NORAD serait renouvelé pour une période de cinq ans à partir de sa date d'expiration, soit le 12 mai. Pour la surveillance radar de l'Amérique du Nord, toutefois, il faudra s'accommoder des services considérablement réduits de deux radars *OTH-B* (radars transhorizon à rétrodiffusion troposphérique), qui ont été cédés à l'Aviation américaine pour la Société *General Electric* pour la somme de 1,2 milliard de dollars en 1990. La décision initiale de l'Aviation américaine, qui a soulevé la controverse, était de les démanteler, mais au début avril, on en est arrivé à un compromis. *OTH-B* de la côte est, installé au Maine, ne fonctionnera que quatre heures par semaine (aux pilotes ennemis de deviner quelles seront ces heures?), et les installations de la côte ouest seront fermées et entretenues par un personnel réduit au strict minimum.

David Cox

# CONDENSÉ SUR LA LIMITATION DES ARMEMENTS

## Les forces conventionnelles en Europe

À cause du différend relatif au lit-belle du Traité sur les FCB (signé en novembre dernier), les négociations sont demeurées dans l'impasse au cours de la période à l'étude. Trois questions ont dominé :

(1) l'Occident (et des pays asiatiques) s'inquiète du fait que l'URSS a transféré, à la dernière minute, des dizaines de milliers d'éléments visés par le Traité (EVT) à l'Est de l'Oural pour éviter de les détruire en vertu du Traité ;

(2) il existe des divergences entre les estimations des services de renseignement occidentaux et les données fournies par l'URSS sur l'équipement laissé dans la zone où les réductions doivent s'opérer. Toutefois, ces divergences auraient été éliminées pour la plupart après la révision des estimations occidentales et des chiffres soviétiques ; et

(3) élément capital, l'URSS prétend qu'environ 5 457 éléments d'équipement ont été exemptés des limites établies par le Traité, parce qu'elle les avait réaffectés à la «défense côtière», ou parce qu'ils appartenaient à l'infanterie navale, à la Force de fusées stratégiques ou aux unités de défense civile. Tous les vingt et un autres signataires du Traité soulignent le fait qu'en vertu de l'article III du Traité, tous les équipements terrestres (à quelques exceptions près) sont assujettis à ce dernier, quelle que soit l'arme à laquelle ils appartiennent.

À la mi-février, le président Bush aurait proposé un compromis qui permettrait aux Soviétiques de respecter les limites numériques fixées par l'Occident sans pour autant renier leur interprétation de l'accord. Initialement, l'URSS s'était seulement engagée à geler le nombre de ses armes navales basées à terre. Plus tard, elle aurait offert de retirer presque la moitié des armes faisant l'objet du litige, c'est-à-dire celles des unités «défenses côtières». Au début d'avril, après avoir échangé plusieurs lettres avec M. Gorbatchev, le président américain aurait accepté une proposition soviétique visant le retrait des armes de «défense côtière» basées à l'Est de l'Oural et aussi la destruction d'un nombre égal d'armes plus vieilles dans cette région. M. Bush aurait toutefois insisté pour que les armes d'infanterie navale soient également touchées par ces mesures et que toute destruction d'équipement effectuée en dehors de l'Europe fût assujettie à une inspection par l'Occident. En échange, celui-ci n'obligerait pas l'URSS à détruire quelque 1 700 EVT dans la Force de fusées stratégiques et les unités de défense civile, ni à renoncer officiellement à son interprétation du Traité.

Le 25 avril, après s'être réuni avec le secrétaire d'Etat américain, M. James Baker, le ministre soviétique des Affaires étrangères, M. Bessmertnykh, a annoncé que le litige avait été réglé, et un porte-parole américain a confirmé que le «principal obstacle» avait été levé, apparemment parce que l'Union soviétique avait accepté d'inclure l'équipement d'infanterie navale. Cependant, l'information s'est avérée prématurée, car, le 7 mai, on a appris que M. Gorbatchev enverrait le général Mikhail Moiseyev, Chef de Grand état-major soviétique, à Washington pour tenter de résoudre le différend. Pour en savoir plus sur l'accord sur les FCB, prière de lire les pages 10 et 11.]

## Pour parler sur la réduction des armes stratégiques

Depuis plus d'un an, on dit que seuls des détails «techniques» empêchent la signature d'un accord START, mais aucune des parties ne semble disposée à faire les compromis nécessaires pour conclure une entente finale. En ce temps, à la mi-mars, le gouvernement américain a fait savoir clairement qu'il ne pourrait pas ratifier START tant que le différend sur les FCB ne serait pas réglé. Parallèlement, il a repoussé l'invitation soviétique à tenir un autre sommet des superpuissances et il a bien précisé qu'une telle réunion n'aurait pas lieu tant que la signature d'un traité START ne serait pas imminente.

Témoignant devant le Congrès peu après avoir démissionné de ses fonctions de négociateur en chef du START pour les Etats-Unis, l'ambassadeur Richard Burt a défini cinq des questions encore en suspens :

(1) la vérification du nombre des bombardiers jourds et des missiles de croisière air-sol, domaine où les Soviétiques craignent que les Etats-Unis soient capables de «dépasser» rapidement les limites fixées dans le Traité ; (2) la surveillance et l'inspection des usines de missiles mobiles, aspects qui préoccupent beaucoup les Etats-Unis ; (3) l'acceptation des données relatives aux essais de missiles, questions dont les détails ne sont toujours pas réglés ; (4) la définition du terme «nouveau missile», une distinction très subtile entre ce que sont un nouveau système et un ancien, afin de s'assurer que les missiles n'ayant subi que de légères modifications demeurent assujettis aux limites touchant le nombre de têtes explosives qu'ils peuvent emporter ; et (5) la possibilité de permettre à chaque partie de réduire le nombre d'ogives montées sur un type de missile donné afin d'en réduire la concentration et de promouvoir ainsi la stabilité en rendant les missiles moins vulnérables.

Selon M. Burt, ce sont là des «questions de second ordre, mais qui sont importantes» et que l'on pourrait résoudre «dans un avenir proche». L'ancien négociateur craint que l'influence croissante des militaires soviétiques permette à l'URSS de poursuivre la modernisation de ses forces nucléaires au moment même où les Etats-Unis réduisent les leurs ; il préconise, par conséquent, que l'on redonne la priorité au START.

## Le désarmement de l'Irak

La résolution de l'ONU sur le cessez-le-feu dans le Golfe, adoptée le 3 avril et acceptée officiellement par l'Irak trois jours plus tard, prévoit la destruction ou la neutralisation de nombreux éléments militaires de pays, notamment toutes les armes chimiques et biologiques, les missiles balistiques ayant une portée supérieure à 150 km, et toutes les armes nucléaires ou tout matériel susceptible d'entrer dans la fabrication d'engins nucléaires, ainsi que toutes les installations de recherche, toutes les installations de stockage des armes biologiques et chimiques et à celui des missiles, et elle en supervisera la destruction. L'AIEA inspectera aussi les installations nucléaires et détruira toutes les matières susceptibles de servir à la fabrication d'armes nucléaires. □

Le 18 avril, conformément à la solution de l'ONU, l'Irak a fourni des renseignements confirmant qu'il possède vingt-cinq missiles balistiques et cinquante-trois têtes explosives (dont trente chimiques), ainsi que d'importants stocks d'armes chimiques, y compris plus de 10 000 roquettes, obus d'artillerie et bombes aériennes, et plus de 1 000 tonnes de gaz imbrutables. Toutefois, il a nié détenir des armes nucléaires, que tous ses matériels nucléaires étaient déjà assujettis aux garanties internationales, et que toutes ses installations de recherche et de développement respectif étaient en matière nucléaire avaient été détruites par les bombes alliées. Les complaisances irakiennes à été im-médiatement et largement déqualifiées, comme étant incomplètes et fausses. Le 22 avril, répondant à l'Agence internationale de l'énergie atomique (AIEA) qui exigeait des détails supplémentaires sur son programme nucléaire, l'Irak a fourni ce qu'un porte-parole américain a décrit comme étant un rapport extrêmement détaillé sur l'état, l'emplacement et la quantité de toute la matière enrichie. Il a également révélé l'existence de centres de recherche nucléaire et de stocks de matières fissiles que l'Occident ne connaissait pas. Une fois plus, la liste a été jugée incomplète, car elle ne comprenait pas les laboratoires de mise au point d'armes nucléaires, comme celui d'Al Qadafi. Conformément à la résolution de l'ONU, le Secrétaire-général, M. Javier Pérez de Cuellar, formera une commission spéciale qui inspectera sur place les capacités irakiennes à fabriquer des armes biologiques et chimiques et à celui des missiles, et elle en supervisera la destruction. L'AIEA inspectera aussi les installations nucléaires et détruira toutes les matières susceptibles de servir à la fabrication d'armes nucléaires. □

## NOTE DE LA DIRECTION

*De la démission d'un ami à la définition d'une politique de défense.*

AVEC TOUTES LES PRESSIONS QUI PESAIENT SUR

la politique de défense canadienne depuis la parution du Livre blanc en 1987, quelque chose de nouveau finit par arriver. La démission très publique du vice-amiral C. M. Thomas, vice-chef d'état-major de la Défense, a porté certaines questions à la une des journaux, mais il en reste d'autres dans l'ombre.

Ceux et celles d'entre nous qui, depuis un moment, réclament un débat public en profondeur sur la politique de défense pensent qu'il faudrait saisir de façon constructive les ouvertures actuelles. Il est, en tout cas, à espérer que le gouvernement n'essayera pas une fois encore d'élaborer le Livre blanc par excellence : à savoir : un plan d'étalement sur quinze à vingt ans, avec des programmes de dotation en équipement compliqués, obtenant des dizaines de milliards de dollars. Des livres blancs annuels, établis sur le modèle de ceux qu'utilisent bien des pays à présent, ramèneraient à plus justes proportions un processus décisionnel paralysé par ses propres données. Par ailleurs, ils seraient assez souples pour qu'on y inscrive des grands achats d'équipement et que l'on puisse recycler le cadre stratégique.

Les questions clés soulevées aujourd'hui tout en haut au rôle des forces armées canadiennes dans le contexte de la sécurité internationale. Ce contexte n'est plus «dominé par la rivalité entre l'Est et l'Ouest», comme on l'avait estimé (à tort) dans le Livre blanc de 1987, mais il n'en demeure pas moins important de conserver une politique de défense cohérente. Si une menace militaire importante, d'un type posant un problème de défense mondial pour la plupart des pays, visait directement le territoire canadien, on peut s'attendre que les États-Unis interviendraient dans la mesure où, par extension, les intérêts vitaux de leur sécurité seraient eux-aussi menacés. Pour notre pays, il y a tout de même un problème de défense à l'échelle continentale et dans quelle mesure.

Depuis 1939, cependant, les Canadiens et leurs gouvernements rejettent une définition étroitement territoriale des intérêts vitaux de la sécurité du Canada et ils l'ont acceptée. L'idée que ceux-ci nous obligent à participer militairement à des opérations de sécurité collective, avec les Nations Unies, et à des opérations de défense elles-mêmes collectives, avec l'OTAN. Cette philosophie s'est étioffée avec l'apartition des missions de maintien de la paix, dont le Canada a été l'un des principaux architectes et ont il reste un des participants les plus importants. Si les dimensions et les exigences militaires de l'OTAN diminuent considérablement, en revanche, il continuera d'avoir besoin des missions de

maintien de la paix des Nations Unies. Avec le précédent créé par l'opération contre l'Irak, il est plus probable que l'on verra apparaître de nouvelles formes de sécurité et d'actions coercitives collectives. En outre, les armées sont appelées à jouer d'autres rôles, comme d'aider les autorités civiles à maintenir l'ordre public, intervenir au lendemain de catastrophes naturelles, ou participer à la surveillance côtière et aérienne visant à faire respecter les règlements canadiens sur les pêcheries, la pollution, l'immigration, la contrebande, les narcotiques, et ainsi de suite.

De tout cela, il ressort que de puissance moyenne privilégiée déchargée des obligations les plus contraignantes de la défense militaire, le Canada est transformé en puissance moyenne confrontée à une série de graves défis militaires, dont aucun ne constitue cependant un danger immédiat pour la survie nationale. Dans des contextes moins heurteux aux prises avec des situations extrêmes, les choix militaires sont simplifiés. Les délais d'exécution et les problèmes de temps morts qui accompagnent les grands achats d'équipement et la politique de la répartition régionale des bases et des dépenses, facteurs plus délicats que jamais dans l'état précaire actuel de la fédération canadienne, compliquent davantage encore notre tâche.

La DÉFENSE OCCUPANT TOUJOURS UNE PLACE IMPORTANTE dans la part «discrétionnaire» des dépenses fédérales, il nous faut voir combien les Canadiens dépensent pour la défense et de quelle manière ils dépensent cette somme. Comme l'historien militaire Desmond Morton le faisait remarquer dernièrement :

On leur parle si souvent des maigres moyens alloués à la Défense que les Canadiens sont surpris quand ils découvrent qu'avec un budget de 12 milliards de dollars, leur armée est au sixième rang des pays de l'OTAN pour ce qui est des dépenses militaires. Avec un peu moins d'argent, comme le fait valoir le général Gerry Thériault, les Hollandais ont un corps d'armée bien équipé, une marine modeste mais moderne et une petite force aérienne respectable. Les Canadiens ont l'organisation militaire la mieux payée, la plus encombrée de grades de l'Alliance. Il ne nous est plus possible de remettre à plus tard les questions de défense. Le régime sec ne suffit pas, il va falloir procéder à des amputations, bien que les réponses les plus simples ne soient sans doute pas les meilleures. Il serait aussi bête de proclamer qu'il est temps de quitter l'Europe que de vouloir garder le même cap. L'Europe qu'il faut alors de nos soldats postés sur un front central qu'il n'existe plus ? Il est presque certain que des troupes américaines resteront stationnées en Europe pour assurer une dissuasion militaire canadienne, même symbolique. Étendue par le biais de l'OTAN, donc une présence militaire canadienne, nous aurons longtemps réclamer dans le passé pour des contributions plus importantes.

Il EST PROBABLE QUE L'ON RÉDUIRA LES EFFECTIFS de l'Armée régulière. Le débat dans la corresponsabilité entre MM. Thomas et de Chastelain sur un «corps expéditionnaire» devra être clarifié. De quel nombre de soldats le Canada peut-il envisager d'engager au niveau international, avec quelles armes et avec quels moyens de transport ? Comment combinerai-je les ressources de l'Armée régulière et de la réserve, et qu'en coïncitera-t-il ? Contrairement à des idées reçues très répandues, pas plus des formations militaires plus légères, ne constituent des options nécessairement moins onéreuses que ce que nous avons à l'heure actuelle, notamment à court terme.

Quant aux forces maritimes et aériennes, leurs rôles et leur équipement soulèvent des débats fondamentaux au fond desquels il nous faudra aller. Dans sa lettre, l'amiral Thomas exprimait des inquiétudes particulières au sujet de la Marine, notamment sur les processus extraordinairement longs qui caractérisent l'acquisition de bâtiments de guerre, et sur la nécessité d'investir aujourd'hui dans du matériel dont on pourrait avoir besoin d'ici quinze à vingt ans. Or, ces propos viennent au moment même où le Canada met en service la première des six nouvelles frégates commandées. Les contribuables ne se satisfont pas d'un débat simpliste et émonuant sur des marines «hauturières» ou «côtières».

Les Canadiens ne peuvent se doter des mêmes capacités d'armement «équilibrées» et «combinaisons» qu'une grande puissance militaire. Ils ne peuvent pas pour se les procurer, et ils n'en veulent probablement pas. Cependant, revenir à l'état sentiel ne signifie pas forcément adopter une vision étroite de la défense territoriale canadienne, car nous ne sommes plus la maison isolée «à l'épreuve du feu» que nous étions dans les années 1920. En matière de défense, comme dans beaucoup d'autres domaines, pour appliquer une nouvelle politique, il faudra aborder avec beaucoup plus de fermeté l'économie en général, les choix difficiles à faire entre des possibilités concurrentes, et évaluer judicieusement les directions dans lesquelles il convient d'engager l'effort militaire canadien.

— BERNARD WOOD

# LA POLITIQUE EN HAUT LIEU

Les sujets du royaume du Népal vont aux urnes.

PAR FRANÇOIS LAFRENIÈRE

ES INDÉS ONT EU GANDHI, maintenant, avec Ganesh Man Singh, c'est enfin notre tour, s'est écrit dans un anglais ardu un vieux Népalais, gémissant et criant parmi la foule en lèsses qui enivraissait *Durbar Marg* (l'avenue du Roi) à Katmandou, le 9 avril 1990. Après plusieurs semaines de tension et de violence entre les manifestants du mouvement pour le multipartisme et les forces de l'ordre, y compris plusieurs jours de couvre-feux complets, c'était la célébration de la victoire dans les rues enssoleillées de la capitale népalaise.

Quelques heures auparavant, après une fusillade par l'armée qui avait fait plusieurs dizaines de morts parmi les manifestants sur la même *Durbar Marg*, le monarque du royaume hindou du Népal, Birendra, avait annoncé la légalisation des partis politiques, illégaux depuis plus de vingt-cinq ans. Quant à Ganesh Man Singh, il était le vénérable et respecté chef du *Nepali Congress Party* (NCP), perçu par la plupart comme étant l'âme politique du mouvement pour le multipartisme. Bien que toujours clairement associé à un parti, Ganesh Man s'est efforcé de demeurer à l'écart des trébuchements électoraux partisanes, ne luttant que contre les «adversaires de la démocratie».

La seule élection multipartite de l'histoire du Népal, celle de 1959, avait mené le NCP et son chef de l'époque, B.P. Koirala, à former le gouvernement de sa majesté pendant dix-huit mois. Le roi Mahendra, père de l'actuel monarque, avait par la suite répudié le multipartisme, pour finalement le remplacer par un régime sans partis, dit *panchayat*, au début des années 1960. En samskrit, le mot *panchayat* signifie littéralement «conseil composé de cinq membres». Les *panchayats* villageois ont été créés comme instruments de gouvernement locaux par le biais desquels le palais s'assurait le contrôle du pays. En 1980, les résultats d'un référendum (qui favorisait le régime sans partis) ont suscité des accusations de fraude de la part des partis et c'est ce même régime corrompu qui est tombé sous la pression populaire le 8 avril.

S'inspirant en partie des succès de mouvements semblables en Europe de l'Est, les partis politiques népalais, clandestins ont lancé leur action concertée en février 1990. Les heures avec la police d'abord, puis avec l'armée, sont allées en augmentant ; même après la victoire du multipartisme, le nouveau gouvernement a dû maintenir les couvre-feux (nourcimes) dans la capitale pendant plusieurs jours. Il y a maintenant quarante-trois martyrs officiels du mouvement, et le gouvernement est à compléter les enquêtes relatives à d'autres personnes disparues ou tuées durant la même période. Quelques jours après la légalisation des partis politiques, un gouvernement intérimariste a été formé et il a reçu pour principale tâche de proposer une nouvelle constitution et d'organiser des élections. Comme dans le cas de Havel en Tchécoslovaquie, le plupart des ministres, y compris le premier ministre Bhatterai, avaient fait de longs séjours en prison. Les changements constitutionnels qui ont finalement été acceptés par le palais sont perçus par les divers partis comme un pas très important vers la démocratie. La nouvelle constitution stipule entre autres que la monarchie constitutionnelle du Népal est une démocratie multipartite : l'État de près de 20 millions d'habitants demeure un «royaume hindou» (le roi Birendra se voulant une réincarnation du dieu Vishnou). Chacun est libre de pratiquer sa propre religion, mais il est toujours interdit de promouvoir la conversion religieuse ; certains partis de gauche auraient préféré un État népalais complètement sécularisé.

Le roi conserve le droit de dissoudre le parlement en cas d'urgence et l'armée, bien qu'elle relève officiellement du Conseil de défense nationale, lui reste fidèle dans les faits. Le nouveau constitution semble satisfaire la majorité des Népalais, encore qu'aux yeux de certains, elle ne garantisse pas suffisamment une totale liberté d'expression. Pour reprendre la formule du magazine de langue anglaise de Katmandou *Himal*, c'est une bonne constitution, mais elle pourrait être meilleure. Bien que mise en cause durant les événements violents du début de 1990, la monarchie a depuis repris auprès de l'opinion publique, une légitimité très fragile. On n'entend plus de slogans hostiles au roi, comme c'était le cas lors de la dernière élection.

cas dans les semaines ayant précédé la déclaration de Birendra qui légifera les partis politiques. La majorité des Népalais voient dans la monarchie un élément indispensable à l'unité du Népal. La gauche compte toujours des factions antimonarchistes mais la plupart des grands partis constatent que la monarchie demeure populaire au Népal, surtout chez les populations rurales qui forment plus de 90 p. 100 de l'électorat. Symbole d'unité dans ce royaume himalayen morcelé suivant les ethnies et les groupes linguistiques la monarchie du Népal se veut protectrice de la religion hindoue, mais aussi garante de la souveraineté des deux géants que le Népal a comme voisins. Le *Nepali Congress* était accusé d'être trop près des Indes, et les différents partis communistes, d'être trop influencés par la Chine. Comme il dépend de son voisin du Sud pour son commerce international, le Népal doit sans cesse subir les pressions politico-économiques des Indes qu'irrite tout rapport commercial sino-népalais. Ce sont les populations urbaines (moins de 10 p. 100 des Népalais) de la vallée de Katmandou qui constituaient le gros des forces du mouvement populaire. À quelques semaines du 12 mai 1991, date des premières élections multipartites depuis celles de 1959, le pays tout entier était en proie à une fièvre électorale. Les «recruteurs» des divers partis sillonnaient à pied les villages isolés de ce pays où une toute petite fraction de la population peut être rejointe par la route. Il n'était pas rare de voir des paysans dénicher des cartes de partis différents. Le processus démocratique s'est heurté à un passé électoral sans pluralisme politique. Dans bien des cas, les cavaliers politiques ont provoqué des divisions profondes au sein de toutes petites localités.

La solidarité qui avait lié les divers partis durant la lutte clandestine s'est rapidement effritée dans les mois qui ont suivi, chacun voulant se distancer d'un éventuel rival électoraleux. Le *United Left Front*, par exemple, après s'être premièrement éloigné du *Nepali Congress*, s'est morcelé et compte une dizaine de factions communistes différentes, dominées par le *Male Nepali Congress* est à la tête du gouvernement intérimariste multipartite et il a intégré dans ses rangs nombre d'anciens élus (y compris des critiques du régime *panchayat*). Le régime déchu a lui aussi produit un nouveau parti politique, le *National Democratic Party* ; déjà en proie à des luttes internes, il s'est scindé en deux factions. Il existe également plusieurs partis régionaux, dont le plus important est sans doute celui du *Terai* qui conteste le pouvoir central de Katmandou. Chaque parti est représenté par un signe qui lui est propre (soleil, arbre, etc.), pour faciliter la publicité électorale et le processus de vote chez la population, en grande partie analphabète. Pour ce qui est des résultats mêmes des élections, les principales surprises en ont été le score étonnamment maigre réalisé par le NCP dans la capitale, et en outre le score des résultats mêmes des élections, les principales surprises

Quant au patriarche Ganesh Man Singh, il a choisi de ne pas se présenter aux élections législatives, mais sa femme et son fils, qui s'étaient présentés à Katmandou sous la bannière du NCP, ont tous deux perdu face à des candidats communistes. Cette famille à l'image quelque peu ternie est maintenant et le fils de la démocratie. Les changements que devra inévitablement apporter le nouveau gouvernement susciteront de nombreux espoirs. Il ne sera pas facile de faire face à une population qui réclame les fruits promiss de la démocratie (développement économique, alimentation, santé, éducation) sans trop savoir ce qu'ils devraient être, mais en les assimilant avant tout à une amélioration du niveau de vie. □

maintenant de larges zones lampous ; et la marge de manoeuvre du pays est tant capable de couper le cordon ombilical qui le relie au courant politique dominant. Il reste déchiré entre son irrésistible besoin d'appartenance et son désir sincère de changer la somme réalité.

La force de cet attachement capital est perceptible dans les réactions émi-nemment émotives de certaines figures de proue du mouvement face aux attitudes de plus en plus anti-islamiques des Palestiniens après le déclen-chement de la crise du Golfe. M. Yosi Sarid, député de la Knesset, que beaucoup considèrent comme l'incarnation du mouvement, a violemment critiqué les Palestiniens pour leur soutien à Saddam Hussein et a fait savoir qu'il ne renouvellerait pas de sitôt le dialogue avec eux. Pour justifier ce re-virement de situation, il s'est efforcé d'expliquer l'ambivalence de son mouvement vis-à-vis des Palestiniens :

« Je ne me sens ni trahi, ni dupé, parce que je n'ai jamais cru en eux... Ce que je croyais, c'est qu'ils avaient atteint un degré de maturité suffisant pour comprendre où sont réellement leurs intérêts... Je pensais qu'après avoir traversé une période plutôt difficile, ils s'étaient rendus compte qu'ils avaient intérêt à accepter et à reconnaître l'existence de l'Etat hébreu... En fait, ce qui s'est passé, c'est qu'ils ont agi en totale contra-diction avec leur cause fondamentale et, ce faisant, ils nous ont fait choir, même de tort à tous... Par leur comportement insensé et dangereux, ils nous ont ramené dix ou vingt ans en arrière !

La volée-façade de M. Sarid a défrayé la chronique, mais nous les pacifistes ne l'ont pas suivi. Mme Shulamit Aloni, femme politique également proche du mouvement, a rejeté l'argument de M. Sarid et résumé le dilemme des

serais-je déçu par la position des  
Qu'a-t-il fait pour eux ? La

entendre la voix de la morale. Nous  
avons l'impression que nous avons posé  
ces questions et essayé de modifier le  
programme... Mais, en réalité, nous  
n'avons rien accompli.  
Le gouvernement a continué  
de dominer les territoires, d'y  
bâter les droits de la personne,  
d'y détruire et d'y tuer ; et nous  
sommes complices, parce que  
nous ne nous sommes pas ré-  
voltés. Nous sommes pas ré-

Maître tous les facteurs qui contribuent à réduire considérablement l'incidence politique du mouvement pacifiste israélien, celui-ci continue à vivre. La vie des mouvements sociaux en général, et celle des mouvements pacifistes en particulier, est souvent marquée par de longues périodes d'hibernation et même de silence. Des événements ponctuels comme la visite de M. Sadate en Israël ou la guerre du Liban en 1987 sont plus susceptibles de favoriser une résurgence du pacifisme qu'un phénomène prolongé comme l'*Intifada*. Quoi qu'il en soit, même dans sa situation actuelle, le mouvement pacifiste constitue majoritairement un défi à l'«obsession «sécuritaire» dominante et il donne de la substance au débat politique national. En dénonçant continuellement les atrocités et la mauvaise conduite des autorités, il continue à mettre l'accent sur les dilemmes moraux que l'occupation des territoires pose à Israël. □

*Peace Now* a riposté en taxant ces actions de manque de réalisme et en les accusant d'empêcher, en fait, de mobiliser la population autour d'une solution de compromis. Ce conflit interne a rarement terni le rôle dirigeant de *Peace Now*, qui disposait pourtant de la plupart des ressources matérielles et du meilleur réseau d'appuis extérieurs, tant en Israël qu'à l'étranger. En somme, à cause de cette division, les pacifistes n'ont pas pu offrir de solution de rechange viable sur le plan politique : ils ont gaspillé leur énergie et terni, de façon générale, la crédibilité de leur mouvement en tant que force raisonnable et efficace.

Quatreièmement, le mouvement pacifiste s'est trouvé pris entre les attentes des Juifs et celles des Arabes. La population juive a exigé qu'il dise clairement à qui il allait sa loyauté première. En effet, les activités pacifistes n'étaient ni juives que si le mouvement du même nom se déclarait partie intégrante du peuple israélien et si le subordonnait tout autre intérêt au consensus national. Toute identification partielle à la cause palestinienne était considérée comme deloyale, voire assimilée à une trahison.

Les Palestiniens, quant à eux, ont trop attendu du mouvement pacifiste. Ils ont sous-estimé le poids des pressions exercées sur ses membres pour les rallier au consensus national, ce qui les a empêché de voir quelle était réellement l'allégeance fondamentale de leur mouvement. Les dirigeants palestiniens les plus modérés de Cisjordanie, interloqués de longue date du mouvement, se sont de plus en plus impatientés face à l'hésitation et l'extrême prudence des pacifistes. Pendant ce temps, ces derniers comprenaient mal le silence des Palestiniens après des actes terroristes.

Les Palestiniens ont également été déçus de voir que la plupart des groupes pacifistes refusaient de les appuyer dans leur demande de retrait total et inconditionnel d'Israël de Cisjordanie et de Gaza, et de création d'un état palestinien indépendant. En outre, nombre de Palestiniens pensaient que l'*Intifada* déclencherait dans l'Etat hébreu une immense vague de protestations, semblable à celle soulevée par la guerre du Liban, mais il n'en fut rien. Au début, ils ont attribué la tiédeur de l'appui de leurs alliés israéliens potentiels au fait que le soulèvement faisait relativement peu de victimes juives et que les affrontements n'avaient lieu que dans les territoires occupés. Toutefois, ils ont fini par se rendre compte que les manifestations n'ont pas pris l'ampleur escomptée parce que, pour les Israéliens, la question palestinienne touche au cœur même de l'Etat hébreu, et qu'une action plus énergique de leur part aurait compromis leur adhésion au consensus national. Les Palestiniens, comme la plupart des Israéliens, ont donc demandé que le mouvement pacifiste exprime clairement sa position. Etant donné que la grande majorité des pacifistes se considèrent d'abord comme israéliens, même en rejetant l'opinion majoritaire sur la question palestinienne, ils ne pouvaient guère réagir autrement qu'ils n'ont fait.

CINQUÈMEMENT, LE MOUVEMENT PACIFISTE ISRAËLIEN S'EST EMPÊTRÉ DANS les contradictions de sa propre image. Il est trompé de vouloir comparer sa vision du monde à celle de ses homologues occidentaux. En effet, les principaux thèmes du pacifisme occidental (la contre-culture post-matérialiste, l'anti-étatisme, l'écologie et l'anti-nucléaire) sont secondaires en Israël. De même, il ne faut pas s'attendre à retrouver les convictions internationales et pacifistes. S'il est vrai que la paix qui, dans le contexte israélien, signifie l'absence de guerre, est souhaitable en tant que telle, il n'en demeure pas moins que la plupart des pacifistes israéliens la prônent parce qu'elle contribuera, selon eux, à la sécurité et au bien-être de la nation, et ce sont là des convictions profondes qui ne sont pas si différentes de celles de la majorité des Israéliens.

De plus, à l'instar de la classe politique israélienne dans sa majorité, le mouvement pacifiste est partisan du réalisme politique, tout en se réclamant des principes moraux universels. Même si ses membres rejettent plusieurs des grands postulats qui sous-tendent les politiques officielles en matière de diplomatie et de sécurité (ex. : dans le conflit israélo-arabe, il y aura toujours un gagnant et un perdant ; pour sa sécurité, Israël doit absolument

# LE MOUVEMENT PACIFISTE

## ISRAËLIEN N'EST PAS ENCORE K.O.

Même par des querelles intestines, des politiques boiteuses, et une grave crise d'identité, le mouvement pacifiste israélien a perdu beaucoup de son influence pendant l'Intifada palestinienne.

PAR TAMAR HERMANN

Forces qui, avaient-ils prévu, consolideraient le nationalisme palestinien ; mais l'Intifada a révélé le fossé qui sépare l'attente intellectuelle d'un tel

soutièvement du véritable effet de surprise réussi par les Palestiniens.

De fait, la question de l'incompatibilité historique entre les objectifs du mouvement sioniste et les intérêts nationalistes des Palestiniens a été au

centre de débats houleux au sein de *Peace Now* et d'autres groupes pacifistes dès leur création. Le mouvement pacifiste a mis quelque six mois à

réagir à la nouvelle situation ; et même alors, il n'a rien dit de nouveau sur le problème et n'a pas proposé de plan de paix structurel. Pour l'essentiel, le

mouvement s'est contenté d'organiser des manifestations contre les mesures draconiennes prises par l'armée. Il a repris contre M. Yitzhak Rabin, ministre

travailliste chargé de la Défense au sein du gouvernement d'unité nationale, les mêmes slogans employés dix ans plus tôt contre le premier

ministre conservateur (Likoud) M. Menachem Begin. Les quelques initiatives destinées à présenter de nouveaux plans de paix, comme le manifeste

rédige par le groupe *Red Line*, étaient trop abstraites et irréalistes pour être

fructueuses.

Deuxièmement, en Israël, le militarisme politique hors des partis officiels n'a jamais été un moyen d'action prisé. Bon nombre d'Israéliens ont

fini par considérer les manifestations et les campagnes de pétitions contre la guerre (par ex., celles lancées pendant la guerre du Liban) comme des preuves

d'antipatriotisme et d'irresponsabilité civile. Ces images négatives ont été

renforcées par l'attitude des factions pacifistes plus radicales qui défendaient le droit de tout Israélien à refuser de faire son service militaire en

Cisjordanie et à Gaza et à participer à la répression de l'Intifada. Une telle

attitude allait manifestement à l'encontre de ce que la plupart des Israéliens considèrent comme un devoir civique fondamental, à savoir : participer à la

défense du pays que soient les convictions politiques de chacun. Elle a suscité la colère de la population et a failli mettre en péril la participation

légitime de tout le mouvement au débat sur la sécurité nationale.

En outre, le mouvement a dans sa majorité, réduit ses propres options en déclarant plus d'une fois que, malgré le rejet des politiques officielles, il

defend essentiellement la même cause que l'armée israélienne. Autrement dit, il exclut toute confrontation avec les soldats. Quant à la question de

savoir quelles actions pouvaient être entreprises sans saper cette affirmation fondamentale du patriotisme des pacifistes, elle s'est posée avec de plus

en plus d'acuité à mesure que le mouvement palestinien s'est ancré dans la violence et que la réaction des militaires s'est durcie.

Troisièmement, loin de contribuer à un consensus sur les objectifs et les stratégies ultimes du mouvement pacifiste, l'escalade de la violence durant

*l'Intifada* a entraîné de nouvelles dissensions internes. En effet, des dizaines de nouveaux groupes pacifistes se sont formés, chacun d'eux préconisant une solution légèrement différente de celle des autres à la question

palestinienne. Des groupes radicaux tels que *There is a Limit*, *Women in Black*, *Shop the Occupation* et *Red Line* ont prôné la désobéissance civile et le boycottage des produits fabriqués par les colons de Cisjordanie. Ces tactiques de provocation ont eu des résultats minimes, mais ont suscité une

réaction nettement négative au sein de la population. *Peace Now*, qui s'était efforcé de préserver sa légitimité aux yeux du public en adoptant une ligne

relativement modérée (par ex., jusqu'à la fin 1988, il s'est abstenu de préconiser la création d'un Etat palestinien), a été accusé par les factions plus

radicales de trop ménager les forces de l'ordre.

'HISTOIRE LE PROUVE IRRÉFUTABLEMENT. LES MOUVEMENTS PACIFISTES ont tendance à rester silencieux ou même à sombrer dans le désarroi en temps de guerre. Bien qu'Israël n'ait joué qu'un rôle passif dans la guerre du golfe Persique, son mouvement pacifiste semble s'être

pratiquement évanoui au fil des hostilités. Le lancement de missiles irakiens sur des cibles civiles israéliennes et la réaction des Palestiniens, qui ont ap-

plaudi Saddam Hussein, a exacerbé le sentiment collectif de vulnérabilité

Ces événements n'ont pas échappé aux pacifistes. Après de longues et

dures années de dissidence, beaucoup d'entre eux semblent maintenant

guerre n'est que l'une des raisons du retour au bercail de ces « enfants

égares ». Cette volonté de rentrer dans le giron national s'explique essen-

tiellement par la frustration croissante que les pacifistes ressentent face

à leur incapacité apparente, quoique inévitable sans doute, de relever le défi

de l'Intifada.

Le mouvement pacifiste israélien, lancé comme une campagne de masses

à la fin des années 1970, a atteint son apogée en termes de participation et

d'efficacité perçue entre 1982 et 1984 en menant les manifestations contre la

guerre du Liban. Depuis lors, il est composé d'un grand faction, *Peace Now*,

et d'un nombre croissant de petits groupes. Cependant, le mouvement n'a

jamaï compté plus de 500 à 750 inconditionnels et, même les observateurs

les plus optimistes estiment le nombre de ses partisans à environ 150 000.

Malgré ces chiffres relativement modestes, le mouvement s'est retrouvé à

l'avant-scène grâce à d'autres facteurs. En effet, en couvrant sans cesse ses

activités, et généralement sous un éclairage positif, les médias en ont fait

une organisation plus puissante qu'elle ne l'était, tant aux yeux de ses parti-

sans que de ses rivaux. De plus, sa composition socio-démographique le

situe assez près du centre du pouvoir. En effet, la plupart des groupes paci-

listes sont dominés par de jeunes Juifs citadins, très instruits, de classe

moyenne et d'origine européenne, profil qui, dans la société israélienne,

prédispose à une belle carrière politique.

Ainsi, le mouvement pacifiste israélien en général et *Peace Now* en parti-

culier réunissent toutes les conditions pour faire une percée politique.

Néanmoins, quand l'Intifada a éclaté, en décembre 1987, il était déjà évi-

dent qu'ils n'avaient pas réalisé leur potentiel. Vers la mi-1980, de puis-

santes forces centrifuges ont fragilisé le mouvement et l'ont divisé en marge

de consensus national, et il s'est trouvé incapable de jouer son rôle naturel,

à savoir : servir d'intermédiaire entre les Israéliens et les Palestiniens.

L'INCAPACITÉ DU MOUVEMENT À MOBILISER UN SORTIR POPULAIRE ET À

obtenir l'aide de décideurs susceptibles de contribuer au changement de la

politique officielle d'Israël et à maintenir sa crédibilité dans les deux camps

ou à y atténuer la violence peut s'expliquer par les facteurs nommés par

premièrement, les pacifistes, tout comme le reste des Israéliens, ont été

groupe pacifistes avaient déconseillé une occupation prolongée des terri-

stite et sa durée. Dès la fin des années 1960, certains dirigeants des premiers

grupos pacifistes avaient déconseillé une occupation prolongée des terri-

\*Note de la rédaction : Intifada est le plus souvent traduit par « soulèvement », bien

qu'en arabe, le mot signifie littéralement « l'envie ». On considère généralement qu'en

tant qu'événement distinct, l'Intifada a commencé en décembre 1987, par des troubles

qui ont éclaté spontanément dans des camps de la bande de Gaza avant de gagner

ceux de Cisjordanie au lendemain de la mort violente d'un Israélien et de quatre

Palestiniens à Gaza.

Fait plus inquietant, il est évident, à voir l'attitude générale de l'URSS, que les politiciens et les militaires ne font pas bon ménage au sein du gouvernement soviétique. L'amée a bien fait comprendre qu'à son avis, M. Gorbatchev et le ministre des Affaires étrangères ont cédé sur trop de points dans les négociations avec l'Occident. Un diplomate soviétique a déclaré que la décision de faire passer une partie de l'équipement de l'armée cdt de l'Oural à été prise par des responsables militaires et qu'elle a surpris les diplomates. Pour d'autres observateurs des milieux diplomatiques, cette décision expliquerait en partie la démission, en décembre dernier, de M. Chevardnadze de son poste de ministre des

CET EPISODE MONTRÉ CLAIREMENT QUE LES PRO-blèmes internes de l'Union soviétique ne sont pas ceux qu'on avait des incidences sur le processus de limitation des armements. Dans le cas présent, l'URSS a interprété le Traité à son avantage et elle a voulu jouer sur deux tableaux. Les efforts déployés par les États-Unis pour sauver le Traité en élaborant une solution de compromis, qui avalués en partie du moins le comportement de l'URSS ont un caractère exceptionnel, mais les

Si l'on arrive à un compromis, le 1<sup>er</sup> traité ne sera pas pour autant sauvé. Avant d'entrer en vigueur, il faudra qu'il franchisse avec succès toutes les étapes des difficiles processus de ratification

En outre, les Soviétiques affirment que le matériel de la Force de fusées stratégiques et des divisions d'infanterie de marine n'est pas visé par le Traité. L'équipement qui se trouve maintenant hors de la zone comprend, estime-t-on, 800 chars, 900 véhicules de combat blindés et quelque 3 500 le nombre total de pièces passées de l'autre côté de l'Oural.

Le problème de l'interprétation porte essentiellement sur les articles II et III, qui définissent les termes employés dans le Traité et établissent les règles de décompte du matériel militaire. L'article III précise les seuls cas où les plafonds fixés par le Traité ne visent pas certains matériels se trouvant dans la zone. D'après les autres pays, tout le matériel (défini à l'article II) se trouvant dans la zone d'application entre dans les catégories limitées, hormis pour les exceptions mentionnées à l'article III. Or, les forces navales ne figurent pas parmi ces exceptions. Seule l'Union soviétique fait valoir qu'il est possible d'interpréter le Traité comme les excluant de son champ d'application.

Ce dernier point a eu pour conséquence de repousser le processus de ratification aux États-Unis et de suspendre les autres négociations sur la limitation des armements, mais les Soviétiques sont restés absolument intransigeants. Leur attitude donne à penser que ce n'est pas l'interprétation du Traité qui est en question, mais que tout simplement, l'armée soviétique a décidé de ne pas renoncer à ces forces, ce qui pourrait s'expliquer par diverses raisons.

Il se peut que, confronté à une terminologie inadmissible, les Soviétiques cherchent à éviter de très coûteuses destructions d'équipement. Ou, peut-être, pour sauver la face au niveau national, ils essaient de minimiser l'incidence de réductions excessivement disproportionnées. En outre, pendant les négociations, l'URSS a cherché à obtenir de l'OTAN la possibilité de convertir du matériel pour l'utiliser à des fins civiles ou paramilitaires plutôt que de devoir tout détruire d'emblée. C'est peut-être le refus catégorique de l'OTAN (encore que l'Occident ait fini par accepter la conversion d'une quantité limitée de matériel militaire) qui a incité les Soviétiques à déplorer une partie de leur équipement pour éviter d'avoir à le détruire.

plement parler d'une violation, cette opération a  
 vite suscité de l'inquiétude quant aux intentions  
 de l'URSS et notamment des autorités militaires.  
 Le Kremlin a déclaré que les transferts fai-  
 saient partie de retards d'Europe de l'Est prévus  
 et préalablement annoncés et qu'une bonne partie  
 de l'équipement allait être détruite. Les États-  
 Unis ont eux aussi craint d'Europe du matériel  
 placé dans des troupes d'Europe du matériel  
 soviétique. Cependant, à l'inverse des Sovie-  
 tiques, les Américains ont annoncé qu'il prendrait  
 des termes du Traité relativement aux plafonds  
 prescrits.

Il n'est pas inhabituel de rencontrer des problèmes accorde quatre-vingt-dix jours aux États pour recevoir les chiffres initialement fournis. Ainsi, l'Allemagne et la Grande-Bretagne ont corrigé leurs données de départ. Cependant, en ce qui concerne le transfert massif de matériel hors de la zone, les chiffres présentés par l'URSS ont été largement supérieurs les Occidentaux, car il y apparaissait qu'en tout, les réductions soviétiques se montaient de trois à quatre fois inférieures à ce que l'OTAN avait prévu dans ses premières estimations de janvier 1990. Plusieurs des représentants des gouvernements qui ont participé à l'Union soviétique ont fourni des données fondées sur les avis qu'ils pensaient, à tort, pouvoir atteindre avant le 19 novembre au avant que les premières inspections commencent.

« L'armée de l'air est une armée de défense coûteuse, mais elle affirme que l'équipement de ces unités n'est pas dans le matériel militaire par le Traité MLT, c'est-à-dire soumis à des restrictions numériques aux termes du Traité.

LA QUESTION DE L'INTERPRÉTATION DU TRAITE  
 risque d'être fort épineuse, au point que pour cer-  
 tains, elle pourrait le «saboter». L'Union sovié-  
 tique a reclassé et rebaptisé trois divisions

# SAUVER UN ACCORD PRECIEUX

*Les Soviétiques essayaient-ils de tricher dans l'application du Traité sur la réduction des forces conventionnelles en Europe ? Et est-ce important ?*

PAR JANE BOULDEN

Après l'entrée en vigueur du Traité, les deux parties disposent de quarante mois pour se conformer aux plateaux convenus. Tout l'équipement trouvant dans la région, visée au 19 novembre 1990, date de la signature, est soumis aux termes du Traité, où qu'il se trouve après cette date. La veille de la signature, tous les pays concernés ont échangé d'abord des dossiers contenant des informations sur les types et le nombre de pièces, sur l'endroit où elles étaient, ainsi que des précisions techniques s'y rapportant et le nom des unités les utilisant à l'intérieur de la région. Des échanges de ce genre se poursuivront tout au long de l'application du Traité afin de pouvoir vérifier

Sur la base des méthodes définies dans le Traité, l'équipement venant en sus des limitations convenues doit être détruit ou converti pour servir à d'autres fins. Les parties peuvent procéder de diverses façons pour les destructions. Par exemple, les chars peuvent être détruits en supprimant des parties essentielles désignées, en les déformant selon des méthodes établies ou simplement en les faisant exploser, ici encore selon des méthodes définies dans le Traité qui, en dernier cas, précise même où la charge explosive devrait être placée dans le char. Les autres parties au Traité sont en droit d'assister à toute destruction ou conversion de matériel et d'inspecter le matériel détruit ou converti.

C'EST L'AMPLEUR MÊME DES RÉDUCTIONS QUI REND le Traité si précieux pour l'Occident. L'Union soviétique devra réduire son arsenal de 26 p. 100, naturellement dit de 18 840 pièces. En tout, les autres membres du Pacte de Varsovie diminueront le Depuis de 18 223 pièces, soit de quelque 42 p. 100. L'arsenal est-allemand compte comme nous l'avons dit de 11 586 pièces, soit presque 15 p. 100. Si l'OTAN ne comptait pas le matériel est-allemand, l'OTAN ne se débarrasserait en fait que d'à peine 5 p. 100 de son équipement.

Les problèmes qui risquent de menacer le Traité portent sur l'attitude soviétique dans trois domaines. Avant la signature du Traité en novembre, il est devenu évident que l'URSS transférerait un grand nombre de chars et d'autres pièces de l'autre côté de l'Oural. Sans qu'il s'agisse à pro-

Aux termes du Traité sur les FCE, l'OTAN et l'Organisation du Pacte de Varsovie doivent ré-  
duire leurs armements conventionnels dans cinq  
catégories de systèmes d'armes (les chars, les  
pièces d'artillerie, les véhicules de combat blindés,  
d'assaut), mais les effectifs (soldats et autres  
personnels militaires) ne sont pas limités. Avant  
la signature du Traité, en février 1990, au cours  
d'une rencontre à Ottawa portant sur une autre  
proposition relative à la limitation des armements, les États-Unis et l'URSS avaient décidé  
de placer sur le plateau de la région de la capitale  
des escadrons de chars et de véhicules blindés  
et de les faire passer à l'arrière-plan. Les  
effectifs des unités de chars et de véhicules  
blindés ont été réduits de 10 à 15 %.

D'OUTRE, PLUS LES NEGOCIATIONS SUR LE TRAITE  
avancées, plus il est devenu évident que le pla-  
fond convenu était trop simplement trop élevé.  
De toute façon, l'Union soviétique avait déjà  
commencé à retirer d'Europe de l'Est pratique-  
ment toutes les troupes qu'elle y stationnait. Par  
ailleurs, pour des raisons nettes autres budgétaires,  
les Etats-Unis n'allait pas tarder à tomber eux  
aussi bien en-dessous du chiffre arrêté. Quand  
il se sera devenu de plus en plus improbable que les  
deux pays se mettent d'accord sur de nouvelles  
limitations des effectifs pour le mois de novem-  
bre, c'est-à-d. à temps pour la conclusion du Traité,  
la partie on ne décide, en septième, que la ques-  
tion serait réglée ultérieurement. Par conséquent

Le Traité se présente comme suit : les plaidos d'engénieurs des cinq catégories d'équipement s'appliquent aux deux alliances (même si le Traité existe également des plaidos intermédiaires qui fixent certaines limites régionales et qui garantissent qu'aucun Etat ne s'arrogera un pourcentage croissant des forces allouées à chaque alliance.

selon l'expression consacrée, de « l'Atlantique à l'Oural ». Cela comprend une portion du territoire soviétique délimitée à l'Est par la chaîne de l'Oural, et tout le territoire des pays de l'alliance européenne (à l'exception d'une petite partie de

E TOUTS LES SYMBOLES DE LA NOUVELLE Europe, le Traité sur les forces conventionnelles en Europe (FCE) sera parmi ceux qui auront les conséquences les plus tangibles et les plus immédiates. Signé à Paris le 19 novembre 1990, ce traité codifie la nouvelle réalité militaire européenne en exigeant des deux alliances\* qu'elles détruisent quelque 50 000 pièces d'équipement militaire lourd. Cependant, à peine l'ence des signatures avait-elle séché que des problèmes ont surgi, car les Soviétiques tentaient apparemment de contourner certains points du texte.

Depuis le 19 novembre, les doutes quant au

devenus tels que, dans pratiquement tous les autres domaines de la limitation des armements, les négociations sont au point mort et que le Traité lui-même est menacé. Le gouvernement Bush a décidé de remettre à plus tard la présentation du Traité au Sénat américain pour ratification, étape essentielle avant que ses termes soient en vigueur, et le Canada et d'autres pays de l'OTAN ont protesté officiellement auprès de l'individu, pour lui reprocher ses actions. Au mois de mars, pour essayer de surmonter George Bush a commencé à échanger des lettres avec Mikhail Gorbachev, à titre privé, afin de trouver une solution de compromis permettant

son presse, M. Gorbatchev doit encore préciser si le Kremlin accepte les conditions les garantissant les autorités militaires soviétiques les respectent.

Le paradoxe de cet accord, s'il se concrétise, c'est qu'en contrepartie d'un geste compensatoire suffisant des Soviétiques, les Etats-Unis et l'Atlantique de l'Atlantique Nord y approuveraient le type même de comportement qui, il y a dix ans, aurait déclenché les craintes les plus alarmistes du gouvernement Reagan quant à la fiabilité de l'URSS. En vérité, cependant, le Traité est trop beau pour que l'Occident et l'OTAN le laissent passer sans avoir tenté pour le garantir.

même si cela signifie enfiévrer un comportement irrépressible des Soviétiques.

ce n'est pas la seule région qui souffre à cause des armements. En Amérique centrale et en Afrique subsaharienne, les dépenses militaires et l'acquisition d'armes épuisent les ressources économiques des États, tout en attirant les conflits régionaux.

Contrôler peut signifier réglementer et limiter. Par la réglementation,

on reconnaît les besoins légitimes des bénéficiaires en matière de sécurité et le fait que certains fournisseurs dépendent des exportations, parce qu'ils

sont un instrument de leur politique étrangère ou qu'elles leur servent à combattre des industries de défense nécessaires à leur sécurité nationale. Les

bénéficiaires peuvent se laisser tenter par une réglementation intermédiaire, s'il en va des intérêts de la sécurité régionale.

Prévenir avant tout la prolifération dans certaines régions du monde de systèmes d'armes déséquilibrés ou coûteux. Peu importe au Pérou que

l'Arabie saoudite acquière plus de chasseurs F-16, du moment que ses propres voisins andins n'en font pas avant ! Plusieurs armes modernes de haut

de gamme, comme les missiles de croisière, les chasseurs polyvalents de pointe (le F-15 ou le MIG-29,

chars de combat perfectionnés (tels que le M-1) ne sont pas encore largement distribués de nos

jours. Il est donc possible que les bénéficiaires comme les fournisseurs

acceptent plus facilement des mesures visant à les interdire dans des régions économiques. En raison de l'état critique dans lequel se trouvent la plu-

part des économies des pays en développement, c'est le moment idéal pour tenter d'imposer de telles mesures, puisque la simple pénurie contraint les

États à envisager d'autres solutions que de gonfler constamment leurs arsenaux pour garantir leur sécurité nationale.

LES EFFORTS DÉPLOYÉS POUR LIMITER LA PROLIFÉRATION DES ARMES DE HAUT

de gamme comme les missiles balistiques ou les armes chimiques et nucléaires portent déjà des fruits, mais ce serait une erreur de se concentrer exclusive-

ment sur ces armements effrayants. À long terme, il est probablement plus important de limiter les armements conventionnels «ordinaires». En effet, à

un autre problème troublant se posera à l'avenir, celui de la diffusion des techniques permettant de fabriquer des avions de combat six, des chars

de combat et six, des hélicoptères à usage militaire. En outre, l'ici à l'an 2 000, il se pourrait que quinze pays en développement soient en mesure de

produire des missiles. De dix à vingt-cinq pays posséderont des armes chi-

miques. La plupart de ces armes ne sont pas ultra-modernes, mais leurs pro-

ducteurs pourraient fort bien contrecarrer toute disposition future visant la

limitation des armements.

La plupart des producteurs d'armements du tiers-monde se sont vus un

jour limiter leurs possibilités d'importer des armes. Cela a été le cas de

l'Inde et du Pakistan pendant leurs affrontements des années 1960 et du

début des années 1970 de la Chine, après sa rupture avec l'Union soviétique

du Brésil, à la fin des années 1970 d'Israël, après la guerre de 1967 et de

l'Afrique du Sud, en vertu d'un embargo décrété par l'ONU. L'Irak, après

avoir subi un embargo dans les premiers temps de sa guerre contre l'Iran,

est bien plus difficile. Aux XVe et XVIe siècles déjà, l'Angleterre et les

États italiens ont essayé de limiter la diffusion de nouvelles techniques

relatives à la fabrication de canons en réduisant la liberté de déplacements

des ouvriers qualifiés. Aujourd'hui, ce ne sont pas des ouvriers qualifiés qui

communiquent les techniques au fil de leurs migrations, mais les grands

producteurs disposés à renoncer à leur monopole technologique pour em-

porter des contrats dont ils ont besoin pour alimenter leurs industries de dé-

fenses, en cédant des licences et en concluant des accords de co-production. Ces restrictions imposées aux transferts de technologie connaissent un suc-

ces mitigés, cependant, en partie parce qu'il est souvent impossible de faire

la part du civil et du militaire dans les techniques en question.

James Vothall

Il existe au moins un précédent positif dans les efforts pour limiter la diffusion des techniques de production des armements, à savoir : le Régime de contrôle des techniques relatives aux missiles (RCTM) de 1987. Au départ, ce sont sept pays occidentaux qui sont convenus de restreindre les exportations de techniques relatives aux missiles (RCTM) de 1987. Le RCTM est un accord sans caractère officiel qui engage uniquement à la coordination des politiques nationales. Il ne prévoit pas que l'on puisse exiger des vérifications ni que l'on rende compte de ses activités. Malheureusement, il ne re-

groupe pas non plus tous les fournisseurs possibles de techniques relatives aux missiles balistiques (les plus grands absents étant l'Union soviétique, la

Chine, le Brésil et la Corée du Nord) et les pays bénéficiaires n'y participent pas. Ce n'est donc un modèle à suivre que partiellement.

LES INITIATIVES CANADIENNES VISANT LA LIMITATION DU COMMERCE DES AR-

mements sont assez châtinières. Bien qu'il arrive au Canada d'exporter

jusqu'à 2 milliards de dollars d'armement (des composants essentiellement) par an, plus de 80 p. 100 de

ces exportations se font à destination des États-Unis. Cette faible participation au

marché mondial des armements permet au Canada de poursuivre une poli-

tique d'exportation assez restrictive tout en conservant une industrie de

défenses. Cependant, il en découle que le Canada ne prend pas toujours

au sérieux les raisons qui poussent les États à vendre ou à acheter des

armes, ce qui l'amène à prêter des solutions techniques ou apolitiques

ne tenant aucun compte de considérations politiques ou économiques

extrêmement importantes.

Parallèlement aux limitations exercées chez les fournisseurs, ou aux

mesures visant à rendre le commerce des armes plus transparent (par le biais

d'un registre de l'ONU), il faut s'efforcer de régler les conflits régionaux

qui, finalement, alimentent la course aux armements dans le tiers-monde.

Le lien entre la limitation des armements et les conflits ou les situations

d'insécurité sous-jacentes, si évident dans le contexte Est-Ouest, existe tout

autant ailleurs dans le monde.

Assurément, les déclarations pieuses contre les ventes d'armes ou pour

une transparence accrue des exportations ne suffiront pas à convaincre amis

et alliés, comme on l'aura compris à la réaction du président Bush qui, au

cours de sa visite à Ottawa, en mars dernier, a rejeté la proposition canadi-

enne d'un sommet sur les armements. Le Canada ne peut à lui seul mener

des campagnes internationales d'une telle envergure. En revanche, il peut

continuer d'occuper plus modestement au sein d'instances comme la Con-

férence sur la sécurité et la coopération en Europe, les Nations Unies et le

Groupe de contrôle des techniques relatives aux missiles pour étendre ou

approfondir le champ des mesures existantes.

Le Canada doit jumeler ses efforts visant à limiter le commerce des arme-

ments avec son engagement plus vaste dans les opérations de maintien de la

paix et dans la gestion des conflits autour du monde. Ainsi, certaines régions

se prêtent mieux aux initiatives canadiennes : l'Amérique centrale, à cause

de sa proximité géographique le Pacifique Nord, car notre pays s'inquiète

de sa stabilité et du gonflement des arsenaux dans la région et l'Afrique

sub-saharienne, parce que le Canada appartient à la Francophonie et au

Commonwealth.

Aucun de ces efforts n'éliminera les ventes d'armes. Ce commerce est

une conséquence du «chacun pour soi» qui caractérise la politique interna-

tionale. Les pays luttent sans cesse pour survivre ou pour gravir des éché-

lons dans la hiérarchie mondiale. Seule une sécurité définie autrement

permettra de changer cet état de fait. Une réglementation du commerce des

armements contribuerait au moins à créer un espace dans lequel la nouvelle

sécurité pourrait s'épanouir.

\* Pour de plus amples détails sur le sujet, voir Marie-France Desjardins, «La

prolifération des missiles balistiques», Exposé no 34, ICPSI, Ottawa, septembre 1990.

# POUR UN MONDE SANS ARMEMENTS

Tout au long de l'Histoire, les efforts déployés pour contrôler quels pays se procuraient quelles armes ont échoué. Que devons-nous

faire pour enfin réussir ?  
PAR KEITH KRAUSE

Les bénéficiaires de ces armements ne manifestent guère d'intérêt pour des restrictions, car pour eux, les efforts déployés se résument à une nouvelle tentative pour gérer une répartition mondiale de la puissance militaire. D'une part, les tenants du traditionnel «jamais plus» proclament la naissance d'un «nouvel ordre mondial» qui règlera les problèmes sous-jacents qui ont, semble-t-il, provoqué le conflit. D'autre part, les pessimistes estiment que la réaffirmation de l'ascendant qui exerce les États-Unis sur le monde et le recours à la force armée pour régler les conflits illustrent la «même vieille anarchie».

Le gouvernement américain prend des positions ou des décisions contradictoires. D'un côté, le secrétaire d'État, M. James Baker, a prôné «des restrictions beaucoup plus sévères sur les exportations d'armes» à destination du Moyen-Orient. Malgré cela, au mois de mars, la Maison Blanche a annoncé son intention de vendre pour 18 milliards de dollars d'armement à ses alliés du golfe Persique et d'utiliser des crédits bancaires d'import-export pour financer ses ventes d'armes autour du monde.

La position canadienne a au moins la vertu d'être plus conséquente. Le premier ministre, M. Brian Mulroney, et l'actuel ministre des Affaires étrangères, M. Joe Clark, ont tous deux affirmé pendant et après le conflit que «le monde devait tirer de la guerre du Golfe la leçon suivante : un commerce des armes sans frein dans cette région n'est plus acceptable, à quoi ils ont ajouté une proposition concrète de «Sommet mondial sur les instruments de guerre et sur les armes de destruction massive».

Pourtant, arrivera-t-on à maîtriser la diffusion des armements modernes ? Plusieurs initiatives internationales visant à limiter ce commerce, qui étaient déjà discutées en coulisses, sont évoquées plus ouvertement aujourd'hui. Un nouvel organisme international non gouvernemental, *Armswatch*, est mis sur pied en Europe pour surveiller les ventes d'armes et les rendre publiques. Cet automne, les Nations Unies divulgueront une proposition visant à accroître la «transparence» dans les exportations d'armements. Par ailleurs, le Bureau des évaluations technologiques américaines, l'*Office of Technology Assessment*, étudie en ce moment la façon dont se fait la diffusion des technologies militaires et de la production d'armements. Ces initiatives, cette énergie diplomatique, cette bonne volonté ne sauraient à elles seules garantir la réussite de l'entreprise. Face à un commerce au chiffre d'affaires dépassant 40 milliards de dollars par an, que se partageant une cinquantaine de fournisseurs et qui intéresse plus de cent acheteurs, les efforts demandés sont immenses. En définitive, on ne parviendra à limiter la vente d'armements qu'en prenant en compte les forces productives d'armements.

Il y a de bonnes raisons d'être pessimiste quant aux chances d'une vraie limitation du commerce des armements. Les États-Unis continuent d'utiliser les transferts d'armes vers des pays amis comme instrument de politique étrangère, comme le prouve la vente de 18 milliards susmentionnée, et l'Union soviétique considère les ventes d'armes comme une de ses nouvelles sources de devises fortes. Des producteurs moins, comme la Grande-Bretagne et la France, comptent sur les exportations pour aider leurs industries de défense à rester à l'avant-garde de la technologie (près de la moitié des armes produites dans ces deux pays dans les années 1980 ont été exportées), et les producteurs des pays en développement tels que la Corée du Sud entendent augmenter leurs propres exportations pour assurer la survie de leurs industries.

Au vu des résultats obtenus jusqu'ici lorsqu'on a essayé de limiter les ventes d'armes, on a de quoi être plus pessimiste encore. Déjà, au temps de Charlemagne, les souverains essayaient, en vain, d'interdire ou de limiter l'exportation d'armes qui pouvaient servir contre eux. En 1574, la reine Elizabeth I d'Angleterre ordonna que l'on mette un terme à l'exportation d'armes après qu'on lui eut fait remarquer qu'en exportant des canons anglais, les navires de Sa Majesté se trouvaient face à un ennemi mieux équipé qu'ils ne l'étaient. Malgré les lourdes amendes infligées aux contrebandiers, les exportateurs ont continué leur trafic.

À la fin du XIX<sup>e</sup> siècle, les puissances coloniales européennes ont tenté, par le biais de la «règle» de Bruxelles (1890), de limiter l'afflux d'armes en Afrique afin de préserver leur mainmise politique et militaire sur ce continent. Malheureusement, la encore, on a continué d'y vendre des armes tant que les avantages commerciaux et politiques l'emportaient sur les dangers immédiats. Au XX<sup>e</sup> siècle, les tentatives se sont révélées aussi peu fructueuses. En fait, le dernier essai en date pour limiter les ventes d'armements, à savoir : les négociations américano-soviétiques sur les transferts d'armes conventionnelles (NPTAC), a échoué dans les années 1970 sur la méfiance croissante des superpuissances et sur la compétition qu'il se livrait dans le tiers-monde. La guerre que se sont livrée l'Iran et l'Irak pendant huit ans a pratiquement relégué aux oubliettes tous pourparlers visant à imposer une limitation partielle du commerce des armements et, pour les plus petits producteurs prêts à fournir les armes que les grands rechignaient à vendre (au début, du moins), elle a été une aubaine.

Si l'on veut que de nouvelles tentatives aboutissent, il faut tirer les leçons de cette succession d'échecs. La toute première semble être qu'il faut scinder le problème en parties moins inextricables. Pour cela, on dispose de trois stratégies simples :

Se concentrer sur des régions ou des sous-régions particulières qui sont surarmées à l'excès ou sujettes à des conflits. Bien que l'on pense aussitôt au Moyen-Orient (à eux seuls, les pays du golfe Persique ont absorbé presque le quart des transferts d'armements mondiaux entre 1980 et 1988).

Il n'y a rien de surprenant alors à ce que le tiers-monde voie dans la limitation du commerce des armes, sans limitation de leur production et de leur acquisition, une discrimination hypocrite contre les États incapables de produire leur propre armement. Pour qu'il change d'avis, il faut donc que les mesures prises tiennent fondamentalement compte des intérêts mêmes des États bénéficiaires à gérer leurs conflits ou à les régler.

# BEIJING NAGE À CONTRE-COURANT

Le triomphe des Etats-Unis dans le Golfe est loin de  
plaire aux dirigeants vieillissants de Beijing.

PAR JEREMY PATIEL

prête à lui vendre des avions de combat Sukhoi-27. Outre qu'il améliore la capacité militaire de la Chine, ce marché fait un pied de nez aux Américains qui, après les manifestations de la place Tian'an-men, ont suspendu un accord conclu plus tôt en vertu duquel ils auraient fourni des éléments de technique d'aviation à la Chine pour son aviation militaire. Divers dirigeants soviétiques haut placés se sont rendus à Beijing au cours des derniers mois. En février, M. Gorbatchev y a envoyé le sous-secrétaire général du Parti communiste, M. Vladimir Iavashko. Le secrétaire général du Parti communiste chinois, M. Jiang Zemin, est allé à Moscou à son tour. A l'occasion d'une autre réunion avec un membre du Politburo, M. Li Peng, premier ministre de la Chine, a dit entretenir «les espoirs les plus sincères» concernant le développement stable en URSS ; enfin, le 1<sup>er</sup> avril, le ministre soviétique des Affaires étrangères, M. Bessmertnykh, a annoncé avec une certaine satisfaction que les relations sino-soviétiques étaient désormais «complètement normalisées». Pour souligner cette nouvelle étape de coopération, M. Dimitri Yartov, ministre soviétique de la Défense, s'est rendu en République populaire au début de mai : c'était la première fois en près de trente ans que le titulaire de ce poste effectuait une visite officielle en Chine.

LE FAIT QUE LA CHINE A RÉCEMMENT REFUSÉ DE COOPÉRER AVEC HONG-KONG pour constituer un nouvel aéroport et qu'elle a adopté une attitude agressive face aux préoccupations des Etats-Unis concernant son énorme excédent commercial révèle un durcissement de sa position envers l'Occident. Selon la théorie des contradictions de Mao Ze-dong, les Etats-Unis représentent maintenant la menace la plus importante pour les intérêts chinois et c'est pourquoi il conviendrait que la Chine et l'URSS tassent front commun. Les efforts de la Chine pour se rapprocher de Moscou peuvent aussi être perçus comme une tentative en vue de préserver la «communauté des nations socialistes».

Les immenses difficultés intérieures qui accablent l'URSS et l'instabilité latente de la Chine pourraient bien rendre ces mesures superflues. Non seulement les Etats-Unis connaissent un regain de popularité, mais le Japon gagne en puissance économique. Tout en espérant que le désaccord opposant ces deux géants économiques servira leurs intérêts, les technocrates chinois doivent se préoccuper des efforts que le Japon déploie pour faire de l'Asie sa propre sphère d'influence économique. C'est pourquoi même la perspective d'une Union soviétique plus petite ou d'une Russie revivifiée n'entravera pas l'amélioration des relations sino-soviétiques.

Sous M. Joe Clark, ancien ministre des Affaires extérieures, le Canada a prudemment accepté un projet soviétique de longue date visant à créer un régime de sécurité pour l'Asie-Pacifique, projet qui plait plus ou moins aux Etats-Unis. Des pourparlers préliminaires sur la question ont eu lieu en avril, à Victoria. Les Japonais ont bien précisé qu'une telle entreprise ne les intéressait absolument pas, et la «nouvelle philosophie» soviétique n'a pas encore gagné la faveur de Tokyo. En avril, la visite tant attendue de M. Gorbatchev au Japon s'est terminée sans qu'un accord ait été conclu pour mettre fin aux conflits territoriaux qui opposent toujours ces deux pays. La Chine n'était pas fâchée de la tournure des événements, car elle demeure un lieu privilégié pour les investissements japonais tout en conservant un rôle central, entre l'Union soviétique et le Japon, sur la scène politique et dans le domaine de la sécurité.

L'opposition à l'hégémonie constitue une des pierres angulaires de la politique étrangère chinoise. Lorsque la souveraineté du Koweït était en jeu, la Chine s'est montée coopérative à l'ONU. Toutefois, elle s'inquiète beaucoup plus à l'idée d'une nouvelle prééminence des Etats-Unis. Mao Ze-dong prêterait le chaos à l'ordre et, dans la Cité interdite, les dirigeants vieillissants rejeteront, eux aussi, le «nouvel ordre mondial». Pour la Chine et pour eux, c'est encore un monde divisé qui procure la plus grande sécurité.

nouveau solliciter des prêts auprès de la Banque mondiale et profiter de

elles s'est permis, sans trop d'opposition, d'intenter secrètement des procès contre les apôtres de la démocratie. Le «nouvel ordre mondial», d'ailleurs, ne plait pas tout à fait à Beijing. Tout d'abord, la fin de la Guerre froide a dissous le «triangle stratégique» sur lequel Beijing avait pris l'habitude de manoeuvrer. La Chine a toujours tendance à partager l'opinion de l'une ou l'autre des superpuissances tierces. Malgré la considération extraordinaire dont le gouvernement de Bush a fait preuve à son égard (les Etats-Unis ont fait exception aux armes à la Syrie), mais encore, au cours des dernières années, l'Irak était le principal acquéreur de travailleurs de la construction chinois pour l'érection de ses infrastructures militaires et civiles. La Chine a perdu des milliards de dollars en devises fortes en raison des sanctions imposées contre l'Irak, elle ne recouvrera vraisemblablement pas les créances qui datent de la guerre.

CHINE A PEUT-ÊTRE OBTENU DES CONCESSIONS EN CONTREPARTIE DE L'APPUI qu'elle a accordé aux Nations Unies et de son abstention au moment du vote de la très importante résolution 678, mais à long terme, elle n'a rien gagné. Le préféral manifestement un règlement pacifique que «arabe» de la crise du Koweït, elle a continué d'exercer cette préférence, même après que la coalition a déclenché l'offensive en janvier. Aujourd'hui, la Chine s'alarme, face à une éventuelle «Pax americana», conjoncture où une seule superpuissance triompherait, les Etats-Unis, éclipseant toute possibilité d'une perspective «tiers-mondiste» distincte dans les affaires mondiales.

au cours d'une récente visite en Europe, le ministre chinois des Affaires étrangères, M. Qian Qichen, a souligné le rôle unique que la Chine joue dans le monde en tant que «plus grand pays en développement», et il a analysé la crise du Golfe en parlant des problèmes Nord-Sud que la Guerre mondiale avait obscurcis. M. Deng Xiaoping a blâmé publiquement les Etats-Unis pour les événements de la place Tian'anmen. Il se serait écrit : «regardez ce que vous nous avez fait, à nous qui ne vous avons rien fait.»

considère qu'une *Pax Americana* asservira inévitablement le régime politique chinois à des pressions plus fortes encore. L'objectif de la politique intérieure de Mikhail Gorbatchev, selon un document officiel, est de ne pas provoquer le mouvement vers la fin de légitimer leur opposition farouche aux activistes pro-mocratiques, ses collègues et lui ont invoqué le mouvement vers la

même s'il est possible d'en conclure.

structures militaires. Quand on y regarde de près, la Turquie et l'Égypte sont en fait des gouvernements militaires ; les militaires y décident du

« Je crois que tu s'agit d'un faux argument. Sur un plan plus général, nous assistons, je crois, à une redynamisation accélérée de l'Histoire. Normalement, la croissance démographique s'impose d'abord, puis de quatorze à six ans plus tard, l'école révisionniste entre en scène et, finalement, quatre ou cinq ans après, on a droit à la synthèse dialectique. Dans ce cas-ci, dialectique trahit.

Byrons : Ce que l'on peut dire sur l'évolution du processus au cours des huit derniers mois, c'est que le système et ses diverses composantes – que ce soit la coalition ou l'ONU – semblent très bien réussir à protéger les États-nations l'un contre l'autre et la souveraineté nationale. Mais comme des exemples particulièrement frappants l'ont montré dans le passé – je songe ici à l'holocauste, rouges, et aujourd'hui, aux Kurdes, et il existe d'autres exemples moins évidents tels que le dossier israélo-palestinien – le système protège très mal les individus contre leur gouvernement. L'ONU a toujours affirmé la primauté de la souveraineté de l'État : nous doit lui être sacrifiée. Par conséquent, les Kurdes ne peuvent se faire entendre. Des mécanismes émaneront-ils de tout cela qui n'aiteront un tant soit peu les entités qui n'appartiennent pas à ce club des États-nations ?

**Heiler** : De tels mécanismes existent déjà depuis un certain temps. Ce n'est pas accident que M. Koranyi a dit de la conférence d'Helsinki qu'elle avait marqué un tournant dans l'Histoire, car les participants ont cherché alors à consacrer la légitimité des discussions portant sur le statut des droits de la personne dans d'autres pays : cette conférence a amorcé la délégitimation de la notion voulant que la souveraineté de l'Etat l'emporte sur tout. Soit, dit en passant, le même processus s'est opéré au sujet de l'Afrique du Sud. Si le monde avait respecté les règles, lesquelles disent qu'aucun Etat ne peut s'ingérer dans les affaires intérieures d'un autre pays, aucune action internationale n'aurait jamais pu être menée contre l'Apartheid, mais tel ne fut pas le cas. Il y a eu des précédents plus déconcertants au sujet de l'impérialisme de l'ère qui nous concerne, que ce soit dans les cas les plus atroces, c'est la que réside le problème.

Hunter : J'ai travaillé longtemps à l'ONU et j'ai siégé à d'innombrables séances de la Commission des droits de l'homme, du Sous-comité de la protection des minorités, et de je ne sais plus quoi encore. J'ai été témoin du cynisme des grandes puissances. Il existe des règles au sujet des violations flagrantes et systématiques des droits de la personne. Après le massacre d'Halabicha (la ville kurde contre laquelle le gouvernement irakien lançait une attaque au gaz en 1988), une motion fut présentée à la Commission des droits de l'homme pour qu'elle sevrise contre l'Irak : je dois dire à ma grande honte que le gouvernement américain s'y est opposé. Au fil des années, les droits de la personne ont fondamentalement servi d'instrument de propagande politique. J'en ai été témoin pendant les années Carter, quand j'étais à l'ONU. On exerçait des pressions sur les Soviétiques. Chaque fois que l'on voulait dénoncer un pays, on disait qu'il violait les droits de la personne. Il n'est pas nécessaire de modifier la Charte : il nous suffit de passer aux actes et d'appliquer tout simplement les principes existants et de renforcer le système de l'ONU.

Stein : D'après l'analyse de Mme Hunter, il n'y avait pas lieu de s'attendre à grand-chose en

Stein : D'après l'analyse de Mme Hunter, il n'y avait pas lieu de s'attendre à grand-chose en

lisme israélien et nationalisme palestinien acquiescent beaucoup de pertinence dans le débat. Quant à la question des normes ambivalentes, prenons-la par l'autre bout ! C'est un couteau à double tranchant, un problème pour tout le Moyen-Orient arabe, un test décisif. Quelles normes Appliqui-t-on face aux minorités nationales chevauchant les frontières des Etats, dans l'ensemble du Moyen-Orient ? Ce problème n'a jamais figuré à l'ordre du jour après la guerre, en dehors du vicaire palestinien. Il y sera désormais inscrit. Qu'advient-il des Kurdes qui, de toute évidence, constituent une nation mais dont le territoire couvrent les frontières de plusieurs Etats ?

CE QUI EST UNIQUE AU SUJET  
DE CETTE GUERRE C'EST QUE  
LA PREMIERE PUISSANCE MILITAIRE  
DU MONDE N'A PAS PU  
FINANCER LA CAMPAGNE QU'ELLE  
METTAIT SUR PIED.

**Korany** : Le modèle d'Helsinki (Conférence sur la sécurité et la coopération en Europe – CSCE) peut-il s'appliquer au Moyen-Orient ? Peut-on dépasser la notion d'Etat et tenter d'organiser des transformations démocratiques, de faire valoir les droits de la personne, et le reste ?

Stein : À Helsinki, on n'a jamais parlé directement des changements dans les formes de gouvernement. On y a posé la question indirectement, en énonçant un autre problème : l'importance des droits de la personne, la remise en cause des gouvernements établis, et la mesure où il faut protéger aussi les droits culturels et tolérer les minorités. En rétrospective, le processus d'Helsinki a influé beaucoup sur ce qui se passe maintenant en Europe. Au fil de l'histoire, il devait aboutir à des changements politiques fondamentaux. Inscrire la forme de gouvernement au sommet de l'ordre du jour, c'est placer la charnière devant les boeufs. Les droits culturels des minorités, tels sont les axes véritable du problème.

**Heller :** Il serait naïf d'insister sur les formes institutionnelles de l'Etat démocratique libéral. Comme je l'ai déjà dit, le problème tient au fait que, depuis l'effondrement de l'Empire ottoman, on a rendu illégitime dans la majeure partie du Moyen-Orient la notion de la souveraineté de l'individu et celle de l'autonomie de la partie par rapport au tout. Personne n'oserait décrire l'Empire ottoman comme ayant jamais été un regroupement d'Etats démocratiques libéraux. Mais il a effectivement amélioré le statut de l'individu et des groupes culturels ou «journéristes» autonomes plus que ne le fit n'importe quel Etat post-colonial du Moyen-Orient.

Bryans : Pourquoi la solution à la question palestiniennne influera-t-elle tellement sur l'issue que connaîtra tout le débat religieux ?

«Heller : Il ne s'agit pas d'un prisme religieux quand on parle des Juifs et des Musulmans. C'est ce qui fait le même paramètre d'identité que celui dont nous parlions antérieurement, une frontière communautaire, si l'on veut. Cela n'a rien à voir avec la peur religieuse de l'Etat ou de la législation tribarbare, ni avec la légitimité des frontières. Pour les habitants du Moyen-Orient, les mots «Juifs» et «Israéliens» sont synonymes. J'ai du mal, cependant, à comprendre le fondement de l'étonné voulant que la solution donnée à la question palestinienne déterminera le degré de pacifisme ou d'échec des mouvements islamiques dans le monde arabe.

forany : La question palestinienne est importante parce que elle réunit de nombreux éléments, entre juifs et Musulmans constitue certes un problème religieux. Nous obliions pas, cependant, que la question palestinienne évoque aussi l'époque coloniale, ou Israël était perçue comme un élément de l'Occident, voire comme la concrétisation d'un complot de l'Occident ; nous revenons ici à cette théorie du complot. Par ailleurs, une autre question se posera tant et plus dans l'avenir et elle consiste de mettre de nombreux gouvernements au Golfe en péril ; il s'agit de l'application de normes ambivalentes. Le monde ayant désormais appliqué avec une extrême rigueur le droit international et les résolutions de l'ONU, il devra user des mêmes critères dans tous les cas venir.

main : La question palestinienne retient l'atten-  
 tion parce qu'elle intègre un grand nombre des  
 mêmes dimensions religieuses, et on l'associe égale-  
 ment au passé colonial. On évoque ici la manière  
 dont la question a toujours été interprétée dans le  
 Moyen-Orient arabe. Le conflit irako-koweïtien  
 représente de l'intérêt à cet égard, car il a confirmé  
 l'existence de frontières tracées à l'époque colo-  
 niale : c'est là que la distinction faite entre «eux-  
 la nous» s'est effondrée. Le Moyen-Orient arabe  
 a reconnu explicitement la légitimité de ces fron-  
 tières. Le processus par lequel elles furent tracées  
 était pas légitime, mais leur existence l'est  
 maintenant. Il n'est pas question de les modifier,  
 ne importe la façon dont elles ont été établies.  
 Une curieuse manière, par conséquent, l'asso-  
 ciation coloniale pourrait bien s'atténuer au cours  
 de la prochaine décennie.

jamais dans la région de la puissance militaire

Si l'on songe aux périodes antérieures où a

existé pareille disjonction de la puissance écono-

mique et militaire, on constate que ce furent des

des Arabes ont effectivement usé de la force les

uns contre les autres. Ainsi, l'Égypte a envoyé

un corps expéditionnaire important au Yémen

pendant la guerre civile qui déchirait ce pays.

La Libye et l'Égypte se sont fait la guerre, et le

Maroc et l'Algérie ont combattu l'un contre

l'autre dans le Sahara.

Pour ce qui concerne la «renaissance» des non-

Arabes et toute la notion de la ramontée iranienne,

elles s'apparentent un peu à la revivification de

l'Islam. Celui-ci n'est jamais mort, et l'Iran

n'a jamais disparu de la carte. Pendant

les années 1980, même si, affaibli, il

n'a pu influencer autant sur les forces

sous-jacentes de la région, l'Iran a mené

une action beaucoup plus importante qu'on

le croit, du seul fait qu'il agissait dans un

vasse contexte islamique. L'Iran s'affirme peut-

être maintenant comme un intervenant de calibre

international, mais il se pourrait qu'il se retourne

plus sa propre identité : dès lors, les cadres de

son activité se redéfinissent sensiblement. A mon

avis, l'Iran a été traumatisé de bien des façons

par la réaction du reste du monde islamique et

certainement par celle du monde arabe.

Bryans : D'après certains écrits de l'année

«*Rois of Moslem Rages*» paru dans le magazine

*Atlantic*), il est évident que certains croient en

l'existence d'un conflit fondamental entre l'Occi-

dent et le monde arabe, et entre l'Occident et

l'univers islamique. Est-ce que vraiment il y a un

monde musulman, ou un monde arabe, en conflit

avec l'Occident ? Et est-ce en fait la une façon

sensée de poser la question ?

Korany : C'est la première fois qu'un Etat arabe

s'empare purement et simplement d'un autre pays

arabe et déclare que celui-ci a cessé d'exister. Com-

ment cela va-t-il influer sur les relations entre non-

Arabes et Arabes ou Musulmans ? Auparavant, il

y avait une distinction à faire (*umr* et *non*), mais

elle ne vaut plus, car certains d'entre «non»

comptent sur l'aide de certains d'entre «non».

Si l'on songe aux périodes antérieures où a

existé pareille disjonction de la puissance écono-

mique et militaire, on constate que ce furent des

épisodes très dangereux. Je dirais qu'une telle

conjonction risque d'être plus dangereuse au

Moyen-Orient qu'ailleurs dans le système inter-

national. Au Moyen-Orient, le recours à la force

constitue encore une solution légitime, contraire-

ment à ce qui est le cas entre les puissances

industrialisées de la planète.

L'évent ne m'inspire pas confiance, notam-

ment parce que le lien entre ces deux mondes

est très lâche.

Si l'on jette sur cette guerre un

éclairage historique approprié,

on voit que sa particularité

tient au fait qu'elle avait pour

objet la défense du principe

de souveraineté nationale.

s'établir par l'entremise des exportations

d'armes vers le Moyen-Orient. Ce sera là un

débouché particulièrement profitable pour les

Etats-Unis et d'autres économies plus ou moins

solides. Ce ne seront sans doute pas les japonais

qui exporteront le plus d'armes au cours des dix

prochaines années, mais plutôt les pays industria-

lisés plus faibles, susceptibles de tirer des avan-

tages concrets d'un Moyen-Orient instable où

existent de véritables craintes au chapitre de la

sécurité, craintes que cette disjonction de la puis-

sance économique et militaire intensifiera en

au cours des dix prochaines années, la région par

excellence pour la prolifération des armes.

Des éléments socio-économiques expliquent la

force de l'Etat dans le Moyen-Orient arabe, en

cette époque de manipulation des structures so-

ciales. Les courants politiques favorisent le plu-

ralisme ou la montée d'un plus grand nombre de

voix authentiques trouvant des moyens insti-

tionnels pour se faire entendre, mais ce genre de

prolifération des armes renforce l'Etat aux dépens

de la société civile. Avec une pareille évolution

des choses — et en même temps les mouvements

politiques réprimés cherchent des moyens d'ex-

pression légitimes, la pression s'intensifie depuis

la base, ce qui aggrave encore plus l'insécurité

et l'instabilité.

Un autre changement important se produisit

arabes et non-Arabes au Moyen-Orient.

Il y eut un moment où l'on fit une distinction entre

le nouveau régime de Bagdad

et le régime du pacte. Ce fut à partir

empire de se retirer du pacte.

Le coup d'Etat dans ce dernier pays en 1958, et à

n et un pays arabe, nommément l'Irak. Il y eut

avec Israël. C'était la première violation du

non-Arabes au Moyen-Orient. Pour la pre-

mière fois, un grand Etat arabe disait la

possibilité et nouait des relations

politiques avec un pays non arabe.

Puis, vers la fin de la période survint

l'évolution iranienne, qui eut d'énor-

les répercussions sur les masses arabes.

certains virent en Téhéran le nouveau

modèle de l'avenir. Pendant la guerre irano-

iranienne, des pays arabes prirent parti pour l'Iran

contre un frère arabe : autre érosion de la dis-

inction entre Arabes et non-Arabes. Ce que

l'Heiler disait au sujet de la montée des non-

Arabes (la Turquie et l'Iran) et de leur rôle dans

le Golfe confirme ce phénomène d'érosion. On

vient à un système moyen-oriental au détriment

une structure simplement arabe. Et la montée

du militarisme islamique va dans le même sens :

Une seconde réalité renforce cette tendance :

la première fois, des pays arabes sont me-

acés par d'autres nations arabes. Auparavant, la

tenace militaire venait d'Israël ou de pays oc-

cidentaux. Le Koweït a dû faire appel à des

non-Arabes pour se défendre contre des Arabes.

Un troisième phénomène s'exprime dans

exemple, un peu rompu et mon avis, du moi-

de la société civile, et pluralisme, dans la so-

ciété arabe. Au cours des dernières années, l'Etat

arabien présent ; il était trop fort. Et le débat

si s'amorce au sujet du statut de la famille

oyale au Koweït et de la possibilité d'élargir les

payer pour instaurer une société civile.

ette guerre, c'est que les forces de la coalition

nt été organisées par la première puissance mili-

ture du monde, à partir d'une base économique

si faible, et que cette même puissance n'a pas

financer la campagne qu'elle mettait sur pied.

Moyen-Orient, ceux qui détiennent la force

litaire, critère traditionnel de mesure du pou-

ur dans cette partie du monde, ne sont pas du

ent ceux qui possèdent la puissance économique.

Un Etat aurait pu dominer sur les deux plans, à

avoir l'Irak, s'il s'était doté d'un régime diffé-

venant une puissance militaire, mais son écono-

est est faible. Israël possède une économie fon-

mentalement faible, lui aussi. Ceux dont les

## LES MEMBRES DU GROUPE

MARK HELLER

*est chargé de recherche principal et coordonnateur de la recherche à l'Institut canadien pour la paix et la sécurité internationale. Il est en congé de l'Université de Tel Aviv, où il est chercheur associé principal au Centre d'études stratégiques Jaffar. Un ouvrage de lui paraîtra bientôt chez Westview sous le titre Between Old Thinking and New: The Changing Dynamics of Soviet Policy in the Middle East.*

SHIREEN HUNTER

*est directrice adjointe du Programme d'études moyen-orientales au Center for Strategic and International Studies, à Washington (D.C.). Elle vient de publier Iran and the World: Continuity in a Revolutionary Decade, chez IUP, en 1990.*

JANICE GROSS STEIN

*est professeur de sciences politiques à l'Université de Toronto et elle a publié, avec Richard Ned Lebow, le Cahier de l'Institut intitulé «La dissuasion: analyse des paramètres de réussite».*

**Mark Heller :** Laissez-moi vous raconter une petite anecdote. Une délégation française visitait l'Académie des sciences en Chine. On présentait aux Français leurs homologues chinois, et les

*Le présent article résume les propos tenus au cours d'une discussion qui a eu lieu à Ottawa le 15 avril. Michael Bryans, rédacteur en chef du magazine Paix et Sécurité était alors l'animateur.*

**Michael Bryans :** Première question : une fois que tout le brouhaha des six derniers mois se sera éteint, qu'est-ce qui nous paraîtra unique au sujet de ce qui s'est passé depuis le mois d'août ? Dans dix ans d'ici, qu'aurons-nous retenu de particulier au sujet de cette époque ?

**Shireen Hunter :** Des changements internes importants se produiront certainement, et ce, dans tous les pays de la région du golfe Persique. Les incertitudes relatives à l'Union soviétique compteront parmi les facteurs qui détermineront le jour sous lequel on percevra toute cette situation dans dix ans. Certains pays, et je songe surtout à l'Iran et à la Turquie, seront très vulnérables face aux changements survenant en URSS. Je ne pense pas que l'Union soviétique subsistera dans sa forme actuelle.

**Sil :** la désintégration de l'empire soviétique se produira rapidement et d'une manière plus ou moins ordonnée, il ne faut pas exclure, à franchement parler, des réajustements territoriaux et ethnolinguistiques dans la région. Rien ne dit qu'il n'y aura pas un jour un Etat kurde. Qu'advendra-t-il, par exemple, de l'Azerbaïdjan soviétique ? Le territoire passera-t-il à la Turquie, ou à l'Iran ? Présentera-t-il des revendications irrédentistes à l'Iran ?

**Bryans :** Il y aurait donc de nouvelles frontières ? **Hunter :** La création de nouvelles frontières risquerait de provoquer de graves bouleversements, mais il y aura certainement des réajustements économiques, politiques et linguistiques. Idéalement, la région devrait opter pour le fédéralisme, puis évoluer peu à peu vers le régionalisme. Autrement, des guerres éclateront du Caucase jusqu'en Asie du Sud.

Français demandèrent qui, à l'Académie, menait les recherches sur la Révolution française. «Perdonnez-moi, leur répondit-on. «Mais pourquo, rétorque, leur répondit-il. Il s'agit là d'un grand événement historique. » Et les Chinois de dire : «Nous n'avons pas encore assez de recul pour bien le faire ! » Rappelons-nous 1981 : ce n'est pas très loin encore, et la région du Golfe (ou l'ensemble du Moyen-Orient) n'était pas très différente de ce qu'elle est aujourd'hui pour ce qui concerne les principales forces à l'oeuvre. Afin d'avoir une idée de la direction dans laquelle les choses évoluent, il nous faut réfléchir à plus long terme et aux tendances socio-économiques qui pourraient un jour s'exprimer dans l'équation politique. Du côté arabe du Golfe, en particulier, les régimes sont de plus en plus déphasés par rapport aux changements socio-économiques. Ils ne sont pas très fidèles au reflet fidèle des sociétés existantes. Il est cependant très difficile de prédire à quel moment cette asymétrie deviendra intolérable. Si j'essayais de résumer les conséquences des développements survenus au cours des dix ou quinze dernières années, je dirais tout simplement ceci : le monde a raté des chances inouïes de mettre à profit les processus fondamentaux d'édification nationale et de modernisation socio-économique. En partie à cause de tout le tohu-bohu politique, et en particulier des guerres (la guerre irano-irakienne, puis la guerre du Golfe), des ressources incroyables ont été gaspillées par les apôtres inconditionnels du nationalisme arabe, ce qui, dans le cas de l'Irak, a entraîné la destruction du pays.

**Au cours des dix prochaines années, nous assisterons à un renforcement relatif des forces non arabes dans la périphérie du Golfe, au redressement de l'Iran, et peut-être même à l'émergence du Kurdistan. Il est fort probable également que la Turquie réintégrera un rôle de taille au Moyen-Orient aux dépens des Saoudiens et des Irakiens.**

**Baghat Korany :** Examinons certaines tendances importantes, à mon avis. Tout d'abord, l'érosion

## NOTE FROM THE EDITOR

At first glance our two lead articles by **Desmond Morton** and **Lawrence Freedman** would seem to have little in common. One is wholly devoted to Canadian concerns with fashioning a defence policy when there is a dearth of both money and identifiable enemies; the other leads the reader through the complex (and acronym-ridden) terrain of Europe's half dozen or so multilateral organizations, and how they might be used to cope with Europe's dramatically redefined security problem. Yet, these writers are in fact dealing with different parts of the same puzzle: what do governments do when the essential

principles that have guided their international policies for forty-five years vanish almost overnight? As Professor Freedman writes, NATO planners without a sense of Soviet power "would become wholly disoriented."

Both of the lead articles in this issue of *Peace&Security* were written before August's momentous events in Moscow, yet the coup and its aftermath only add to their relevance. As this issue goes to press there are startling announcements from various corners of the Soviet Union almost hourly. Some, like the implosion of the Soviet Communist Party, the mass secession by republics from the Union, and the wholesale purge of the upper echelons of the Soviet armed forces, would lead one to suspect that NATO's bureaucrats are going to be needing new compasses sooner rather than later. Others, like the disturbing dictatorial streak that some observers see in Russia's president Boris Yeltsin, and that scary, and unverifiable story that the Soviet Union's nuclear missile launch codes went astray during the coup, would seem to lend weight to Desmond Morton's contention that the best defence policy is one that expects the unexpected.

Also in this issue: **Thomas Weiss** runs down a list of contenders for the UN's top job and wonders if there isn't a better way to choose Secretaries-General; Ottawa political writer **Charlotte Gray** reassesses some of the domestic soul-searching about war and peace that went on through the Persian Gulf crisis; **Paul Marantz** explains the motivations for the abortive putsch in Moscow and how the grey men who launched it helped accelerate precisely those changes they sought to avoid; Middle East analyst and frequent commentator on various Canadian media throughout the Persian Gulf crisis, **Janice Gross Stein**, contributes the first of what we hope will be a series of essays by different writers in *Peace&Security* weighing the long-term implications of this conflict; **Michael McIvor** writes of his experience covering the ongoing famine emergency in Sudan for CBC Radio; **Rychard Brûlé** tells us what is supposed to happen – before the end of 1991 if luck holds – to finally end the drawn-out conflict over the future of Western Sahara; and **Gabrielle Mathieu** sets out the crowded agenda for La Francophonie's next summit meeting in Paris in November. – **Michael Bryans**

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

# DEFENCE POLICY FOR A NICE COUNTRY

*With truly impressive consistency, defence policy makers in Canada get their futures wrong.*

BY  
DESMOND  
MORTON

THE RESIGNATION OF VICE-ADMIRAL CHARLES Thomas last spring told Canadians what a few nervous defence insiders had known for months: Ottawa was again in the throes of making defence policy – a trying experience for its primary victims, those who have chosen careers in the Canadian Forces.

It is hardly more reassuring for the rest of us. As of June 1991, the government is claiming its post-Cold War peace dividend. Whether all three services share comparable cuts or, as Admiral Thomas argues, the navy and air force survive at the expense of the army, the government is bent on drastic savings. The army, in particular, could lose its expertise in armoured warfare and in modern artillery. Where, after all, would such expertise, and the costly equipment it entails, be used? Where will we use the patrol frigates or the CF-18s? Even thinking about such possibilities is an activity fit only for wild-eyed warmongers.

The answer, of course, is that we don't know – but then we never do. Forecasting is a key skill in defence policy and a rare one, as authors of Perrin Beatty's blueprint discovered. The 1987 White Paper assured Canadians that we would still be toe-to-toe with the Warsaw Pact's huge tank armies well past the year 2000 and that we desperately needed nuclear-powered submarines to join the hunt for future unfriendly *Red Octobers*. By 1989, that seemed like ancient history. But who, in June of 1990, predicted that a quarter of the army would spend the summer camped around Montreal or that Canadian ships and CF-18s would be engaged in a full-scale war in the Persian Gulf?

WITH TRULY IMPRESSIVE CONSISTENCY, DEFENCE POLICY makers in Canada get their futures wrong. However, the thinkers of 1987 can also ease their chagrin by discovering how short-sighted were their predecessors. In 1949, the highly intelligent Brooke Claxton insisted that home defence would be the most probable role of Canada's defenders. The army was re-equipped to drop on Soviet lodgements in our Arctic. Within months we had sent ships and troops to Korea. By 1951, we were dispatching soldiers, fighter squadrons and every weapon we could spare to defend Europe. Paul Hellyer's 1964 white paper put peacekeeping first; Donald MacDonald, eight years later, put it last. In neither case were the results any different.

Our distant ancestors were no smarter. Until late August 1939, no one predicted that Canada would go to war to save Poland and only Winnipeg's J.W. Dafoe even dared to suggest that it might be a good thing. In July 1914, Toronto's *Globe* sternly warned Canada to look to its defences – against communicable diseases from the United States. Three weeks later, the Great War began. To be fair, staff officers in the Militia Department had a mobilization

scheme in their usual stack of plans. Sam Hughes, their redoubtable minister, tore it up and proceeded on his old wild intuition.

Even more important than bad guessing is the fact that Canadians have never paid a price for our mistakes. Not since 1814 has Canada been invaded, pillaged or even seriously threatened. We have no Pearl Harbour, no Rotterdam, no Blitz in our collective subconscious. The awful paradox for those of us who desperately believe in preparedness is that our scoffing enemies have been right. Canada's defence policies, politically-driven and dreadful as they are, have been a brilliant success. Even when we went to war in 1914, and 1939 and 1950, our allies bore the heat of battle until we had recruited, trained and equipped our forces. We blame the British for Hong Kong or Dieppe.

FUTURES GROW OUT OF THE PAST BUT THEY DON'T necessarily resemble them. A post-Cold War world is already more complex for Canada than the bi-polar world of 1987. Conceivably, it is even more dangerous. The notion of the US as an all-powerful arbiter of world peace ignores the profound limits of American economic and military power. The idea that the USSR is finished as a major power is a comparable self-deception.

Instead of the prudently-managed confrontation of two super-powers with attendant allies, we now live in a multi-polar world. Instead of the Middle East as uncontested winner in the instability sweepstakes, we face a smorgasbord of real and potential conflicts from the troubled frontiers of the USSR the Balkans, the Horn of Africa and the restless nations of South-East Asia.

This matters to a Canada that depends utterly on world trade for its standard of living. It also matters to the people of an increasingly multicultural country, reinforced by refugees from every troubled corner of the globe. Far from forgetting their homelands, Canada has always been populated by people who expect their adopted country to get involved – British ethnic loyalty made Canadians answer "Ready, Aye Ready," in 1914 and 1939. If Canadians really don't care about this world, why were we in the Gulf?

Canadians also face the horrid prospect of domestic conflict – further Okas promised by Canada's First Nations and the lurking possibility of civil disorder if

*Canada's defence policies,  
politically-driven and dreadful as they  
are, have been a brilliant success.*

Confederation shatters. While Canadians are nearly unanimous in rejecting force as an option in their future, there is enough intransigence in national attitudes to make explosions a frightening likelihood. As last summer revealed, the Canadian Forces are a last resort that can get involved very quickly. Setting aside the nightmare of civil war, we need to remember that the October Crisis of 1970 never pitted French against English but a democratically elected government against murderous fanatics.

Predicting specific scenarios is a mug's game. A country that buys more insurance than any other should understand that you don't pay premiums only

because *The Journal* interviewed a pyromaniac the night before. Whatever our misgivings about prophecy, defence policy cannot be for the here and now. Time matters in war and peace; officers and troops take years to train; modern weapons systems take decades to build or procure. Virtually every ship, plane or vehicle the Mulroney government has so far handed over to the armed forces got its start under the Trudeau government. The high-tech wizardry of the 1991 Gulf War was conceived in the 1970s.

THE FUTURE IS UNKNOWNABLE, BUT WE must prepare for it with billion-dollar decisions. Hidden in the Pearkes Building, a new defence policy takes shape. One prediction alone is safe: it will deliver savings to the federal treasury. It is hard to argue with Admiral Thomas that keeping approximately forty-four bases in the wrong places is a contribution to regional economic equalization, not to national defence. But is it necessary to agree with him that proficient ground forces with up-to-date equipment can be written out of Canada's foreseeable future?

Though Tories in opposition used to emphasize that Canada's defence effort ranked down with Iceland and Luxembourg, current rhetoric puts the stress on the fact that at \$12 billion a year, we are about the fifth or sixth biggest military spenders in NATO. Much of the money is devoted to politically-convenient bases, using defence contracts to create jobs and votes, and paying more generals than we had in the Second World War.

One result is an old-fashioned inter-service battle. While Admiral Thomas and General De Chastelain helped make the debate a little more public, the details remain shrouded – ominous to those who care about defence and absurdly irrelevant to the rather larger group of Canadians who do not. Admiral Thomas insists that we preserve our navy and air force at the expense of bases and the army; the soldierly Chief of the Defence Staff apparently favours all three services sharing reductions in the name of balance, flexibility and the unpredictable.

WHAT NO ONE SAYS IS THAT THE THREAT OF domestic disorder gives the army pride of place in any new defence policy. While highly-trained, tightly disciplined soldiers would be needed in any public order emergency – and ill-trained militia could only aggravate the crisis – neither politicians nor generals want to contemplate an army that resembles Mexico's or Guatemala's: fit to intervene against rural guerillas or urban insurrection. Instead, the army pleads for continued "real soldiering" with tanks and artillery.

Competing services need only ask where the war will be and for what cause young Canadians would die. Armies mean bloodshed, and Canada sent no troops to the Persian Gulf. If every CF-18 dispatched to the region had been blown out of the sky by the Iraqis, twenty-four Canadians would have died – a small price for a good day's fighting by an armoured brigade group.

## *A post-Cold War world is already more complex for Canada than the bi-polar world of 1987. Conceivably, it is even more dangerous.*

The sailors have been luckier or more cunning than the soldiers. Its worn-out state is national knowledge. Its dozen splendid new patrol frigates may each cost as much as Montreal's "Big O" but they are also a significant source of Quebec jobs. The Persian Gulf War showed how proudly and bloodlessly such modern warships might have represented Canada. That such conventional surface vessels may be too slow and vulnerable for any future naval warfare is a heresy that drives admirals apoplectic, as do questions about the relevance of such ships to our three-ocean frontier. Is it a common sense of claustrophobia that banishes that short-lived but best of solutions, the nuclear-powered subs of 1987?

Luckiest of all is the air force, its backbone of CF-18 fighter aircraft acquired, still youthful and now proven in action. Since Mackenzie King, politicians have liked the air force and believed themselves modern-minded as they echoed the claims of its enthusiasts. Now larger by far than its sister services, its survival sure, it can be arbiter of the fate of its rivals.

BUT IS THE ALTERNATIVE REALLY TO CANNIBALIZE one service to spare the others? Are there not other answers, all the more valid for being unthinkable? Admiral Thomas raised the issue of the number of bases, most of them small, jerry-built towns with roads, sewers and aging buildings. How many such towns, with their commanders and administrators and maintenance crews do we really need? The answer would come from anguished politicians. Are jobs in key constituencies really a defence responsibility?

Must we periodically gear up to build a few warships or could we buy them from our major allies with fast delivery at forty to sixty percent less cost? Must we always have Canadian-made bullets and shells and service-pattern trucks costing eighty to one-hundred percent more than imports? Why not be highly

selective in the defence industries Canada fosters in peacetime?

It is easy to lecture politicians. The Canadian Forces have found their own way to comfort themselves. We may not have money for tanks or even for sufficient rifles but there was no delay in creating a divisional headquarters and then a range of regional headquarters. Each was an opportunity to add a major-general and

an accompanying hierarchy. Rank inflation spreads. What other defence force boasts more corporals than privates?

Rank proliferation, we are told, is vastly worse in the civil service. Good people need an incentive to remain for a full career. But why persuade them to stay to age fifty-five? Why not seek faster promotion and a flatter hierarchy by routinely ending most military careers at age thirty plus? How many

men and women over that age could, in any case, endure the strain of modern combat? An outflow of trained veterans would meet the greatest need of Canada's reserves, and they would also be fit and qualified, with a little specialized training, for a host of civilian careers. Thousands of first-rate people would no longer have to be kept in expensive storage, waiting for their pensions. This would save money.

CANADA IS NOT REALLY SUCH A CHEAPSKATE IN defence spending, but do we get value for money? The Dutch have as many planes and warships as we do, all of them modern, and almost twice as much of an army – at half the cost. They do not do it with low pay. Surely we, too, could do better, without slashing already limited effectives or wiping out expertise it takes decades to develop – and months to lose.

Canada's defence problems are not new. In 1873, Lt. Col. Henry Fletcher, the governor-general's secretary, offered the young Dominion of Canada his best wisdom on the making of defence policy. There were, he suggested, three elements in the equation: money, manpower and preparedness. The answer to any two questions resolved the third. Recognizing that Ottawa had set \$1 million as its limit for defence, Fletcher urged that Canada maintain only as many troops as could be made efficient for the money. Politicians, of course, spread the cash over 40,000 militia who often could train every other year. The rewards were political; votes repaid militia pay. In different guises, Fletcher's equation still defines defence policy in a country whose need for military force is as recurrent as it is unpredictable. □

# WAKING UP TO REALITY IN POST- REVOLUTION EUROPE

BY  
LAWRENCE  
FREEDMAN

THE WARSAW PACT IS A THING OF THE PAST; THE Soviet Union has lost control over its former satellites; Germany is united with NATO; the Iron Curtain has been dismantled. The suddenness of this process has caught many by surprise, and many of the attitudes and institutions left over from the Cold War remain in place. As a result, much of the current debate about security and defence in Europe concerns how best to adapt these to the new situation. Upheavals throughout much of the old communist world are dramatically redefining Europe's security problem.

The phrase "instability in Eastern Europe" has come to be used as a shorthand to cover all the less welcome political consequences of the 1989 revolution. The decline of Soviet power means that Central and Eastern Europe can breathe again, but it has also made possible a revival of nationalist and ethnic antagonisms. These were once stifled by the dead hand of communism, along with enterprise and free expression, but are now being aggravated by the dire economic legacy of state socialism.

The challenge for post-revolution Europe has been described in terms of deflecting these negative tendencies by accentuating the pluses of liberal democracy and market economics. In case this fails, much diplomatic activity has been devoted to revamping the institutions and designing new procedures to manage conflicts. At the time of writing, all this is being put to the test in Yugoslavia. Thus far, the experience has been salutary.

Until this real test, the debate itself was rather bewildering because so much of it was focussed on the capacity of institutions developed to perform specific functions in one set of circumstances to perform quite different functions in much changed circumstances. In the past, the field was dominated by the North Atlantic Treaty Organization (NATO). It still has the only serious integrated military organization and is the one best able to draw on North American power.

NATO'S CURRENT STRATEGY REVIEW STILL ASSUMES that the most serious problem with which member states could expect to cope would be a Soviet attempt to regain its former military influence in Europe. There is no doubt that Soviet military power remains substantial and will be so for some time. But whether the USSR has any interest in military adventurism beyond its borders must be doubtful when it faces so many internal challenges.

Exactly how this will look in five years (by which time all Soviet forces should have withdrawn, including from Germany) is hard to say, but the current period may be very transitional. NATO still tends to describe its role with concepts derived from the past, and without any sense of Soviet power its planners would become wholly disorientated.

The Alliance now expects that it will have considerable warning of any reassertion of Soviet strength. This means that it can cut existing force levels substantially and rely on the warning time to reconstitute them in an emergency. Because it is so geared to the Soviet threat, NATO is not obviously appropriate to lesser threats or to those beyond the European continent. Western leaders are anxious that direct military action be very much a last resort in all future crisis management and, despite talk of the organization becoming more "political," it is only really of relevance when military cooperation has become necessary. It provides the basis for developing common command and control procedures, and the much wider familiarization that comes through inter-operability of equipment and exercises.

ONE AREA WHERE NATO HAS DUCKED A CENTRAL ROLE is in providing security guarantees to former members of the Warsaw Pact who still judge themselves vulnerable to a reassertion of Soviet strength, but are not part of any functioning collective security organization. Poland, Czechoslovakia and Hungary, in particular, have made little secret of their desire to join NATO. So far, closer cooperation has been agreed with liaison offices and membership of the non-governmental North Atlantic Assembly, which now meets with twenty-two rather than sixteen countries. Beyond this, NATO is unwilling to go because it does not want to be committed to particular states in all their conflicts with neighbours. Neither does it want to appear to be ganging up in a provocative manner on the Soviet Union. New security guarantees must of necessity affect the disposition of military forces, including moving both the forward line of defence and the nuclear umbrella eastward.

NATO is endeavouring to ease the risks for the newly democratizing states left in limbo by this judgement by insisting that it would not remain "indifferent" if they were threatened. Attempts are being made to define the basic principles which would serve as a stimulus to intervention, and in practice it is hard to see how NATO could avoid acting in the event of a gross act of aggression.

At first, the East Europeans invested much greater hopes in another institution, the Conference on Security and Co-

operation in Europe (CSCE). This still brings in the Americans and, indeed, everyone else. Albania has marked the end of its isolation by joining, and recently CSCE pro-

cedures have been revamped to allow it to respond to emergencies. It provides a mechanism in which force levels, and even military doctrines, might be discussed. But its decision-making depends largely on unanimity and therefore it cannot serve as a means

*"Instability in Eastern Europe"  
is shorthand for all the less  
welcome political consequences of  
the 1989 revolution.*

by which Europe as a whole can impose its will on one recalcitrant member. It may provide a forum in which agreements cobbled together elsewhere can be endorsed, as well as facilities for private conciliation, but it is unlikely to have much impact on the management of crises. The Yugoslavian crisis erupted as the new procedures were being settled, and occasioned the CSCE's first, unfortunately not very influential, statement.

At times of crisis, especially when based on a challenge to the norms of the international community, such as Saddam Hussein-type aggression, then well-placed would be the United Nations with its clear decision-making mechanisms in the Security Council and the mandatory nature of the measures that can flow from its decisions. The UN even has its own Military Staff Committee, although this remains dormant, and was not employed during the Gulf war. However, it is not an institution to which Europeans naturally look to solve their problems. It may have a role in some parts of the European periphery but to the extent that many of the key developments directly involve the Soviet Union – which is probable – then the Security Council could well be paralyzed because of the USSR's veto.

THE MAIN FEATURE OF THE ALTERNATIVES IS entrained in Western Europe. The Western European Union (WEU) has always been a transitional body – initially, after the war, as a means of demonstrating the resolve of Western European countries to defend themselves in order to convince the United States to come and help them. Then, in 1954, it provided an ingenious method of allowing West German rearmament by ensuring that reassuring limits were put on its future capability. Over time, Germany's rehabilitation rendered these limits unnecessary and the WEU became irrelevant. It was "revived" in the mid-1980s as a means of developing a strategic view for Western Europe, distinct from that of the United States.

While the WEU always had a military focus, it has never had a military organization, and its distinctive strategic view has rooted firmly in the context of an Atlantic Alliance. It has more legitimacy for some European countries than NATO and it has a less restrictive geographical frame of reference, but it is unlikely to become a free-standing institution in its own right. One problem is its membership which excludes some members of both the European Community (EC) and NATO, such as Norway and Turkey.

It is only being spoken of now as a "bridge" between NATO and the European Community or – for those anxious to see a separate European identity – the basis of the EC's military arm. This, however, raises the central problem

of any European defence identity: with a much reduced Soviet threat, it is possible to imagine Western Europe having sufficient front-line forces, but it is impossible in the foreseeable future for Europe to be able to cope with anything more than the most minor military operations without the support of American military logistics and intelligence.

Despite this basic constraint, there is a strong push among some European states, and

## *Difficulties with conflict in modest-sized Yugoslavia, bring home the potential of the problems with upheaval in the Soviet Union.*

especially the European Commission, for the Community to complete its project by taking on the full attributes of a sovereign state with its own foreign and defence policy. It is important not to underestimate the pressures reinforcing European co-operation. Practical decisions on new structures are seen as statements about the role of Europe in defence arrangements as well as the nature of future crisis management.

It is the economic magnetism of the Community which is most critical because it draws non-members towards it. Through grants and loans, association agreements and promises of eventual membership, the Community can play an integrative role throughout Europe. One difficulty, however, is that with each expansion of membership, those still excluded can feel more isolated. Another problem is that those anxious to push forward fastest with proposals for political union fear that this "deepening" process will be undermined by the extra complexities resulting from the further "widening" that comes from taking in new members.

TO THE EXTENT THAT THERE IS AN ECONOMIC dimension to managing crises, there is a natural Community role. This inevitably spills over into the political and even military arena, as can be seen in the case of Iraq. However, the Community is only one of a number of institutions available for the management of security problems, and the more prominent the military dimension of the crisis, the less likely the EC is to be chosen.

In cases where a military response remains unlikely, the Community is emerging as the natural leader in European crisis management, because of its economic strength and because it has effective decision-making mechanisms.

Member governments are in regular touch with each other – there are high-level meetings of one sort or another almost weekly – and this facilitates coordination. A common Community policy now tends to be implemented through the "troika" system. This brings together the foreign ministries of the past, current and next Presidents of the European Council (the Presidency changes every six months), the supreme political body in the Community.

In the case of Yugoslavia at the end of June, it was the troika which took the lead in trying to achieve a ceasefire and encourage a constitutional settlement. The mixed success of the effort indicated a number of problems with this sort of crisis diplomacy that need to be resolved if Community efforts are not to meet with regular frustration. Any serious engagement in these complicated affairs cannot take place from a distance: it must be constant and based on a keen understanding of the nature of the crisis. It is tempting, as happened with Yugoslavia when the stress was placed on national unity above all, to forge consensus statements on the basis of wishful thinking rather than an informed grasp of local political realities.

THE PROSPECTS FOR SUCCESS ARE MUCH greater if the Community activates itself while the crisis is still simmering and before it boils over. There was an abundance of evidence that Yugoslavia would explode at the end of June 1991, yet the international community remained curiously impassive during this process and only switched to emergency mode when violence erupted. As a result, in addition to the resolution of the existing political dispute, the Community faced the extra challenge of arranging a ceasefire in the face of a confusing and vicious situation. The difficulties of coping with conflict in a modest-sized country such as Yugoslavia bring home the potential scale of the problems if the next test-case turns out to be internal upheaval within the Soviet Union.

Europe now often appears to be looking for a balance of institutions to replace a balance of power, with institutions prospering to the extent that they can persuade countries to surrender national sovereignty. In practice, it is much more complex. The rich institutional framework can be reworked in a variety of ways depending on the nature of the crisis, and how this is done depends on governments. Though policy outputs increasingly come through trans-national institutions – because most problems are too substantial for individual countries to manage on their own – the main inputs still come from governments. Because there are a variety of choices, governments will decide in practice and through crisis, their preferred institutions.

# ROUND UP THE USUAL SUSPECTS

*Regardless of who gets named new head of the United Nations, the selection process for Secretary-General is in need of a radical overhaul.*

BY THOMAS G. WEISS

**B**ASEBALL TEAMS CHANGE THEIR MANAGERS with some frequency as losing records embarrass owners and ultimately disgruntle supporters. In contrast, the United Nations is "on a roll," but it will change its chief executive officer, after two successive five-year terms on 31 December.

His successor will inherit an organization whose renaissance could hardly have been imagined, let alone predicted, when Javier Perez de Cuellar assumed the leadership mantle. The rebound is even more spectacular in light of the financial nadir of the mid-1980s that almost destroyed the UN secretariat's morale and largely negated its ability to function.

The most important parts of the altered international landscape are political attitudes in East and West. After four decades of open hostility, or at best indifference, the sea change in the Soviet Union's attitudes toward world affairs and its born-again enthusiasm for the United Nations has been particularly dramatic. In the United States, successive Republican administrations have moved from "UN-bashing" to actively embracing the world organization when ousting Saddam Hussein from Kuwait. And the Third World, which began the decade by lamenting a lack of superpower enthusiasm for international institutions, can be heard these days in many quarters complaining that the UN is now frequently a fig-leaf for Washington's policies.

IN SPITE OF PRESIDENT BUSH'S RHETORIC, A "new world order" based on "the rule of law" is hardly imminent. Although an ideal collective security system envisaged by the UN Charter's architects is not feasible in the next decade, UN peace and security networks have become purposeful and effective. As the collegiality of the Security Council has increased steadily since 1987, influential and active governments have been paying more attention to this international safety net.

The United Nations has, in fact, moved to the centre of the security debate. It is now a plausible policy option even for the great powers, rather than a pipe-dream for fuzzy-

headed idealists or an afterthought when bilateral policy has foundered. While the economic and social organizations of the UN system play mainly a hortatory role and are ignored by governments large and small, there are a host of developmental and environmental challenges or catastrophes on the horizon. The world organization will certainly be called upon to play a more visible and crucial role in problem solving as the global community gropes toward the 21st century.

PREVIOUS HEADS OF THE UNITED NATIONS system have been three neutral Europeans (Trygve Lie from Norway, Dag Hammarskjöld from Sweden, and Kurt Waldheim from Austria), an Asian (U Thant from Burma), and a Latin American (Javier Perez de Cuellar). In light of the new demand for its services, the sixth UN Secretary-General must be exceptionally well-equipped – intellectually, constitutionally, morally – to take the helm of one of the world's more unmanageable vessels.

De Cuellar's heir will be the critical appointment of the 1990s. Yet, the international community has made no systematic effort to identify the most outstanding individual. To date, only candidates themselves and some of their governments are actively lobbying to secure a nomination. One list of candidates is said to include upwards of thirty-five names. As elsewhere in the UN system, geographical origins have come to take precedence over more mundane concerns, such as competence. And it is supposed to be "Africa's turn."

Yet, the numerous African candidates are generating little enthusiasm. Five were officially endorsed by African heads of state and government in early June. They include governmental ministers (Bernard Chidzero of Zimbabwe), an ex-president (Olesegun Obasanjo from Nigeria), UN officials (Kenneth Dadzie, the Ghanaian Secretary-General of UNCTAD, and James O.C. Jonah, a UN Under-Secretary-General from Sierra Leone), and the head of a non-governmental organization (Olara Otunnu, the Ugandan president of the International Peace Academy). However a new candidate has emerged receiving initially favourable re-

actions in New York diplomatic circles: Egypt's deputy prime minister, Boutros Boutros Ghali.

Other contenders from developing countries are also mentioned with some frequency: Tommy Koh (former UN ambassador from Singapore), Ali Alatas (Indonesian Foreign Minister), and Sadruddin Aga Khan (former High Commissioner for Refugees and present head of operations in the Persian Gulf).

British tabloids have speculated about Margaret Thatcher's availability, and interest in a national from a Security Council permanent member has been fuelled by Eduard Shevardnadze's remark that he would consider the post. Traditionally, neutral European countries furnish candidates. Martti Ahtisaari from Finland, who heads the UN's administration and oversaw the independence process in Namibia, has been joined by a quasi-neutral, Norwegian Prime Minister Gro Harlem Brundtland. And now with the end of the Cold War, a national from a strong NATO country is not necessarily excluded from the race; so Canada's Joe Clark and Maurice Strong have also surfaced as contenders.

IN SPITE OF THE FLURRY OF NAMES, THERE HAS been far too little soul- and cv-searching to identify the best candidate for the globe's toughest job. While some UN ambassadors have met informally in New York, there is nothing resembling a search committee which would not only actively seek out candidates but also vet the professional and personal qualities of nominees. The hardest runners are, in fact, self-declared candidates.

Brian Urquhart – former UN Under-Secretary-General for Special Political Affairs – has quipped that more time, resources, and energy are spent by the Ford Foundation in selecting a junior officer than by the international community in choosing its Secretary-General. Certainly a search to fill a major university chair or senior administrative appointment involves far more extensive publicity, interviewing, and consideration of a potential candidate's intellect and character.

What has happened over the past forty-six years to allow the choice of the United Nations

Secretary-General to degenerate into such a charade? The selection has always been determined by the five permanent members of the Security Council. The idea of a more popular election by the General Assembly was rejected at Dumbarton Oaks in 1944 and again at San Francisco in 1945. The General Assembly has served as a rubber-stamp, in keeping with the language of Charter article 97 that the "Secretary-General shall be appointed by the General Assembly upon the recommendation of the Security Council."

Clearly, a viable candidate must have the support of the major powers to do the job. And so given the harsh realities of the Cold War, the great powers settled for the lowest common denominator. In order to avoid a veto, the most important part of a prospective candidate's *curriculum vitae* became credentials as a presentable diplomat who would make no waves; and a secondary notion concerned rotation of the post among regions. Of course, some of the permanent five developed other criteria; for instance, Paris has always insisted that candidates be reasonably fluent in French.

HAMMARSKJÖLD SOMEHOW SLIPPED BETWEEN the cracks and astonished the permanent five; he was supposed to be a non-political technocrat from the Marshall Fund, but ended up as the most dynamic of the five individuals who have occupied his post. Nonetheless, in selecting secretaries-general, there has been too little consideration of leadership qualities or management skills. The 1971 appointment of Waldheim, and his routine reappointment in 1976, provide *prima facie* evidence of egregious oversight. The selection process has come to be characterized by disinterest and by inadequate consultation and research; it needs a radical overhaul.

Major corporations, newspapers, and universities seek the best men or women available as chief executive officers. The upheavals in international politics in the last few years are making it increasingly evident, even to governments, that the interests of UN member states, individually and collectively in the long run, would also be better served by forceful leadership than politically acceptable mediocrity.

The post-Cold War era means that many obstacles which had hitherto impeded or prevented the effectiveness of international institutions are vanishing. After some four-and-a-half decades of limping, the prospects for vigorous strides toward multilateralism are brighter than at any time since World War Two. There is opportunity for vigorous international leadership.

The Charter itself is vague about qualifications, stating in articles 100 and 101 that the Secretary-General and staff members "not seek or receive instructions from any authority external to the Organization" and reflect "the highest standards of efficiency, competence

and integrity." But the system needs more specific guidance. It is time to seek a candidate for the top job who is highly literate, culturally sensitive, autonomous and creative, who has convictions, dynamism, and also a good dose of common sense.

What are the main elements of the job description? The central preoccupation – both when the Charter was drafted and today – is international peace and security. The UN's involvement in conflict management, stimulated by the burgeoning demand for UN military services beginning in 1988, was boosted by the Gulf War. The range of tasks emerging for the UN's agenda from the crisis in the Persian

Gulf include coercion, the forcible delivery of humanitarian relief, the administration of a war reparations fund, and destroying Iraq's chemical and nuclear weapons capacities. They erode the shibboleth of national sovereignty enshrined in article 2(7) of the Charter. Whereas the traditional interpositional and buffer-force peacekeeping operation of the past required an executive of detachment, caution, and tact, the tasks that are now on the horizon require more vision and daring.

Moreover, the UN Secretary-General must be a vocal advocate of human rights and educate the public about development and environmental matters. Making better use of the United Nations as "bully pulpit" to embarrass and cajole governments also necessitates someone with vision and a penchant for risk-taking. In addition to managing the global agenda, the Secretary-General needs to manage an increasingly large and complex bureaucracy, an army of blue-helmeted soldiers, and a legion of researchers, technicians, and humanitarians.

THERE IS A CRYING NEED TO LOCATE A FIRST-class administrator who can find new ways to create synergy among inchoate organizations of the so-called UN "family" of specialized agencies (FAO, WHO, ILO, etc.). These reflect a sectoral approach to the world when increasingly the international system requires more

global and synthetic approaches to problem solving. Further, the growing number of non-governmental organizations active in the same sectors need to work in harmony with the United Nations system.

A central challenge for the next UN CEO will thus be to make better use of an extremely decentralized system of international governance. "Coordination" and "comparative advantage" are theoretical concepts that hardly exist in practice. For example, it is hard for a seasoned observer even to master the acronyms of the host of governmental, inter-governmental, and non-governmental agencies actively responding to a natural disaster in Bangladesh or a man-

made catastrophe in Kurdistan. Efforts are made at present not only by governments without much reference to other governments, but also by United Nations organizations without reference to other parts of the UN or non-governmental system. This must change.

Admittedly, the post of Secretary-General may actually be three or four jobs. While no single individual may be adequate to perform all the tasks, the choice of a person who is not even the best candidate for any one of them, which result the present process of selection guarantees, is unacceptable.

THERE IS NOW SPECULATION IN NEW YORK that Perez de Cuellar might consider a shortened additional term, say a year or two. While the incumbent himself has reiterated that he intends to step down, it would be difficult to reject a unanimous appeal to stay on from the five permanent members. France has always been his strongest backer, and more recently the Soviet Union and China have made positive noises about his accomplishments.

This interim solution would in fact be quite sensible if, as a *quid pro quo*, the Security Council were to establish an independent search committee who would seriously look for an autonomous and creative man or woman to do the job. Many often forget that the practice of running for the secretary-generalship as one were a politician running for parliament in the West only began with Waldheim. In fact, the best person may be involved in other work and not have the time or inclination to lobby for the position. Almost certainly the best person would not be actively running his or her own campaign.

It is high time for the United Nations to broaden the talent pool beyond the usual governmental suspects who are well-connected in New York. The person could well be an African. But far more important than geographical origins should be old-fashioned competence and qualifications: a fearless, outspoken, and articulate champion of international peace and justice with dignity, a professional and a leader for the future. □

# HOME GROWN SKIRMISHES: CANADA AND THE WAR

*The fighting is over, but arguments about how the Persian Gulf war got started, and Canada's role in it, go on.*

BY CHARLOTTE GRAY

CANADIAN FORCES MAY ALL BE SAFELY HOME FROM THE MIDDLE East by now, but according to Canada's peace activists, the war in the Persian Gulf is not over. "Over a thousand people are still dying every day," proclaimed an appeal dropped through my mailbox in July. "There are no missiles or bombs – and the victims are not soldiers. They are children." The appeal came from the Canadian Physicians for the Prevention of Nuclear War, a group that hit the news last spring with a sit-down protest by local physicians outside the Canadian Forces recruiting office in Hamilton, and an impassioned speech in Toronto by Nobel Laureate Dr. John Polanyi against the use of force.

By and large, the position adopted by CPPNW was the mushy middle ground of last spring's peace activism: a distaste for the bulldozing speed of Canadian government involvement (and for the Prime Minister's eagerness to shadow US actions), without a rigorous examination of the alternatives. "We didn't say that the use of force is never justified," explains Bill Singleton, executive director of CPPNW. "Our position was that, in this case, the scale of damage produced by a war would be so great, there was no way that the medical profession could cope with it. It's no pleasure to have been proven right."

In fact, the Gulf War provoked an intellectual crisis for many peace lobbyists. They differed amongst themselves on the appropriate response from the international community to a ruthless dictator, and on how Canada should position itself before and after the war. Ironically, there is more unanimity today, as they review events in the Middle East from the safe haven of officially-declared peace.

Post mortems on the conflict by critics like Singleton share an "I told you so" edge. With Saddam Hussein still in Baghdad, Iraq in ruins and Kuwaiti oilfields in flames, they argue that war achieved nothing. Each succeeding report of renewed Middle East arms sales or famine in Iraq re-ignites a moral certitude that had been shaken by the reality of Hussein's cruel ambitions.

THE DISARRAY OF CANADA'S PEACE MOVEMENT DURING THE CRISIS WAS hardly surprising, given its heterogeneous make-up. Some groups seek a radical restructuring of society, others search for progress in arms control and disarmament through established institutions. There is the turn-the-other-cheek pacifism of Mennonites and Quakers, reflected in the positions of Project Ploughshares (a broadly-based peace group sponsored by the Canadian Council of Churches since 1976). Then there is the feminist rejection, by the Voice of Women, of the patriarchal values of military alliances in particular and governments in general.

Many of the groups come under the umbrella of the Canadian Peace Alliance (CPA): a national coalition founded in 1985 which consists of 300 organizations (including labour and women's groups) and thousands of individuals. About seventy percent of the rank and file are women, a factor which is not reflected at the executive level.

Parallel to but independent of the peace movement are various think tanks, such as the Canadian Centre for Arms Control and Disarmament (CCACD) and the Canadian Institute for International Peace and Security (CIIPS).

These public policy research institutes bristle at the label "peace lobbies," because of the ideological freight it carries. Nevertheless, their mandate is to help mould public opinion on the need for international security and the peaceful resolution of conflicts.

They fed into the public debate last spring because their regular, formal briefings received better media coverage than ragtag demonstrations outside government offices. They helped shape public opinion – and public opinion helped shape policy. "The peace movement *per se* had little influence on ministers," a senior official at the Department of External Affairs told me, "but public opinion polls had a significant impact."

GIVEN THE JUMBLE OF INTERESTS AND INTENTIONS, IT WAS PREDICTABLE that the Gulf crisis highlighted the divisions within a movement in which idealism, legalism, internationalism and kneejerk anti-Americanism burn like unreliable propane jets. "For weeks," recalls Thomas Homer-Dixon, coordinator of Peace and Conflict Studies at the University of Toronto, "many of us walked around feeling personally sick. We didn't come to our positions flippantly."

Despite his own impeccable credentials within the peace movement (he was a vociferous opponent of the US invasions of Grenada and Panama), Professor Homer-Dixon found himself a hawk among campus doves when he reluctantly concluded that force was the only recourse when dealing with a malevolent tyrant like Hussein.

We only had choices between terrible options. I didn't believe that sanctions could achieve peace without horrible human suffering. If Saddam Hussein had been allowed to continue, it is highly likely that he would have used nuclear weapons against Israel. I therefore felt that the wisest choice was the use of force as quickly and decisively as possible.

Last spring, however, the most audible voices from the peace movement were those which condemned the Persian Gulf War. And their loud condemnations helped electrify – albeit temporarily – a movement that was collectively running out of power. By mid-1990, trendier causes (campaigns to free Mandela or save the rain forest) had elbowed the peace movement out of the public eye. "But the Gulf refocused us on the issue of war itself," explains Singleton. At a February conference of the CPA in Montreal, leaders of peace groups from all over Canada united to lobby against the war. "Finally," said classical pianist Pierre Jasmin, a long-time separatist who is president of the Quebec group Artists for Peace, "Canadians and Québécois agree on something. Peace."

WHILE THE GULF WAR GALVANIZED THE PEACE MOVEMENT, PEACE activists did not produce solutions to the fundamental issue in the crisis: how the international community should deal with oppressive and dangerous dictators. This was partly because everything happened too fast. People accustomed to thinking in terms of East-West conflict struggled to adapt their intellectual analyses to a different context. Moreover, little leadership was given by the most visible spokespeople on the issues.

The absence of informed discussion was deplored by various analysts. "The Parliamentary debate was particularly unimpressive. Before

war began, it was very partisan: then the Liberals switched to an after-the-fact endorsement of Canadian action. This was a contrast to Washington, where all the principled positions were genuinely explored," comments David Leyton-Brown, a member of the Centre for International and Strategic Studies at York University.

In mid-January, Bernard Wood, director of CIIPS, made the same point to a parliamentary committee: "I would have to fault the government for not doing more to clarify the choices and provide the opportunities for debate; and fault the opposition (parliamentary and otherwise) for focussing on peripheral questions and, in the end, trivializing issues of war, peace and collective security."

Principles of collective security, however, don't turn the crank of many peace activists, who are leery of lofty debates between powerful players on the "New World Order." "The Gulf crisis made me realize some of the fundamental assumptions of the left," reflects Homer-Dixon. "Particularly that the powerful are automatically assumed to be morally wrong, and the people at the bottom of the hierarchy are righteous."

Some activists vented their distrust of what Doug Roche, former Canadian Ambassador for Disarmament, called, "the combat culture." Roche defines this culture as one in which "military spending is used to maintain the industrialized states' control over the exploitation of the world's resources, technology and capital." Roche's refrain throughout the crisis was "we cannot let the militarists take over Canadian policy."

TWO MAIN THEMES EMERGED FROM THIS BABBLE OF REVULSION TOWARDS the hostilities, and Canada's role. The first focussed on the ethics of violence: the second revolved around the efficacy of international institutions.

"Our analysis," explains Project Ploughshare's Ernie Regehr, who comes from a Mennonite background, "is based on the notion of what constitutes a 'Just War'." Just War theory allows for the use of military violence against an aggressor, so long as the risk of civilian death and damage is restricted. "But our conclusion was that, given the level of destruction that modern warfare produces, and the inability to distinguish between civilian and military targets, modern war as a deliberate, chosen policy has become unacceptable."

In theory, Project Ploughshares members accepted police action to enforce economic sanctions, for example, and therefore supported those Canadians in the Gulf whose job was to monitor sanctions. But in practice, their "Just War" analysis meant that the sanctions could only be enforced by surveillance, not military action. This logic would have paralyzed coalition partners in cases of blatant sanctions-busting. "If the non-military sanctions proved unenforceable," says Regehr, "then you've lost the fight anyway. Wholesale sanctions-busting would have proved that there was no consensus among coalition partners to get the Iraqis out of Kuwait."

For many observers, Project Ploughshares' objections to the Gulf War were agonizingly impractical, however, Regehr's arguments – sanctions, yes: war, never – had considerable appeal to Canadians who distrusted Washington's motives. Explains Leyton-Brown, "It was not simply anti-Americanism. Many people were suspicious of the use of US military techniques, and its attempted domination of the third world to protect its oil interests. You heard a lot of statements from this group to the effect that if Kuwait didn't have oil, the US wouldn't be there."

ANOTHER BLOC WITHIN THE PEACE MOVEMENT ARRIVED AT ITS SUSPICION of US actions via a different route. This group included some of the self-styled Pearsonites who, since the early 1950s, have lobbied for a more effective UN. "These people," explains Leyton-Brown, "had argued throughout the Cold War that superpower polarity could be reduced if collective security mechanisms were allowed to work." For some UN supporters, the Gulf War was the UN's finest hour, but other internationalists argued that the war had triggered a wrenching distortion of the UN Charter. They were concerned that Canada's involvement would prejudice its historic role as an international peace-keeper.

Both groups laid claim to the legacy of Lester Pearson, a squabble which prompted Geoffrey Pearson to remind *Globe and Mail* readers that his father could be as tough-minded as required. "L.B. Pearson believed that the Charter system of collective security required the Security Council to act against aggression by force ... the Canadian presence improves our diplomatic leverage where it counts. L.B. Pearson would surely have taken maximum advantage of that fact."

Geoffrey Grenville-Wood, president of the United Nations Association in Canada, initially regarded the Gulf War as a golden opportunity for the UN, after decades of benign neglect. For the first time ever, in August 1990, the Security Council was unanimous. Its members agreed that Iraq's invasion of Kuwait was wrong, and the US State Department appeared eager to let the UN flex its muscles. Grenville-Wood watched with pleasure as the UN, baby step by baby step in its series of resolutions, put economic sanctions in place, with back-up military support.

But there were doubts about whether participants were following the UN Charter sufficiently faithfully. Who was actually running the show? "It was true that there was no UN integrated military command structure in place before the crisis began," explains Grenville-Wood, "but surely it should have been possible to put one together?" When an additional 250,000 US troops flew to Saudi Arabia in November, Grenville-Wood started to publicize his misgivings. And when Resolution 678 was passed in late November, authorizing the use of "all necessary means" to liberate Kuwait if Iraq had not withdrawn its troops by the deadline of 15 January, Grenville-Wood argued vigorously in a letter to Joe Clark, that this put the UN "at grave risk."

The UNA supported the use of sanctions, but deplored the rush to aggression before the effect of sanctions had been evaluated. Grenville-Wood avoids accusing the US of outright manipulation of the UN, but admits, "There was no question that Security Council votes were obtained through some pretty heavy-hitting from the US and the UK." As a result of these misgivings, Grenville-Wood and the UNA split with the UN line.

HOW MUCH IMPACT ON CANADA'S conduct during the war did these various arguments have? The peace movement's effect was perhaps more evident in government statements on Canada's post-war role, suggests John Lamb, director of the Centre for Arms Control and Disarmament, "I think that the speeches that Clark and Mulroney made in February, on the need for post-war controls on the arms trade, were a direct response to the public's concern about how this war started in the first place."

Today, despite the efforts of groups like CPPNW to maintain public concern about the Gulf situation, the brief frenzy within the peace movement appears to have abated. "My impression," admits Leyton-Brown, "is that we've returned to the status quo ante." When peace activists had to face a real conflict, involving a ruthless leader with apparently limitless ambitions, their responses did not stretch much beyond a denunciation of war. In the end, opinion polls revealed that the majority of Canadians supported the UN-sanctioned coalition, and were prepared to face the costs of hostilities. Canadian politicians took their cue from the polls, not the placards waved outside their windows.

Brian Hughes

# SOVIET STATE POWER, DOWN FOR THE COUNT

*By bungling their August coup d'état, the plotters will  
accelerate precisely those changes they sought to avoid.*

BY PAUL MARANTZ

**T**HE ATTEMPTED SOVIET COUP WAS MUCH like an earthquake in an active seismic zone: its eruption was a shock, even though the quake itself had long been predicted. Indeed, the coup was a shock precisely because it had been discussed so often without actually occurring – most notably in December 1990 as part of Eduard Shevardnadze's speech resigning as Foreign Minister – that people had become complacent about the powerful subterranean pressures that were obviously building up along well-recognized fault lines.

Since the mid-1980s, a conflict had been intensifying between two antithetical political forces, the reformers who wanted to transform Soviet totalitarianism into a democratic, pluralistic and free-market society; and the ultra-conservatives who were desperate to defend the old order and all the privileges and power that it accorded them.

THIS CONFLICT BETWEEN THE REFORMERS AND the hardliners was grounded in their diametrically opposed world views. The policy of the reformers was built upon several key assumptions and principles:

The Soviet Union's excessive reliance upon military strength ultimately weakens the nation's security. It fuels the arms race, overburdens the Soviet economy, and impoverishes the Soviet people.

The Soviet Union can overcome its present crisis only by moving towards a market economy within the country and toward full integration with the world economy.

The ideological approach to international politics must be abandoned. Capitalist countries should not be regarded as "the enemy." The Soviet Union must end its self-imposed isolation and avail itself of the greatest achievements of world civilization, such as democratic political institutions, legal norms for protecting fundamental human rights, and the free market.

The USSR should recognize the many constraints that limit its global power, and accept a sharply diminished role in the world.

Initially, in the period 1986 through 1988, when Gorbachev first set out the "new thinking" about international politics – a develop-

ment which gave the reformers the political elbow room to elaborate their own more far-reaching ideas – the "old thinkers" were stunned into silence. Life-long habits of obedience to the party line were slow to die among conservative forces within the military and party bureaucracy. However, by 1990, the traditionalists began to challenge the Soviet government's new orientation. The traditionalists disagreed fundamentally with the key tenets of the new thinking. They asserted:

The Soviet Union must not neglect its military power. The Soviet Union can deter an enemy attack and command the political influence it deserves only if its military forces are second to none.

Socialism must be protected against the domestic and foreign foes who would like to see it dismantled. The introduction of a capitalist market would lead to chaos and increased suffering. Rapid integration with the international economic system would allow foreign corporations to buy up the Soviet Union's natural resources and to despoil the natural environment.

There are powerful elements in the United States and other capitalist countries that remain deeply hostile to the Soviet Union. They are intensifying their efforts to subvert the Soviet system. The Soviet people must remain vigilant against foreign intrigues.

The Soviet Union must preserve its status as a great power. Its leaders must not humiliate the nation by abandoning long-time allies and grovelling before the West for foreign loans and aid.

THE JUXTAPOSITION OF TWO STATEMENTS, ONE by reformers and the other by a militant conservative, indicates just how wide the gulf is between these two warring camps. Writing in the August 1989 issue of *International Affairs*, two liberal scholars, Radomir Bogdanov and Andrei Kortunov, forcefully reiterated the reformist agenda:

As to our status in world politics, it is objectively bound to decline irrespective of whether or not we preserve a surplus of nuclear arms. This is because we fall short of a highly developed country on very many

counts, including economic structure, living standards, life expectancy and the environment. Our weakness will come out more and more as the cold war system disintegrates and international relations are demilitarised, with new, non-military components of national power coming to the fore. Of course, we could delay this inevitable process, but hadn't we better give up obsolete symbols of international status and concentrate on catching up with countries which have surpassed us in recent decades?

In contrast, Colonel Viktor Alksnis, who had emerged as one of Gorbachev's most vocal critics, stated:

By cutting the military budget, we're ruining the country. We are now trying to destroy everything that it took us decades to create, everything that we could rightfully be proud of. Whereas we used to be called an "Upper Volta with missiles," soon we'll be called simply an "Upper Volta."

BY MID-1990, IT BECAME FASHIONABLE IN SOME circles in both the Soviet Union and the West to write off Gorbachev and to portray him as a relic of the past who had been overtaken by events and could no longer control the rising tide of popular opposition to the communist system. However, developments in late 1990 and early 1991 demonstrated that this verdict was premature. With the intensification of the battle between the party conservatives on the right and the radical reformers on the left, Gorbachev remained a potent and pivotal force, manoeuvring between these two political camps.

In the immediate aftermath of the coup, there has been much discussion of what the West might have done in the past to strengthen the reformist course in Soviet politics and what should be done now to preclude a future coup. Unfortunately, this discussion has been marred by an inadequate appreciation of the primacy that internal forces within the Soviet Union have in determining the politics of that country, and of the consequent difficulty of trying to influence Soviet politics from outside the country. The heated controversy in August over External Affairs Minister Barbara McDougall's handling of Canada's response to the coup is symptomatic of this.

Many commentators have argued that the West made a near fatal mistake by not being more forthcoming with massive economic assistance to the troubled Soviet economy. It has even been suggested that Gorbachev's failure to secure Western aid at the July meeting of the seven industrialized nations (G-7) in London severely compromised his domestic standing and made it easier for his conservative opponents to contemplate an armed seizure of power, since they knew that they would not be jeopardizing any substantial aid from abroad.

In reality, the coup was triggered by domestic considerations over which the West had little influence. The attempted military takeover was a desperate last ditch effort by conservatives to defend their crumbling position. They were prodded into action by the frantic fear that the tide of events was moving against them and by the sense that they had to act before their positions were even weaker. Three key developments contributed to the hard-liners growing desperation.

FIRST, IN THE SPRING OF 1991, GORBACHEV once again changed political direction. He began to move away from the conservative course that he had embraced the previous autumn, and he sought active partnership with the reformist forces led by Boris Yeltsin. Elections in June demonstrated the growing power of reformers. Yeltsin received an overwhelming endorsement as president of the Russian republic, prominent democrats were elected as the mayors of Moscow and Leningrad, and the people of Leningrad voted to restore the original name for their city, St. Petersburg, thus choosing to honour the long dead Tsar Peter the Great, rather than the founder of the Soviet state.

Second, Gorbachev belatedly recognized that it was impossible to preserve the Soviet Union in its previous form as a highly centralized state in which all decisions of consequence were made by a handful of officials in Moscow. As a realist with an ever-mobile bottom line, he reluctantly came to the conclusion that the only hope for avoiding the total fragmentation of the Soviet state was to negotiate directly with the leaders of the republics for a loose federation in which there was a major devolution of power to them. Just as Gorbachev had eventually acquiesced in the unification of Germany and the establishment of a multiparty system within the Soviet Union, even though he had strenuously resisted these developments at first, he now reconciled himself to the emergence of a genuine federation of highly autonomous Soviet republics.

Despite all the attention that Western analysts have showered upon the impending Union Treaty as a possible trigger for the August

coup, a third factor may well have been more critical. While it is true that the coup leaders were distressed by what they saw as the disintegration of the Soviet Union as a unified state, and hence as a major world power, they felt more acutely threatened by the direct assault that Boris Yeltsin had launched against the remaining core of the old system, namely the communist party's continued domination of the military, the KGB and the economic bureaucracy.

In mid-July, Yeltsin issued a decree calling for the elimination of communist party cells within all governmental institutions on the territory of Russia. If this decree had been enforced, it would have been a death blow to communist power in the Soviet Union. Gorbachev spoke out in opposition to Yeltsin's decree, but the conservatives were unwilling to rely on him to protect their interests. Their remaining power and all of their still considerable privileges were under assault. The resort to arms was their response.

THE REFORMERS HAVE BEEN STRENGTHENED immeasurably by the failed coup. The ignominious defeat of the conservatives constitutes a fundamental turning point in the post-1985 revolution. Gorbachev was returned to office, but the "Gorbachev era" is over. Others, first and foremost Boris Yeltsin, will increasingly set the Soviet political agenda.

The failed coup will accelerate precisely those developments that its plotters sought to avoid: the disintegration of the communist party, the strengthening of the republics, the depoliticization of the military and the KGB, the movement toward a market economy, and the victory of reformist forces in the next round of national elections. Indeed, an unprecedented blow will be struck against the Soviet Union's international might if the growing demand of the republics to control the military forces on their soil is met.

As the formerly autocratic Soviet state weakens, and as the power of an autonomous civil society grows, the ability of the Soviet Union to threaten its neighbours will greatly diminish. The world no longer needs to fear Soviet might; rather it is Soviet weakness – with the threat of chaos, civil war, and potentially hundreds of thousands of Soviet refugees fleeing westward – which constitutes the main danger to international stability.

Ultimately it will be political and economic forces within the Soviet Union which will determine the fate of that country. Feuding democrats, who thus far have been divided into no less than several dozen fractious political parties, will have to mute their differences and unite to form an effective alliance. Political leaders will have to summon up the political will to take the painful and unpopular decision (such as allowing prices to rise and accepting increased unemployment) that are unavoidable if a functioning market economy is to be created.

THE WEST CAN PLAY A CONSTRUCTIVE ROLE in all this not by doling out billions of dollars, but by assisting those dynamic elements in Soviet society that are actively participating in the construction of autonomous institutions: the emerging economic entrepreneurs, the independent communication media, the evolving organs of local government, the lawyers and judges who are endeavouring to establish the rule of law.

Creative and selective assistance is far more valuable than a cascade of undirected funds. Well chosen aid will pay rich dividends in assisting the bold and courageous struggle that the Soviet people are waging to create a humane and democratic society that can take its place as an honoured and peaceful member of the civilized community of nations.

After six years of tinkering, improvisation and tactical manoeuvring, Gorbachev's attempt to reform the communist system has exhausted itself. The real revolution aimed at totally destroying it has begun. The Soviet Union is now where Poland, Hungary and Czechoslovakia were in the fateful autumn of 1989.

Communism has been vanquished, but the triumph of democracy is by no means assured. The first glorious sprouts of democracy are still fragile and vulnerable. If the collapse of the Soviet economy is not reversed, a "Weimar Russia" may fall victim to demagogic political movements. The forces of intolerance, ethnic violence and xenophobia lurk just beneath the surface of the newly emerging democratic political culture. However, thanks to the bungled coup, the prospects for successful economic and political transformation are now far brighter than they were just a few months ago.

# POST-WAR MYTHS AND POLITICAL ILLUSIONS

*What is remarkable, a year after Iraq's seizure of Kuwait,  
is how much the Middle East after the war looks like  
the Middle East before.*

BY JANICE GROSS STEIN

EVEN THOUGH IT IS STILL VERY EARLY, THE EUPHORIA OF VICTORY surrounding the Persian Gulf war has already created several myths, and elicited some preliminary lessons about the management of international conflict in the post-Cold War era. The lessons are cautionary and disheartening, and the myths misleading.

Two lessons in particular stand out in importance. The first is that "smart" weapons are smart not only because they hit their targets with precision, but because, although they were relatively expensive to make, they reduced the political and human costs of war to the coalition far beyond expectation. Smart bombs, missiles and aircraft brought swift victory with a minimum of military casualties to those who used them. But by reducing the costs of battle, smart weapons also make it easier for great powers to fight conventional wars against middle and smaller powers in the Third World. Accordingly, the easy availability of smart weapons over the next decade may significantly depress the likelihood of the peaceful settlement of a myriad of disputes in the Third World and make some kinds of north-south wars more likely.

Second, the domestic political constraints operating on President Bush during the war, as distinct from the pre-war period, were overestimated. Although the war was electronic, its coverage in the media was not. Largely as a result of what leaders thought they had learned from the Vietnam experience, management of the media and control of information was carefully planned by the Pentagon before the fighting began.

The result was the first radio war in two generations, one where television was largely restricted to "talking heads." This lesson has been well assimilated by military leaders in Washington as well as other Western capitals. In part because the public saw very few images of death and damage in the fighting, Bush conducted the war virtually free of political constraints. Electronic wars with radio coverage make war more rather than less likely as a future instrument of managing conflict.

IN THE VERY EARLY POST-WAR PERIOD, SEVERAL DANGEROUS MYTHS HAVE already achieved wide acceptance. The first and most important is that the orchestration of the war confirms "American hegemony," or the emergence of a "unipolar system" dominated by the United States. Some critics allege that the US, working under the guise of collective security to preserve a hegemonic order, went to war to secure strategic resources in the Persian Gulf and to protect its client regimes. Others insist that the most striking feature of the post-Cold War world is its unipolarity, with the US unchallenged at the centre of world power.\* The first group sees continuity, the second fundamental change in the system, but both agree on the pre-eminence of the United States in the post-Cold War world.

However, such views mistake the shell for the substance. The war occurred under very specific conditions which are not likely to be

replicated in the future. Saddam Hussein was widely feared and hated in his own country and beyond his borders in the Middle East, and although his political agenda received wide support in the Arab world, he had almost no personal constituency. In addition, Iraq sat close to the largest proven reserves of the world's oil, upon which the industrialized economies generally depend. This created a shared perception of threat and common interest among the major powers at the United Nations that was unique. It is inconceivable, for example, that a Syrian invasion of Lebanon, or an attack by Libya against Chad, would evoke the same response.

SOVIET INTEREST IN COOPERATING WITH THE UNITED STATES WAS ALSO extraordinarily high, and in view of its long-standing political and military relationship with Iraq, nothing short of remarkable. Soviet cooperation can be explained in large part by the expectation of its leaders of Western economic and technical assistance critical to the reorganization of the Soviet economy. If a politically weakened President Gorbachev cannot resist the renewed political importance of the military, the KGB, and traditionalist foreign ministry officials, the Soviet "moment" that created the myth of "unipolarity" may well have passed.

Last, the United States from the outset did not expect to pay for the war. Even before the fighting began, Washington exacted financial pledges from the Gulf states for more than half the anticipated cost of the war. Interestingly, the contributions of the strong industrialized economies – Germany and Japan – were small in proportion to the total bill. Without the money provided largely by Saudi Arabia and Kuwait, the impact on the American budgetary process would have been severe, with real domestic political costs for the Bush administration. But just as it has been able to do with its debt, the United States was able to export most of the costs to those most directly threatened.

These are not the actions of a pre-eminent power. In a unipolar system the single great power is supposed to bear a disproportionate share of the burden in order to persuade would-be free-riders to join; it does not export costs unless it is a power in decline. In short, a historically specific and unique set of conditions permitted the US to engineer a series of steps which were all necessary to move down the path to war. Insofar as all were essential, it is dangerous and misleading to generalize from this single case. The United States did not so much "control" the international agenda as it carefully, and at considerable political risk, crafted a coalition to shape that agenda. The evidence suggests, then, that the role of the US in conflict management in the decade ahead will be conditioned more by its diplomatic and political skills than by its economic and military power.

A SECOND MYTH IS THAT WARS CREATE NEW OPPORTUNITIES IN THEIR aftermath, and that imaginative leadership can restructure once-frozen political forces and resolve long-festering conflicts. What is remarkable a year after Iraq's seizure of Kuwait, is how much the Middle East after the war looks like the Middle East before. Though the consequences of war are almost always unpredictable, this war changed little in the polit-

\*Charles Krauthammer, "The Unipolar Moment," *Foreign Affairs* 70, 1 (Winter 1990-91).

ical geography other than eliminate Iraq as a threat to its neighbours for the rest of the decade. Of the three principal American political objectives for the post-war period – economic redistribution from rich to poor in the Arab world, expansion of political participation, and a resolution of the Arab-Israel conflict – none are likely to be met.

In the matter of redistribution of wealth, Kuwait – the only country with substantial liquid assets – will be fully engaged in political and economic reconstruction. Saudi Arabia, which financed a large part of the war, had to go to the international money markets to raise its share. Iraq will be struggling for the rest of this decade to rebuild its infrastructure and economy. Nor can the oil-producing states anticipate a substantial increase in the price of oil to finance reconstruction. The Arab-Israel conflict, now more than forty years old, has bankrupted the economies of Egypt, Jordan, Israel, Syria, and the Palestinians, and the war in the Persian Gulf has now ruined the Iraqi economy and removed the oil-producing states as potential donors of aid. The prospects for redistribution of wealth between the rich and the poor, and the management of conflict that grows out of inequities of resource ownership, are hardly bright.

ALSO UNLIKELY IN THE FORESEEABLE FUTURE IS THE EXPANSION OF POLITICAL participation and democratization in the heartland of the Arab Middle East. Limited processes of political reform have begun only in Kuwait and progress is very slow. No such change is likely in Saudi Arabia, the smaller Gulf states, and Syria. The prospect of political change in Iraq is very remote.

Finally, the war has also made it more, not less, difficult to resolve the Israeli-Palestinian conflict. It strengthened the existing governments of Syria and Israel, and badly weakened the leadership of the Palestinians. The president of Syria, Hafez-al-Asad, emerged from the war strengthened economically and politically, using the opportunity to consolidate formal control of Lebanon. Syria's troubled economy is also receiving substantial help from Saudi Arabia following Syrian participation in the coalition. Despite declining Soviet military assistance and diplomatic support, Syria today is as capable of shaping the agenda and the terms of Arab-Israeli negotiations as before the war.

In Israel, the war had contradictory consequences. Now that Iraq is no longer in a position to join a coalition against Israel, the only serious strategic threat comes from Syria. Syria is less likely to attack alone than in conjunction with other Arab forces, so a large-scale war involving ballistic missiles and attacks against cities is far less probable than it was a year ago. Israel is therefore relatively more secure.

On the other hand, for Israel the war was a difficult experience. Its civilian population was sent night after night into sealed rooms and forced to don gas masks, bringing back traumatic memories for many. From left to right across the political spectrum, there was a deep reaction against pictures of Palestinians chanting for Saddam Hussein to use chemical weapons against Israel.

The government of Yitzhak Shamir also came out of the war strengthened in Israeli public opinion. He was able to persuade Israelis, under extraordinarily trying circumstances, that restraint in response to missile attacks by Iraq against Tel Aviv was the wisest course of action. Given this surge of public support, it is going to be extraordinarily difficult to persuade the governing coalition of the urgency of concessions to the Palestinians once the bargaining begins.

Palestinians, for their part, face the prospect of a divided and weakened leadership. Yasir Arafat has been crippled in the Arab world by his open

and strong support of Saddam during the war. Saudi Arabia, Kuwait and some of the smaller Gulf states were the principal source of funds for the PLO – a flow now cut off and not likely to be renewed as long as Saddam Hussein is in power in Iraq, and Arafat is Chairman. Iraq can no longer provide meaningful support; President Asad of Syria is a long-time personal foe of Arafat; and the leaderships of all the Gulf states are embittered by Arafat's position during the war.

In the Middle East, only Egypt offers lukewarm political endorsement of the PLO. Within the Arab world, Arafat's support is now restricted to North Africa, Yemen, and Libya. It is no coincidence that the government of Lebanon, supported by Syria, finally moved in July to expel PLO armed forces from the south, and to deprive the PLO of its only independent base of operations against Israel.

THE FINAL FACTOR AT WORK AGAINST PROGRESS IN THE PALESTINIAN-Israel conflict is the changed international context. For almost three decades, the Arab-Israel dispute was embedded in the larger Soviet-American contest. The US moved vigorously in the 1970s to manage the conflict in large part because it feared that the dispute could draw it into a dangerous confrontation with the Soviet Union. As that fear has abated with the changing politics of the USSR, so has the sense of urgency.

The peace process can move forward only if President Bush exploits his unprecedented influence at home and abroad. The President is in all probability a two-term president, relatively immune from domestic political pressures. He thus has the freedom to move forward aggressively, without worrying about the domestic political costs of doing so. The United States is also now in a unique position in the Middle East, with unprecedented influence and unchallenged by the Soviet Union – governments in the region have nowhere else to go. Damascus agreed to attend the regional peace conference promoted by the US largely because Syria had to turn to Washington. President Asad did not want everyone else in the Arab world but Syria to have an open line to Washington once the Soviet line was disconnected, even if temporarily.

IF AND WHEN THE PEACE CONFERENCE CONVENES, SOONER OR LATER THE US will have to force governments and leaders in the Middle East to make tough choices. Whether it will do so is an open question. There is no urgency attached to what will inevitably be a difficult and unpopular task. And even if the US tries vigorously and consistently to resolve the conflict, it will not be enough. Leaders in Israel, among the Palestinians, and among the Arab states must come to the conclusion that despite the painful choices they must make, they have more to lose if the status quo continues into the future. Here too, the prognosis is not bright.

The most tentative yet most revolutionary lesson of the war may lie in the way it ended. The intervention by the international community in the internal affairs of a member state, in response to the creation of massive numbers of Kurdish refugees, is without precedent – Iraq's sovereignty was clearly breached.

Although the intervention grew out of the war, and is therefore historically specific, the response of the international community nevertheless sends a strong message about the acceptable limits of the treatment of minorities in the Middle East. This may be a much more important bellwether of the kinds of international conflict – and solutions – likely to dominate the rest of this decade, than a war launched to defend the principle of state sovereignty and the legitimacy of state borders. □

Bernie Eisenstein

**F**ROM 19 TO 21 NOVEMBER 1991, the Palais de Chaillot in Paris will host the fourth summit of heads-of-state and government of countries which have in common the use of French, otherwise known as la Francophonie. The first such gathering of French-speaking countries took place in Paris in 1986, the second in Quebec in 1987, and the third in Dakar, Senegal in 1989.

However, the idea of la Francophonie is not a new one. Léopold Sédar Senghor, President of Senegal, was the first to advance the idea of a "francophone Commonwealth" in 1962, together with Presidents Habib Bourguiba of Tunisia and Diori Hamani of Niger. In 1970, the Agency for Cultural and Technical Cooperation (ACCT) was created in Niamey, Niger. Its mandate was to promote multilateral cooperation between member states in the areas of education, training, culture, science and technology, and in doing so bringing the francophone nations of the world closer together. At the present time ACCT has thirty-two member states, seven associate members and two participating governments – Quebec and New Brunswick.

The idea of a "francophone commonwealth" was proposed again in 1975, this time by Prime Minister Pierre Trudeau. However, there was a stumbling block which prevented a summit being held: the participation of Quebec and the place it would occupy at such a meeting. In 1985, Prime Minister Brian Mulroney and Quebec Premier Pierre-Marc Johnson signed an agreement on the role the province would play at future summits. The accord divided summit affairs into one of two "baskets" – issues related to cooperation and development, and those of a political and economic nature. The government of Quebec could intervene in discussions on cooperation and development; but when the debate focussed on the world economic and political situation, Quebec would have the status of an interested observer.

### Structure and Functions

There is more to la Francophonie than summit meetings. It embraces many individuals and organizations: the Association of Partially or Entirely French-speaking Universities, the International Association of French-speaking Parliamentarians, the International Association of Francophone Mayors, and the International Council of French-language Radio and Television.

Initially, the summits were organized into five networks or areas of activity: scientific information and technological development, culture and communications, language industries, energy, and agriculture. There are two bodies overseeing these various networks: the International Follow-up Committee, responsible for ensuring that the programmes adopted during the summit are implemented; and the International Preparatory Committee, which is responsible for preparing the next summit and to which subjects for future summit discussion must be submitted. Following the 1989 Dakar meeting, many of the functions of these separate bodies, as well as funding decisions, were integrated into the ACCT.

Since the first summit in 1986, over one hundred projects have been implemented. Most notable among them are the creation of an energy institute in Quebec City and Senghor University in Alexandria; the establishment of television stations TV 5 Canada and TV 5 Europe; the opening of a francophone African centre in Tunis for training students in book publishing and distribution; the first Francophone Games in Morocco in 1989; an international consortium for distance-learning; the establishment of a fund to provide schooling for francophone children; and the creation of a solidarity fund for Lebanon and a similar one for the victims of apartheid.

# LA FRANCOPHONIE A MULTILATERAL ORGANIZATION WITH A FUTURE?

*The future of the Francophone "commonwealth"  
may well ride on the success or failure of  
its next summit meeting.*

Also at the 1989 Dakar summit, the decision was taken to add to the list of areas of concern to the francophone international community. These new fields of activity include education and training, the environment, legal and judicial cooperation, and the holding of ministerial-level conferences on problems common to all member governments. In the opinion of Jean-Louis Roy, Secretary-General of the ACCT, "La Francophonie must become more concrete in what it does" and work in closer cooperation with other international

organizations. Thus the ACCT has established new links with the World Bank, the International Monetary Fund, the Secretariat of the World Conference on the Environment and the UN Development Program.

### Agenda For the Next Summit

The fourth summit of la Francophonie was to have taken place this fall in Kinshasa, Zaire. However, in January, Zaire decided to pass on its turn to hold the meeting. The new ambassador of the Republic of Zaire in Canada, Kaweta-Milombe Sampassa, has stated that the decision was forced by the political timetable and not because of reservations expressed by Canada about human rights violations in his country. Nevertheless, certain other countries such as Belgium which had expressed similar misgivings, were relieved that the summit was moved from Kinshasa. However, Zaire remains an active member of la Francophonie, and President Mobutu recently wrote to Ottawa to obtain Canadian assistance in creating a human rights commission in Zaire.

According to Jean-Louis Roy, the next summit is expected to concentrate on issues related to the environment, legal and judicial cooperation and the economy. For its part, Canada wants more emphasis put on political issues: human rights, establishment of the rule of law in Africa, economic development and the environment. At the Dakar meeting Canada submitted a resolution on fundamental human rights, which was adopted unanimously by the other member states. Canada is now proposing the creation of a division within the ACCT secretariat on democracy and human rights, and a declaration on democracy and development will be presented to the Paris summit for approval.

### Future Challenges

La Francophonie is still in the process of consolidation. The Chaillot summit will be a test, for if la Francophonie fails as a french multilateral organization, Roy fears that the role of the french language in the world will quickly diminish. In *Le Droit* of May 1991, Roy stated:

Francophone Africa now has a choice in the alliances it makes. If it is ignored by the French-speaking nations of the North, it may well look elsewhere, to Japan or Germany for example, for the support, assistance and investment its economy needs.

And there are fresh challenges facing la Francophonie. Romania and Bulgaria have asked to be allowed to attend the Chaillot meeting, a prospect that makes certain African countries apprehensive about the redirection of money and resources away from their part of the world. It is also apparent that the whole question of human rights and the process of democratization in a number of African countries may also be a cause of friction. This, despite essentially unanimous agreement that it is up to the African countries themselves to make their own choices and decide how they wish to develop. □

*Gabrielle Mathieu is media relations officer at the Institute.*

**T**HIS LAND, WHICH AT VARIOUS times has been called Spanish Sahara, Western Sahara and the Saharan Democratic Republic, remains virtually unknown to most Canadians. However, some seven hundred Canadian soldiers will find themselves there soon, under United Nations command, working in conjunction with the Organization of African Unity (OAU) towards holding a referendum that will determine that country's future.

### Historical Background

During the fifteenth century, Spain colonized the coast of Northwest Africa. Western Sahara officially became a Spanish protectorate in 1884, but the region did not come completely under Spanish control until 1934. Spain negotiated some boundary changes with Morocco following the latter's independence in 1956. In 1957 and 1958, there were uprisings against the Spanish colonial authorities, who (with the help of France) repressed them, and in 1958 Western Sahara became an overseas province of Spain.

In 1963, the UN included the region on a list of colonies entitled to independence. In 1975, Spain accepted the principle of a referendum on Western Sahara's future, but neighbouring Morocco and Mauritania immediately claimed sovereignty over the area. Then in October 1975, the International Court of Justice ruled that Western Sahara had a right to self-determination – the referendum never materialized.

After the so-called "green march" orchestrated by the King of Morocco – 350,000 Moroccan civilians walking into Western Sahara brandishing their national flag and carrying the Koran – and following a tripartite agreement between Spain, Morocco and Mauritania, the Spanish authorities withdrew in February 1976. The region was subsequently divided in two, with Morocco's troops taking control of the northern two-thirds and the Mauritanian army occupying the south. European colonialism was supplanted by regional expansionism.

On the very day the Spanish left, the *Polisario* front (*Frente Popular para la Liberación de Sanguia el Hamra y Río de Oro*), which since its creation in 1973 had been fighting a guerilla war against the Spanish, announced the creation of the independent and sovereign state of the Saharan Arab Democratic Republic (SADR), with its own government. Mohammed Abdelazziz was appointed Secretary-General of *Polisario* and President of the new republic. Together with Algeria, which at the time was encouraging a number of national liberation movements, *Polisario* denounced the occupation by Morocco and Mauritania. The result was war between Moslem "brothers."

In August 1979, financially drained by the war with the *Polisario* which was consuming sixty per cent of the national budget, Mauritania abandoned all claims to the Western Sahara. Its slice was immediately occupied by Morocco, and during the 1980s, the Moroccan army became enmeshed in a drawn-out campaign against *Polisario*. In an effort to gain the upper hand, Morocco erected an enormous wall of stone and sand 1,600 kilometres in length along the western edge of the region.

Since 1989, fighting has virtually stopped, partly as a result of the weariness felt by both sides, and because of new political developments in the region, especially the creation in 1989 of the Arab Maghreb Union – an economic and trade pact between Libya, Tunisia, Algeria, Morocco, and Mauritania. However, control of the former Spanish Sahara is still a matter of prestige for Morocco's King Hassan, and ceding ground on this issue makes him vulnerable to attacks from his domestic opposition.

### The UN's Task

In 1988, the UN Security Council passed a resolution asking the Secretary-

# WESTERN SAHARA A SETTLEMENT IN SIGHT

*The people of Western Sahara will soon have the opportunity to vote on whether their territory should become an independent state or be absorbed into Morocco.*

General to prepare, in cooperation with the OAU, a report on the holding of a referendum on self-determination by the people of Western Sahara. In June 1990, the parties directly concerned agreed to base the referendum on the 1974 Spanish census of Saharans. A further resolution was adopted by the Security Council supporting the principle of a UN Mission for the Organization of a Referendum in Western Sahara (MINURSO). On 29 April 1991, the Security Council formally created

MINURSO. Its work is expected to last for nine or ten months, with the referendum taking place before the end of December.

The Secretary-General has proposed that the ceasefire – an essential prerequisite both for carrying out the repatriation of legitimate citizens made refugees by the war, and for the election itself – come into effect on 6 September. However, it may not be possible to meet these various deadlines. The UN is behind schedule in selecting countries and individuals for the various contingents. The UN forces are to depart within two months of the referendum, after observing either the withdrawal of the Moroccan troops or the dismantling of the *Polisario* forces, depending on the referendum's outcome.

MINURSO will have four components: the special representative – Johannes Manz from Switzerland – and a staff of forty-nine; a contingent of 1,695 troops; 880 civilians, including police, the commissions responsible for the referendum and identification, and a contingent responsible for repatriation. The military unit will ensure that most of the Moroccan army withdraws, that both Moroccan and *Polisario* troops are confined to barracks during the referendum campaign, and, with the International Red Cross, supervise the exchange of prisoners.

Canada does not recognize the Saharan republic and has remained neutral throughout the conflict. However, it has always supported the mediation efforts of the UN Secretary-General, and has contributed some military personnel and Elections Canada staff to technical missions in the area in 1987 and 1990. For the referendum, Canada will provide a battalion of soldiers, and their commander, Major-General Armand Roy, will head up the MINURSO military forces. Following the success in assisting the UN in Namibia, Elections Canada staff and approximately ten RCMP officers will also be sent. Canada's financial contribution to the mission was set by the UN at US \$ 5.9 million, almost four per cent of the projected operating costs of \$ 166 million.

### Western Sahara's Prospects

The creation of a new micro-state, dependent on phosphate deposits and fishing, might not be the ideal solution from the international community's point of view, but the aspirations of the people of Western Sahara cannot be ignored. Any settlement that is lawful as well as legitimate requires the holding of a referendum. On the other hand, the most practical outcome might be the integration of the region as an autonomous province within Morocco, an idea advanced by King Hassan. This would automatically bring Western Sahara into the Arab Maghreb Union. It is widely hoped a settlement can be reached by the end of the year, since failure to achieve a resolution to the issue by 1992 would likely force a re-opening of the whole agreement and require negotiations between the contending parties to start all over again.

## FROM THE DIRECTOR

### *The Curious Link Between Democracy and Peace*

ONE STRIKING RESULT OF THE WITHERING OF the Cold War has been the flowering of some unabashed utopianism about what can follow. The hardened cynicism of forty-five years of East-West confrontation and mistrust has given way, even in some of the most hawkish quarters, to explicit optimism about the prospects for a wider and more durable "peace." This new world has heard brave visions of "new thinking," a "Common European Home," a world of "cooperative security," a born-again United Nations, and various forms of "New World Order."

The habits of cynicism die hard and the brief experience of the post-Cold War world has already included some major disappointments. As by people who think about international relations dare again to dream about a better world, as they did at the end of each of the two World Wars, it is depressingly clear how much the Cold War retarded the development of serious thinking about how to get there. One indication of this shortcoming was the widespread confusion and misinformation about the rules of collective security and the role of the UN which followed Iraq's war against Kuwait.

An even more revealing echo of past debates about peace has centred on the attempt to understand societal sources of war and their possible remedies. One focus for these inquiries is the link between democratic government inside states and peaceful international behaviour between them. The overturning of undemocratic structures in the communist countries and the parallel emergence among them of more pacific international stances has renewed interest in the democracy-peace linkage. Aggression by the Iraqi dictator, his obvious unconcern for his own peoples' danger and suffering, and the threat of continuing chronic instability among undemocratic countries of the region – including Kuwait – have all led to new questions about whether durable peace can be assured with dictatorial governments.

Such thinking harkens back to some of the more aggressive, proselytic Western rhetoric of the Cold War era, as well as to some of the genuine democratizing and integrating achievements of the Helsinki CSCE process in Europe. At the same time, the winds of democratization

and liberalization in various forms are swirling throughout the world, from Africa to China, and many observers are speculating about the ways in which internal and international improvements might reinforce each other.

Such reflections are seen by some as being very brave and new, but in fact they are only brave. Immanuel Kant, in his *Project for Perpetual Peace* in 1796, laid out sweeping propositions about how "republicanism" and peace would come together:

The republican constitution ... offers the hope for the desired result i.e. perpetual peace ... because when the consent of the citizens is required in order to decide whether there should be war or not, nothing is more natural than that those who would have to decree for themselves all the deprivations of war, will think long before they will begin such an evil game.

Over the decades, this Kantian vision – and some other, more sectarian designs – have been the subject of repeated debate and study. Woodrow Wilson's prescriptions during the "war to end all wars" contained a strong dose of democratic medicine. And John Maynard Keynes' warnings about how the punitive terms imposed on Germany at Versailles in 1919 would cripple that country's ability to develop a stable economic and social order, in turn bringing chaos to all of Europe, proved prophetic.

THE CURRENT SITUATION ARGUES FOR A thoughtful consideration of this tradition, and not just for a triumphalist offensive by missionaries of Western democracy. Kant's proposition that democracies would be inherently more peace-loving states is such an attractive one ideologically that analysts have repeatedly tried to support it by reference to historical experience. They have generally been frustrated. In a recent assessment, two scholars from Rice University concluded that "the results of most [empirical] studies indicate that democracies are no less war-prone than other forms of government." More optimistically, however, they also found that virtually all studies have "noted that, at the dyadic level, democracies simply do not fight one another."\*

The cynic might suggest that the reason for the lack of wars between democracies is that the sample of democratic nations is still too small, but there is probably more to it than that. In pursuing the subject, scholars have opened up some more specific and less rhetorical lines

of thinking, and recognized that no nation's decision on going to war is arrived at through referendum. The democratic influence on these decisions is thus always indirect and always shaped by "decisional constraints" on leaders, some of which may also operate in non-democratic societies. These constraints include: the method of selecting and removing leaders – leaders who are regularly and frequently accountable are likely to be more constrained in launching wars; the nature of political competition – the freedom to organize opposition through formal, institutionalized channels should reduce the society's propensity to war; the degree to which the leader must share decision-making power – the greater the number of individuals, and, especially, institutions that must approve a decision for war, the less likely it may be.

In fact, when they test even these appealing hypotheses against experience, the researchers do not find clear general support for them, and the results even suggest that these democratic constraints may be more influential in curbing major powers than minor ones. And it is worth noting that mass public opinion, particularly whipped on by a jingoistic press, has sometimes pushed less willing leaders down the path to war, as it did in the 1898 Spanish-American War. At least one of the contributors to a recent issue of the journal *Alternatives* – writing on the theme of "The Global Context of Democratization" – purports to have seen somewhat similar processes at work in US decisions in the Persian Gulf.

THE "STRUCTURAL" ANALYSES OF DEMOCRACY and peace thus remain inconclusive, and researchers concerned refer to the work of Michael Doyle on "Liberalism and World Politics" and others, to suggest that it may be more in the political culture of democratic conflict resolution that hope is to be found. For a whole range of excellent human reasons, international as well as domestic, the evidence that democracies seem to be able to avoid fighting each other still lends support to the desirability of fostering more democratic forms of governance.

In the US, some argue that a consensus is emerging to "make the promotion of democracy the central focus of [US] foreign policy." Many countries are glad that the middle powers are available with their own kind of help with democratic change, and many of them have already found their way to the International Centre for Human Rights and Democratic Development in Montreal.

## DEFENCE NOTES

### Military Lessons of the War

■ In mid-July, the Pentagon transmitted to Congress an interim report on the Persian Gulf War. Amid stories that its writing provoked some hard-fought inter-service fire fights – did the M1A1 tank deserve as much ink as the F-117A stealth fighter? – the report identified some of the weaknesses of Desert Storm, as well as its successes. Some of the latter are well known: high-technology fighters, satellite navigation, communications and intelligence, precision-guided bombs, and the NATO training exercises gave the coalition forces an overwhelming advantage on the battlefield.

On the other hand, the report acknowledges that the circumstances of the Gulf War favoured the coalition. Saudi Arabia provided excellent ports for the military build-up with little or no risk that the Iraqis could interdict supply lines. The five-month lead-up to the beginning of hostilities allowed the coalition to sort out crucial command and control issues. Perhaps most importantly, the open desert terrain was an ideal environment for air operations against the Iraqi army, leading very quickly to a situation in which the Iraqis were cut off from re-supply, and unable to move on the battlefield.

### Gulf Wars and Star Wars

■ While the lessons of the Persian Gulf will undoubtedly lead to many changes in US military planning, ranging from tactical satellites for battlefield commanders to better equipment and training for the removal of old-fashioned mines, some major strategic debates have also emerged from the experience. In early August, Pen-

tagon officials were quoted as suggesting that Iraq might still have two to three hundred Scud missiles. The Pentagon report to Congress acknowledged the great difficulty and cost of locating mobile missiles. And in his preface to the report, Defense Secretary Cheney declared that the Gulf experience reinforced the case for both the B-2 bomber and defence against ballistic missiles.

On 16 July, in a speech in Washington delivered on the same day as the Gulf War report, Cheney repeated his support for the Star Wars project with unusual fervour:

It's absolutely essential that we develop now the capacity to defend ourselves, the continental United States, our troops overseas and our friends overseas against the ballistic missile threat.... I'm convinced we can do it from a technical standpoint. I'm convinced it's an absolutely urgent national security requirement.

Cheney received support from an unexpected quarter, but not possibly of the kind that he wanted. The Senate Armed Services Committee, following a crucial reversal of position by Chairman Sam Nunn and the Democrat majority, declared its support for a limited, ground-based ballistic missile defence. In doing so, the Committee rejected the administration's approach, which is centred on the deployment of a space-based system using swarms of small, "smart" interceptors (Brilliant Pebbles). In theory, Brilliant Pebbles will defeat even a full-scale nuclear attack by intercepting the hostile missiles before they re-enter the earth's atmosphere.

By contrast, the Senate proposes to deploy one hundred ground-based missile launchers in North Dakota, at the location which is a permitted site under the 1972 ABM Treaty. Limiting the deployment to one hundred launchers means that there would be no violation of the ABM Treaty, although Senator Nunn has also proposed that negotiations begin with the Soviet Union to amend the Treaty

in order to permit the deployment of a more extensive system. Compared with the administration's plan, estimated to be ready at the end of the 1990s at a cost of US\$ 40 billion, the Senate proposal would cost US\$ 10 billion and be completed by 1996.

### Flight From Goose Bay

■ Much more so than the space-based Brilliant Pebbles, the deployment of a ground-based missile defence system in North Dakota has important consequences for Canada. Pentagon sources indicate that the minimum area to be defended would reach far into northern Canada, ending around Churchill, Manitoba, while the maximum plausible defended area with only one site could extend far into the Canadian Arctic.

These issues may well be addressed in the long-awaited revision to the 1987 Defence White Paper. In the meantime, public comment on defence issues has focussed mainly on base closings, as regional Members of Parliament from all parties have pleaded with the government to save local bases. In mid-summer, however, as the government continued to be tight-lipped on which bases might be closed, one long-term tenant decided in any case to leave.

In July, the US Air force left Goose Bay, Labrador, casting a long shadow over the future of the historic base. More recently known because of the controversy over low-level flying, Goose Bay was at the centre of the nuclear debates of the early 1960s. As a base already occupied by the US Air Force, and guarding the vital air approaches to the northeast seaboard, Goose Bay was the first US priority for the deployment of air defence nuclear weapons. Canadian archival materials from the Diefenbaker government also indicate that Strategic Air Command wanted to store nuclear bombs at the base for "reflex strikes" – B-52 bombers which would return from their first attacks, reload at

Goose Bay, and take off again for the Soviet Union.

According to official documents obtained by the St. John's *Sunday Express*, in February 1989, the Canadian Government announced new fees for all foreign users of Goose Bay, amounting to a doubling of the charges for the US Air Force to \$ 12.1 million. The latter resisted, and threatened to leave the base, but in May 1990, the Canadian government repeated its position that the US must pay the increased fees. In July 1991, the US Air Force carried out its threat and went home, ending almost fifty years of occupancy. Commenting on the future of the base, Marcel Masse said, "It's not in our mandate to pay for things we don't need ... If the need disappears, the base disappears."

### Canada and NATO

Seeking to define its place in Europe after the Cold War, at the end of May the NATO Ministerial Council announced a drastic downsizing and reorganization of its multinational forces. Troop strength will be reduced by half to approximately 750,000. These forces will be reorganized into seven corps based in western and central Europe, and a rapid reaction force under British command. The rapid reaction force will comprise four divisions, two of which will be British and one American, and be able to respond to a crisis in five to seven days.

The announcement made no mention of the future of Canadian forces in Europe. Speaking in Berlin in early June, Prime Minister Mulroney indicated that Canada's military presence in Europe would be reduced, but added that "Canadian forces will remain as long as there is a residual threat to European and Canadian security here and as long as we are needed and welcome." He gave no hint of the form that a continued Canadian military presence might take.

– DAVID COX

## REPORT FROM THE SECURITY COUNCIL

### Sanctions Against Iraq

As July drew to a close, Iraq continued to dominate the proceedings of the Security Council.

Among other things, the fifteen members of the Council were in the midst of considering a proposal that for the first time would allow Iraq to sell oil. The aim would be for Baghdad, under tightly monitored conditions, to use oil money to pay for urgently needed food on a one-time only basis. The Security Council's sanctions committee had heard from Prince Sadruddin Aga Khan, who is in charge of UN humanitarian operations in the Persian Gulf area, that Iraq faced a "catastrophe" if food shipments were not urgently authorized.

The proposed resolution would also authorize the Council to take money from oil sales to pay for the scrapping of Iraq's weapons of mass destruction, fund the UN commission in charge of determining the final Iraq-Kuwait borders, and compensate those who suffered as a result of the Iraqi invasion.

The issue was also noteworthy because it sparked the first open dissension among the five permanent members of the Security Council. The split involved the US and Britain on one side who insisted that Iraq divulge all its gold reserves before any oil sale was approved, and France which argued it would be impossible to fully verify any information provided by Iraq.

Underlying the debate was Iraq's failure to fully satisfy UN inspectors who were seeking information on Baghdad's clandestine nuclear weapons programme. On 15 July, Rolf Ekeus, the head of the UN Special Commission looking into Iraq's weapons of mass destruction, told of Iraq's attempts to withhold

information and hide equipment for enriching uranium as well as of its earlier denial that a clandestine programme even existed.

On 19 July, the Council was told by Ekeus that Iraq had built and tested a "supergun" capable of delivering nuclear, chemical and biological weapons. The gun had been designed by Canadian inventor Gerald Bull. The disclosures confirmed the worst suspicions of some Council members. In Resolution 687 of 3 April, the Council had called for the destruction of any nuclear weapons capability.

In the view of many members, Iraq was often uncooperative, and on 28 June, the Security Council adopted a statement calling on Iraq to grant a UN nuclear inspection team unimpeded access to a site it had been previously prevented from entering. The statement warned that failure to comply would lead to "serious consequences."

The warning was repeated the following month when the five major powers summoned the Iraqi ambassador and told him to provide all relevant information by 25 July. The date passed without any formal Council action, but diplomats noted that the Iraqi request to sell oil to buy food was moving at an extremely slow pace. On 17 June, the Council unanimously adopted Resolution 699 which ordered that Iraq should bear the cost of scrapping its weapons of mass destruction, a process estimated to cost about US \$ 200 million.

On the same day, the Council unanimously approved Resolution 700, which outlined a set of guidelines to enforce the arms embargo against Iraq. The resolution proscribed a wide variety of weapons to be sold to Iraq and also included research, development and manufacturing facilities for chemical, biological, and nuclear weapons; and ballistic missiles.

On 20 May, the Security Council set up a compensation fund for payment of claims against Iraq.

Resolution 692, adopted by a vote of fourteen in favour with Cuba abstaining, also created a commission to administer what became known as the United Nations Compensation Fund. Eleven days later (31 May), the Secretary-General, as called for in Resolution 768, made public his suggested "ceiling" or maximum amount of annual Iraqi oil revenues that should be made available to pay those who suffered as a result of its invasion of Kuwait. In a letter to the Security Council, the Secretary-General said the amount should not exceed thirty percent. It will be up to the Compensation Commission to determine the final percentage.

### Central America

On 20 May, the Security Council decided to establish an observer mission in El Salvador (ONUSAL) with the initial task of monitoring human rights. Adopted unanimously, Resolution 693 was a radical departure for the world body which for the first time in its history, had volunteered to survey the human rights situation of a member state. Some diplomats saw the resolution as a portent for a new and more vigorous UN.

The UN will deploy over 100 civilians and police human rights specialists during the summer to be followed by an additional fifty monitors in the fall. Observers say ONUSAL is expected to change the nature of the ongoing conflict in El Salvador by making both sides more wary about committing human rights abuses. Both sides in the conflict requested the creation of ONUSAL.

On 6 May, the Council extended the mandate of the UN Observer Group in Central America (ONUCA) for another six months. ONUCA is charged with observing and reporting on the five Central American governments to ensure that they comply with the peace plan contained in the Esquipulas II agreement, which requires the governments to cease providing aid to irregular forces and insurgent movements operat-

ing in the region, and to prevent the use of their territory for attacks on other states.

### Angola

On 30 May, the Council enlarged the mandate of the Angola Verification Mission (UNAVEM) responsible for verifying the staged withdrawal of Cuban troops from the country. UNAVEM II is charged with the additional tasks of monitoring the ceasefire worked out between the government of Angola and the insurgent movement UNITA (National Union for the Total Independence of Angola).

### The Middle East

On 24 May, the Security Council unanimously adopted Resolution 694 which deplored the deportation by Israel of four Palestinians from the Occupied Territories. On 18 May, Israel had moved the four from the Gaza Strip to southern Lebanon. The resolution called on Israel to refrain from further deportations and to "ensure the safe and immediate return of all those deported."

On 30 May, the Council renewed for another six months the mandate of the UN Disengagement Observer Force (UNDOF) which has been supervising the ceasefire between Israel and Syria since 1974.

### Cyprus

On 14 June, the Council unanimously adopted Resolution 698, which attempts to address concerns by countries like Canada who feel they bear too much of the financial burden of the UN Peacekeeping Force in Cyprus (UNFICYP). The document "concludes that a method of financing is needed which will put the Force on a sound and secure financial basis." Resolution 696 was adopted on the same day that the Council extended the UNFICYP mandate for an additional six months. [

- TREVOR ROWE

## REPORT FROM THE HILL

### The al-Mashat Affair

The third session of the 34th Parliament, which had opened on 13 May, adjourned for the summer on 21 June and is scheduled to resume on 16 September. Ottawa was gripped during May and June with the case of Mohammad al-Mashat, the former Iraqi ambassador to the United States, who had landed in Canada on 30 March after receiving permission to immigrate to Canada in a speedy twenty-eight days.

The Government asked the House of Commons Standing Committee on External Affairs and International Trade (SCEAIT) to look into the matter. It began hearings on 30 May and received testimony from a wide range of witnesses including several senior cabinet ministers – Constitutional Affairs Minister Joe Clark, Secretary of State for External Affairs Barbara McDougall and Immigration Minister Bernard Valcourt among them. The government stated that the former diplomat had entered the country as a result of, in McDougall's words, "a whole series of errors of judgement."

In testimony late in the proceedings, Joe Clark maintained that two officials – his chief of staff, David Daubney, and Raymond Chrétien, the Associate Under-Secretary of State for External Affairs – owed him an apology for their failure to inform him of the controversial case because it might have embarrassed him as External Affairs Minister at the time of an important trip to the Middle East following the end of the Gulf War. Glen Shortliffe, a senior official in the Privy Council Office, revealed that he had called Chrétien into his office on 13 May to endorse a description of events (including an apology to the government) with

which Chrétien disagreed. Chrétien subsequently told the Committee that he had followed all of the correct procedures and had nothing to apologize for.

The inquiry also witnessed public recriminations between Chrétien and de Montigny Marchand, the Under-Secretary of State for External Affairs, two of the most senior public servants in Ottawa; a verbal slanging match between one of the Committee substitutes, John Nunziata, and Paul Tellier, the head of the civil service in his position as Clerk of the Privy Council; and an admission by David Daubney under cross questioning by NDP MP Svend Robinson that he had not understood the importance of a key memo he had received on the case and, therefore, had neglected to inform Mr. Clark about it. Later Daubney told the Committee that he had been singled out to provide "symmetry" – "because Mr. Chrétien had been isolated as an official who made an error in this matter. Given his name and his relationship to the Leader of the Opposition [a nephew], I think there was some symmetry."

In a report released on 20 June the Committee agreed on the need for improved communications "both within and between government departments." It also recommended that the House Committee on Labour, Employment and Immigration examine the Immigration Act and Regulations to find ways in the future to avoid the, "evident unfairness associated with Mr. al-Mashat's admission to Canada." Finally, it urged the government to appoint a "high-level task force of retired politicians, public servants, and experts to clarify and foster consensus concerning the meaning of ministerial responsibility..."

Members of Parliament differed sharply about who should be blamed for the imbroglio. The Conservative majority accepted the government's version of events; the Liberals accused various ministers, including the Prime Minis-

ter, of mishandling the case after it became public, while the NDP insisted on the resignations of Clark, McDougall and Valcourt. One Conservative backbencher, Geoff Scott, broke with his party and called for a judicial inquiry into the unanswered questions.

### Arms Exports Bill

Another major controversy in the House in May and June concerned Bill C-6, an act "respecting the exporting, importing, manufacturing, buying or selling of or other dealing with certain weapons." The government introduced the bill on 23 May by way of amending the Export and Import Permits Act and the Criminal Code to permit two Canadian companies to pursue major weapons sales, one to the Netherlands and one to Saudi Arabia.

Diemaco Ltd. of Kitchener is attempting to sell 100,000 C7 automatic rifles to the Netherlands for \$ 120 million, while General Motors of Canada is seeking the sale of 1,117 light armoured vehicles equipped with machine guns for up to \$ 800 million to Saudi Arabia. International Trade Minister Michael Wilson insisted that the legislation did not contradict the government's campaign to restrain the international arms trade following the Persian Gulf War. He indicated that campaign was aimed specifically at "weapons of mass destruction" which would not include automatic rifles and armoured vehicles.

Until then, the Criminal Code made it illegal for automatic weapons to be sold to anyone except Canadian military and police forces. The new provisions establish strict criteria for the sale of weapons to foreign countries. No sales will be permitted to civilians, each sale will be reviewed by the government, and an annual report will be submitted to Parliament. In addition, the government will set up a "control list" of countries that are permitted to buy guns from Canada.

Opposition MPs criticized the new legislation. NDP MP Ian Waddell told the House on 23 May, "Canadians were waiting for a gun-control bill and instead we got a gun-export bill." Liberal MP Warren Allmand proposed two amendments to the bill. One would have required scrutiny by Parliament whenever a country is added to the list of those permitted to buy weapons from Canada. The second would have prohibited the sale of guns to countries involved in armed conflicts or human rights violations.

In the end, however, the government and opposition parties reached a deal which permitted Bill C-6 to pass the Commons and the Senate and receive Royal Assent on the day Parliament adjourned, 21 June. In return for speedy passage, the government promised to suspend all further exports of automatic weapons to the Middle East for the rest of the year and while a special Subcommittee on Arms Exports of the SCEAIT holds hearings on the question. That sub-committee is expected to begin its work as soon as Parliament resumes in the fall.

### Other News

Under the new House rules, Parliamentary Secretaries (PS) to Ministers will now be members of the relevant committees. This will mean, for example, that the newly-named PS to External Affairs Minister Barbara McDougall, Benno Friesen, will be a member of the SCEAIT, while Patrick Boyer, the PS to National Defence Minister Marcel Masse, will be a member of the House Defence Committee.

It was also decided before the House adjourned for the summer that two sub-committees of SCEAIT would be established: one, on International Trade, with John Reimer as its chair; the other, on Human Rights and Development, with Walter McLean in the chair. |

## ARMS CONTROL DIGEST

### Strategic Arms Reductions Talks

At the Moscow summit on 31 July, Presidents Bush and Gorbachev signed a seven hundred-page START Treaty. The three major outstanding issues had been settled during four days of talks between their foreign ministers in Washington earlier in the month. On "downloading" (reducing the number of warheads per missile), the two sides agreed to a ceiling of 1,250 missile "spaces" on three different missile types (versus the Soviet preference for 2,150 on three types, and the American preference for just 1,000 on one type). On the telemetry issue, the Soviets agreed to provide tape-recorded data from every missile test, not just a limited number. Finally, the two sides settled on 21 percent as the change in throw-weight signifying a new type of missile. The definition of "throw-weight" for this purpose was not agreed until the Bush-Gorbachev meeting in London on 17 July.

START has been hailed as the first arms control agreement to actually reduce, rather than merely limit, the number of strategic nuclear weapons. It sets a ceiling of 6,000 on warheads and 1,600 on delivery vehicles for each side. A sub-ceiling of 4,900 on ballistic missile warheads mandates the elimination of over 7,000 such warheads. The USSR will cut the numbers of its most powerful missile, the SS-18, as well as its overall ballistic missile throw-weight, by 50 percent. The Treaty also includes an unprecedentedly elaborate system of verification, including twelve different types of on-site inspection. However, because it credits bombers with fewer

weapons than they may actually carry, while sea-launched cruise missiles are left out entirely (being limited to 880 by a separate accord), total reductions in the strategic arsenals will be about 15 percent for the US and 25 percent for the USSR, rather than 50 percent as originally intended, over seven years.

### Conventional Forces in Europe

The dispute over the terms of the CFE Treaty, signed last November, was finally resolved by US Secretary of State Baker and Soviet Foreign Minister Bessmertnykh in Lisbon on 1 June. The compromise was formally approved by the other Treaty signatories in Vienna two weeks later. Without accepting the interpretation of its co-signatories that such forces are subject to the Treaty, the USSR agreed that equipment held by its naval infantry and coastal defence units will not exceed the Treaty's ceilings and sub-ceilings, and will not be increased.

The existing equipment will remain, but an equivalent number drawn from ground forces – amounting to 3,738 pieces – will have to be destroyed, modified, or converted to non-military use. Of this amount, 753 armoured combat vehicles (ACVs) will be modified and reclassified as combat support equipment, exempt from the Treaty limits. Of the remainder, half will be reduced under normal CFE provisions within Europe, while half will be withdrawn east of the Urals, where an equivalent number of older pieces will be destroyed or converted under less stringent procedures. The 1,701 ACVs assigned to the Strategic Rocket Forces will be exempted from the Treaty as internal security forces, although also subject to a no-increase commitment.

The USSR also undertook to destroy or convert 14,500 tanks, ACVs, and artillery pieces that it

had moved east of the Urals before the Treaty was signed (about 25 percent of the total transferred); agreed to provide advance notice of weapons destruction; and declared that "the equipment withdrawn will not be used to create a strategic reserve ... and will not be stored in a way which allows for rapid return to the [Treaty] area." Resolution of the dispute will permit formal ratification of the Treaty and the beginning of substantive "CFE-1A" negotiations focusing on personnel limits and aerial inspection.

### The Middle East

On 29 May, President Bush announced a Middle East arms control proposal including the following elements: (1) an early meeting of the five major arms suppliers in Paris to discuss guidelines for restraining destabilizing transfers of conventional weapons, as well as weapons of mass destruction; (2) a mechanism for supplier consultations, including advance notification of certain sales; (3) a freeze on the acquisition or testing of surface-to-surface missiles, looking toward their ultimate elimination from the region; (4) a ban on the further production or acquisition of enriched uranium and separated plutonium, usable in nuclear weapons; and (5) commitments from all the regional states to sign the emerging Chemical Weapons Convention and to bolster the 1972 Biological Weapons Convention. Israel immediately objected to the plan on the grounds that it overemphasized weapons of mass destruction, while Arab states complained that it said nothing about Israel's presumed existing stock of nuclear weapons.

The five main suppliers (the Permanent Members of the UN Security Council) met in Paris as planned on 8 and 9 July. They endorsed the Bush proposals, called for the creation of a Middle East "weapons of mass destruction-free zone," and agreed to hold an experts meeting in September before

resuming talks on arms transfer restraints in London in October.

### Short Notes

On 13 May, President Bush announced that the US would drop its previous insistence on retaining a small chemical weapons (CW) stock (2 percent of its current holdings, or about 500 tons) until all CW-capable states had joined a global CW ban, and would also withdraw its previous reservation of the right to use CW in retaliation against an attack in kind. He called on the Geneva-based Conference on Disarmament to settle all major issues by the end of this year in order to complete a CW Convention by May 1992.

During a visit by Soviet Chief of the General Staff General Moiseyev in early May, Canada and the USSR signed an agreement on "The Prevention of Dangerous Military Activities." It is designed to avoid incidents arising from one country's armed forces exercising or operating in close proximity to those of the other.

In accordance with the 1987 Intermediate-range Nuclear Forces (INF) Treaty, the US and USSR destroyed the last of their 2,692 INF missiles in early May.

Zambia, Tanzania, and South Africa have all recently signed the Nuclear Non-Proliferation Treaty (NPT), while France announced plans to do so. The only remaining non-signatory nuclear-weapon state, China, also indicated that it was "seriously considering" signing.

A proposal long championed by Canada for a UN register of conventional arms transfers was endorsed by the European Council at the end of June, the Paris meeting of the five permanent Security Council members in early July, and the London Economic Summit later that month. Canada was also instrumental in persuading the Berlin meeting of CSCE foreign ministers in June to endorse the idea of greater transparency in arms transfers. □

## REVIEWS

### Circle of Fear

Hussein Sumaida with  
Carole Jerome

Toronto: Stoddart, 1991, 305 pp.,  
\$25.95, cloth

### By Way of Deception:

#### A Devastating Insider's Portrait of the Mossad

Claire Hoy and Victor Ostrovsky

Toronto: General Paperbacks, 1991,  
396 pp., \$6.99 paper

### Arms and the Man: Dr. Gerald Bull, Iraq and the Supergun

William Lowther

Toronto: Doubleday, 1991, 298 pp.,  
\$27.50 cloth

☐ The new paperback version of *By Way of Deception* includes an appendix which describes the efforts made by representatives of Israel, legal and otherwise, to prevent publication of this book. The senior Mossad agents who confronted him at his Ottawa apartment, Victor Ostrovsky tells us (by the way, they drove a red medium-sized rental car with Quebec licence plates), had probably only seen the dust jacket. One wonders if the Mossad would have gone through all their subsequent efforts to suppress the book if they'd actually had a chance to read it.

Victor Ostrovsky was born in Canada of an Israeli mother, and served with the Israeli armed forces before joining the Mossad. His message is clear enough and frequently repeated: the Mossad is a law unto itself, out of control, and a menace to democracy in Israel. Unfortunately, the evidence to substantiate these claims is surrounded by endless, largely tedious descriptions of events which have either no great significance or are already very well known.

In the midst of the dross, there are serious issues. The close liai-

son with Danish intelligence services is an embarrassment to Denmark; the discussion of Mossad operations in the United States may not come as a surprise but could hardly be welcomed in Israel. For Canadians who are having difficulty getting a passport, just write to the Mossad – they are said to have one thousand of them, all blank and unused. For the most part, however, Ostrovsky's revelations deal with more mundane matters.

For those who want to brush up on techniques for staking out rendezvous and trailing suspects, an appendix provides detailed instructions. And, of course, beautiful women abound, luring, decoying, and providing brief solace to overstrained agents. For all this, Hoy and Ostrovsky may have the last laugh. After Israel representatives went to court to try to prevent publication of the book, orders for it jumped from the projected 42,000 to over 300,000 in just a few days – better than a Mossad pension.

Those who find Ostrovsky's revelations to be rather thin gruel should not turn too quickly to Carole Jerome's latest Middle East adventure, *Circle of Fear*. The poor soul trapped in the circle is Hussein Sumaida, son of a senior official in Saddam Hussein's government who, by all accounts, is an old pal of the great survivor himself. After an absolutely dreadful childhood coping with his beastly father, and understandably mixed up about his loyalties, Sumaida set out to England to study, where, ever given to quixotic decisions, he decided first to penetrate and inform on Iraqi groups in exile (they were admittedly no more attractive than the bunch he had just left behind.) Tiring of this, he started to work for the Mossad, but then decided that he had better tell Iraq's Mossad (the Mukhabarat) that he was doing this before they found out for themselves. At this point his father was ready to see him off, but

the ever-merciful Saddam intervened, and (what else to do with wayward sons?) gave him a job in Iraqi intelligence.

After many quasi-adventures learning to be an agent, Sumaida decided to abandon both the Mukhabarat and the Mossad, and bolted to Canada, where he has applied for political asylum. Possibly inspired by the jump in sales of *By Way of Deception*, the publishers have pointed angrily to the privileged treatment afforded Mohammad al-Mashat, and demanded equal treatment (or perhaps just bigger sales) for their despondent co-author. They're right, but they're wrong: both of them should be at the bottom of the application list.

William Lowther's study (*Arms and the Man*) of our very own Dr. Gerald Bull tries hard to improve the image of Canada's international villain by portraying him as a complex personality eventually doomed by a combination of personal insecurities, scientific obsession and business naivete. Lowther places great emphasis on Bull's deprived childhood. After the death of his mother, three year-old Gerry lived first with an older sister, and then with relatives who, having won a prize in the Irish sweepstakes, took Gerry to live on an apple farm outside Kingston. Despite Lowther's efforts to find great meaning in all of this, Bull's upbringing and education is not a compelling story. Emerging from the University of Toronto, Bull was no genius, but a bright young man with a passion for ballistics.

Soon afterwards, Bull found himself working for Canada's Department of National Defence, whose officials and scientists he came to despise as stupid and shortsighted. Canadians would surely have warmed to Dr. Bull's big gun if he had continued to present it as the little man's fight against official Ottawa. Unfortunately, he took his designs elsewhere – to the United States, South Africa, a brief stay in prison, China, Iraq –

in fact, to anybody who might have a use for a longer gun barrel and a more effective shell.

Perhaps Bull really did see all of these efforts as mere expedients to help him achieve his real goal – firing satellites into orbit from a super gun. But it is difficult to believe that his increasing entanglement with Iraq was in pursuit of a higher cause. Bull's firm in Brussels, surely the most unsteady merchant of death in the history of the trade, was broke, the Iraqis offered money and first class tickets to Baghdad, Bull was off and running.

Even Bull's assassination was curiously anti-climactic. According to Lowther, the unidentified secret service that did the job (one, incidentally, that seemed very much in control) left endless hints to Bull to cease and desist, practically pleading with him to not make them do it. When it was done, those dull bureaucratic people in Ottawa did little more than raise an eyebrow, while the Belgian police were totally perplexed by a murder which their most illustrious of detectives, Hercule Poirot, would have solved without leaving his chambers.

William Lowther has written an almost interesting book which makes a conscientious effort to present Bull as something of a romantic figure – a Canadian Clyde Barrow in the international world of guns and missiles. Unfortunately, Bull is not up to the character he is asked to play. In the end, he leaves no legacy for his fellow Canadians, but only a footnote. In mid-August UN inspectors in Iraq found little Babylon, the prototype for the biggest gun in the world. They also found 1,481 artillery shells and bombs containing chemical weapons, stocks of poison gases, and, just in case anybody was in any doubt about Iraq's intentions, large quantities of the biological toxin anthrax. Perhaps the unidentified secret service did the right thing after all.

You may be looking for: statistics on yearly Canadian military expenditures, the view of developing countries on the state of global warming, a copy of the speech the Minister of External Affairs gave at the Canadian club last week, or informed analysis and reflection on the future role of the United Nations.

Whatever your current needs, we offer you:

- a unique collection of international peace and security sources from around the world, in French and English;

- quick, easy access to these sources through our computerized database;

- personal help from a competent staff.

### Special Services

- our own computerized database giving subject access to the various materials in the library collection from 1985 on; includes the *Nuclear weapons and arms control bibliography* covering the English-language literature on this subject from 1945 on;

- access to the **Canadian Mili-**

**tary Industry Database** containing information on Canadian companies' military sales in Canada and abroad;

- **referrals** to outside information sources;

- the preparation of **customized bibliographies** from our in-house database;

- an **interlibrary loan** service (ILL) via your own library;

- a competitive **Bookshelf Grant** awarded to public and secondary school libraries to augment their collection in the peace and security field.

### The Collection

**French and English language materials** cover international peace and security issues, specifically, arms control, disarmament, defence and conflict resolution; comprising:

- over 200 **periodicals and newsletters** from around the world, including alternative press sources;

- **reference materials** providing current statistics, biographies, terminology, maps, etc.;

- **newspaper clippings** from major Canadian newspapers and a selection of key foreign newspapers covering international issues by subject;

- a selection of **government documents** from Canada, other countries and international organizations;

hard-to-find **unpublished materials** like speeches, conference papers, theses, press releases;

**books** for detailed coverage and background information.

### Publications and Hand-outs

- annual **bibliography** *Canada and international peace and security*.

- *Peace and security bookshelf bibliography* of Canadian publications for public and school libraries.

- *Peace and security thesaurus*, a classification of over 750 terms in the field.

- *Peace and Security Information Resources*, a **guide** to reference sources in the field.

- **List of periodicals** held in the library.

- monthly library **acquisitions list**.

### Facilities

- microform reader-printer
- photocopier
- study carrels for on-site research
- user-accessible database

### Hours of operation:

Monday to Friday,  
8:30 a.m. – 5:00 p.m. (Eastern)

### Barton Awards Programme

The Institute invites applications for its Awards Programme, designated the Barton Awards in honour of its first Chairman, former UN Ambassador William Barton.

The programme is open to both academics and non-academics who wish to enter or continue studies in the field of international peace and security. The programme is intended to encourage expertise and scholarship in that area by supporting Canadians and permanent residents who wish to pursue their studies at institutions abroad or in Canada.

The Institute expects to make eleven awards: two fellowships valued at up to \$30,000 and nine scholarships at up to \$14,000 each. Applications will be assessed by an independent selection committee and decisions will be announced in May 1992.

Applicants must be Canadian citizens or permanent residents whose experience or academic qualifications enable them to pursue advanced study.

The deadline for applications for the 1992–1993 academic year is 1 February 1992.

For further information and application forms please write to:  
The Barton Awards Programme, Canadian Institute for International Peace and Security, 360 Albert Street, Ottawa, Ontario K1R 7X7

### Peace and Security Competitions Fund Procedures and Deadlines

For the semi-annual competitions with deadlines of 30 November 1991 and 30 June 1992, the Fund will be interested in receiving applications to support projects that would make thoughtful contributions to issues related to international peace and security on the 125th anniversary of Confederation in 1992. It is our understanding that Canadians will be invited by Parliament to reflect in their various fields on the record of opportunity and achievement in that record and on challenges for the future.

30 June for an October decision

30 November for a March decision

Write to: Peace and Security Competitions Fund, c/o CIIPS

## LETTERS TO THE EDITOR

### Drowning in the "realist" mainstream

Though I found both the roundtable on "State Breaking, Nation Building" and "Gun Control For the World" (Summer 1991) generally informative and well-argued, I think that pessimism over the possibilities of arms transfer control was a bit overdone. Rational analysis soon leads to the conclusion that from a global point of view, arms transfers are predominantly a waste of resources, lives and property. From a national standpoint, things look different; each state feels threatened. The problem is how to make states feel safer. This problem has objective (threat) and subjective (perception of threat) sides. It is therefore equally important to work on the reduction of threats, and to work toward changed perceptions of international relations.

One important way to slow arms transfers is by making arms less attractive, and another is to make alternatives, economic development for instance, more attractive. It is here that Keith Krause's article fails. If we consider decision-making about arms, and not simply the mechanics of the international system, we see that there are other roads to arms transfer limitation than the one he outlines. For instance, if development aid is linked to arms purchases, this changes the relative prices of weapons and development, which, under normal circumstances, will have some effect on demand. It is this approach which is currently being discussed at the World Bank and the IMF.

Another consideration has its origin in Kant's "Eternal Peace." Democratic states, and governments which respond to the wishes of their

citizens, might have a different perspective on the relative costs of arms and other goods. Is it not possible, that the limiting of arms transfers is linked to democratization?

Analysis, even if it is devoted to peace and security has to be realistic and avoid wishful thinking. On the other hand, I expect such analyses to search for better solutions, not to drown in the "realist" mainstream.

Hamburg, Germany*

### No Enlightenment?

In the article on the "Enduring Legacies of the Persian Gulf War," CIIPS drew from only establishment institutions. The result was a foregone conclusion – there would be no enlightenment.

The moderator tried his best. He asked what the war's unique legacy would be. He got marginal replies, with careful avoidance of the real changes. He tried again: is there a fundamental conflict between the Islamic world and the West? Only Korany dealt with this directly in saying the gulf between Islamic and non-Moslem countries has increased. But to tell us why was evidently too dangerous.

It is quite useless for CIIPS to select an establishment panel and then expect its moderator to squeeze from them what they are not programmed to deliver. How about hearing, just once, what a dissident Arab Moslem has to say?

*Boris Aldanov, Ottawa*

### Neither Rank-inflated Nor Austere

Your Summer issue ("From the Director") cited a statement attributed to me by Professor Desmond Morton which is partly incorrect. I have indeed pointed to the Dutch example of forces which are better equipped than ours at two-thirds of the budget, and I have called attention to the very high cost of an all-volunteer force as raised in Canada, with our equipment acquisition practices and excessive infrastructure and other politically

related costs. I have not ever described our forces as rank-inflated; their rank structure is driven by the Canadian Forces own particular mix of activities, roles, geographical spread and required command structure. Besides, why should a standard of austerity be expected of our military that does not apply elsewhere in the federal bureaucratic or political environment?

*Gerard C.E. Thériault, Nepean*

*Editor's Note:* The correspondent's note regarding how he was cited in the summer issue of *Peace & Security* is correct. The mistake is the fault of the editors, and we apologize to Mr. Thériault and to Desmond Morton for it. Mr. Thériault is a member of the Board of Directors of the Institute.

### North Pacific dialogue – who's idea?

Professor Jeremy Paltiel, in "Beijing Sails Into Adverse Winds" (Summer 1991) is mistaken when he states that "Under former External Affairs minister Joe Clark, Canada cautiously accepted a longstanding Soviet initiative for creating an Asia-Pacific Security system ... exploratory talks were held in Victoria in April."

The Canadian initiative for establishing a North Pacific Cooperative Security Dialogue (NPCSD) was first introduced by the Secretary of State for External Affairs in speeches in Victoria, Tokyo, and Jakarta in July 1990. The NPCSD is not an acceptance of the Soviet "Vladivostok-Krasnoyarsk" approach to Asia-Pacific Security. The Soviet initiative includes a call for a Pan-Asia Foreign Ministers Summit Meeting to be held in Vladivostok in 1993, the proposal for USSR-USA-Japan discussions on North-East Asian security issues, and the establishment of a five-nation forum (USSR, USA, India, China and Japan) to discuss Asia-Pacific Security issues.

The Canadian approach to Asia-Pacific security issues rejects the

establishment of unnecessary mechanisms, avoids a bloc approach to security matters, and seeks to develop a "habit of dialogue" among concerned states in the region.

The NPCSD has two tracks – a non-governmental and a governmental element – and focusses on the North Pacific countries of China, the Democratic People's Republic of Korea, Japan, the Soviet Union, the Republic of Korea, the United States, and Canada. Only in [the North Pacific] sub-region, where there is a significant concentration of conventional and nuclear forces, and where growing instability would have an adverse effect on Canada's political, economic, social and environmental interests, is there no multi-lateral forum to allow the timely discussion of policy.

The NGO (non-governmental organization) track of the Canadian initiative is designed specifically to explore issues and prospects for dialogue and to focus knowledge and awareness on the North Pacific. York University organized an international colloquium in Victoria in April to discuss, with academic and other NGO experts, various research approaches to North Pacific security issues.

The official, or governmental, track of the Canadian initiative is an open-ended process intended to explore the merits of establishing a regional dialogue. Such a dialogue must not be the result of an attempt to transplant European models or institutions. The sources of tension and the nature of the regional challenges in the North Pacific do not lend themselves to such an approach. Rather, approaches to enhance stability must accommodate the specific traditions, history and geopolitical dynamics of the region.

External Affairs, Ottawa*

## LETTER FROM SUDAN BY MICHAEL McIVOR

**The temperature hovers around fifty degrees celsius and a *hubbub*, the local name for dust storm, is blowing. We are travelling through northern Kurdufan region from El Obeid to Sodiri on what aid workers here sardonically call "Highway 1."**

In some places it is vague track. More often, there is nothing but drifting sand or rough shale. A companion pulls out his canteen and takes another swig of hot water. Some spills as we lurch and jolt along. "Driving in Sudan," he mutters, "is like riding in a clothes drier with dust blowing in."

By air, it is less than 200 kilometres between El Obeid and Sodiri. By "Highway 1" it is eight back-bruising hours in a four-wheel drive van, not including the time wasted fixing two flat tires, digging out after twice becoming stuck in the sand, and getting seriously lost. In other words, it was a normal trip with an experienced driver. This is the same route emergency food aid must travel to reach the hungry in North Kurdufan.

And it gets worse going west to Darfur region. The paved road built with international aid ends at El Obeid, the capital of Kurdufan. El Fasher, the capital of Darfur is two days further on by rough track. Most people prefer to fly taking the risk that Air Sudan, not so affectionately dubbed, "Air Sometimes," will actually show up as scheduled. It usually doesn't. Sometimes it is days late on domestic routes.

Arriving in El Fasher is to step back in time. There actually is one paved road. But mostly it is dirt street. A few four-wheel drive vehicles are out and about. Almost all of them belong to international aid agencies, the government, army or security police. For the rest, with the disconcerting exception of three or four American cars with '50s fins and chrome, it is donkey power. And the donkeys are slowly dying because of the drought. There are power lines which is a nice Potemkin village touch be-

cause unless one is on the "A" line which runs to the government buildings there is no electricity at all. Just as there are no phones.

El Fasher is the pinnacle of twentieth century technology in Darfur. Outside the capital, it gets primitive, which is why it is a truly awesome task trying to get emergency food aid and seeds to rural areas. Even communication is impossible. The shortwave radios used by foreign construction teams and aid agencies were seized by the security police some months ago. They were convinced the radios were being used for spying. Just what there would be to spy on in rural Darfur defies the imagination.

But the two-year old Islamic fundamentalist military does not like foreigners, especially Westerners. Until late this spring, many aid agencies suffered various types

of harassment. Some, like *Médecins Sans Frontières* in Darfur, gave up and left. In Khartoum, our hotel rooms were searched. Telexes are read by the security police. Many telephones are bugged. Not that it matters; they usually do not work. Sudan is a country that has turned xenophobic at a time when it most desperately needs foreign development assistance. Sudan inherited an underdeveloped but functioning infrastructure when it gained independence from the British in 1956. The trains from Khartoum to Port Sudan, the

country's access to the ocean, used to run twice a day. Now there are fewer than two a week. During the sixteen years of Gaafar Mohammed Numeiri's rampantly corrupt dictatorship, not only was there little effort to expand basic services, what existed was not maintained. "I am afraid the infrastructure of the country has deteriorated very severely over the last seven or eight years," says Abhav Deshoande, the World Bank's representative in Khartoum. "This applies to roads, railways, power, factories, irrigation systems, everything." Deshoande says a World Bank survey found 112 of the 115 bridges on the Port Sudan-Khartoum highway to be unsafe; ninety percent of the emergency food aid moves down that road.

Sudan's Finance Minister, Abdul Rahim Hamdi acknowledges that what he calls "the very pervasive deterioration" continues, and admits, "we need massive economic investment to basically rehabilitate all the infrastructure in the country." To try to attract it, Hamdi has introduced some measures to promote the development of a market economy and to appease the International Monetary

Fund which turned its back on Sudan for failing to come to grips with economic restructuring and debt payments. But there is opposition inside the regime to these policies, especially from hardline fundamentalists. So most businessmen, including many inside the country, do not trust the government and prefer to keep potential investment funds offshore in hard currency accounts. The concerns of donor nations, including Canada, include but go beyond the regime's xenophobia and economics. Khartoum's support of Iraq in the Gulf War angered coalition members including rich, formerly generous, Arab neighbours. Western nations are upset the government will not compromise to end the brutal, debilitating civil war with largely Christian and animist tribes in the South. Of particular concern is its refusal to replace Sharia or Islamic law with a secular code. And the dictatorship's human rights record is worrying. The US Ambassador to Sudan, James Cheek, says the result is "most of the development assistance that used to flow to Sudan has stopped because donors feel that given the policies and attitude of the government, assistance cannot really accomplish much."

Emergency food aid will continue. But without development assistance for roads, irrigation projects, new wells and reforestation, the tragic cycle of drought and famine will continue. Sudan, potentially the breadbasket of East Africa, cannot even cope with its disintegrating infrastructure much less finance anything new.

Such global problems do not feature in Mahava village in northern Kurdufan even though the people here have to live with the consequences. It is a six-hour walk to the nearest water since their well went dry. There is water deeper down but no money to drill for it. And the desert is seeping into the village. "Thirty years ago there were lots of trees," says a farmer pointing to the barren landscape. "I remember seeing deer when I was a boy. Now, if there is a stick on the ground, after a while there will be a small sand dune." There are no funds to plant new trees as a buffer against the desert.

"What will happen to you?" I ask. "I expect one day the sand will drive us from our land." Being landless in Sudan's agrarian, peasant society is tantamount to a death sentence. At the moment there seems no hope of a reprieve. □

## LETTRE DU Soudan

PAR MICHAEL M'LIOR

**La température avoisine les cinquante degrés Celsius et le *hubub*, tempête de poussière, souffle. Nous traversons le**

**Kordofan-Nord.**

Pour nous rendre d'El-Obeïd à Sodiri, nous roulons sur ce que le personnel des organismes de secours baptisé sardoniquement "l'Auto-route n° 1". Par endroits, c'est une vague piste. Le plus souvent, il n'y a que du sable balayé par le vent ou un mauvais chemin en schiste argileux. Un de mes compagnons sort sa gourde et boit une gorgée d'eau chaude. «Conduire au Soudan, mar-monne-t-il, secoué par une embardée, c'est comme d'être enfermé dans un séchoir à linge rempli de poussière.»

«A vol d'oiseau, il y a moins de 200 kilomètres entre El-Obeïd et Sodiri. Par l'«Autoroute n° 1» et en 4x4, il faut compter huit heures de route éreintantes, plus le temps perdu pour réparer deux crevaisons, pour nous désensabler deux fois et pour retrouver notre chemin après Signaions, que les secours alimentaires destinés aux populations ar-famées du Kordofan-Nord doivent passer par là.

Les conditions empirient lorsque l'on se dirige vers l'Ouest, vers la province de Darfour. La route pavée construite avec l'aide internationale s'arrête à El-Obeïd, capitale du Kordofan. El-Fasher, la capitale de la province de Darfour, est encore à deux jours de route par une piste accidentée. La plupart des gens préfèrent prendre l'avion, même si les horraires des vols locaux sont assez fantaisistes. Il arrive que les avions aient des jours de retard sur les lignes intérieures.

Arriver à El-Fasher, c'est faire un bond en arrière dans le temps. Hormis une route pavée, il n'y a que des rues en terre battue. On croise quelques véhicules à quatre roues montées. Tous pratiquement appar-internationale, au gouvernement, à l'armée ou à la police de sûreté. Pour le reste, si l'on excepte la présence de décorations de trois ou quatre voitures américaines des années 1950, la population se dé-place à dos d'âne. Or, les ânes sont en voie d'extinction, à cause de la

sécheresse. Il y a des lignes élecs-triques, ce qui donne un air de vil-lage modeste à la Potemkine, puis-que moins d'être raccordé à la ligne qu'il alimente les bâtiments officiels, on n'a pas du tout d'électricité. Pas de téléphone non plus.

El-Fasher est la tête de pont de la technologie du vingtième siècle dans le Darfour. En dehors de la capitale, tout est plus primitif, ce qui explique pourquoi il est extrême-ment difficile de faire parvenir les secours alimentaires d'urgence et les semences dans les régions rurales. Même les communications sont impossibles. Les radios à ondes courtes utilisées par les équipes de construction et les organismes d'aide étrangers ont été confisquées par les forces de sécurité. Il y a vaincu qu'elles servaient à l'es-pionnage. Quant à savoir ce que le pays a besoin d'une aide économique massive pour au moins remettre en état toute son infrastruc-ture. Pour essayer d'obtenir cette aide, M. Hamdi a introduit quelques mesures visant à favoriser la mise en place d'une économie de marché et à apaiser le Fonds monétaire international, qui a tourné le dos au pays dès lors qu'il s'est montré incapable de restructurer son éco-nomie et de faire face aux échéances de remboursement de sa dette. Ce-pendant, à l'intérieur même du ré-gime, certains, les fondamentalistes purs et durs notamment, s'opposent à ces politiques. En conséquence, la plupart des gens d'affaires, et parmi beaucoup de Soudanais, ne font pas confiance au gouvernement et préfèrent garder à l'étranger, sur capitaux qui pourraient servir à des investissements locaux.

La xénophobie et les méthodes économiques du régime ne sont pas les seules raisons de préoccupation des pays donateurs, dont le Canada, en soutien de l'Irak pendant la guerre du Golfe, Khartoum s'est

## Le Soudan est devenu xénophobe à un moment où il a désespérément besoin de l'aide au développement que les étrangers peuvent lui apporter.

Jour de Khartoum à Port-Soudan, sur la Mer Rouge. Maintenaant, c'est à peine s'il y en a deux par semaine. Pendant les seize années de dicta-ture corrompue de Caafar Mohamed Nemeiry, non seulement on n'a pas fait grand chose pour accroître les services de base, mais ceux qui existaient n'ont pas été entretenus. «Je crains bien que l'infrastructure se soit très gravement détériorée au cours des sept ou huit dernières années», déplore M. Abbar Deshoandé, qui représente la Banque mondiale à Khartoum. Je parle des routes, des chemins de fer, du réseau électrique, des usines, des systèmes d'irriga-tion, de tout.» Selon une étude de la Banque mondiale qu'il cite, 112 des 115 ponts de la route qui relie Port-Soudan à la capitale sont en mauvais état ; or, 90 p. 100 de l'aide alimentaire d'urgence est acheminée par cette route.

Le ministre des Finances du Soudan, M. Abdul Rahim Hamdi, reconnaît ce qu'il appelle «la dette-rotation généralisée» et il admet que le pays a besoin d'une aide économique massive pour au moins remettre en état toute son infrastruc-ture. Pour essayer d'obtenir cette aide, M. Hamdi a introduit quelques mesures visant à favoriser la mise en place d'une économie de marché et à apaiser le Fonds monétaire international, qui a tourné le dos au pays dès lors qu'il s'est montré incapable de restructurer son éco-nomie et de faire face aux échéances de remboursement de sa dette. Ce-pendant, à l'intérieur même du ré-gime, certains, les fondamentalistes purs et durs notamment, s'opposent à ces politiques. En conséquence, la plupart des gens d'affaires, et parmi beaucoup de Soudanais, ne font pas confiance au gouvernement et préfèrent garder à l'étranger, sur capitaux qui pourraient servir à des investissements locaux.

attire la colère des membres de la coalition, entre autres de riches voisins arabes autrefois gencueux. Les pays occidentaux sont contrai-riés que le gouvernement refuse un compromis qui mettrait fin à la guerre civile brutale et déstabilisante animistes du Sud. Ce qui gêne le plus, c'est qu'il ne veut pas rem-placer la Charta, c'est-à-dire le droit de propriété, par un code séculier. En plus, les atteintes aux droits de la personne sont inquiétantes. Pour l'ambassadeur des Etats-Unis au Soudan, M. James Check, il en ré-sulte que «l'aide au développement s'est réduite à un mince filet car les donateurs jugent le gouvernement incapable de bouger».

Les envois de secours alimentaires d'urgence continueront, mais sans aide au développement pour construire des routes, pour entre-prendre des travaux d'irrigation, creuser de nouveaux puits et replan-ter des arbres, le cycle tragique de la sécheresse et de la famine conti-nuera lui aussi. Le Soudan, qui pour-rait être le grenier à blé de l'Afrique orientale, ne peut même pas entrec-tenir la désintégration de son infrastruc-ture, et encore moins financer quoi que ce soit de nouveau.

Personne n'a idée de ces prob-èmes internationaux dans le village de Mahara, dans le Kordofan-Nord, même si ses habitants en sup-portent les conséquences. Depuis que leur puits est sec, ils doivent marcher pendant six heures pour at-teindre le point d'eau le plus proche. Il y a une nappe d'eau plus pro-fonde, mais ils n'ont pas les moyens de faire creuser un nouveau puits. De plus, le désert gagne sur le vil-lage. «Il y a trente ans, il y avait beaucoup d'arbres, explique un fer-mier en montrant le paysage désolé. «Quand j'étais enfant, j'ai vu un cerf. Aujourd'hui, s'il y a un bout de bois planté, peu de temps après, il est recouvert par une petite dune.»

Un jour, le sable nous chassera de chez nous», répond-il. Se retrouver sans terre dans la société agraire du Soudan, c'est comme signer son ar-rêt de mort. Pour l'instant, il semble n'y avoir aucun espoir de survis. □

Michael M'lior est principal correspondant européen de la CBC pour le National Radio News.

Noyés dans le courant «réaliste»

Quoique trouvant la table ronde intitulée «Éclatement des États, gé-mèse des nations» et l'article consacré à un «Monde sans armements» (Ét 1991) informatifs et bien argu-mentés dans l'ensemble, le pes-

Si l'on analyse rationnellement la situation, on ne tarde pas à conclure que, d'un point de vue mondial, les transferts d'armements sont surtout

une perte de ressources, de vies et de biens. D'un point de vue national, il en va autrement, puisque tout Etat se sent menacé. Le problème est de savoir comment rassurer les Etats : or, ce problème est à la fois objectif (la menace) et subjectif (la perception d'une menace). Il importe donc tout autant de s'efforcer de réduire les menaces et de parvenir à changer les perceptions des

Un moyen important de ralentir les transferts d'armements consiste

à rendre les armes moins intéressantes ; un autre, à donner des choix, à rendre le développement économique, par exemple, plus attrayant. C'est en cela que l'article de Keith Krause nêche. Si l'on considère les

des décisions prises en matière d'armements, et pas simplement les mécanismes du système international, on s'aperçoit qu'il existe d'autres façons d'arriver à limiter leurs transferts que celle qu'il expose. Ainsi, si l'on

ite aide au développement et achats d'armes, on change les prix relatifs des armes et du développement, ce qui aura, normalement, une incidence sur la demande. C'est cette méthode dont on discute actuellement à la Banque mondiale et au FMI.

Un autre élément renvoie à la «Paix perpétuelle» de Kant. Des États démocratiques et des gouvernements qui répondent aux souhaits de leurs citoyens voient peut-être sous un autre angle le coût relatif des armes et d'autres biens. N'est-il pas possible

die que la limitation des transferts d'armement ait un lien avec la démocratisation ? Les analyses, même consacrées à la paix et à la sécurité, doivent être réalistes et éviter les voeux pieux. Par ailleurs, j'attends d'elles qu'elles cherchent de meilleures solutions et non qu'elles se noient dans le courant «réaliste».

Le volet officiel, ou gouvernemental, de l'initiative canadienne est un processus souple dont l'objectif

est d'analyser les mérites de l'ouverture d'un dialogue régional. Ce dialogue ne doit pas résulter d'une tentative de transplantation de modèles ou d'institutions européens. Les sources de tension et la nature

des problèmes régionaux dans le Pacifique Nord ne se prêtent pas à une telle démarche. En fait, il est indispensable d'adapter des méthodes favorisant la stabilité aux traditions et à la dynamique historique et géographique de la région.

Planification des politiques  
Affaires extérieures, Ottawa

## NOUVELLES DE L'INSTITUT

Industry Database, une base de données qui contient des renseignements sur les articles militaires vendus au Canada et à l'étranger par les sociétés canadiennes.

**Le renvoi à des sources de renseignements extérieures.**  
La préparation de bibliographies «sur mesure» à partir de notre propre base de données.

**Un service de prêt entre bibliothèques par l'entremise de votre bibliothèque.**

**L'octroi (par suite d'un concours) aux bibliothèques publiques et à celles des écoles secondaires, de subventions accordées pour augmenter leurs collections d'ouvrages sur la paix et la sécurité.**

**Documents en français et en anglais portant sur des questions relatives à la paix et à la sécurité internationale et, plus précisément, sur la limitation des armements, le désarmement, la défense et le règlement des conflits. La collection comprend notamment :**

**plus de 200 périodiques et bulletins de tous les pays, y compris diverses sources médiatiques ; des ouvrages de référence comportant des statistiques à jour, des biographies, des renseignements terminologiques, des cartes, etc. ; des dossiers de presse tirés des principaux journaux canadiens et d'une sélection des grands journaux étrangers sur des problèmes internationaux classés par sujet ; un choix de documents officiels**

Vous désirez peut-être obtenir :

des statistiques sur les dépenses annuelles des Forces canadiennes, le point de vue des pays en développement sur le réchauffement de la planète, un exemplaire du discours donné la semaine dernière au Cercle canadien par le ministre des Affaires extérieures, une analyse solide sur le futur rôle des Nations Unies

Quels que soient vos besoins, nous mettons à votre disposition :

une collection d'ouvrages en français et en anglais, sur la paix et la sécurité internationales

des moyens rapides et aisés de consulter ces ouvrages par l'intermédiaire de notre base de données

un personnel compétent et prêt à vous aider.

**Services spéciaux**

Notre base de données informatisées dominant un accès par sujets aux différents ouvrages de la bibliothèque dont la collection remonte à 1985 ; on y trouve notamment la *Nuclear Weapons and Arms Control bibliography* dans laquelle figure la liste des ouvrages parus en anglais sur ce sujet depuis 1945.

L'accès à la *Canadian Military*

Dans le cadre de son programme des «Bourses Barton», ainsi appelé en l'honneur de son premier président, M. William Barton, ancien ambassadeur du Canada à l'ONU, l'Institut invite les personnes intéressées à déposer leur dossier de candidature. Le programme est ouvert aux universitaires et aux autres personnes qui veulent entreprendre ou poursuivre des études sur la paix et la sécurité internationales. Il entend favoriser l'accroissement des compétences et des connaissances de haut niveau dans ce domaine, en appuyant les candidats pour la poursuite des études dans des institutions au Canada et à l'étranger. L'Institut compte choisir seize récipiendaires, deux d'entre eux recevront chacun une bourse de «fellow» de 30 000 \$ maximum et les neuf autres bénéficieront chacun d'une bourse d'étude de 14 000 \$ maximum. Un comité de sélection indépendant évaluera les candidatures et rendra ses décisions en mai 1992.

Les candidats(e)s doivent être citoyen(ne)s canadien(ne)s ou immigré(e)s résident(e)s d'expérience ou des compétences universitaires leur permettant de poursuivre des études supérieures.

Les candidatures pour l'année universitaire 1992-1993 doivent

### Programme de bourses Barton

parvenir à l'Institut le 1<sup>er</sup> février 1992 au plus tard. Pour obtenir plus de détails et des formulaires de demande, prière d'écrire à l'adresse suivante :

Programme des bourses Barton, Institut canadien pour la paix et la sécurité internationales, 360, rue Albert, bureau 900, Ottawa (Ontario) K1R 7X7

Pour les compétitions dont les dates limites seront les 30 juin et 30 novembre 1991, et le 30 juin 1992, le Fonds étudiant, en particulier, les demandes de contributions reliées à des projets qui pourraient contribuer à une réflexion sur des questions portant sur la paix et la sécurité internationale lors de la célébration du 125<sup>e</sup> anniversaire de la Confédération en 1992. Nous croyons qu'à cette occasion, les Canadiens et Canadiennes seront invité(e)s par le Parlement à réfléchir, dans leurs champs d'activités respectifs, sur leurs réalisations et sur les défis que présente l'avenir.

le 30 juin, pour la sélection d'octobre

le 30 novembre, pour la sélection de mars

Concours «Paix et Sécurité», 360, rue Albert, bureau 900, Ottawa (Ontario) K1R 7X7

### Concours «Paix et Sécurité» : procédure et échéancier

#### Heures d'ouverture

Du lundi au vendredi, de 8 h 30 à 17 h

#### Équipements offerts

● Lecteur de microfiches avec imprimante ;  
● Machine à photocopier ;  
● Cabines d'étude pour les recherches sur place ;  
● Base de données directement accessible au public.

#### Publications et brochures

La bibliographie annuelle intitulée *Le Canada, la paix et la sécurité internationales : une bibliographie*, une bibliographie des publi-  
cations canadiennes destinées aux bibliothèques publiques et scolaires, *Le Thésaurus de la paix et de la sécurité*, dans lequel sont classés plus de 750 termes utilisés dans le domaine.

Les «Sources d'information sur la paix et la sécurité», un guide des sources de référence sur le sujet.

La liste des périodiques en bibliothèque.  
La liste des ouvrages acquis chaque mois par la bibliothèque.

## LIVRES

### Compétitivité internationale et

depenses militaires

François Chénais

Éditions Economica, Paris, 1990  
245 pages, 40,95 \$

Dans la collection CPE-Econo-

mie, François Chénais propose un

livre qui aborde les liens existant

entre les grands programmes d'arme-

ment, les dépenses militaires et les

politiques industrielles endossées

par les gouvernements des pays in-

dustrialisés. Dans ce domaine, les

stratégies des différents pays qui

sont confrontées à ces questions sem-

blent diverger en apparence. Cepen-

dant, en rapport avec les sommes

colossales qui sont investies dans la

course aux armements, peu de gou-

vernements utilisent la rhétorique de

la compétitivité internationale pour

légitimer l'allocation de ressources

militaires. Les problématiques amé-

ricaine et françaises sont abordées en

profondeur dans ce livre.

Les trois premiers chapitres sont

consacrés aux États-Unis. Dans le

premier, écrit par Bernard Haude-

ville, il est question de Recherche &

Développement et du rôle de l'État

à la structure industrielle du

pays. Christos Passadacos traite, dans

Serfati), pour ensuite terminer avec

un cas spécifique de l'industrie mili-

taire de ce pays, le Groupe Thomson

(Claude Serfati). Globalement, les

liens très réels qui existent entre la po-

litière note la position de l'industrie

industrielle françaises situent de façon

très positive au début. La recherche

statistique est abondante, bien ex-

pliquée et surtout évoquée de façon

pertinente et elle est bien appuyée par

certaines chapitres plus «théoriques».

Toutefois, l'exercice de comparat-

son entre les États-Unis et la France,

ne repose en aucun cas sur une analyse

systématique entre les deux prob-

lèmes. Peu d'indices sont utilisés

pour évaluer et mesurer les diffé-

rences qui peuvent exister, tant et si

bien que après la lecture de cet ou-

vrage, on fait face à deux recherches

distinctes, artificiellement réunies et

traitées séparément.

Le traitement inégal des différents

chapitres est aussi à noter. Celui de

peut-être le double dessein des au-

teurs : recueillir dans un même livre

deux études qui sont tout au plus

parallèles et dont les contenus gravi-

rent dans une grande problématique

en mal d'hypothèses plus précises.

politique à l'Université du Québec à

Montréal.

L'Armée rouge face à la

perestroïka

Thierry Mallaret et Murielle

Delaporte

Éditions Complexe, Bruxelles, 1991

303 pages, 18,95 \$

L'appareil militaire a longtemps

benéficié d'une situation tout à fait

privilegiée en Union soviétique. Sa

puissance reposait alors essentiel-

lement sur l'absorption d'une part im-

portante des ressources économiques

et industrielles du pays. Dès lors, il

est normal que se pose la question

des répercussions des réformes en-

treprises par Mikhaïl Gorbatchev

sur l'appareil militaire soviétique.

Malheureusement, le livre de Thierry

Mallaret et Murielle Delaporte ne

nous aidera pas beaucoup à cerner

ces répercussions.

L'ouvrage est construit autour des

cinq principales composantes du

système de défense et de sécurité de

l'URSS. Toutefois, contrairement à

ce que le titre laisse entendre, l'ou-

vrage ne touche que partiellement à

l'Armée rouge. Les composantes

qu'aborde les auteurs sont les

suites suivantes : l'infrastructure et la pen-

se militaire, le désarmement et le

contrôle des armements, l'économie,

et les alliances. Le tout est soutenu

par une approche historique qui

cherche à comprendre et à expliquer

les développements de l'appareil

militaire «à partir de l'histoire et de

l'évolution des structures».

Diverses sections de l'ouvrage

sont consacrées soit aux évolutions

la mécanisation ou l'apparition des

armes nucléaires, soit encore aux

conséquences de la Grande Guerre

mondielle (1939-1945). D'autres

sections classiques sur l'économie du

complexe militaro-industriel ou en-

core sur le pacifisme comme instru-

ment traditionnel de propagande.

Cette grande dépendance des auteurs

face à l'historiographie occidentale,

peut-être le double dessein des au-

teurs : recueillir dans un même livre

deux études qui sont tout au plus

parallèles et dont les contenus gravi-

rent dans une grande problématique

en mal d'hypothèses plus précises.

# CONDENSÉ SUR LA LIMITATION DES ARMEMENTS

## Les pourparlers sur la réduction des armements stratégiques

■ Au sommet de Moscou du 31 juillet, les présidents Bush et Gorbatchev ont signé un Traité START long de 700 pages. Les trois grandes questions restées en suspens avaient été réglées plus tôt dans le mois, à Washington, au terme de quatre jours de pourparlers entre leurs ministres des Affaires étrangères.

Pour ce qui est de la réduction des charges, c'est-à-dire du nombre des ogives par missile, les deux parties se sont entendues sur un plafond de 1 250 «têtes» sur trois types de missiles différents (au départ, les Soviétiques soulaient un accord sur 2 150 têtes sur trois types d'engins, alors que les Américains auraient préféré 1 000 têtes sur un seul type de missile), s'agissant de la telle-mentre, les Soviétiques ont accepté de fournir des données enregistrées pour tous leurs essais de missile, et pour un nombre limité d'entre eux. Enfin, les deux parties ont fixé à 21 p. 100 le changement de puissance des lanceurs au décollage à la 17 juillet, que la définition de la MM, Bush et Gorbatchev à Londres, n'est qu'à la rencontre entre

Le différend portant sur les termes du Traité FCB, signé en novembre, a finalement été réglé à Lisbonne, le 1<sup>er</sup> juin, par le secrétaire d'Etat américain, M. James Baker, et le ministre des Affaires étrangères soviétique, M. Bessmertnyk. Les autres signataires du Traité ont officiellement approuvé le compromis deux semaines plus tard, à Vienne. Sans accepter l'interprétation de ces signataires, selon laquelle ces forces tombent sous le coup du Traité, l'URSS s'est engagée à ce que le matériel équippant son infanterie de marine et ses unités de défense côtière ne dépassent pas les plafonds de

Le document et à ne pas l'accroître. Elles conserveront le matériel actuel, mais un nombre équivalent de pièces, soit 3 738, seront retirées des forces terrestres pour être détruites, modifiées ou converties pour usage civil. Sur ce total, 753 véhicules blindés de combat (VBC) seront modifiés et reclassés sous l'appellation de matériel de soutien au combat, catégorie non visée par le

Le Traité START a été salué comme étant le premier en matière de limitation des armements à réduire véritablement le nombre des armes nucléaires stratégiques et à ne pas se contenter de le limiter. Il interdira dans les réductions normales, quant au reste, la moitié en-viron de matériel de soutien au combat, catégorie non visée par le

## Le Moyen-Orient

Le 29 mai, le président Bush a proposé les mesures suivantes pour une limitation des armements au Moyen-Orient : (1) une première rencontre à Paris des cinq grands fournisseurs d'armements afin de définir des lignes directrices pour restreindre les transferts déséquilibrés d'armes conventionnelles et d'armes de destruction massive ; (2) un mécanisme de consultation entre fournisseurs, et la notification à l'avance de certaines ventes ; (3) un gel de la acquisition ou des essais de missiles sol-sol, avec pour objectif ultime d'en éliminer la présence dans la région ; (4) une interdiction de produire ou d'acquiescer davantage d'uranium enrichi et de plutonium séparé, qui peuvent servir à la fabrication d'armes nucléaires ; et

(5) l'engagement de tous les Etats trop sur les armes de destruction massive. Quant aux Etats arabes, ils se sont plaints qu'il n'y était nullement question du stock d'armes nucléaires que l'on soupçonne les Israéliens de posséder.

Les cinq grands marchands d'armes, qui se trouvent être les cinq membres permanents du Conseil de sécurité, se sont réunis à Paris les 8 et 9 juillet. Ils ont approuvé les propositions de M. Bush, ont demandé la création au Moyen-Orient d'une «zone libre de toute arme de destruction massive», et sont convenus de réunir des experts en septembre, avant de reprendre en octobre, à Londres, les pourparlers sur la restriction des transferts.

## En bref

Le 13 mai, le président Bush a annoncé que les Etats-Unis n'insis-

restait plus pour conserver un petit

stock d'armes chimiques (AC) (2 p. 100 de son stock actuel, soit quelque 500 tonnes) tant que tous les Etats capables de produire des AC n'auront pas adhéré à une interdiction mondiale des AC, et qu'ils renonceraient à se réserver le droit d'employer des AC en représailles à une attaque chimique. Il a invité la Conférence du désarmement, qui siège à Genève, à régler toutes les grandes questions avant la fin de l'année, de façon qu'une Convention sur les armes chimiques soit prêtée d'ici à mai 1992.

Pendant une visite du chef d'état-major général de l'armée soviétique, le général Moïsseseyev, début mai au Canada, l'URSS et le Canada ont signé un accord sur «la prévention des activités militaires dangereuses». Cet accord vise à éviter des incidents liés aux armes chimiques.

Conformément au Traité sur les forces nucléaires intermédiaires (FNI) conclu en 1987, les Etats-Unis et l'URSS ont détruit les derniers de leurs 2 692 missiles FNI au début du mois de mai.

La Zambie, la Tanzanie et l'Afrique du Sud ont toutes récemment signé le Traité sur la non-prolifération des armes nucléaires (TNP), tandis que la France a annoncé son intention d'en faire

autant. Le seul Etat possédant les armes nucléaires à ne pas être signataire du TNP, à savoir la Chine, a aussi déclaré qu'elle «envisageait sérieusement» de signer le Traité.

Le Conseil de l'Europe, à la fin juin, les cinq membres permanents du Conseil de sécurité réunis à Paris début juillet et le Sommet écono-

mique de Londres, plus tard le même mois, ont approuvé une proposition dont le Canada se fait depuis longtemps le champion, celle d'un registre des transferts d'armes conventionnelles qui serait confié à l'ONU. Le Canada a également con-

tribué à convoquer les ministres des Affaires étrangères de la CSECE assemblés à Berlin en juin de proner une plus grande transparence dans les transferts d'armements. □

## EN DIRECT DE LA COLLINE PARLEMENTAIRE

« avoir fait preuve de maladresse après la divulgation de l'affaire, tant que le NPD réclamait avec insistance la démission de MM. Clark et Valcourt et de Mme McDoougall. Un député conservateur sans portefeuille, M. Geoff Scott, a rompu avec son parti et demandé une enquête judiciaire afin que toute la lumière soit faite sur l'affaire.

**Le projet de loi sur les exportations d'armement**

Une autre grande controverse a secoué la Chambre en mai et juin, le C-6 « relatif à l'exportation, à l'importation, à l'achat, à la vente ou à toute autre contrat visant certaines armes ». Le gouvernement a présenté le 23 mai ce projet de loi qui a pour objet de modifier la Loi sur les licences d'exportation et d'importation, et le Code pénal afin que deux des ventes d'armes importantes, l'une aux Pays-Bas et l'autre, à l'Arabie Saoudite.

Diemaco Ltd. (Kitchener) essaie de vendre aux Hollandais 100 000 fusils automatiques C7, ce qui représente un contrat de 120 millions de dollars, alors que General Motors (Canada) essaie elle de vendre aux Saoudiens 1117 véhicules blindés légers équipés de mitrailleuses, ce qui représente un contrat de 800 millions de dollars. Le ministre du Commerce extérieur, M. Michael Wilson, a insisté sur le fait que le projet de loi C-6 n'était pas en contradiction avec la campagne lancée par le gouvernement après la guerre du Golfe pour limiter le commerce international des armes. Cette campagne les armes de destruction massive », catégorie dans laquelle n'entrent pas les fusils automatiques et les véhicules blindés.

Jusqu'à-là, il était illégal, en vertu du Code pénal, de vendre des armes automatiques à quiconque sauf aux forces armées et à la police du Canada. Les nouvelles dispositions établissant des critères stricts concernant la vente d'armes à des civils étrangers. Toute vente à des civils est interdite, chaque vente sera examinée par le gouvernement, et un rapport annuel doit être remis au Parlement. En outre, le gouvernement dressera une « liste de contrôle » des pays autorisés à acheter des armes fabriquées au Canada.

L'enquête a également été l'occasion de récriminations publiques entre deux des plus hauts fonctionnaires d'Ottawa, MM. Chétien et de Montigny Marchand, sous-secrétaire d'Etat aux Affaires extérieures ; et d'investigations entre un des suppléants du Comité, M. John Nunziata, et M. Paul Tellier, greffier du Conseil privé, c'est-à-dire chef de la fonction publique. En outre, M. David Robinson (NPD), a reconnu ne pas avoir servi le qu'il avait reçue à propos du dossier al-Mashtar, ce qui explique pourquoi il ne l'avait pas transmise à M. Clark. Plus tard, M. Daubney a déclaré au Comité qu'on l'avait choisi pour partager la tâche, « parce que M. Chétien avait été monté du doigt comme étant le fonctionnaire ayant commis une erreur dans cette histoire. Etant donné son nom et son lien de parenté avec le chef de l'opposition — il est son neveu —, je pense qu'on a voulu faire partager la faute. »

Dans un rapport publié le 20 juin, le Comité convenait de la nécessité d'améliorer les communications « tant à l'intérieur des ministères qu'entre les ministères ». Il recommandait également que le Comité du travail, de l'emploi et de l'immigration examine la Loi et les règlements sur l'immigration afin de trouver des moyens d'éviter que se répète « l'insécurité manifestée à l'admission de M. al-Mashtar au Canada. Enfin, il exhortait le gouvernement à constituer un « groupe de travail de haut niveau composé de personnalités politiques et de spécialistes, de fonctionnaires et de spécialistes, en vue de préciser ce que l'on doit entendre par « responsabilité ministérielle » et de rallier un consensus autour de cette définition... »

Les avis divergeaient à la Chambre quant à savoir qui était à blâmer pour l'imbrigoï. La majorité conservatrice acceptait la version gouvernementale des événements ; les ministères, y compris M. Mulroney, Libéraux accusaient différents

**L'affaire al-Mashat**

Le 21 juin, la troisième session de 34<sup>e</sup> législature du Parlement, qui s'était ouverte le 13 mai, a été levée pour l'instant. Les travaux parlementaires reprendront le 16 septembre. En mai et juin, Ottawa a été aux prises avec l'affaire al-Mashat, c'est-à-dire avec le dossier concernant l'arrivée au Canada, le 30 mars, d'un ancien ambassadeur d'Irak aux États-Unis, à qui un visa d'immigrant avait été accordé au terme d'une procédure accélérée de vingt-huit jours.

Le gouvernement a demandé au Comité permanent des affaires extérieures et du commerce extérieur (CPAECB) de la Chambre des communes d'étudier la question. Des audiences ont commencé le 30 mai et de nombreux témoins sont venus déposer devant le Comité, dont plusieurs ministres du Cabinet, à savoir : M. Joe Clark, ministre des Affaires constitutionnelles ; Mme Barbara McDougall, secrétaire d'État aux Affaires extérieures ; et M. Bernard Valcourt, ministre de l'Immigration. Le gouvernement a déclaré que l'ancien diplomate était entré dans le pays à la suite de ce que Mme McDougall a qualifié de « toute une série d'erreurs de jugement ».

S'exprimant vers la fin des débats, M. Joe Clark a maintenu que deux fonctionnaires, à savoir : M. David Daubney, son chef de cabinet, et M. Raymond Chretien, le sous-secrétaire d'État associé aux Affaires extérieures, lui devaient des excuses pour ne pas lui avoir parlé de ce dossier controversé, qui misquait de l'embarrasser alors que, ministres des Affaires extérieures, ils allaient entreprendre, au lendemain de la guerre du Golfe, un important voyage au Moyen-Orient. M. Glen Shortliffe, haut fonctionnaire du bureau du Conseil privé, a révélé qu'il avait appelé M. Chretien à son bureau, le 13 mai, afin de confirmer une description des événements (y compris des excuses au gouverne-

# À L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

## Sanctions contre l'Irak

Fin juillet, l'Irak était toujours au

coeur des délibérations du Conseil

de sécurité. Entre autres choses, les

quatorze membres du Conseil exami-

naient une proposition visant à au-

toriser l'Irak à vendre du pétrole

pour la première fois depuis la fin

du conflit. Il s'agissait de permettre à

Bagdad d'utiliser des revenus pétro-

liers pour acheter, une seule fois et

sous très étroite surveillance, des

dépenses qui font cruellement défaut

en Irak. Le prince Sadruddin Aga

Khan, qui est chargé des opérations

humanitaires de l'ONU dans le

golfe Persique, venait d'informer le

comité des sanctions du Conseil de

sécurité qu'on allait au-devant d'une

adoption de l'ONU pénétrer

l'Irak de laisser l'équipe d'inspec-

tion nucléaire de l'ONU pénétrer

l'Irak de laisser l'équipe d'inspec-

tion nucléaire de l'ONU pénétrer

l'Irak de laisser l'équipe d'inspec-

15 juillet, Rolf Ekeus, chef de la

Commission spéciale de l'ONU

chargée de trouver les armes de des-

truction massive irakiennes, avait

rapporté que Bagdad essayait de

tenir des informations secrètes et

de cacher du matériel servant à

embûcher l'uranium et rappelé qu'au

début, les Irakiens avaient même

nié l'existence d'un programme

clandestin.

Le 19 juillet, le même M. Ekeus

a déclaré au Conseil que l'Irak

plus tard, comme le prévoyait la ré-

solution 768, le Secrétaire général a

fait savoir quelle part maximale des

revenus pétroliers annuels irakiens

il proposait de destiner au dédom-

agement versé aux personnes qui

avaient souffert à cause de l'inva-

sion du Koweït. Dans une lettre au

Conseil de sécurité, M. Pérez de

Cuellar précisait que cette part ne

devrait pas dépasser 50 p. 100 des-

dis revenus. C'est à la Commission

d'indemnisation qu'il incombera

de fixer le pourcentage en dernier

ressort.

## Amérique centrale

Le 20 mai, le Conseil de sécurité

a décidé de mettre au place une mis-

sion d'observation au El Salvador

(ONUSAL) qui aura pour tâche

initiale de voir dans quelle mesure

les droits de la personne sont res-

pectés. Adoptée à l'unanimité, la ré-

solution 693 marque un revirement

complet de la part de l'organisation

mondiale, puisque pour la première

fois de son histoire, elle se propose

d'étudier la situation des droits de

la personne dans un Etat membre.

Certains diplomates ont vu dans

cette résolution le signe d'une ONU

nouvelle et plus vigoureuse.

Au cours de l'été, les Nations

Unies déploieront plus de 100 civils

et policiers spécialistes des droits

de la personne, qui seront rejoints

par cinquante autres à l'automne.

Selon des observateurs, l'ONUSAL

devrait changer la nature du conflit

salvadorien, car sa présence fera

d'avantage hésiter les belligérants

à violer les droits de la personne.

Les deux parties en présence ont

reclamé la création de l'ONUSAL.

Le 6 mai, le Conseil a prolongé

de six mois le mandat du Groupe

d'observateurs des Nations Unies

en Amérique centrale (ONUCA),

L'ONUCA a pour mission d'obser-

ver les cinq pays d'Amérique

## Angola

Le 30 mai, le Conseil a élargi le

mandat de la Mission de vérification

des Nations Unies en Angola

(MVNUA) chargée de contrôler le

retrait progressif des soldats cubains

du pays. La MVNUA a à desormais

pour tâches supplémentaires de

surveiller le cessez-le-feu conclu

entre le gouvernement angolais et

les insurgés de l'UNITA (Union

nationale pour l'indépendance totale

de l'Angola).

## Moyen-Orient

Le 24 mai, le Conseil de sécurité

a adopté à l'unanimité la réso-

lution 694 par laquelle il déclarait

déployer l'expédition au Sud-Liban

pour Israël, le 18 mai, de quatre

Palestiniens de la bande de Gaza.

La résolution demandait à Israël de

cesser d'expulser des habitants des

territoires occupés et de «garantir

le retour sain et sauf, et immédiat,

de tous les expulsés».

Le 30 mai, le Conseil a prolongé

de six mois le mandat de la Force

des Nations Unies chargée d'ob-

server le désengagement (FNUOD),

qui supervise le cessez-le-feu entre

Israël et la Syrie depuis 1974.

## Chypre

Le 14 juin, le Conseil a adopté à

l'unanimité la résolution 698 visant

à répondre aux questions de pays

comme le Canada qui ont le senti-

ment de supporter une trop grande

part du fardeau financier de la Force

des Nations Unies chargées du

maintien de la paix à Chypre

(FNUC). Le document «conclut

qu'il est nécessaire de définir une

méthode de financement qui don-

nera à la Force des bases financières

solides». La résolution 696, adoptée

le même jour, prolonge le mandat

de la FNUC de six autres mois. □

# CHRONIQUE DE LA DÉFENSE

## Les leçons militaires du conflit

■ À la mi-juillet, le Pentagone a transmis au Congrès un rapport provisoire sur la guerre du golfe Persique. Entouré de rumeurs selon lesquelles sa rédaction aurait provoqué de sévères éclats entre services du char *M1A1* méritait-il autant d'encore que le chasseur furtif *F117A* ? — ce rapport cite quelques-unes des faiblesses de l'opération Tempête du désert, mais ses réus-sites aussi, dont certaines sont bien connues. Ainsi, les avions de chasse de haute technologie ; la navigation, les communications et le recueil de renseignements par satellite ; les bombes à guidage de précision ; et les manœuvres d'entraînement de l'OTAN ont donné aux forces de la coalition un avantage écrasant sur le champ de bataille.

Par ailleurs, le rapport reconnaît que la coalition a bénéficié de conditions favorables. L'Arabie Saoudite a fourni d'excellents ports pour le débarquement des forces, et il y avait peu de risque que les Irakiens interdisent le ravitaillement de ses dernières. Les cinq mois précédant le début des hostilités ont permis à la coalition de régler des questions essentielles en matière de commandement et de contrôle. Plus important encore, sans doute, le désert a constitué un terrain idéal pour les opérations aériennes contre l'armée irakienne. En effet, on a pu couper rapidement les Irakiens de leurs postes de ravitaillement et les empêcher, par conséquent, de progresser sur le champ de bataille.

## Guerre du Golfe et Guerre des étoiles

Les leçons du golfe Persique conduisent certes les Américains à revoir de nombreux points de leur planification militaire, des satellites de champ de bataille à des améliorations matérielles en passant par un meilleur entraînement pour le démantage de vieux engins, mais elles ont

aussi soulevé certains débats stratégiques importants. Début août, des fonctionnaires du Pentagone ont encore posé deux à trois cents questions *SCUD*. Dans son rapport au Congrès, le Pentagone reconnaît qu'il est très difficile d'obtenir de localiser des missiles sur rampes mobiles. En outre, dans la préface de ce rapport, le secrétaire à la Défense, M. Dick Cheney, déclare que l'expérience du Golfe confirme la nécessité d'avoir des bombardiers *B-2* et de défense anti-missiles balistiques. Le 16 juillet, le jour même de la remise du rapport, dans une allocution prononcée à Washington, M. Cheney a réitéré avec ferveur inhabituelle son soutien au projet de la Guerre des étoiles. « Il est absolument essentiel, a-t-il affirmé, que nous nous dotions maintenant des moyens de nous défendre, de défendre le territoire des États-Unis, nos troupes outre-mer et nos amis à l'étranger contre la menace des missiles balistiques (...) ». Je suis persuadé que nous en sommes capables techniquement, je suis tout à fait convaincu qu'il n'en va de notre sécurité nationale.

M. Cheney a reçu un appui inattendu, mais différent de celui qu'il aurait souhaité. Après un revirement crucial de son président, M. Sam Nunn, et de la majorité démocratique, le Comité sénatorial des forces armées s'est déclaré favorable à une défense anti-missiles balistiques terrestre limitée. Ce faisant, le Comité a rejeté l'option gouvernementale, qui vise au déploiement d'un système spatial utilisant de petits intercepteurs « intelligents » (*Brilliant Pebbles*). En théorie, *Brilliant Pebbles* fera échouer même une attaque nucléaire massive en interceptant les missiles ennemis avant leur rentrée dans l'atmosphère terrestre.

Pour sa part, le Sénat propose de déployer 100 lance-missiles terrestres dans le Dakota du Nord, à restes dans le Dakota du Nord, à un endroit autorisé en termes du Traité ABM de 1972. Limiter le déploiement à 100 rampes, c'est respecter le Traité ABM, encore que le sénateur Nunn ait proposé d'entamer des négociations avec l'URSS

pour sa part, le Sénat propose de déployer 100 lance-missiles terrestres dans l'atmosphère terrestre. Pour sa part, le Sénat propose de déployer 100 lance-missiles terrestres dans le Dakota du Nord, à restes dans le Dakota du Nord, à un endroit autorisé en termes du Traité ABM de 1972. Limiter le déploiement à 100 rampes, c'est respecter le Traité ABM, encore que le sénateur Nunn ait proposé d'entamer des négociations avec l'URSS

en vue d'en modifier la tenue pour pouvoir déployer une plus grande défense. Comparé au programme gouvernemental, qui devrait être terminé à la fin des années 1990, pour un coût de 40 milliards de dollars, le système proposé par le Sénat sera en place d'ici à 1996 et il ne coûterait que 10 milliards de dollars. Plus encore qu'un *Brilliant Pebbles* spatial, l'installation d'une défense anti-missiles terrestre dans le Dakota du Nord a des conséquences importantes pour le Canada. Selon des sources du Pentagone, au minimum, la région défendue, jusqu'au nord du Canada, jusqu'à Churchill (Manitoba) ; au maximum, elle s'étendrait loin à l'intérieur de l'Arctique canadien.

## Les vols de Goose Bay

Il se peut fort que l'on traitera de ces questions dans la révision tant attendue du Livre blanc de la défense de 1987. Entre-temps, le débat public sur les questions de fermeture de bases, alors que des dépôts de bases qui pourraient fermeront n'en disant pas plus sur le nom des bases qui pourraient fermer, un « localitaire » de longue date a décidé de partir quoi qu'il advienne. En juillet, les avions américains ont quitté Goose Bay (Labrador), ce qui fait planer de sérieux doutes sur l'avenir de la base. Plus connue dernièrement à cause des controverses soulevées par les vols à basse altitude, Goose Bay était au centre des débats nucléaires au début des années 1960. Étant donné la situation très stratégique de Goose Bay sur la côte nord-est, les États-Unis, qui y stationnaient déjà des appareils, avaient mis la base en tête de la liste des emplacements où ils déploieraient en priorité des armes nucléaires de défense aérienne. Des documents d'archives canadiens, bakker précisent aussi que le Commandement du gouvernement Diefenbaker, ce qui permettrait aux bombardiers *B-52* de rentrer de leur première attaque, de se réarmer et de s'envoler de nouveau vers l'Union soviétique.

Fin mai, le Conseil des ministres de l'OTAN, qui s'efforce de définir la place de l'organisation dans l'Europe de l'après-Guerre froide, a annoncé une réduction et une réorganisation considérables des forces multinationales. Les effectifs seront diminués de moitié pour être ramportés à 750 000 hommes. Ils seront réorganisés en sept corps basés en Europe occidentale et centrale, plus une force d'action rapide placée sous commandement britannique. Celle-ci comprendra quatre divisions, dont deux britanniques et une américaine, et elle sera capable d'intervenir dans un délai de cinq à sept jours en cas de crise.

Aucune mention n'a été faite de l'avenir des forces canadiennes en Europe. Parlant à Berlin, début juin, le premier ministre Mulroney a expliqué que l'Europe serait réduite, en Canada en Europe serait réduite, en ajoutant toutefois : « Les forces canadiennes resteront aussi résiduelles pour la sécurité européenne et canadienne et aussi longtemps qu'elles seront nécessaires et bienvenues. » Il n'a donné aucune précision quant à la forme qu'une présence canadienne prolongée pourrait prendre.

## Le Canada et l'OTAN

Si le besoin disparaît, la base disparaît. »

Si le besoin disparaît, la base disparaît. »

Si le besoin disparaît, la base disparaît. »

# NOTE DE LA DIRECTION

## Le curieux lien entre démocratie et paix.

ÉVANOUISSEMENT DE LA GUERRE FROIDE A EU

fléunt un utopisme sans borne quant à la suite entre autres effets frappants celui de faire des événements. Le cynisme endurt par quarante-cinq années de confrontation et de méfiance entre l'Est et l'Ouest a laissé place, même dans certains des milieux les plus intransigeants, à un franc optimisme pour ce qui est des perspectives d'une «paix» mondiale plus durable. On a présenté à ce nouveau monde des visions de «nouvelle planète unie par une «sécurité coopérative», de Nations Unies régénérées, et de diverses formes de «nouvel ordre mondial».

Le cynisme est une habitude difficile à vaincre et la brève expérience de l'après-Guerre froide est déjà semée de grandes déceptions. Cependant, internationaux osent de nouveau rêver d'un monde meilleur, comme elles l'ont fait à la fin des deux Guerres mondiales, on s'aperçoit combien, malheureusement, la Guerre froide a retardé la réflexion sérieuse qui permettra d'arriver à ce monde meilleur. Quand l'Irak a attaqué le Koweït, la confusion et la méfiance généralisées que l'on suivit en ce qui a trait aux règles de la sécurité collective et au rôle des Nations Unies sont un des signes de cette carence.

Les efforts déployés pour comprendre les causes sociales de la guerre et leur trouver des remèdes éventuels sont un écho encore plus révélateur de débats passés sur la paix. Le lien qui existe entre les États gouvernés démocratiquement et les relations internationales pacifiques qu'ils entretiennent entre eux constitue un des pôles de cette recherche. Le renversement des régimes autoritaires des pays communistes et l'émergence, parallèlement, de positions internationales plus pacifiques ont ravivé l'intérêt pour le lien entre démocratie et préférence manifeste avec laquelle il expose son peuple à des dangers et aux souffrances, et la menace d'une insupportable endémie dans les pays à régimes non démocratiques de la région, y compris le Koweït, sont autant d'éléments qui amènent à se demander si l'on peut garantir un paix durable avec des gouvernements dictatoriaux.

Cette réflexion renvoie à certains des discours occidentaux les plus agressifs, les plus prosélytiques de la Guerre froide, ainsi qu'à ce que le processus de la CSE, dit d'Helmsinki, a véritablement accompli en Europe en matière de démocratisation et d'intégration. En même temps,

les vents de la démocratisation et de la libéralisation sous diverses formes soufflent sur le monde entier, de l'Afrique à la Chine, et nombre d'observateurs se demandent comment des améliorations intérieures et internationales pourraient se renforcer mutuellement.

D'aucuns considèrent pareilles réflexions comme très hardies et nouvelles, alors qu'en fait, elles ne sont que hardies. Dans son *Projet de paix perpétuelle* écrit en 1796, Emmanuel Kant a exposé des idées fondamentales sur la façon dont «républicanisme» et paix ne feraient plus qu'un : La constitution républicaine (...) offre l'espoir d'atteindre le résultat escompté, à savoir : la paix perpétuelle. (...) parce que, lorsque le consentement des citoyens est nécessaire pour décider si l'on doit ou non faire la guerre, il n'y a rien de plus naturel que de voir ceux qui traitent s'imposer toutes les privations de la guerre réfléchir longuement avant de se lancer dans un jeu aussi diabolique.

Au fil des décennies, cette vision kantienne, et quelques autres idées, plus sectoriales, ont fait l'objet de débats et d'études répétées. Les institutions de Woodrow Wilson pendant la «dérive des démocratiques». Lorsque John Maynard Keynes prévenait que les conditions imposées à l'Allemagne à Versailles, en 1919, risquaient d'empêcher ce pays de se doter d'un gouvernement stable, ce qui, par contre-coup, entraînerait le chaos dans toute l'Europe, il parlait en prophète.

LA SITUATION ACTUELLE APPELLE UNE RÉFLEXION approfondie sur cette tradition, pas uniquement une offensive triumphaliste des missionnaires de la démocratie occidentale. La théorie de Kant, selon laquelle les États démocratiques seraient par essence plus pacifiques, est tellement tentante d'un point de vue idéologique que les analystes ont essayé maintes fois de l'éclairer par des exemples historiques. Dans une analyse récente, deux universitaires de l'Université Rice ont conclu que, d'après les résultats de la plupart des études [empiriques], les démocraties ne seraient pas moins belliqueuses que d'autres régimes. Sur une note plus optimiste, cependant, ils déclarent aussi que, dans pratiquement toutes les études, on remarque qu'au niveau dyadique, les démocraties ne s'entrevoient tout simplement pas.\*

Quelqu'un de cynique estimerait sans doute que l'absence de guerres entre démocraties s'explique par le fait que les nations démocratiques sont en core trop peu nombreuses, mais ce n'est probablement pas la seule raison. À force de se pencher sur le sujet, les universitaires ont développé des raisonnements plus précis et moins rhétoriques, et ils reconnaissent que jamais une décision d'entrer en guerre n'est sanctionnée par un référendum.

L'influence démocratique sur une telle décision que le processus de la CSE, dit d'Helmsinki, a véritablement accompli en Europe en matière de démocratisation et d'intégration. En même temps,

«Lifton T. Morgan, Sally Howard Campbell, War - So Why Kant? Democratic Constraints, and Conflict Resolution, vol. 35, n° 2, juin 1991.

«Lifton T. Morgan, Sally Howard Campbell, War - So Why Kant? Democratic Constraints, and Conflict Resolution, vol. 35, n° 2, juin 1991.

«Lifton T. Morgan, Sally Howard Campbell, War - So Why Kant? Democratic Constraints, and Conflict Resolution, vol. 35, n° 2, juin 1991.

est donc toujours indirecte et toujours fonction de «contraintes décisionnelles» pesant sur les dirigeants, dont certaines peuvent aussi jouer dans des sociétés non démocratiques. Il s'agit, entre autres, de revocation des dirigeants : en effet, des dirigeants qui sont plus souvent et plus régulièrement tenus de rendre des comptes hésiteront probablement davantage à lancer leur pays dans des guerres ; la nature de la concurrence politique ; la liberté d'organiser une opposition par des voies officielles et institutionnalisées devrait réduire la propension de la société à guerroyer ; et le fait que le dirigeant doit partager le pouvoir décisionnel ; plus le nombre de personnes et, notamment, d'institutions qui doivent approuver une déclaration de guerre est grand, plus le risque de déclencher la guerre est petit.

EN FAIT, QUAND ILS CONFRONTENT CES HYPOTHÈSES à la réalité, les chercheurs ne parviennent pas à les élayer clairement, et les résultats qu'ils obtiennent laissent même supposer que ces contraintes démocratiques peuvent influencer davantage sur les grandes puissances que sur les petites. Par ailleurs, il est intéressant de noter que l'opinion publique, surtout si elle est avertie par une presse chahuvée, a parfois poussé sur le sentier de la guerre des dirigeants hésitants, comme ce fut le cas pour la Guerre hispano-américaine de 1898. L'un des auteurs d'articles publiés récemment dans la revue *Alternatives* sur le thème «Conjoncture mondiale de la démocratisation» laisse entendre qu'il verrait le résultat de processus similaires dans les décisions américaines concernant le golfe Persique. L'Histoire abonde d'exemples de guerres extérieures pour consolider leur position politique intérieure.

Les analyses «structurelles» de la démocratie et de la paix restent donc peu convaincantes, et les chercheurs s'appuient sur les travaux de Michael Doyle sur «Le libéralisme et la politique mondiale pour suggérer que c'est peut-être dans la culture politique du régime démocratique des conflits que réside l'espoir. Le fait que les démocraties semblent capables, pour un tas d'excellentes raisons humaines, tant internes que nationales, d'éviter de se livrer des guerres continue de prouver qu'il est souhaitable de favoriser des formes de gouvernement plus démocratiques.

Aux États-Unis, certains affirment qu'un consensus se dessine pour «réa-ir de la promotion de la démocratie l'axe de la politique étrangère. Beaucoup de pays sont heureux que les puissances moyennes puissent les aider dans leurs changements démocratiques, et nombre d'entre eux s'adressent déjà au Centre pour les droits de l'homme et le développement démocratique de Montréal. □

— BERNARD WOOD

AHARA ESPAÑOL, SAHARA OCCIDENTAL, République arabe sahraïenne démocratique (RASD), que désignant le même lieu, devenu inconnus de la majorité des Canadiens et Canadiennes. Pourtant, plus de 700 de nos soldats s'y retourneront pour participer sous l'égide des Nations Unies (ONU), en collaboration avec l'Organisation de l'Unité africaine (OUA), à la mise sur pied d'un référendum dans ce territoire.

## Historique

Au XVI<sup>e</sup> siècle l'Espagne s'est installée sur la côte africaine occidentale. En 1884, elle se rend officiellement maîtresse du Sahara occidental, mais elle ne réussit à s'imposer dans tout le territoire qu'à partir de 1934. Elle négocie quelques ajustements de frontières avec le Maroc dans les années qui suivent l'accession de ce dernier à l'indépendance (1956). Des rébellions ont lieu contre les colonisateurs en 1957-1958, et elles sont suivies d'une répression espagnole. Colonie jusqu'en 1958, le Sahara occidental devient alors province espagnole. En 1963, l'ONU ajoute le territoire à la liste des colonies qui ont droit à l'indépendance. En 1975, l'Espagne accepte le principe d'un référendum sur l'avenir du territoire, mais le Maroc et la Mauritanie en réclament aussitôt la souveraineté. Consultée, la Cour internationale de justice proclame en octobre 1975 le droit du Sahara occidental à l'autodétermination.

Le référendum espagnol n'a pas eu lieu. Après une «marche verte» marocaine (350 000 civils marocains avec Coran et drapeau marocain en main) orchestrée par le roi, et un accord tripartite entre l'Espagne, le Maroc et la Mauritanie, le retrait des Espagnols a lieu le 26 février 1976, et le territoire est alors divisé en deux administrations : marocaine et mauritanienne. Les armées marocaine et mauritanienne prennent la direction, respectivement, des deux tiers nord et du tiers sud du territoire. L'expansionnisme régional remplace dès lors le colonialisme européen.

Le jour même du retrait des Espagnols, le POLISARIO (*Frente Popular para la Liberación de Saguia el Hamra y Río de Oro*), crée le 10 mai 1973 et qui mène une guérilla contre les Espagnols, annonce la création de l'État libre, indépendant et souverain de la République arabe sahraïenne démocratique (RASD) et la constitution d'un gouvernement du peuple sahraï. Mohammed Abdelaziz est nommé secrétaire général du POLISARIO et président de la RASD. Avec l'Algérie, qui encourage à cette époque plusieurs fronts de libération nationale, le POLISARIO dénonce l'occupation des Marocains et des Mauritanien. La guerre éclate entre «frères» musulmans. En août 1979, financièrement épuisé par les combats contre le POLISARIO qui absorbe 60 p. 100 de son budget, la Mauritanie abandonne toutes ses prétentions sur le territoire du Sahara occidental. La partie mauritanienne est immédiatement réclame et occupée par le Maroc. Le combat pour l'obtention de tout le territoire se fait désormais à deux : le POLISARIO et le Maroc. Durant les années 1980, l'armée marocaine s'enlise dans une longue lutte contre le POLISARIO. Afin de mieux contrôler le Sahara occidental, le Maroc étire une énorme muraille de pierre et de sable tout le long de la côte ouest du territoire, muraille de 1 600 km de long et de trois à quatre mètres de hauteur avec barbelés et toute une panoplie d'équipements. Depuis 1989, les combats ont presque cessé, les deux parties sont épuisées et de nouveaux impératifs régionaux, comme la création de l'Union du Maghreb arabe (UMA) en février 1989, ayant modifié les intérêts de tous les maghrébins. Il n'en reste pas moins que le contrôle du Sahara espagnol est une question de prestige pour le roi du Maroc et qu'il lui est très difficile de reculer sans que l'opposition marocaine ne se serve d'un tel geste pour fomentier la révolte.

## La MINURSO

En 1988, le Conseil de sécurité a adopté une résolution demandant au Secrétaire général de préparer, en collaboration avec l'Organisation de l'Unité africaine (OUA), un rapport sur la tenue d'un référendum relatif à l'autodétermination du peuple du Sahara occidental. En juin 1990, les parties directement visées se sont mises d'accord sur l'idée d'un référendum basé sur

# LE SAHARA OCCIDENTAL

*Sous l'égide de la MINURSO, le peuple sahraoui aura bientôt l'occasion de répondre à la question référendaire suivante : désirez-vous l'indépendance ou l'intégration au Maroc ?*

Le 29 avril 1991, le Conseil de sécurité a décidé de créer la MINURSO afin de surveiller le processus de désarmement des forces du POLISARIO, selon le résultat du référendum. Malheureusement, les échecs ont été nombreux. On tarde à l'ONU à choisir les pays et les personnes qui composeront les divers contingents. La MINURSO sera divisée en quatre parties : d'abord, le représentant spécial (le Suisse Johannes Manz) et son entourage de quarante-neuf fonctionnaires, puis un contingent de 1 695 militaires. Il y aura par ailleurs un contingent civil de 884 personnes, dont des forces de police, la Commission d'identification et la Commission référendaire, et un contingent de rapatriement ; ces trois dernières entités établiront et vérifieront l'identité du corps référendaire et rapatrieront les personnes qui auront droit de vote. Le contingent militaire s'assurera du retrait d'une bonne partie de l'armée marocaine, verra au cantonnement des combattants marocains et du POLISARIO durant la campagne, et supervisera, avec la Croix-Rouge internationale, l'échange de prisonniers.

Le Canada ne reconnaît pas la RASD et est demeuré neutre dans ce conflit. Cependant, il a toujours appuyé les efforts du Secrétaire général et, grâce à quelques militaires et représentants d'Élections Canada, a contribué à certaines missions techniques sur le territoire en 1987 et 1990. Nous fournissons un bataillon de militaires (700) et un commandant (le major-général Armand Roy) qui sera chargé de tout le contingent militaire de la MINURSO. Vu le succès obtenu par les membres de la GRC et d'Élections Canada lors de l'intervention des Nations Unies en Namibie, Elections Canada fournira aussi du personnel de la MINURSO. Il faut aussi s'attendre à ce qu'une dizaine de membres de la GRC y participent également. Notre apport financier a été fixé par l'ONU à 5,9 millions de dollars, soit 3,09 p. 100 du coût prévu de l'opération (166 millions de dollars US). Le Haut-Commissariat des Nations Unies pour les réfugiés (34 millions de dollars US) afin d'aider à ses opérations humanitaires et au rapatriement des réfugiés sahraouis.

## Les perspectives d'avenir

La création d'un nouveau micro-État, qui vivrait surtout de la pêche et des phosphates risque ne pas être la solution idéale pour la communauté internationale, mais peut-on faire abstraction des aspirations légitimes du peuple sahraoui ? La seule solution légale passe donc par le référendum. D'un autre côté, la solution la plus pratique pourrait être l'intégration, d'ailleurs déjà proposé. Cela permettrait aussi au Sahara occidental de faire automatiquement partie de l'UMA.

Un espoir d'enouement pour la fin de l'année, mais des dérapages sont toujours possibles et une remise à 1992 forcera sans doute la réouverture de tout le dossier et la négociation d'une nouvelle entente.

— RYCHARD BRÖLE

# LA FRANCOPHONIE D'OÙ VIENT-ELLE ET OÙ VA-T-ELLE ?

Il est important, pour l'avenir même de la Francophonie, que le prochain Sommet soit une réussite.

Leopold Sédar Senghor, président du Sénégal, a été le premier, dès 1962, à avancer l'idée d'un «Commonwealth francophone», en compagnie des présidents Habib Bourguiba, de Tunisie, et Dion Hamaoui, du Niger.

En 1970, à Niamey au Niger est créée l'Agence de coopération culturelle et technique (A.C.C.T.). Son mandat est de voir à l'affirmation et au développement d'une coopération multilatérale entre ses membres dans les domaines de l'éducation, de la formation, de la culture, des sciences et de la technologie, et par là au rapprochement des peuples. Elle regroupe aujourd'hui trente-deux Etats membres, sept Etats Associés et deux gouvernements participants (le Québec et le Nouveau-Brunswick).

L'idée d'un «Commonwealth francophone» refait surface en 1975. Elle est reprise et relancée par le premier ministre Pierre Elliott Trudeau. La tenue du prochain Sommet francophone achoppe cependant sur la participation du Québec à un tel Sommet et sur la place que cette province y occuperait. Le 7 novembre 1983, une entente entre le premier ministre Brian Mulroney et le premier ministre du Québec, Pierre-Marc Johnson est signée relativement à la place du Québec dans le cadre d'événements somnités de la Francophonie. Ceci-ci comporterait deux volets : un qui concerne la coopération et le développement, et un autre, de nature politique et économique. Le Québec, présent durant tout le Sommet, peut intervenir lorsqu'il s'agit de quand on parle de la situation politique et économique mondiale.

## La Francophonie et les sommets

La Francophonie, ce ne sont pas seulement les Sommets, c'est une multitude de personnes et d'organisations, telles que l'Association des universités partiellement ou entièrement de langue française, l'Association internationale des maîtres francophones et le Conseil international des radios-télévisions de langue française.

Au tout début de l'histoire des Sommets de la Francophonie, ils ont été organisés par l'entremise de cinq réseaux regroupant des spécialistes dans leurs domaines respectifs et provenant de plusieurs pays francophones. Ces domaines sont l'information scientifique et le développement technologique ; la culture et les communications ; les industries de la langue ; l'énergie ; et national du suivi, qui voit au suivi des programmes adoptés lors du Sommet, et le Comité international de préparation des Sommets, qui s'occupe d'organiser le prochain Sommet et auquel les réseaux doivent présenter des propositions pouvant faire l'objet d'études au prochain Sommet. En mai 1989, lors du Sommet de Dakar, il a été décidé de confier à l'A.C.C.T. le mandat de proposer des programmes et des affectations budgétaires et de voir à la gestion d'un fonds multilatéral créé pour financer la mise en oeuvre de projets sanctionnés aux Sommets. L'A.C.C.T. intégrait ainsi son sein les cinq réseaux et devenait l'organe de réflexion du Comité international du suivi et du Comité international de préparation des Sommets.

Depuis la tenue du premier Sommet en février 1986, plus d'une centaine de projets ont été réalisés. Citons notamment la création d'un Institut de l'énergie à Québec et de l'Université Senghor d'Alexandrie ; la mise en place de TV 5 Canada et de TV 5 Europe ; l'ouverture d'un Centre africain francophone de formation à l'édition, à la diffusion et à la distribution du livre à l'Unité et la création d'un Consortium international de formation à distance, d'une Banque internationale d'information sur les Etats francophones, d'un Fonds de scolarisation des enfants francophones, d'un Fonds de soutien à la Francophonie et du Programme en faveur des victimes de l'apartheid. La Francophonie s'est également donné de nouveaux secteurs d'intervention.

## Le prochain Sommet

Initialement, le quatrième Sommet de la Francophonie devait avoir lieu cet automne à Kinshasa au Zaïre. En janvier, ce pays décidait de passer son tour. Selon le nouvel ambassadeur de la République du Zaïre au Canada, M. Kaweta-Milombe Sampaasa, c'est le calendrier politique de son pays qui a été à l'origine de cette décision, et non les réserves exprimées par le Canada par suite de violations des droits de la personne et, plus particulièrement, du massacre par les forces de l'ordre en mai dernier d'étudiants de l'Université de Lubumbashi qui réclamaient plus de démocratie. Néanmoins, certains autres pays, dont la Belgique qui avait soulève des réserves en la matière, ont été soulagés que le Sommet n'ait pas lieu à Kinshasa. Le Zaïre demeure cependant très actif dans la Francophonie et dans l'organisation du prochain Sommet et, récemment, le président Mobutu a écrit à Ottawa afin d'obtenir une aide canadienne pour la création d'une commission des droits de la personne au Zaïre.

## Les perspectives d'avenir

La Francophonie en est encore au stade de la consolidation. Le Sommet de Chailiot constitue une épreuve. S'il y a échec de la francophonie multilatérale, M. Roy craint à terme dans le monde une rapide régression du français qui ne pourrait plus prétendre à un rayonnement international. Dans un article publié dans *Le Droit* du 7 mai 1991, M. Roy affirme que «L'Afrique francophone a maintenant le choix de ses alliances. Si elle est négligée par la communauté francophone du Nord, elle risque d'aller chercher ailleurs, comme au Japon ou en Allemagne, le soutien, l'assistance et les investissements nécessaires pour son économie.»

D'autre part, de nouveaux défis attendent la Francophonie. La Roumanie et la Bulgarie ont demandé l'autorisation d'assister au Sommet de Chailiot. Certains pays africains craignent l'arrivée de pays d'Europe de l'Est au sein de la Francophonie, car ils ne veulent pas qu'une partie des fonds disponibles soit réorientée vers cette région du monde.

Enfin, toute la question des droits de la personne et du processus de démocratisation dans certains pays africains risque également de causer des frictions, même si tous s'entendent pour dire qu'il revient aux pays africains de faire leur propre choix et de décider de leur propre évolution.

[illegible]

L'ancien autocrate soviétique reculant et le pouvoir de la société civile grandissant, l'URSS sera beaucoup moins à même de menacer ses voisins. Le monde n'a plus à craindre la puissance soviétique. Au contraire, c'est sa faiblesse — et le risque de chaos, de guerre civile et de déferlement de centaines de milliers de réfugiés soviétiques en Occident — qui constitue le principal danger planant sur la stabilité internationale. En définitive, ce seront les forces politiques et économiques intérieures de l'Union soviétique qui décideront de son destin. Les démocrates, déjà divisés en des dizaines de partis politiques querelleurs, devront faire leurs dissensions pour former une alliance effective. Les dirigeants politiques devront rassembler tout leur courage politique pour prendre les décisions pénibles, impopulaires (autoriser des hausses de prix et accepter une montée du chômage, par exemple), mais indispensables pour créer une économie de marché. MM. Eltsine et Gorbatchev devront collaborer de façon productive malgré leurs ambitions et leurs points de vue contradictoires.

L'OCCIDENT PEUT JOUER UN RÔLE CONSTRUCTIF dans tout cela, non pas en déversant des milliards de dollars, mais en aidant les éléments dynamiques de la société soviétique qui participent activement à la mise sur pied d'organismes autonomes, c'est-à-dire les nouveaux entrepreneurs, les médias indépendants, les organes gouvernementaux en mutation, et les avocats et les juges qui ne demandent qu'à faire primer le droit. Une aide novatrice et sélective est de loin plus valable qu'une cascade de fonds non dirigés. Une assistance bien choisie sera très fructueuse, car elle contribuera à la lutte couraueuse que le peuple soviétique mène pour créer une société humaine et démocratique qui puisse trouver sa place de membre honore et pacifique au sein de la communauté des nations civilisées.

Après six années de bricolage, d'improvisation et de manœuvres tactiques, la tentative de réformer du régime communiste entreprise par M. Gorbatchev s'est épuisée d'elle-même. La vraie révolution qui vise à détruire totalement le régime communiste, l'Union soviétique se trouve maintenant au point où se trouvait la Pologne, la Hongrie et la Tchécoslovaquie à l'automne décisif de 1989.

Le communisme a été vaincu, mais le triomphe de la démocratie n'est en rien garanti. Ses premiers bourgeois flamboyants sont encore fragiles et vulnérables. Si la faillite de l'économie soviétique n'est pas jugulée, une «Russie de Weimar» pourrait tomber aux mains de mouvements politiques démagogiques. Les forces de l'intolérance, des violences ethniques et la xénophobie guettent juste sous la surface de la culture politique démocratique naissante. Cependant, grâce au coup d'Etat déjoué, les chances de réussite de la transformation politique et économique sont bien plus fortes maintenant qu'elles ne l'étaient il y a quelques mois à peine. □

Sam Wright

Nombre de commentateurs ont expliqué que l'Occident avait commis un impitoyable quasi-fatal en n'accordant pas d'emblée une aide économique plus massive à une URSS au bord de la faillite. On a laissé entendre qu'enობ-tenant pas l'aide occidentale à la réunion de juillet des sept pays industriels (G7) à Londres, M. Gorbatchev avait sérieusement compromis son image en URSS, voire encouragé ses opposants conservateurs à envisager de prendre le pouvoir par la force, puisqu'en passant aux actes, ils ne remettaient pas en cause une importante aide étrangère.

En réalité, le coup d'Etat a été décisif pour des raisons internes aux-quelles l'Occident ne pouvait pas grand-chose. La tentative de coup d'Etat militaire était un dernier effort infructueux de conservateurs n'ayant plus d'autre recours pour défendre leur position désespérée. Ils ont agi poussés par une peur panique d'être balayés par la marée des événements, et par le sentiment qu'ils devaient faire quelque chose avant qu'il soit trop tard. Trois faits nouveaux ont contribué au désespoir croissant de la vieille garde de Krehlin.

D'ABORD, AU PRINTEMPS 1991, MIKHAIL GORBATCHEV A UNE FOIS DE PLUS CHANGÉ D'ORIENTATION politique. Il a commencé à s'écarter de la voie conservatrice dans laquelle il s'était engagé à l'automne 1990 pour rechercher une collaboration active avec les forces réformatrices dirigées par Boris Eltsine. Les élections de juin ont démontré la puissance grandissante des réformateurs. Boris Eltsine a été porté à la présidence de la République de Russie avec une nette majorité des voix, des démocrates en vue ont été élus maîtres de Moscou et de Leningrad, et la population de cette dernière ville a décidé de lui rendre donc honneur Pierre le Grand, tsar depuis longtemps disparu, plutôt que le fondateur de l'Etat soviétique.

Ensuite, M. Gorbatchev a reconnu, tardivement, qu'il était impossible de préserver l'URSS dans sa forme passée d'Etat fortement centralisé dans lequel toutes les décisions importantes étaient prises par une poignée de fonctionnaires à Moscou. Réaliste face à des objectifs continuellement redoublés, il en est arrivé, à contrecoeur, à la conclusion que le seul espoir d'éviter le morcèlement complet de l'Union soviétique était de négocier directement avec les dirigeants des républiques la création d'une fédération souple dans laquelle une grande part de pouvoir leur serait dévolue. Tout comme il avait fini par donner son assentiment à l'unification de l'Alliance et à l'instauration du multipartisme en Union soviétique, même s'il avait commencé par résister farouchement à ces changements. M. Gorbatchev s'était habitué à l'idée d'une véritable fédération constituée de républiques soviétiques très autonomes.

Les analystes occidentaux avaient certes bien prévu que le tout prochain Traité de l'Union soviétique de déclencher le coup d'Etat auquel on

sa domination.

À la mi-juillet, Boris Eltsine a décrété la disparition des cellules du Parti dans tous les organes gouvernementaux se trouvant sur le territoire de la Russie. Si ce décret était entré en vigueur, il aurait porté un coup fatal au pouvoir communiste en URSS. M. Gorbatchev s'est déclaré opposé au décret de B. Eltsine, mais les conservateurs n'étaient pas disposés à le laisser veiller sur leurs intérêts. On s'attaquait à ce qui leur restait de pouvoir et à tous leurs privilèges considérables. Leur réponse a été de prendre les armes.

LES RÉFORMATEURS SONT SORTIS INFINIMENT renforcés du coup d'Etat avorté. La défaite ignominieuse des conservateurs constitue un tournant fondamental dans la révolution d'après 1985. M. Gorbatchev a retrouvé la présidence de l'URSS, mais «l'ère Gorbatchev» est terminée. D'autres, et en tout premier lieu Boris Eltsine, dièrent de plus en plus les choix politiques soviétiques.

Le putsch raté contribuera à accélérer les changements mêmes que ses instigateurs venaient empêcher, soit la désintégration du parti communiste, le renforcement des républiques, la dépolitisation de l'armée et du KGB, le passage à une économie de marché, et la victoire des réformateurs aux prochaines élections nationales. En fait, si les républiques obtiennent, comme elles le réclament de plus en plus, le contrôle des troupes stationnées sur leur sol, la toute puissance de l'URSS au niveau international sera plus que jamais minée.

Le nombre de commentateurs ont expliqué que l'Occident avait commis un impitoyable quasi-fatal en n'accordant pas d'emblée une aide économique plus massive à une URSS au bord de la faillite. On a laissé entendre qu'enობ-tenant pas l'aide occidentale à la réunion de juillet des sept pays industriels (G7) à Londres, M. Gorbatchev avait sérieusement compromis son image en URSS, voire encouragé ses opposants conservateurs à envisager de prendre le pouvoir par la force, puisqu'en passant aux actes, ils ne remettaient pas en cause une importante aide étrangère.

En réalité, le coup d'Etat a été décisif pour des raisons internes aux-quelles l'Occident ne pouvait pas grand-chose. La tentative de coup d'Etat militaire était un dernier effort infructueux de conservateurs n'ayant plus d'autre recours pour défendre leur position désespérée. Ils ont agi poussés par une peur panique d'être balayés par la marée des événements, et par le sentiment qu'ils devaient faire quelque chose avant qu'il soit trop tard. Trois faits nouveaux ont contribué au désespoir croissant de la vieille garde de Krehlin.

# LE POUVOIR CENTRAL SOVIÉTIQUE K.-O.

En ratant leur coup d'Etat au mois d'août, les conspirateurs accéléreront les changements même qu'ils voulaient empêcher.

PAR PAUL MARANTZ

**L**E COUP D'ETAT MANQUÉ EN UNION SOVIÉTIQUE a fait l'effet d'un tremblement de terre dans une région sismique. On avait beau le prédire depuis longtemps, le choc ressentit n'en a pas été moindre. En fait, le coup de force a été un choc précisément parce que l'on en parlait si souvent sans que rien n'arrive — ainsi, en décembre 1990, M. Edouard Chevardenadze en avait évoqué la possibilité en demis-sionnant de ses fonctions de ministre des Affaires étrangères — que la population avait fini par s'habituer aux pressions souterraines puissantes qui s'accroissent manifestement le long de lignes de failles bien connues.

Depuis le milieu des années 1980, le conflit se durcissait entre deux forces politiques anti-thétiques, à savoir : les réformateurs, qui voulaient transformer le totalitarisme soviétique en démocratie pluraliste doublée d'une économie de marché, et les ultra-conservateurs, qui s'accrochaient désespérément à l'ancien régime et à tous les privilèges et pouvoirs qu'il leur conférait. CE CONFLIT ENTRE RÉFORMATEURS ET CONSERVATEURS TENAIT À DES VISIONS DIAMÉTRALEMENT OPPOSÉES DU MONDE. Les premiers battaient leur politique sur plusieurs hypothèses et principes fondamentaux :

Il fallait cesser d'aborder la politique internationale d'un point d'une idéologique. Les pays capitalistes ne devraient pas faire figure d'ennemis. L'Union soviétique devait mettre fin à l'isolement dans lequel elle-même enfermée et profiter des plus grandes réalisations de la civilisation mondiale, comme les institutions politiques démocratiques, les règles juridiques visant à protéger les droits fondamentaux de la personne et l'économie de marché ; et l'URSS devait reconnaître que de nombreuses contraintes limitaient son pouvoir international et accepter de jouer un rôle bien moindre dans le monde.

Au départ, pendant la période allant de 1986 à fin 1988, lorsque M. Gorbatchev a décidé d'apaiser le monde.

l'URSS ne devait pas négliger sa puissance militaire. Pour être en mesure de repousser une attaque ennemie et d'exercer l'influence politique qu'il méritait, le pays devait posséder la première armée du monde ;

Il fallait protéger le socialisme contre les adversaires intérieurs et extérieurs qui aimeraient le voir démantelé. L'introduction d'un marché capitaliste entraînerait le chaos et accentuerait les souffrances. L'intégration rapide dans le système économique international permettrait à des sociétés étrangères d'acheter les ressources naturelles de l'URSS et de piller son environnement ;

l'URSS devait préserver son statut de grande puissance. Ses dirigeants ne devaient pas humilier la nation en abandonnant des alliés de longue date et en rampant devant l'Occident pour obtenir prêts et aide.

La juxtaposition des deux déclarations, celle de réformateurs et celle d'un conservateur militaire, montre combien le fossé qui sépare ces deux camps adverses est profond. Dans le numéro d'août 1989 d'*International Affairs*, deux universitaires libéraux, MM. Radomir Bogdanov et Andriy Kortunov, rappelaient avec force le programme réformateur :

Quant à notre place sur l'échiquier mondial, elle ne peut, en toute objectivité, que reculer et ce, que nous conservions ou pas un surplus d'armes nucléaires. La raison en est que, sur

bien des plans (structure économique, niveau de vie, espérance de vie, environnement, etc.), nous sommes loin d'être un pays très développé. Notre faiblesse ressortira de plus en plus à mesure que le système mis en place par la Guerre froide disparaîtra, que les relations internationales se démilitariseront et que de nouveaux éléments, non militaires, de la puissance nationale se manifesteront. Évidemment, nous pourrions retarder ce processus inévitable, mais ne ferions-nous pas mieux d'abandonner des symboles désuets du statut international pour nous attacher à rattraper des pays qui nous ont surpassés au cours des dernières décennies ?

À l'opposé, le colonel Viktor Alksnis, qui s'était révélé un des plus farouches adversaires de M. Gorbatchev, déclarait ce qui suit :

En réduisant le budget militaire, nous menons le pays à sa ruine. Nous sommes en train d'essayer de détruire ce que nous avons mis des dizaines d'années à créer, tout ce dont nous pourrions légitimement être fiers. On nous sommait « la Haute-Volta dotée de missiles », bientôt, nous ne serons plus que « la Haute-Volta ».

À la mi-1990, IL ÉTAIT DE BON TON DANS CERTAINS milieux, tant en Union soviétique qu'en Occident, de mettre une croix sur Mikhaïl Gorbatchev, d'en parler comme d'un relique du passé, comme de quelqu'un qui s'était laissé englober par le flot des événements et qui ne pouvait plus maîtriser la marée montante de l'opposition populaire au régime communiste. Cependant, des développements fin 1990 et début 1991 ont prouvé qu'il était prématuré de le condamner ainsi. La lutte entre les conservateurs du Parti, à droite, et les radicaux réformateurs, à gauche, s'intensifiant, le président de l'Union a continué de naviguer entre les deux camps en tenant fermement la barre. À peine le coup d'Etat passé, d'aucuns se demandent ce que l'Occident aurait pu faire pour renforcer le courant réformateur en URSS et ce qu'il devrait faire pour éviter qu'un autre putsch se produise à l'avenir. Malheureusement, ce débat est faussé du fait que l'on ne mesure pas convenablement le poids des forces internes à l'URSS dans le modelage des politiques du pays, ni la difficulté qu'il y a, par conséquent, à essayer d'influer, sur les politiques soviétiques. La controverse passionnée du mois d'août sur la réaction de Mme Barbara McDougall au coup d'Etat est symptomatique de telles erreurs d'appréciation.

étaient véritablement étudiées», commente David Leyton-Brown, membre du Centre for International and Strategic Studies de l'Université York. À la mi-janvier, Bernard Wood, directeur de l'ICPSI, a fait la même remarque devant un comité parlementaire : «Je devrais blâmer le gouvernement de ne pas en avoir fait plus pour clarifier les choix et fournir des occasions de débat, et blâmer l'opposition (parlementaire et autre) qui, à force de se concentrer sur des problèmes périphériques, a fini par banaliser les questions se rapportant à la guerre, à la paix et à la sécurité collective».

TOUTEFOIS, LES PACIFISTES, QUE LES DÉBATS CONDESCENDANTS ENTRE ACTEURS puissants du «nouvel ordre mondial» dégoûtent, ne sont pas des adeptes des principes de la sécurité collective. «La guerre du Golfe m'a fait comprendre certaines des suppositions de la gauche», déclare Homer-Dixon, notamment celle selon laquelle les puissants ont automatiquement tort, par principe, alors que les gens qui sont au bas de l'échelle violent toujours justice. Certains pacifistes ont exprimé leur méfiance pour ce que Doug Roche, ancien ambassadeur du Canada au désarmement, appelait «la culture du combat». Il s'agit, en fait, d'une culture dans laquelle «on utilise les dépenses militaires pour permettre aux États industriels de toujours contrôler l'exploitation des ressources, les techniques de tous jours contrôler le temps de la crise, M. Roche n'a cessé de répéter que nous ne pouvions pas laisser les militaires décider de la politique du Canada. Deux grands thèmes ressortaient de cette répulsion, exprimée pour les hostilités, et le rôle du Canada. Le premier concernait l'éthique de la violence, le second, l'efficacité des institutions internationales. «Notre analyse», explique Ernie Regehr, de Projet Ploughshares, qui est Memnonite, part de ce que l'on estime être une «guerre juste». Elle autorise le recours à la violence militaire contre un agresseur, pour autant que le risque de morts et de dommages civils soit restreint. «Mais nous en sommes arrivés à la conclusion qu'il n'y avait pas de destructions causées par les guerres modernes et l'incapacité de distinguer les cibles civiles des cibles militaires, il est devenu inacceptable de choisir délibérément la guerre comme instrument politique».

En théorie, les membres de Projet Ploughshares acceptaient une intervention politique pour faire appliquer les sanctions économiques, par exemple, il s'agissait donc favorables à la présence dans le Golfe de Canadiens chargés de vérifier que l'on n'entretenait pas les sanctions. En pratique, en revanche, leur analyse de la «guerre juste» signifiait que les sanctions ne pouvaient être appliquées que par le biais d'une surveillance accrue, mais sans intervention militaire. Cette logique aurait paralysé les participants de la coalition en cas de violations flagrantes des sanctions. «S'il s'était avéré impossible de faire respecter les sanctions non militaires», explique Regehr, cela aurait voulu dire que la bataille était de toute façon perdue. Des violations systématiques des sanctions auraient prouvé qu'il n'existait pas de consensus au sein de la coalition pour obliger les Irakiens à rentrer chez eux. Pour de nombreux observateurs, les objections de Projet Ploughshares face à la guerre du Golfe étaient terriblement irréalistes, même si le message clairement transmis par les arguments de M. Regehr — sanctions, oui ; tifs avancés par Washington. Comme l'explique M. Leyton-Brown, «Il ne s'agissait pas seulement d'anti-américanisme. L'utilisation de techniques militaires américaines, et le fait que les Américains essaient de dominer le tiers-monde pour protéger leurs intérêts pétroliers éveillait la méfiance de bien des gens. Beaucoup dans ce groupe affirmaient que, s'il n'y avait pas eu de pétrole au Koweït, les États-Unis n'auraient pas levé le petit doigt».

UN AUTRE BLOC À L'INTÉRIEUR DU MOUVEMENT PACIFISTE EN EST ARRIVÉ PAR un autre chemin : à se méfier des mesures prises par les États-Unis. Ce groupe comprend quelques-uns des émules de Lester Pearson qui, depuis le début des années 1950, font pression pour des Nations Unies plus efficaces. Ces personnes, précises M. Leyton-Brown, ont soutenu pendant toute la Guerre froide que la polarité des superpuissances pouvait être atténuée si l'on laissait les mécanismes de sécurité collective fonctionner. Pour certains participants de l'ONU, la guerre du Golfe a marqué l'heure de gloire de l'Organisation, mais d'autres internationalistes étaient plutôt d'avis qu'à cause de la guerre, la Charte de l'ONU a été gravement délaissée. En outre, des partisans de l'ONU redoutaient qu'en prenant part au conflit, le Canada perde de sa crédibilité en tant que pays participant depuis longtemps aux opérations de maintien de la paix.

Les deux groupes se réclamaient de Lester Pearson, si bien que devant cette querelle, Geoffrey Pearson s'est senti obligé de rappeler, dans le *Globe and Mail*, que son père pouvait se montrer dur si les circonstances l'exigeaient. «L.B. Pearson pensait que le régime de sécurité collective prévu par la Charte supposait que le Conseil de sécurité utilise de la force en cas d'agression (...). La présence canadienne renforce notre poids diplomatique là où il compte. L.B. Pearson aurait certainement tiré le meilleur parti de la chose». Geoffrey Grenville-Wood, président de l'Association canadienne pour les Nations Unies (ACNU), a d'abord vu dans la Guerre du Golfe une occasion en or pour l'ONU, après des années d'indifférence. Pour la toute première fois, en août 1990, le Conseil de sécurité a été unanime. Ses membres sont convenus que l'Irak avait eu tort d'envahir le Koweït, et le Département d'État américain semblait tout disposé à laisser les Nations Unies taper du poing sur la table. C'est avec plaisir que M. Grenville-Wood a regardé l'ONU mettre des sanctions économiques en place, petit à petit, puis les étayer par un soutien militaire.

Cependant, on s'est demandé si les participants suivaient assez fidèlement la Charte des Nations Unies. Qui menait la barque en réalité ? «Il est vrai qu'avant la crise, il n'existait pas de commandement militaire intégré à l'ONU, explique le président de l'ACNU, mais il aurait dû être possible d'en créer un, non ?» Lorsque les États-Unis envoyèrent 250 000 soldats de plus en Arabie Saoudite en novembre, M. Grenville-Wood commença à clamer haut et fort ses appréhensions. Puis, quand fin novembre, le Conseil de sécurité a adopté la résolution 678 autorisant l'emploi de «tous les moyens nécessaires» pour libérer le Koweït si l'Irak n'avait pas retiré ses troupes au 15 janvier 1991, M. Grenville-Wood a écrit à M. Joe Clark pour lui dire sans ambages que cette décision mettait les Nations Unies «en grave danger». L'ACNU appuyait les sanctions, mais déplorait que l'on s'empresse de passer la force avant même d'avoir évalué leurs effets. M. Grenville-Wood évite d'accuser les États-Unis d'avoir carrément manipulé l'ONU, mais pour lui : «Il ne faisait aucun doute qu'Américains et Britanniques devaient user de toute leur influence pour que le Conseil de sécurité vote les résolutions». En raison de ces appréhensions, M. Grenville-Wood et l'ACNU se sont démarqués de la position de l'ONU.

QUELLES INCIDENCES CES DIFFÉRENTES DISCUSSIONS ONT-ELLES EUES SUR LA conduite du Canada pendant la guerre ? Pour John Lam, directeur du Centre pour le contrôle des armements et le désarmement, celle du mouvement pacifiste est sans doute plus manifeste dans les déclarations plus dans l'après-guerre. «Je pense, dit-il, que les discours prononcés par MM. Clark et Mulroney en février, sur la nécessité, après cette guerre, de limiter le commerce des armements, répondaient directement aux préoccupations de la population quant à la façon dont ce conflit a éclaté pour aujourd'hui, malgré les efforts de groupes comme le MCPGN pour que le public continue à s'intéresser à ce qui se passe dans le Golfe, la brève trêve au sein du mouvement pacifiste s'est calmée. «À l'impression, reconnaît M. Leyton-Brown, que nous en sommes revenus au *status quo ante*». Quand les pacifistes ont été confrontés à un vrai conflit, dans lequel l'adversaire était un dirigeant cruel aux ambitions apparemment illimitées, ils n'ont rien su faire d'autre, no presque, que de dénoncer la guerre. Pour finir, les sondages ont révélé que la majorité des Canadiens et Canadiennes soutenaient la coalition approuvée par l'ONU et qu'ils étaient prêts à payer le prix des hostilités. La classe politique canadienne a emboîté le pas à la population, elle n'a pas suivi ce que demandaient les pancartes brandies sous ses fenêtres. □

# LE CANADA ET LA GUERRE : JOUTES INTESTINES

Les combats sont terminés, mais les discussions sur la façon dont la guerre du Golfe a commencé et sur le rôle que le Canada y a joué continuent.

PAR CHARLOTTE GRAY

LES SOLDATS CANADIENS SONT PEUT-ÊTRE TOUTS RENTRÉS SAINS ET SAUFS du Moyen-Orient à l'heure qu'il est, mais selon les pacifistes du Canada, la guerre du Golfe n'est pas terminée. «Chaque jour, il meurt encore plus de mille personnes», affirmait un appel agité dans ma

boîte à lettres en juillet. «Il n'y a ni missiles ni bombes, et les victimes ne sont pas des soldats. Ce sont des enfants». L'appel venait des Médecins canadiens pour la prévention de la guerre nucléaire (MCPGN), un groupe qui a fait la une de l'actualité au printemps dernier en organisant, avec ses membres locaux, un *sit-in* devant le bureau de recrutement de l'armée canadienne à Hamilton, et avec un discours passionné contre le recours à la force prononcé à Toronto par le Dr John Polanyi, prix Nobel.

Dans l'ensemble, la position adoptée par les MCPGN était la version fleur bleue du pacifisme du printemps dernier : un dégoût pour l'attitude du gouvernement, qui a forcé tête baissée dans le conflit (et pour l'empressement du premier ministre à embôbler le pas aux Américains), sans examiner rigoureusement les autres solutions possibles. «Nous n'avons pas dit que l'emploi de la force ne se justifie jamais», expliqua Bill Singleton, directeur général des MCPGN. À notre sens, l'ampleur des dégâts aurait été telle dans le Golfe que la profession médicale aurait été incapable d'y faire face. Les faits nous ont malheureusement donné raison».

En réalité, la guerre du Golfe a provoqué une crise intellectuelle dans bien des groupes de pression pacifistes. Ils ne se sont pas entendus entre eux sur ce qu'aurait dû être la réaction appropriée de la collectivité internationale face à un dictateur impitoyable, ni sur la position que le Canada aurait dû adopter avant et après la guerre. Paradoxalement, ils se montrent plus unanimes aujourd'hui alors qu'ils examinent les événements depuis le havre d'une paix officiellement proclamée.

Les autopsies du conflit pratiquées par des détracteurs comme Bill Singleton ont en commun de distiller des «leçons l'avaient bien dit». Pour eux, si Saddam Hussein est toujours au pouvoir, si l'Irak est en ruines et les champs de pétrole du Koweït, en flammes, c'est que la guerre n'a servi à rien. Chaque dépêche qui annonce la reprise des ventes d'armes au Moyen-Orient ou fait état de la famine qui sévit en Irak renforce une certitude morale que la réalité des ambitions cruelles de Saddam Hussein avait ébranlée.

Le désarroi du mouvement pacifiste canadien pendant la crise n'était guère surprenant, étant donné son hétérogénéité. Certains groupes aspirent à un remodelage radical de la société, d'autres souhaitent que la limitation des armements et le désarmement progressent par le biais d'institutions stables. Il y a le pacifisme des Mennonites et des Quakers, qui prône de tendre l'autre joue et qui transparaît dans les positions de Projet Ploughshares (un groupe pacifiste de large assise paraissant par le Conseil canadien des églises depuis 1976). Puis, il y a le rejet féministe, par La Voix des femmes, des valeurs patriarcales que représentent les alliances militaires, notamment, et beaucoup de groupes sont réunis au sein de l'Alliance canadienne pour la paix (ACP), coalition nationale fondée en 1985 qui regroupe 300 organisations (y compris des syndicats et des groupes de femmes) et des milliers de citoyens. Quelque 70 p. 100 des membres sont des femmes, une proportion qui n'est pas respectée dans l'encadrement.

Parallèlement au mouvement pacifiste, mais sans liens avec lui, on trouve différentes cellules de réflexion, comme le Centre pour le contrôle des armements et le désarmement (CCCAD) et l'Institut canadien pour la paix et la sécurité internationales (ICPSI). Ces instituts de recherche sur

L'intérêt public se cabre à l'appellation de «lobbies de la paix» à cause des sous-entendus idéologiques. Néanmoins, ils ont pour mandat d'aider à éclairer la population sur la nécessité de la sécurité internationale et du règlement pacifique des conflits.

Au printemps dernier, ils ont alimenté le débat public parce que leurs révisions d'information officielles régulières ont été mieux couvertes par la presse que les manifestations improvisées devant les bureaux du gouvernement. Ils ont contribué à façonner l'opinion publique qui, son tour, a contribué à modeler la politique. «Le mouvement pacifiste en soi a eu peu d'influence sur les ministères, m'a assuré un haut fonctionnaire du ministère des Affaires étrangères, mais les sondages d'opinion ont eu un poids considérable».

Il était prévisible, étant donné la diversité des intérêts et des intentions, que la crise du Golfe ferait ressortir les divisions au sein d'un mouvement où couvent en permanence idéalisme, argutie, internationalisme et anti-américanisme instincitif. «Pendant des semaines, raconte Thomas Homer-Dixon, coordinateur des études sur la paix et les conflits à l'Université de Toronto, beaucoup d'entre nous en étaient malades. Nous n'avons pas défini nos positions à la légère.

Malgré ses propres références impeccables dans le mouvement pacifiste même (il s'est bruyamment opposé à l'invasion de la Grenade et du Panama par les Américains), le professeur Homer-Dixon est devenu faucon au milieu des colombes du campus quand il a conclu, à contre-cœur, que la force était le seul recours lorsque l'on avait affaire à un tyran aussi malveillant que Saddam Hussein.

Nous n'avons le choix qu'entre des options terribles. Je ne croyais pas que les sanctions pouvaient ramener la paix sans d'horribles souffrances humaines. Si l'on avait laissé Saddam Hussein continuer sur sa lancée, il m'a donc semblé que le plus sage était d'employer la force aussi vite et aussi résolument que possible.

Au printemps dernier, cependant, les voix que l'on entendait le plus chez les pacifistes étaient celles condamnant la guerre du golfe Persique. Or, leurs condamnations fracassantes ont contribué à insulter de l'énergie, ne fût-ce que temporairement, à un mouvement qui, dans l'ensemble, s'essouffait. À la mi-1990, des causes plus à la mode, comme les campagnes pour la libération de Nelson Mandela ou pour sauver la forêt tropicale) ont relégué le mouvement pacifiste au second plan. «Mais le Golfe nous a re-centrés sur le problème de la guerre elle-même», explique Singleton. En février, à la conférence de l'ACP à Montréal, des dirigeants de groupes pacifistes du Canada entier se sont unis pour faire pression contre la guerre. Ce qui a fait dire à Pierre Jasmin, pianiste classique, séparatiste de longue date et président du groupe québécois Artistes pour la paix : «Les Canadiens et les Québécois s'engagent enfin sur quelque chose. La paix».

La guerre du Golfe a certes galvanisé le mouvement pacifiste, mais les pacifistes eux-mêmes n'ont pas proposé de solutions au problème fondamental de la crise, à savoir : comment la communauté internationale devrait-elle réagir face à des tyrans dangereux ? Il faut dire à leur décharge qu'ils ont été pris de court. Des gens habitués à penser par rapport au conflit Est-Ouest ont eu du mal à adapter leurs analyses à un autre contexte. De plus, les porte-parole les plus éminents ont peu montré l'exemple en la matière. Divers analystes ont déploré l'absence de discussions éclairées. «Le débat parlementaire a été fort peu convaincant. Avant le début de la guerre, il était canadienne. À Washington, en revanche, toutes les positions raisonnables partisans. Ensuite, les Libéraux ont choisi d'appuyer *à posteriori* l'action

Un des principaux défis que le prochain «pa» des Nations Unies aura à relever consistera à mieux utiliser un système extrêmement décentralisé du gouvernement planétaire. «Coordination» et «avancée comparée» sont deux concepts théoriques qui, en pratique, n'existent point ainsi dire pas. Ainsi, même un observateur aguerri du monde des gouvernements, intergouvernementaux ou gouvernementaux, qui se portent au secours du Bangladesh après qu'une catastrophe naturelle s'est abattue sur le pays ou du Kurdistan, frappé par un cataclysme d'origine humaine. Non seulement des gouvernements déployés en ce moment des efforts sans grande coordination avec d'autres gouvernements, mais des organismes des Nations Unies font la même chose sans se consulter entre eux ni tenir le réseau informé. Il faut que cela change.

De l'avis général, le Secrétaire général accompli en fait à lui seul le travail de trois ou quatre personnes. Il est certes probable que nul ne s'acquitterait convenablement de toutes les tâches, mais il n'en est pas moins inacceptable que l'on choisisse quelqu'un qui n'est pas le plus à même de remplir l'impérative laquelle d'entre elles. Or, c'est ce qui arrivera, inmanquablement, au terme de l'actuel processus de sélection.

ON MURMURE EN CE MOMENT À NEW YORK que M. Pérez de Cuellar pourrait envisager d'accepter un nouveau mandat, plus court, disons d'une année ou deux. Même si l'intéressé lui-même a répété que telle n'est pas son intention, il lui serait difficile de dire non si les cinq membres permanents du Conseil de sécurité lui demandaient de rester. La France l'a toujours défendu contre vents et marées et, depuis peu, l'Union soviétique et la Chine font des commentaires positifs sur les résultats qu'il a obtenus. De fait, cette solution provisoire serait assez sensée si, en contrepartie, le Conseil de sécurité créait un comité de recherche indépendant qui se mettrait sérieusement en quête d'un homme ou d'une femme autonome et imaginative capable de prendre la suite de l'actuel Secrétaire général. Beaucoup oublient souvent que se porter candidat à ce poste d'un homme politique briquant un siège parlementaire en Occident ne se pose pas à la manière d'un homme politique. Il est grand temps que les Nations Unies élargissent leurs horizons hors du bassin des habituels candidats gouvernementaux qui ont des appuis à New York. Il est fort possible que l'on choisira un Africain. Cependant, on devrait attacher bien plus d'importance à la bonne vieille compétence et aux qualifications qu'aux origines géographiques et rechercher quelqu'un qui défende la paix et la justice internationales avec dignité, quelqu'un qui n'ait pas peur, qui ne mâche pas ses mots et qui sache s'exprimer, quelqu'un qui monte l'exemple pour demain.

cultivé, ouvert, autonome et créatif, qui ait des conceptions, du dynamisme et aussi une bonne dose de bon sens.

Quels sont les principaux éléments de la destruction de l'ONU à la gestion des conflits, stimulée par une demande croissante de réparations de guerre et la destruction des pour réparations de guerre et la destruction des secours humanitaires, la gestion d'un fonds d'acheminement, même contre le gré de certains, au programme de l'ONU figurent la coercition, des tâches que la crise du golfe Persique a ajoutées à l'acheminement, même contre le gré de certains, s'est accrue avec la guerre du Golfe. Au nombre depuis 1988 d'interventions des casques bleus, s'est accrue avec la guerre du Golfe. Au nombre des conflits, stimulée par une demande croissante de réparations de guerre et la destruction des secours humanitaires, la gestion d'un fonds

capacités d'armements chimiques et nucléaires de l'Irak. Or, ces tâches enlèvent au parassant de la souveraineté nationale énoncée au paragraphe 2 de l'article 7 de la Charte. Alors que les opérations traditionnelles de maintien de la paix, qui consistent à interposer une force lampon un certain détachement, de la prudence et du tact, les tâches qui se profilent aujourd'hui à l'horizon exigent plus de vision et de culot.

DE PLUS, LE SECRÉTAIRE GÉNÉRAL DE L'ONU DOIT défendre haut et fort les droits de la personne et il au développement et à l'environnement. Pour les Nations Unies pour embarrasser ou cafoier les gouvernements, il faut aussi quelque un qui voit mieux utiliser la «charnière» formidable qu'offrent au développement et à l'environnement. Pour gérer l'ordre du jour mondial, le Secrétaire général doit aussi gérer une bureaucratie tentaculaire et complexe, une armée de casques bleus et une légion de chercheurs, de techniciens et de membres des sections humanitaires. Il devient urgent de trouver un gestionnaire de premier ordre capable de définir de nouveaux moyens de créer une synergie entre des organisations «impartiales» de la solidarité «amille» des organes spécialisés de l'ONU (FAO, OMS, OIT, etc.). Ceux-ci traduisent une approche sectorielle du monde, alors que le système international réclame, pour la résolution des problèmes, des approches plus globales et synthétiques. De plus, un nombre grandissant d'organismes non gouvernementaux ont des buts et des méthodes d'activités plus précises. Il est temps de chercher pour la plus haute charge un candidat qui soit très

tion a toujours été l'appareil des cinq membres permanents du Conseil de sécurité. L'idée d'une sélection plus populaire par l'Assemblée générale a été rejetée à Dumbarton Oaks, en 1944, puis, de nouveau, à San Francisco, en 1945. L'Assemblée générale se contente d'entériner le choix du Conseil, conformément à l'article 97 de la Charte qui précise que «le Secrétaire général sera nommé par l'Assemblée générale sur recommandation du Conseil de sécurité».

De toute évidence, pour faire l'affaire, un candidat doit bénéficier du soutien des grandes puissances. Donc, étant donné les dures réalités de la Guerre froide, les puissances ont opté pour le petit dénominateur commun. Pour éviter un veto, ce sont les références en tant que «diplomate présentable qui ne ferait pas de vagues» qui sont devenues la partie essentielle du curriculum vitae d'un candidat possible, suivie par l'«obligation» de rotation régionale du poste. Bien entendu, certains membres permanents ont établi d'autres critères. Ainsi, Paris a toujours insisté pour que les candidats parlent assez bien français.

M. HAMMARSKJÖLD S'EST FAVORISÉ ET IL A surpris les cinq permanents. En effet, on s'était attendu à un technocrate apollinien, il s'est avéré être le plus dynamique des cinq Secrétaires généraux que l'ONU a eu à ce jour. Néanmoins, dans le choix des candidats, on tient trop peu compte des qualités de dirigeant ou des capacités de gestionnaire des personnes. La désignation de M. Kurt Waldheim en 1971, puis la reconduction de son mandat en 1976 sont la preuve de cette négativité flagrante. Le processus de sélection en est arrivé à se caractériser par un manque d'intérêt et par des consultations et une recherche insuffisantes, au point qu'il faut complètement le revoir.

Les sociétés importantes, les grands journaux, les universités cherchent à recruter les meilleures hommes et femmes pour leurs postes de haute direction. Même pour les gouvernements, il devient de plus en plus manifeste, au vu des bouleversements qui ont secoué la politique internationale ces toutes dernières années, que les intérêts des États membres seraient eux aussi mieux servis à long terme, tant individuelle-ment que collectivement, si les Nations Unies avaient à leur tête quelqu'un de fort plutôt qu'une personnalité acceptable politiquement.

La fin de la Guerre froide signifie que de nombreux obstacles qui avaient empêché les instances internationales d'agir efficacement disparaissent. Après une quarantaine d'années d'alternements, plus que jamais depuis la Seconde Guerre mondiale, nous avons des chances de nous achever sans choisir une direction internationale vigoureuse. La Charte elle-même est vague quant aux précisions requises, les articles 100 et 101 permettent seulement que le Secrétaire général et le personnel «ne sollicitent ni n'acceptent d'ins-tructions d'aucun gouvernement ni d'aucun autre organisme existant à l'Organisation» et font preuve des «plus hautes qualités de travail, de compétence et d'intégrité». Pourtant, l'ONU a besoin de

# LES DES SONT PIPES

Qui que l'on nomme à la tête de l'ONU, le processus de sélection du Secrétaire général est une mascarade à laquelle il est temps de mettre fin.

PAR THOMAS G. WEISS

LES ÉQUIPES DE BASEBALL ONT TENDANCE À changer de gérants dès qu'une série de défaites embarrasse les propriétaires et finit par agacer les partisans. Aux Nations Unies, tout va bien. Pourant, le 31 décembre, elles vont remplacer leur plus haut fonctionnaire, qui achèvera alors deux mandats consécutifs

Son successeur héritera d'une organisation dont la renaissance semblait inimaginable et, plus encore, imprévisible à l'époque où Javier Pérez de Cuelar, l'actuel Secrétaire général, en a pris le relais. Cette renaissance paraît d'autant plus spectaculaire lorsque l'on sait que la débâcle financière du milieu des années 1980 a failli abattre le moral du secrétariat de l'ONU et l'a pratiquement empêché de fonctionner.

Ce qui a le plus changé sur la scène internationale, ce sont les attitudes politiques à l'Est comme à l'Ouest. Après quatre décennies de franche hostilité ou, au mieux, d'indifférence, le revirement d'attitude de l'Union soviétique en matière de relations internationales et son regain d'enthousiasme pour les Nations Unies sont remarquables. Les États-Unis, après avoir systématiquement dénigré l'ONU par la voix de leurs plus fervents partisans quand il s'agit de mettre un terme à l'agression koweïtienne de Saddam Hussein. Le tiers-monde, enfin, qui a enlaid la décennie en regrettant le manque d'enthousiasme des superpuissances pour les instances internationales, se plaint maintenant dans bien des sphères de ce que l'ONU sert souvent de paravent aux politiques américaines.

MALGRÉ LE DISCOURS TENU PAR LE PRÉSIDENT Bush, le «nouvel ordre mondial» fondé sur la «primaauté du droit» n'est pas pour demain. Même si l'on n'est pas possible de mettre en place dans dix ans à venir le système de sécurité collective idéal souhaité par les architectes de la Charte des Nations Unies, il n'en reste pas moins qu'en matière de paix et sécurité, les réseaux onusiens sont renforcés et sont devenus efficaces. Depuis 1987, la nature collégiale du Conseil de sécurité s'affirmant de plus en plus, des gouvernements influents et actifs prêtent davantage attention à ce fillet de sécurité internationale.

En fait, les Nations Unies sont aujourd'hui au centre du débat sur la sécurité. Il est plausible de sormais, même pour les grandes puissances, de s'appuyer sur elles. Il ne s'agit plus seulement d'utopie de quelques idéalistes rêveurs, ni d'un

dernier recours en cas d'échec d'une politique bilatérale. Certes, les organisations économiques et sociales du système onusien jouent surtout un rôle de meneur de jeu et les États, petits et grands, s'en désintéressent, mais une myriade de défis et de catastrophes pointent à l'horizon du développement et de l'environnement. L'organisation mondiale sera très probablement appelée à jouer un rôle plus visible et essentiel dans le règlement des problèmes en cette époque où la collectivité internationale se dirige à tâtons vers le 21<sup>e</sup> siècle.

JUSQU'ICI, L'ONU A EU POUR SECRÉTAIRES GÉNÉRAUX trois Européens ressortissants de pays neutres (Trygve Lie, Norvégien; Dag Hammarskjöld, Suédois; et Kurt Waldheim, Autrichien), un Asiatique (U Thant, Birman) et un Latino-américain (Javier Pérez de Cuelar, Péruvien). Etant donné que l'on sollicite davantage leurs services, le sixième titulaire du poste devra être doué d'une force intellectuelle, physique et morale exceptionnelle pour prendre la barre d'un des navires les plus difficiles à manoeuvrer du monde.

Le choix du prochain Secrétaire général sera très délicat. Pourant, la collectivité internationale n'a pas fait d'effort systématique pour trouver la personne la plus qualifiée. Pour l'heure, seuls les candidats eux-mêmes et certains de leurs gouvernements battent campagne pour obtenir une investiture. Il paraît qu'une des listes porte au moins trente-cinq noms. Comme ailleurs dans le système des Nations Unies, les origines géographiques ont fini par prendre plus d'importance que des considérations liées à la terre comme la compétence. C'est apparemment «le tour de l'Afrique».

Cependant, les nombreux candidats africains ne suscitent guère d'intérêt. Début juin, cinq d'entre eux ont reçu l'appui officiel de chefs d'États et de gouvernements africains. Entre autres personnes, sont sur les rangs des ministres, anciens présidents, à savoir M. Olesegun Obasanjo (Nigeria), des fonctionnaires de l'ONU, comme M. Kenneth Dadaie, le Secrétaire général de la CNUCED (Ghana) et M. James O.C. Jonah, sous-secrétaire général des Nations Unies (Sierra Leone), et le chef d'une organisation non gouvernementale, M. Olara Ominu, président de l'*International Peace Academy* (Ouganda). Cependant, une nouvelle candidature semble bien accueillie au premier abord dans les milieux diplomatiques new-yorkais, celle du vice premier ministre égyptien, M. Boutros Boutros Ghali.

En outre, on cite assez souvent les noms d'autres candidats de pays en développement, par exemple : M. Tommy Koh, ancien ambassadeur de Singapour auprès des Nations Unies; M. Ali Alatas, ministre des Affaires étrangères de l'Indonésie; et Sadruddin Aga Khan, ancien haut commissaire aux réfugiés et actuel chef des opérations dans le Golfe.

La presse populaire britannique s'est intéressée sur la disponibilité de Mme Margaret Thatcher; et l'intérêt pour un ressortissant d'un des États membres permanents a été attisé par une remarque de M. Edouard Chevardnadze, qui a laissé entendre qu'il penserait au poste. Par habitude, les pays neutres européens fournissent des candidats. Le Finlandais Martti Ahtisaari, responsable de l'administration de l'ONU et qui a supervisé l'accession à l'indépendance de la Namibie, a maintenant pour concurrente Mme Gro Brundtland, premier ministre de la Norvège. De plus, avec la fin de la Guerre froide, un ressortissant d'un pays fort de l'OTAN n'est pas nécessairement hors course. En conséquence, on parle aussi de MM. Joe Clark et Maurice Strong, tous deux Canadiens.

MALGRÉ LA PROFUSION DE NOMS, IL Y A EU BIEN trop peu de recherche et de décontrage des curriculum pour trouver le meilleur candidat à l'emploi le plus difficile de la Terre. Quelques ambassadeurs des Nations Unies se sont certes rencontrés officieusement à New York, mais il n'existe aucun comité de recherche qui se mette activement en quête de candidats tout en examinant de très près les qualités professionnelles et personnelles des personnes déjà en lice. Les candidats les plus solides sont en fait ceux qui se présentent de leur propre chef.

M. Brian Urquhart, ancien sous-secrétaire général de l'ONU pour les Affaires spéciales a déclaré, non sans sarcasme, que la Fondation Ford investit plus de temps, d'argent et d'énergie dans le recrutement d'un de ses cadres que la collectivité internationale n'en dépense pour choisir son Secrétaire général. Quand on cherche un professeur pour une chaire universitaire importante pas un fonctionnaire pour un poste élevé, à n'en pas douter, on fait plus de publicité, on organise davantage d'entrevues et on s'interroge plus sur les capacités intellectuelles et sur le caractère des éventuels candidats.

Que s'est-il passé au cours des quarante-six dernières années pour que le choix du Secrétaire général tourne à une telle mascarade? La sélection

Pour les cas où une réaction militaire demeure improbable, la Communauté apparaît comme le choix naturel pour la gestion des crises européennes, en raison de sa puissance économique et de ses mécanismes décisionnels efficaces. Les gouvernements membres se consultent régulièrement, ce qui facilite la coordination. Une politique communautaire commune semble désormais se mettre en place par le biais d'une *noyaka*. Cette dernière réunit les anciens ministres des Affaires étrangères, et les présidents en exercice et à venir du Conseil de l'Europe (le président changeant tous les six mois), qui est l'organe politique suprême de la Communauté. Dans la crise yougoslave de la fin juin, c'est la *noyaka* qui a donné l'exemple en essayant d'obtenir un cessez-le-feu et de renouer un règlement constitutionnel. Le succès mitigé de la démarche révèle un certain nombre de problèmes inhérents à ce type de diplomatie de crise qu'il faut résoudre si l'on ne veut pas voir les efforts de la Communauté régulièrement voués à l'échec. Tout engagerait sérieusement dans ces affaires compliquées ne peut se faire à distance : il doit être constant et suppose une compréhension profonde de la nature de la crise.

IL EST TENTANT, COMME CELA A ÉTÉ LE CAS AVEC la Yougoslavie lorsque l'on a insisté sur l'unité nationale avant toute chose, de forger des déclarations consensuelles reposant sur des vœux pieux plutôt que sur une réelle connaissance des réalités politiques locales. Les chances de réussite sont tellement plus grandes si la Communauté s'active pendant que les crises couvent mais n'ont pas encore éclaté. À la fin de juin 1991 nombreux signes indiquaient que la Yougoslavie allait arriver à ébullition. Pourtant, la collectivité internationale n'a réagi qu'une fois le cycle de la violence enclenché. En conséquence, outre apaiser le différend politique existant, la Communauté a dû trouver le moyen de faire accepter un cessez-le-feu dans une situation confuse et haineuse. Ces difficultés à mettre fin à un conflit dans un pays de superficie aussi modeste que la Yougoslavie ouvre les yeux sur l'ampleur que pourraient prendre les problèmes si le prochain passe-tête à résoudre est un soulèvement interne en URSS.

En ce moment, il semble que l'Europe cherche à remplacer un équilibre des forces par un équilibre des institutions, en faisant prendre à ces dernières une envergure telle qu'elles sauront persuader des pays de renoncer à leur souveraineté nationale. En pratique, les choses sont beaucoup plus complexes. Il y a maintes façons de retisser le riche tissu institutionnel, suivant la nature des crises, or cette tâche dépend des gouvernements. Bien que ce soient de plus en plus les instances transnationales qui donnent des solutions politiques, parce que la plupart des problèmes sont trop importants pour qu'un pays puisse en venir à bout seul, ce sont les gouvernements qui continuent d'apporter les principales idées. Parce qu'il existe plusieurs choix, ces derniers décideront dans les faits et pendant les crises à qui ils préfèrent s'adresser. □

À l'heure actuelle, on n'en parle que comme d'un «pont» entre l'OTAN et la Communauté militaire de la CE. Ce dernier point soulève le problème central de toute identité européenne en matière de défense. En effet, la menace soviétique étant considérablement réduite, on pourrait penser que l'Europe occidentale dispose d'assez de forces pour la ligne de front, mais elle serait incapable, dans un proche avenir, de faire face à autre chose que des opérations militaires routières à l'heure actuelle, on n'en parle que comme d'un «pont» entre l'OTAN et la Communauté militaire de la CE. Ce dernier point soulève le problème central de toute identité européenne en matière de défense. ## L'expression «instabilité en Europe de l'Est» est devenue synonyme des conséquences politiques les moins désirables de la révolution de 1989.

EN PÉRIODE DE CRISE, NOTAMMENT lorsque que ce sont les règles de la collectivité internationale qui sont en péril, comme dans l'agression commise par Saddam Hussein, les Nations Unies seraient bien placées pour intervenir, mais il n'est guère probable qu'elle influe sur la gestion des crises. La crise yougoslave, qui a éclaté au moment où l'on mettait de nouveaux mécanismes en place, a été l'occasion de la première déclaration, malheureusement sans grande portée, de la CSCE.

La Conférence peut, en revanche, servir d'instance où des accords conciliés ailleurs sont avalisés, offrir un cadre à la conciliation privée, mais il n'est guère probable qu'elle influe sur la gestion des crises. La crise yougoslave, qui a éclaté au moment où l'on mettait de nouveaux mécanismes en place, a été l'occasion de la première déclaration, malheureusement sans grande portée, de la CSCE.

La CSCE est une instance au sein de laquelle on peut discuter des efforts, voire des doctrines unanimes. Cependant, ses décisions se prenant à l'unanimité, elle ne peut servir à l'Europe entière à imposer sa volonté à un membre récalcitrant. La Conférence peut, en revanche, servir d'instance où des accords conciliés ailleurs sont avalisés, offrir un cadre à la conciliation privée, mais il n'est guère probable qu'elle influe sur la gestion des crises. La crise yougoslave, qui a éclaté au moment où l'on mettait de nouveaux mécanismes en place, a été l'occasion de la première déclaration, malheureusement sans grande portée, de la CSCE.

BIEN QUE SE CONSACRANT AUX QUESTIONS MILITAIRES, L'UEO n'a jamais eu d'organisation militaire en tant que telle, et son point de vue stratégique distinct s'inscrit indubitablement dans le contexte d'une Alliance Atlantique. Elle a plus de légitimité aux yeux de certains pays européens que l'OTAN et elle est moins restreinte qu'elle géographiquement, mais il est improbable qu'elle devienne une instance à part entière. Entre autres problèmes, des membres de la Communauté européenne (CE) et de l'OTAN, tels que la Norvège et la Turquie, n'en font pas partie.

C'EST LE MAGNÉTISME ÉCONOMIQUE DE LA Communauté qui est essentiel, parce qu'il attire des membres admis, ceux qui sont exclus risquent de se sentir plus isolés. Autre problème, ceux qui tiennent à accélérer le mouvement par des propositions d'union politique redoutent que ce processus d'"approfondissement" soit miné par les complications supplémentaires qui résultent de l'«élargissement» traduisant l'admission de nouveaux membres.

Dans la mesure où la gestion des crises comporte une dimension économique, la Communauté a bien un rôle naturel à jouer. Ce dernier débordement inévitablement sur la dimension politique et militaire, comme on peut le voir dans le cas de l'Irak. Toutefois, on peut aussi faire valoir que la Communauté n'est qu'une des instances capables de gérer les problèmes de sécurité et que plus la dimension militaire est importante, moins elle a de chances d'être choisie.

Le Pacte de Varsovie est chose du passé : l'Union soviétique n'a plus de prise sur ses anciens pays satellites ; l'Allemagne réunifiée fait partie de l'OTAN ; le Rideau de fer a été démantelé. La soudaineté de ce processus en a surpris plusieurs, mais nombre des attitudes et des instances datant de la Guerre froide sont inchangées. Par conséquent, l'essentiel du débat actuel sur la sécurité et la défense en Europe porte sur la question suivante : comment adapter au mieux ces instances à la nouvelle situation ? Les crises qui secouent la plupart des pays de l'ancien monde communiste obligent à reformuler la question de la sécurité européenne.

L'expression « instabilité en Europe de l'Est » est devenue synonyme des conséquences politiques les moins désirables de la révolution de 1989. Le déclin de la puissance soviétique signifie que l'Europe centrale et l'Europe de l'Est peuvent à nouveau respirer, mais il sonne aussi le réveil des nationalismes et des antagonismes ethniques, qui avaient été étouffés par la poignée de fer du communisme, en même temps que la libre entreprise et la libre expression. Cependant, tous deux sont exacerbés aujourd'hui par le terrible héritage économique du socialisme d'Etat.

Le défi pour l'Europe post-révolutionnaire consiste à désamorcer ces tendances négatives en faisant ressortir les aspects positifs de la démocratie libérale et de l'économie de marché. Si cela échoue, une bonne partie de l'activité diplomatique est parallèlement consacrée à la réorganisation des institutions et à la conception de nouveaux mécanismes pour la gestion des conflits. En ce moment même, tout cela est mis à l'épreuve en Yougoslavie et, pour l'instant, l'expérience est saluante. Jusqu'au test yougoslave, le débat était assez décon- certain tant il était, pour l'essentiel, axé sur la capacité d'institutions conçues pour accomplir des fonctions précises dans un ensemble de circonstances données, d'accomplir des fonctions très différentes dans des circonstances bien changées. Dans le passé, l'Organisation du Traité de l'Atlantique Nord (OTAN) tenait le haut du pavé en la matière. Elle continue d'avoir la seule organisation militaire intégrée importante et est la mieux à même de mettre à contribution les deux partenaires nord-américains.

Dans son examen actuel de sa stratégie, l'OTAN part encore du principe que le problème le plus grave que les Etats membres pourraient avoir à affronter serait un sursauf de l'URSS qui chercherait à regagner son ancienne influence militaire en Europe. Il ne fait aucun doute que la puissance militaire soviétique reste importante et le restera pendant quelque temps encore. Quant à savoir si l'URSS a un intérêt quelconque à s'aventurer militairement hors de ses frontières, il est permis d'en douter lorsque l'on voit les nombreux problèmes internes qui l'assaillent. Il est difficile de dire à quoi la situation ressemblera dans cinq ans (alors que toutes les troupes soviétiques auront été retirées, y compris d'Allemagne), mais la période actuelle pourrait être

# QUÉRELLES DANS UNE EUROPE NOUVELLE

L'Europe est aux prises avec les conséquences des révolutions de 1989.

PAR LAWRENCE FREEDMAN

## Les difficultés à mettre fin à un conflit en Yougoslavie ouvre les yeux sur l'ampleur que pourraient prendre les problèmes s'il y avait un soulèvement interne en URSS.

très transitoire. L'OTAN a toujours tendance à décrire son rôle avec des concepts issus du passé, et sans référence à la puissance soviétique, ses planificateurs deviendraient totalement désorientés.

L'Alliance s'attend maintenant à être avertie d'amplement à l'avance de tout coup de force soviétique. Ce qui signifie qu'elle peut réduire considérablement ses effectifs actuels et compter sur cet avertissement pour avoir le temps de les reconstituer en cas d'urgence. En étant à ce point axé sur la menace soviétique, l'OTAN n'est pas prête pour des menaces moindres, ou pour des menaces extra-européennes. Les dirigeants occidentaux ne tiennent beaucoup à ce que l'intervention armée directe soit un recours extrême dans toute gestion de crise future et, bien que l'on parle de rendre l'organisation plus « politique », elle n'est vraiment pertinente que lorsque la coopération militaire devient une nécessité. Elle permet de mettre sur pied un commandement et des procédures de contrôle communs, et favorise les plus grandes connaissances qu'entraîne l'interopérabilité du matériel et des exercices.

S'AGISSANT D'OFFRIER DES GARANTIES DE SÉCURITÉ À d'anciens membres du Pacte de Varsovie qui ne se sentent toujours pas à l'abri d'un coup de force soviétique, mais n'appartiennent à aucune organisation de sécurité centrale. La Pologne, la Tchécoslovaquie et la Hongrie, notamment, ne font guère de secret de leur souhait d'intégrer les rangs de l'OTAN. Pour l'instant, on en est à une coopération plus étroite grâce à des bureaux de liaison et à la participation à l'Assemblée de l'Atlantique Nord (non gouvernementale) qui de seize membres, est passée à vingt-deux. L'OTAN ne veut pas aller plus loin par refus de s'engager vis-à-vis de certains pays pour tous leurs conflits avec des voisins et aussi parce qu'elle ne veut pas créer l'impression qu'elle se ligue de nouvelles garanties en matière de sécurité influenceront négativement sur la disposition des forces armées, entre autres en déplaçant vers l'Est la ligne de défense avancée et le parapluie nucléaire.

L'OTAN s'efforce d'atténuer les risques pesant sur les nouvelles démocraties en assurant qu'elle ne resterait pas « indifférente » si elles étaient menacées. Elle tente de définir les principes fondamentaux dont la transgression déclencherait une intervention et l'on voit mal, en fait, comment elle pourrait éviter d'agir en cas d'acte d'agression flagrant.

Au début, les pays de l'Est investissaient de bien plus grands espoirs dans une autre instance, la Conférence sur la sécurité et la coopération en Europe (CSCE), au sein de laquelle on retrouve non seulement les Américains, mais tout le monde. L'Albanie a marqué la fin de son isolement en intégrant la CSCE et les procédures de

**L**A DÉMISSION DU VICE-AMIRAL CHARLES THOMAS au printemps dernier a révélé aux Canadiens et Canadiennes ce que quelques initiés aux questions de défense redoutaient depuis des mois. Ottawa s'attelle de nouveau à la redéfinition de sa politique de défense — moment douloureux pour ses premières victimes, à savoir les personnes qui ont choisi de faire carrière dans les forces canadiennes.

L'affaire n'est guère plus rassurante pour le reste de la population. En juin 1991, la Guerre froide était bel et bien révolue, le gouvernement réclamait son tribut de paix. Que les trois armes subissent des compressions budgétaires comparables ou, comme l'amiral Thomas le fait valoir, que la marine et l'armée de l'air survivent au déclin de l'armée de terre, le gouvernement entend trancheur dans le vif pour réaliser des économies. L'armée de terre, notamment, pourrait perdre son savoir-faire dans la guerre blindée et dans l'artillerie moderne. Où se servirait-on, d'ailleurs, de ce savoir-faire et du matériel coléux qu'il suppose ? Ou utiliserait-on les frégates de patrouille ou les CF-18 ?

La réponse, bien entendu, est que nous n'en savons rien. Savoir prévoir est un atout majeur en matière de politique de défense et un atout qu'on possède rarement comme les auteurs du projet de Fernin Beatty l'ont découvert. Le Livre blanc de la défense de 1987 assurait hautement au Pacte de Varsovie et à ses ennemis armés de blindés bien après l'an 2 000, et que le pays avait désespérément besoin de sous-marins à propulsion nucléaire pour participer à l'avenir à la chasse à d'éventuels «Octobre rouge» ennemis. En 1989 déjà, ces affirmations étaient reléguées aux oubliettes. En revanche, en juin 1990, quelqu'un a-t-il prédit qu'un quart de l'armée canadienne tout l'été aux abords de Montréal ou que des navires et des CF-18 canadiens seraient engagés dans un conflit armé dans le golfe Persique ?

AVEC UNE CONTINUITÉ VRAIMENT IMPRESSIONNANTE, ceux qui définissent la politique de défense du Canada se fourvoient. Ceux de 1987 peuvent aussi se consoler en découvrant l'incroyable manque de clarté de leur prédecesseurs. En 1949, le très intelligent Brooke Claxton affirmait que le rôle le plus probable des défenseurs du Canada serait d'assurer la défense du territoire national. L'armée a donc été rééquipée pour repousser les incursions soviétiques dans notre Arctique. Quelques mois plus tard, nous envoyions des bâtiments de guerre en Europe des soldats, des escadrons de chasse et toutes les armes que nous pouvions pour défendre le vieux continent. La défense territoriale est si vite apparue inutile que le pays a même accepté de se départir de ses milices. Dans son Livre blanc de 1964, Paul Hellyer donnait la priorité au maintien de la paix. Huit ans plus tard, Donald MacDonald la classait au dernier rang de nos soucis.

Si nous remontons plus loin dans le passé, leurs prédecesseurs n'étaient pas plus malins. Jusqu'à la fin août 1939, personne n'avait prévu que le Canada entrerait en guerre pour sauver la Pologne et seul J.W. Diefenbaker, en juillet 1914, le *Globe* de Toronto mettait Ottawa en demeure de veiller à nous

## Les politiques de défense du Canada, aussi politisées et terribles soient-elles, se sont avérées brillantes.

défendre... contre des maladies contagieuses «infiltrées» des États-Unis. Trois semaines plus tard, la Grande Guerre éclatait. Pour être juste, disons que des officiers de l'état-major du ministère de la Milice avaient un ordre de mobilisation dans leur habituelle pile de plans. Sam Hughes, leur redoutable ministre, l'a déchiré pour suivre son propre instinct débordant.

Il y a plus important que de mal prévoir. En effet, les Canadiens et Canadiennes n'ont jamais fait les rais de ces erreurs de jugement. Depuis 1814, leur pays n'a pas été envahi, pillé ni même gravement menacé. Nous n'avons ni Pearl Harbor, ni Rotterdam, ni guerre éclair grave dans notre subconscient collectif. Le paradoxe affreux pour ceux d'entre nous qui croient dur comme fer à l'état de préparation, c'est que nos adversaires ont raison de se moquer de nous. Les politiques de défense du Canada, aussi politisées et terribles soient-elles, se sont avérées brillantes. Même lorsque nous sommes battus en 1914, 1939 et 1950, ce sont nos alliés qui ont supporté le poids de la bataille le temps que nous recutions, institutions et équipions nos forces.

Nous faisons porter le chapeau aux Britanniques pour Hong Kong ou Dieppe.

L'AVENIR SE BÂTIT SUR LE PASSÉ, MAIS NE LUI RESSEMBLE PAS FORCÉMENT. Le monde de l'après-guerre froide est déjà plus complexe pour le Canada que ne l'était le monde bipolaire de 1987. Faire des États-Unis l'arbitre tout-puissant de la paix mondiale, c'est refuser de voir les limites profondes du pouvoir économique et militaire américain. Dire que l'URSS n'est plus une grande puissance revient à se voiler la face.

Finie la confrontation prudemment gérée entre les deux superpuissances entourées de leurs alliés respectifs. Nous vivons maintenant dans un monde multipolaire. Le Moyen-Orient n'est plus le vainqueur incontesté des parts d'instabilité. Nous sommes désormais confrontés à une multitude de conflits réels ou potentiels des frontières troubles de l'URSS aux Balkans, de la Corne de l'Afrique aux pays agités de l'Asie du Sud-Est.

C'est important pour un Canada qui dépend fondamentalement du commerce mondial pour assurer son niveau de vie. C'est important aussi pour les habitants d'un pays de plus en plus multiculturel, dont les rangs sont gonflés par des réfugiés venus de toutes les contrées troubles de la planète. Loins d'oublier leur patrie d'origine, ces gens attendent de leur pays d'adoption qu'il intervienne. Après tout, n'est-ce pas par loyauté envers la Grande-Bretagne que les Canadiens ont pris part aux deux Guerres mondiales ? Si le reste du monde

importe vraiment peu aux Canadiens, pourquoi sont-ils allés dans le Golfe ? Les Canadiens et Canadiennes sont également confrontés à l'affreuse perspective de conflits intérieurs, à de nouveaux «Oka» promis par les Premières nations du Canada et à la vague possibilité de troubles civils si la Confédération vole en éclats. Bien que la population canadienne rejette quasi unanimement l'idée de l'emploi de la force, il y a suffisamment de transigence dans les attitudes nationales pour que des explosions soient fort malheureusement possibles. Comme l'a été dernier l'armée canadienne représente un dernier recours rapidement mobilisable. Bâtir des scénarios précis est un jeu de dupes. Un pays dans lequel on s'assure plus que nulle part ailleurs devrait comprendre qu'on ne paie pas de primes uniques

“Madly Off In All Directions,” our lead story this time (with appropriate acknowledgements to Stephen Leacock for the title) is a less starry-eyed appraisal of the USSR’s alarmingly rapid political decomposition than we are used to. Apart from “chaos,” the words used most commonly in association with Soviet events of the last year seem to have been “democracy,” “freedom,” “independence,” “self-determination” — affirmative, hopeful words all of them.

**Joan DeBardeleben** reminds us that like other places in the world, "the people" don't have very much to do with what is going on in several corners of the former Soviet nation. In some cases local members of far-flung bits of the old communist apparatus severed ties with the centre for fear of being dragged down with the Moscow communist party ship after the August coup. Elsewhere, demagogues continue to exploit ancient ethnic fears and widespread deprivation in order to settle scores with enemies new and old.

Then there are the enormous disparities in power and resources between Russia, and the other much smaller republics. In the final days of November, the government of Russia announced that it had given up on trying to pursue economic reform in concert with other republics. "They can get on the train with us or stay behind – it's up to them" was the tone of press reports about how Russian republic negotiators felt about the other eleven. But Russia can afford to play the bully. A year before the coup, a Russian economist, Vassily Silunin, told me in

a voice that left no doubt about how he viewed economic relations between the republics:

All we have to do is look through USSR foreign trade statistics. Half of this profit comes through selling oil – *Russian* oil. The next most important export is natural gas – *Russian* gas. Then there is gold – *Russian* gold. Then wood – *Russian* wood. Until now, all this income from Russian goods has been distributed across the Union.

Ethnic differences aside, the smaller republics are torn between, on one hand, staying in a union and, in DeBardeleben's words, finding "themselves underlings in a revised edition of the former Soviet empire," and on the other, taking the chance that they can make their way in the world on their own. It is still very early days of what will continue to be an intricate political dance among the twelve.

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1981 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

22 LETTERS TO THE EDITOR

19 REPORT FROM THE HILL

*Following the failed coup d'état in the USSR in August, a surge of nationalism swept through the dying empire. By November, all but two of the fifteen Soviet republics declared their independence. Some, like the three Baltic republics (Latvia, Lithuania, and Estonia), Armenia, and Georgia had already asserted their intention to achieve independent statehood before the coup d'état, but from late August until late October, most others joined the independence bandwagon.*

ONLY THE RUSSIAN FEDERATION AND KAZAKHSTAN (where the Russian proportion of the population is nearly as large as the Kazakh) broke the spell, presumably because they would form the core of any new Russian-dominated union. With the old centre defunct, they would in effect only be declaring independence from themselves.

This new wave of independence mania evoked a sense of déjà vu among Soviet-watchers, for in 1989 and 1990, a similar "parade of sovereignties" had marched through the land. But now the republics were not only claiming control over their own affairs, but were, at least ostensibly, asserting their right to full recognition in the international community.

The coup d'état itself was both a response and a spur to this rising tide of nationalism. On the eve of the planned signing of a new union treaty, Gorbachev's disloyal aides took action to block the agreement that would have shifted numerous powers from the centre to the newly-assertive republics. Only five republics intended to sign the new accord on 20 August (the Russian federation, Kazakhstan, Belorussia, Tadzhikistan, and Uzbekistan), with four others (Ukraine, Turkmenistan, Kyrgystan, and Azerbaidzhan) possibly following in the next month.

THE ORGANIZERS OF THE COUP RIGHTFULLY DISCERNED that 20 August would signify a capitulation of the centre to vital demands from the republics, a process which could easily initiate the withering away of the Soviet state, though hardly in the sense Marx and Lenin had intended. Ironically, the putsch attempt accelerated the very process that the coup-plotters were trying to halt. As one Soviet commentator noted:

If in other countries a putsch usually is a venture of a dozen malefactors who are then put in prison and the old leaders go on living like they did before, the August putsch was unparalleled. Practically all of the union leadership – the coercive structures,... the executive power,... the legislative power,... and party power ... all could simultaneously be charged under various articles of the criminal code.

And when the whole apex of government, consisting either of criminals or of their accomplices, suffers a shattering defeat by the people, such a government cannot hold out. The whole leadership of the government collapses into political non-existence, and out of the

political vacuum arises some other government. It arose, but not as a single government.\*

The coup-plotters' actions revealed the deep corruption, stupidity, and arrogance which governed actions of the central organs; this fuelled the centrifugal forces tearing the union apart. The draft union treaty was scuttled, and by 21 August when the coup flopped, its concessions were already too limited to satisfy even the most acquiescent of republics.

SURVEYING THE MAP, ONE WONDERS WHAT SOME of the republics intended to achieve with their declarations. Could the smaller or less-developed regions really hope and want to stand alone as independent states? Who and what lies behind their grand language? Are these declarations really assertions of national self-determination and popular sovereignty, as we in the West might like to believe? Or are they Janus-faced, with a darker, seamier side as well?

Like everything in the former USSR today, generalizations come hard and are usually wrong. And despite *glasnost*, one must still look beyond the words to discern the true message. The independence declarations above all signify that each former republic must be understood in its own terms. But the meaning of the proclamations varies dramatically from place to place, even if some common tendencies exist.

For the Baltic peoples, the declarations without doubt reflected a genuine resolve to achieve independent statehood, a national yearning ever since the treachery of the Molotov-Ribbentrop Pact in 1939 made these nations into pawns of larger forces. On 6 September 1991, the Soviet state itself recognized Baltic independence; the gradual realization of that status will involve a radical rejection of Soviet institutions and communist power. New democratic procedures and institutions

are under construction, and a genuine national and social revolution has occurred over the last two years. To be sure, problems remain, and nationalism's uglier face peaks out at times. For example, will individual rights be as well protected as the collective rights of the newly assertive Baltic peoples? How will national minorities be treated? And how will they respond to new stresses and demands for assimilation?

In mid-September, large numbers of Estonians rallied to protest

## MADLY OFF IN ALL DIRECTIONS

*The dark side of the USSR's  
independence bandwagon.*

BY JOAN DEBARDELEBEN

\*Maksim Sokolov, "Slava Bogu, perestroika konchilas. (Thank God, perestroika is over), Kommersant (19–26 August 1991), p. 1.

against proposed legislation which would grant non-Estonian residents the right to choose Estonian citizenship. A group called the Congress of Estonia, which organized the demonstrations, demanded that those who did not hold Estonian citizenship in the interwar period (or have ancestors who did) should have to apply for citizenship. This type of "exclusive" nationalism, even if it does not make its way into government policy, can easily poison the terrain on which new democratic institutions are constructed. It could also trigger large-scale emigration of Russians and other minorities, spreading the tension by intensifying claims to scarce resources in neighbouring countries.

THE PROCESS OF ECONOMIC REFORM CAN MAKE inter-ethnic accommodation even more difficult. Construction of large state-owned industrial plants on Baltic territory was commanded by the Stalinist economic machine as it pursued a "big is beautiful" strategy, interconnecting all regions through a network of semi-monopolistic enterprises. These operations injected large numbers of Russians into the Baltic region as the central economic ministries recruited labour power for the new mammoths. The Russian recruits severely diluted the weight of the titular nationality in Estonia and Latvia, fuelling the commitment of the indigenous populations to fiercely resist assimilation to Russian and Soviet culture. In some localities, Russians now form the bulk of the workforce.

As these factories and enterprises are privatized, rationalized, or split into smaller units, unemployment and dislocation of workers are almost certain to occur, and in some regions, Russians will be the main victims. Thus, the hardships of economic reform could themselves be taken as signs of ethnic discrimination and add ethnic strife to the long list of other suffering involved in the economic and political metamorphosis. In the final analysis, however, the Baltic peoples may well be able to manage these collisions with relative civility, as their non-violent struggle for independence over the last two years has already demonstrated. But in some other parts of the former USSR, tensions are already taking or could take on a more aggressive turn.

If the coup's collapse allowed the Baltics to push forth their long-standing claim for independence, the putsch's radical aftermath provided a different motor for other republican leaders to join the independence train. Two developments were of particular importance. First, if the coup's defeat was a victory for Russia, as is so loudly proclaimed both there and abroad, then it almost immediately raised the spectre of a revitalized Russian nationalism taking unpredictable turns. On 26 August, Yeltsin's office warned that border questions

might be re-opened (except with the Baltic states) if more republics pressed their claims for independence. This statement demonstrated that the hero of August could not wear both hats – protector of Russian interests and protector of all of her neighbours.

Furthermore, officials in the Russian government who had proven themselves loyal to the constitution were catapulted into posts at the centre vacated by the coup's accomplices. At first blush, the new post-coup centre looked like a surrogate for the Russian government. Those non-Russian groups that stayed with the union might well find themselves underlings in a revised edition of the former Soviet empire. Moreover, if they didn't join the independence bandwagon, their bargaining power might later be weakened as Russia tried to lure the defectors to rejoin the union.

A second factor frightened some of the more conservative republic leaders (for example in Uzbekistan, Azerbaidzhan, Tadjikistan, and finally Turkmenistan). The suspension of communist party activities by the USSR Congress of People's Deputies after the coup posed a direct threat to the leaders of these republics, who simultaneously headed the republic communist party organization and the government. Having equivocated or expressed outright support for the coup attempt, these leaders were already on shaky ground following the defeat of the putsch. They tried to save their own political bases by rescuing those same communist organizations and established bureaucracies.

AS THESE LEADERS DONNED THEIR NATIONALIST hats, some quit the party ship; others bailed out into newly-formed parties, republic surrogates for the old communist centre; and some were dumped from power by their parliaments, as their compromising behaviour was too transparent to warrant even minimal credibility. In sharp contrast to the Baltics, here the elite's declared support for independence reflected an attempt to conserve old power relationships, rather than to nurture new ones. The leadership's nationalism had little to do with national self-determination and democracy, and much to do with elite preservation.

In these areas, the social revolution is in its beginning stages or is still to occur, but until then, independence should not be confused either with a clearly conceived strategy for national self-determination or with popular sovereignty. Nonetheless, recent events in Tadjikistan demonstrate that popular protests may force concessions from the communist parties in these republics, but it

is far from clear what the outcome will be. In Kyrgyzstan, in sharp contrast to the other Central Asian republics, a figure outside the party establishment and with good democratic credentials – Askar Akaev – has been president since October 1990; he also distanced himself from the coup attempt from the start.

Developments in Belorussia (which renamed itself the Republic of Belarus on 19 September 1991) represent a more convoluted twist of events. The Belorussian nation, sharing broad historical and cultural features with the neighbouring Russian population, has long been considered by Soviet-watchers to be one of the least likely candidates for serious separatist aspirations. Opposition movements have, until recently, been strongly controlled. However, popular resistance to the prevailing order surged in April 1991, when the central authorities hiked prices in state stores by, on average, 170 percent; supplies didn't increase and wages went up only 60 roubles per month, on an average monthly salary of 300 roubles.

WORKERS IN MINSK, THE BELORUSSIAN CAPITAL, had apparently had enough and demanded new elections in the republic and the resignation of the central government. Alongside the oppositionist Popular Front of Belorussia, the new Minsk Strike Committee broadened the social range of the anti-communist chorus which had been largely based in the intelligentsia. Independence sentiments were strengthened by central mismanagement of the economy; here, as elsewhere, people began to think that they couldn't do much worse than the Kremlin crew, and might do a lot better. The Belorussian government itself began to feel the strain. By the day of the coup, those who had carried communist party cards on the day

of their election (some 85 percent of the parliaments' deputies) were themselves increasingly split over the correct strategy, although the leadership in the parliament was still in party-loyal hands.

When the coup came, the party's central organs expressed support for the Emergency Committee. This made the party's position even more tenuous once the coup collapsed, not only because its leadership was at least passively implicated but also because Gorbachev had ostensibly abandoned ship in resigning as General Secretary. In a desperate move, the Belorussian party leader appealed to the increasingly rebellious parliament to declare independence and thus to decouple the Belorussian party's fate from that of the

*"exclusive"  
nationalism ...  
can poison the  
terrain on which  
new democratic  
institutions are  
constructed.*

CPSU, which was increasingly under threat from the radical turn of events in Moscow. The anti-communist deputies seized the opportunity, and after making certain conditions they offered support for the proposal.

THE PARTY LEADERSHIP MAY HAVE WON A Pyrrhic victory, for its activities were nonetheless suspended pending investigations, and its property was to be seized. Politics had indeed made strange bedfellows, and the party's gamble in playing the independence card may yet backfire. The declaration of independence represented an ambiguous compromise between the party establishment and the forces of reform. The anti-communist forces turned the last-ditch attempt of the old party structure to protect itself into a mechanism for loosening the grip of central authority. However, real independence does not seem to be on the immediate agenda and the struggle over democracy is still in its beginning stages in the republic. The republic's dependence on suppliers and buyers in the rest of the former USSR helped spur economic discontent but at the same time binds the region to the others. And the continuing burden of the Chernobyl clean-up would make true independence a costly gain. The declaration of independence signals a change in venue for the political battle, but does not assure its final outcome.

Traditional political culture, perceived injustices of the Stalinist system, economic needs, and more contingent twists of events produce a different configuration in each republic. In Georgia, yet another tendency is evident. Here, the former dissident, Zviad Gamsakhurdia, was elected president with 87 percent of the popular vote earlier this year, buoyed by strong nationalist and anti-communist sentiments in the republic. His subsequent actions, however, suggest serious deviations from democratic practice.

A 99 percent vote in favour of national independence was reportedly achieved in April 1991, when pressure was exerted on voters by threatening to deny Georgian state citizenship or property rights to the population in regions where the majority voted against independence. Gamsakhurdia's equivocations during the coup and his suppression of opposition after its collapse spurred public demonstrations calling for his resignation. Violent clashes between the government and its detractors have occurred on the streets of the republic capital, Tbilisi. Particularly noxious has been the sometimes violent suppression of demands for autonomy

made by national minorities (for example, the South-Ossetians) residing within Georgia.

A deep-seated national revolution has occurred in Georgia, but social revolution has not yet placed power in the hands of an accountable system of democratic control. Gamsakhurdia and his entourage have expelled the communist model and institutions, but the absence of indigenous democratic traditions and the, at least, short-term dominance of the "exclusivist" variant of nationalism have produced political violence, polarization, and personalistic politics in the wake of the coup.

Ukraine presents perhaps the most difficult case for Western policy-makers. With over 50 million people and territory rich in agriculture and industry, Ukraine is, alongside Russia, the linchpin of the former USSR. Her fate will help shape the destiny of all of her neighbours. A strong democratic groundswell is active in the republic. When the republic's parliament declared independence on 24 August

1991, a popular referendum on the issue was set for 1 December, along with an election for the post of president. (The results of those votes were not available when this issue went to press.)

HOW ONE INTERPRETS THE RESULTS DEPENDS ON a careful assessment of the voting procedure itself. Was the referendum question worded in an unambiguous manner? Was the secret ballot respected? Did all sides have the right to express their views prior to the vote? Was the presidential post contested? To what extent was the favoured candidate (the president prior to the election, Leonid Kravchuk) able to influence the election through his old party connections?

If the vote for independence passes strongly in the Crimea and in the highly Russianized eastern portion of Ukraine, as well as in western Ukraine, where Ukrainian nationalism reigns strong, this will suggest a strong national consensus on the issue. If there are substantial regional differences in the vote, on the other hand, this might indicate that an independent Ukraine could face growing tensions in areas that have substantial Russian and other minorities. A successful independence vote might make the republic's leadership more conciliatory toward economic cooperation with other parts of the former USSR. On the other hand, it could legitimize further resistance to any compromises of Ukrainian economic auton-

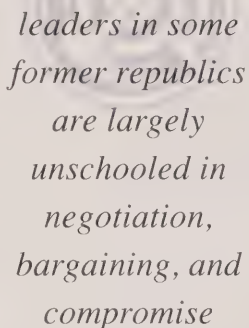

omy. Continued resistance to a functioning economic union with other parts of the former USSR could easily contribute to further economic havoc throughout the entire region.

WESTERN GOVERNMENTS SHOULD BE WARY OF quick or easy responses as they weave their way through the complexities of the present war of sovereignties in the former USSR. Historic claims must be carefully assessed, election and referendum processes scrutinized, and the credentials of would-be national spokespersons checked. In addition, the practical consequences of bolstering the independence claims must also be weighed. The Soviet government, however dubious its moral or legal basis, has, since World War II, maintained a sort of international peace in this conflict-ridden terrain of Central Europe and Asia. The costs of that imposed peace must now be borne. Not only was the "peace" forcefully imposed (a non-sequitur perhaps?) but, with it, a silencing of grievances. And when grievances are repressed rather than expressed, prejudices and stereotypes replace dialogue and understanding. Identity may come to be defined in terms of opposition to the other, rather than in self-comprehension. Such delusions and confusions exact a price once controls are lifted.

The floodgates of regional unrest have been thrown open by the final collapse of communist power. The war of sovereignties has already stoked the fires of regional violence in Nagorno-Karabakh, in Georgia, and elsewhere. And regional unemployment and competition for scarce resources have already produced violent clashes in parts of Central Asia. But even larger problems loom if accommodation is not found between the newly-emergent states. Massive population movements, establishment of new regional dictators, strife in border and mixed-population regions, further dramatic declines in economic well-being, ethnic scapegoating, and regional wars are all possible consequences of failed accommodation.

IN THE FORMER USSR, NEARLY EVERYTHING IS in short supply, including time. We have, over the last few months, witnessed history moving at fast-forward speed; numerous crises must be addressed simultaneously, and leaders in some of the former republics are largely unschooled in processes of negotiation, bargaining, and compromise. Each population group faces a crisis of self-identity which will take time to resolve.

From the international community, skills of peaceable conflict resolution may be a much more vital gift than the plum of diplomatic recognition. A further acceleration of the independence train could itself, in some cases, derail democratization, economic reform, genuine national self-determination, and a true and lasting peace.

# THE DELICATE BUSINESS OF MILITARY BASE CLOSINGS

**T**HE LONG AWAITED DEFENCE policy review, outlined by the Minister of National Defence, Marcel Masse, on 17 September 1991, included cuts in personnel and operations and maintenance costs. These cuts will make related infrastructure (read bases, training establishments, supply depots, dock yards, etc.) either redundant or unnecessary, and elimination of excess infrastructure will allow budgetary savings which can be put towards a proposed increase in the portion of the defence budget allocated to equipment purchases.

In announcing the changes, Mr. Masse noted that the basic equation was quite simple – to get savings as fast as possible, unnecessary infrastructure should be eliminated immediately. However, Mr. Masse immediately noted that “socioeconomic reality militates against this prospect” and announced that an impartial advisory group would be established to “help formulate a decision-making framework which can be used to rationalize Canada’s defence infrastructure.”

In the past two years, the government has learned that base closings are a highly charged political issue. In 1989, the Department of National Defence (DND) announced that seven bases would be closed and operations would be scaled back at seven others in order to achieve a savings of close to \$3 billion over fifteen years. The announcement generated considerable criticism from communities where base closings would deal a significant blow to the local economy, and the government came under fire for making the decision without giving local communities time to make a case for keeping the base open or to explore alternative measures.

In the summer of 1991, newspaper reports attributed to an unnamed government source said that the government was considering closing five bases. This prompted the communities named to undertake various measures to fight the rumoured cuts. The federal government sought to ease concerns by assuring communities that the economic effects of base closure would be considered and that no decisions would be made until communities had an opportunity to make a case for keeping the bases open.

## Previous Canadian Base Closings

Some seventy facilities have been closed by DND since 1964. The most recent experience has been in closing twenty-four sites associated with the obsolete CADIN/Pinetree radar line. By the end of 1988, eighteen sites had been closed and put to other uses. These included industrial parks, housing complexes, a private school for troubled children, retirement homes, and native training and housing facilities. Of 900 civilian employees, twelve were unable to be placed in other jobs. The process used in carrying out this successful transition was facilitated by local re-use committees which received financial grants from various government programmes associated with industrial and work force development.

## The US Experience – Deciding on Base Closures

For at least a decade, the US has sought to find a decision-making process which avoids unilateral choices by the Pentagon and lengthy battles among Members of Congress trying to protect their own regions from economic dislocation, but which at the same time accepts that base closures are a necessary element of an efficient cost-effective national base structure.

In 1977, the US Congress passed legislation which required Congressional approval of any base closures with 300 or more civilian employees, or any base realignments which affected either 1,000 or half the total civilian employees at the base. It also specifically requires DOD to comply with the procedural requirements of the National Environmental Policy Act. These requirements were so strict that they effectively prevented the closing of bases.

In 1983, the President’s Private Sector Survey on Cost Control, recognizing that an efficient process which facilitated cost effective base

closures would contribute to more efficient use of Pentagon funds, recommended that an independent non-partisan commission be established to examine base closings. As a result, the Defense Secretary’s Commission on Base Realignment and Closure was established in May 1988. Its first report, issued in December 1988, recommended that eighty-six

installations be closed. The US Department of Defence and the US Congress accepted the commission’s recommendations.

In determining which installations would be closed or realigned, the commission’s primary criteria was the military value of the base. It therefore began with a thorough review of the US military force structure and its requirements and then examined how bases fit into that structure. Other criteria, including local economic effects were considered but the military factors were primary.

The US has continued to use the commission procedure. The Secretary of Defense recommends closures which are then examined by the commission, whose members are appointed by the Administration. The commission then examines the recommendations and makes its own set of recommendations which may differ from those put forward by the Pentagon. Congress and the Pentagon then accept or reject the commission’s recommendations but must do so without changes. If the recommendations are not actively rejected they are considered to be accepted and will be implemented.

## Local Recovery from Base Closures in the US

Since 1961, a US government programme has been in place which seeks to minimize the impact of defence decisions on local communities. This began as the Economic Adjustment Program and in 1970 was transformed into the President’s Economic Adjustment Committee (EAC). The EAC includes representatives of eighteen federal departments and agencies.

The mandate of EAC is to help communities implement strategies for dealing with the effects of base closure or reductions. Under procedures developed by the EAC, the establishment of a local steering council or task force which includes representatives from a wide cross-section of local interests (business, labour etc.) is seen as key to the process. The inter-departmental nature of the EAC allows for ease of access to grants and opportunities available through other government agencies.

According to the US Department of Defense, over a thirty-year period, more than eighty percent of base closure communities have replaced lost civilian jobs and incomes within several years. Between 1961 and 1990, 158,104 civilian jobs replaced 93,424 former civilian defence and contractor jobs associated with the bases.

## Canada’s Advisory Group

Mr. Masse’s appointment of an advisory group on base closings is recognition of the need to de-politicize the process and develop a standard method of dealing with closures. The Minister’s Advisory Group on Defence Infrastructure has three civilian members: Harry Graschuk, a chartered accountant from Alberta, will chair; the other two members are Kathryn M. Bindon, a professor at Memorial University in Newfoundland; and Guy Fournier, a civil engineer from Quebec. The group will, inter alia, set out decision-making criteria, develop a methodology for calculating net cost savings, take into account regional equity and the country’s duality, identify the possible social and economic effects and examine the experience of other governments. It is expected to submit a report by May 1992.

# WHEN TO SPEAK OUT WHEN TO KEEP SILENT

*A journalist who covered the Iran hostage drama eleven years ago wonders whether media reporting in such situations does more harm than good.*

BY JEAN PELLETIER

**H**OSTAGE-TAKING IS POLITICAL BLACKMAIL, and ranks as one of the more primitive and barbaric forms of human conflict. It depends for its effectiveness as a political negotiation tactic on the presence of modern mass media. One must therefore ask if there would be fewer incidents of hostage-taking if members of the media refused to cover them.

The press officer of any foreign ministry would answer yes to this question. He or she would argue that without media, terrorists would lose the very tool that gives them leverage – the ability to turn a given conflict to their advantage through the use of terror. Without mass media, terrorists could not effectively influence the electorate of the hostages' home countries. Without the inquisitiveness of journalists, whose ears are always open for official reactions, hostage-takers would never otherwise get past the front doors of the White House, the Elysée Palace or 10 Downing Street.

It is true that hostage-taking is a last resort. Nonetheless, it is a very sophisticated weapon, all the more horrifying since, thanks to satellites, it reaches millions of "targets" – from ordinary television viewers (and voters) in the comfort of their homes to the most powerful heads of state secure in their bomb-proof "situation" rooms on the other side of the globe.

TO WRITE THE STORY ABOUT THE KIDNAPPING or not? To show the images or censor them? To speak up or remain silent? These are the questions for which there are no easy answers, not to mention ones that apply to all circumstances. Just as it is false to believe that journalists too become "kidnappers" when they report the taking of a hostage, it is also difficult to sustain the notion that they can remain strictly neutral about a given hostage situation when they are at the same time acting as a negotiating channel.

It was the US hostage crisis in Iran from 1979 to 1981 that, in effect, "modernized" hostage-taking – authorities of a nation state chose to hold foreign diplomats in detention in

order to achieve a political end. Iran opted to use a medieval form of blackmail as an instrument of foreign policy. But such a political calculation only made sense if Khomeini's Iran was certain from the outset that the action would have the desired effect on Jimmy Carter's America.

About this, Teheran had no doubts. After all, wasn't the regime of the ayatollahs brought to power thanks to the skilful use of the modern media? Wasn't Khomeini's calculation about the actions of the Shah, once a few gunshots were fired, right as well? The ayatollahs knew in November 1979 that in order get their own way with the United States, they would have to reach into the living rooms of America.

BY INVADING THE US EMBASSY IN DOWNTOWN Teheran and letting the TV reporters and correspondents of all the major networks and newspapers on the planet work their beats essentially without hindrance, they succeeded far beyond their own expectations. In a remarkably short time, traditional diplomacy was supplanted by the video camera; the live correspondent became the chargé d'affaires and the satellite, the only diplomatic channel that mattered.

Images of the American hostages being paraded blindfolded, hands tied, through the streets of Teheran, had a deep and lasting effect on American public opinion. One year later, the power of these images led to the election of a candidate for president – Ronald Reagan – who had but one election promise: "never again."

The US media – especially television – became active accomplices in this game. Ted Koppel is one of the most watched and respected TV journalists today, in the main, because of a nightly programme which got its start in November 1979 – "America Held Hostage." Viewed from the perspective of 1991, this seems an absurd title for a TV programme. It wasn't America, but fifty-three diplomats who were being held hostage.

Nevertheless, Jimmy Carter played the game too, isolating himself in the White House and binding his fate to that of the hostages imprisoned in the basement of the US chancellery in Teheran. Nevertheless, this inane title, no doubt dreamed up by a news editor unable to resist a sensationalist headline, was to become in just a few weeks, an objective description of the American political mood.

FROM THE MOMENT TRADITIONAL DIPLOMACY left the field, the media filled the vacuum. Journalists in Khomeini's Iran were to enjoy greater diplomatic immunity than the diplomats themselves. The US electorate, encouraged by an overheated press, began to perceive the crisis as much more significant than it actually was. And whereas the White House should have remained above all the media noise, instead it diminished itself by playing at the same level as the mass media. From that point on, only a successful military intervention could have broken the impasse between Iran and the US, but the attempt that was made ended in disaster on an Iranian desert – the political fate of Jimmy Carter was sealed.

Throughout those long months of the Iranian hostage crisis was the US media right in carrying on as it did? The simple answer is no. First of all, if certain facts had to be reported, this could have been done without all the pathos and hand-wringing. Was it necessary to play up the yellow ribbons, and the drawn-out counting of days, when all the while it was clear there was no imminent solution? Did the press have to indulge in a primitive and offensive demagoguery, effectively making Islam of the 1980s out to be the Bolshevism of the 1950s? Khomeini's Iran was not Ho Chi Minh's Vietnam, yet the hostage crisis became America's second Vietnam.

THIS KIND OF CRITICISM COULD BE HEARD eleven years ago, but it was at the time evidently much better for the networks' bottom line to sensationalize. Jimmy Carter's calculation that if he immersed himself in the crisis, he would better his chances against his Democratic Party rival, Ted Kennedy, encouraged this tendency.

Can one then reasonably argue that if the media had played a more serious and restrained role, the hostage crisis in Iran would have ended differently? I believe the answer is yes. By playing excessively on the feelings of national humiliation, the American media also became hostage to a crisis which they thought they were covering "objectively." The more the press demanded a rapid end to the crisis, the more this played into the hands of the ayatollahs who simply raised the ante. The taking of a hostage is, by definition, a negotiation, and it is in the interest of the kidnapper to control the timing of deadlines. If the media plays along with the giving of ultimata, then they are dancing to the terrorists' tune.

press can only carry out its role if it retains the option to remain silent, to keep "off-the-record" statements secret, to respect confidentiality, to delay the broadcasting of facts under certain conditions. Secrets and silence are part of the journalist's day-to-day work tools; it is naive to pretend otherwise.

WE SHOULD NOT CONCLUDE FROM ALL THIS, however, that the media ought to ignore the taking of hostages. Had it not been for the stubbornness of the press in keeping alive the issue of hostages in Lebanon, who knows whether or not governments would have forgotten about them. The search for truth demands caution and a sense of what the boundaries are,

The search for balance between these two formulas must continue. "Live" does not replace research, much less serious reflection. We know that the presence of a video camera can influence the event it is covering, which is why the presence of journalists in the field is still essential – journalists who go beyond merely expanding upon what the camera sees and seriously examine the subtleties missed by the camera.

FINALLY, WE COME TO THE QUESTION OF whether journalists contribute to the resolution of international conflicts or their prolongation. What we can say for certain is that there is no going back to the good old days. The citizen who has had access to a free, high-technology press, capable of relaying events live from the other end of the world, will not be content with only wire services or the radio. To imagine that we can return to the era of totally secret diplomacy, of no information at all, is an illusion. A parallel development is the fact that media is now part of the event – the number of press attachés in governments is proof.

This new dynamic can increase the rapidity with which solutions to problems are found. But perhaps it also serves to multiply the number of crises we have to face. By simplifying the means of mass communication, modern media has given the even most marginal interest groups the opportunity to express themselves. The collapse of the Eastern European bloc would not have been possible without television, facsimile machines, and communications satellites. But at the same time, the Hezbollah terrorists would never have been able to impose themselves on political events without these very same instruments.

Obviously the media must defend its right to know and systematically oppose censorship. But with equal vigour we need also to uphold our obligation to make sound judgements about when to speak up and when to remain silent.

(translation by Veronica Baruffati and Michael Bryans)

JOURNALISTIC ETHICS demand that the press not takes sides when reporting facts and information. They also demand that a certain distance be maintained between journalist and subject. The journalist who allows himself or herself to be used as go-between risks a dangerous compromise. For example, should a TV crew agree to board a plane in which the passengers are being held hostage? What if the hostage-takers then declare that if their message to the world is not broadcast without editing or commentary, a passenger will be executed in front of the cameras?

One can see right away how the original decision by the journalist to participate leads quickly to some very difficult dilemmas. On the other hand, no one can say that in choosing not to get involved, a journalist is helping the hostages either. But we need to be aware from the outset that by taking hostages, modern terrorists also try to take the press hostage as a means to achieve their ends. It is therefore incumbent on the press to resist these efforts. In the case of terrorism, this means that from time to time – and to preserve its professional integrity – the press should adopt a self-imposed silence.

The argument that freedom of the press can only be assured by rejecting all forms of censorship under all circumstances reduces the role of the press to that of mere loudspeaker and transmitter for any and all voices, be they those of murderers, or dictators. As members of the media we should have no illusions; the

but caution and a sense of proportion do not mean only silence and forgetting.

IN THE 1990S, ISSUES SURROUNDING THE role of media in conflict cannot be raised without mentioning Cable News Network (CNN) and the effect it has had on contemporary mass media. While CNN has released televised news from the straitjacket imposed by the US networks' monopoly, the central question posed by its success is whether broadcasting everything live and direct amounts to progress? Just because CNN transmits live, unfiltered and unedited does not mean its news contains more truth than the others.

It is in some ways peculiar that this question still constitutes part of the journalistic debate in the '90s, for it was first raised in 1939 when American radio, notably the CBS network, would air only "live" news broadcasts. CBS maintained that any tampering with the raw information was contrary to its news ethic. Contemporary journalists like Edward R. Murrow and William Shirer argued the opposite. Live broadcasting only made sense if there was still the option to produce edited programmes which permitted a more reflective, measured handling of the news.

Bernice Ferguson

# PUTTING AN END TO BUSINESS AS USUAL

*A former US Assistant Secretary of Defense says the best way to prevent countries from getting their hands on large arsenals is for the leading arms merchants to stop selling them.*

BY PAUL C. WARNKE

THE OVERWHELMING MILITARY VICTORY OF the allied forces in Desert Storm must not be allowed to obscure the policy failure that largely contributed to the creation of the Persian Gulf crisis. Between 1981 and 1988, Iraq acquired some \$48 billion worth of military hardware. "The largest accumulation ever of modern weapons by a Third World country," in the estimation of the *Bulletin of the Atomic Scientists*.

Most of these weapons were sold by the United States, the Soviet Union, the United Kingdom, France and China, who are also the five permanent members of the UN Security Council. This is the same group that thereafter authorized the use of force to expel one of their major customers from Kuwait.

In recent decades, the United States has sought to contain the bitter antagonisms in the Middle East by fostering a delicate balance of power, principally by supplying arms to Israel, Iran and several Arab states. The policy has failed. In 1973, Egypt, Syria and Israel engaged in a brief but bloody conflict. In the 1980s, Iran and Iraq fought a war over disputed boundaries in which Iraq used poison gas and both countries saw the decimation of thousands of their young men.

Also, for many years, the US placed its faith in the Shah of Iran to maintain peace and stability in the Persian Gulf area. I must admit to a degree of complicity in this flawed policy concept because I served in the late 1960s in the administration of President Lyndon Johnson as Assistant Secretary of Defense for International Affairs, which office had major responsibility for weapons transfers.

THE SHAH OF IRAN WAS ONE OF OUR PRINCIPAL customers. American policy-makers saw him as a durable proconsul who would protect Western interests in the Middle East. Every spring, his generals would show up in Washington with their wish-list of military hardware. Working with our counterparts in the Department of State, we would cut back on the list but on the Shah's next visit to Washington he would have dinner with President Johnson and most of the deleted items would be restored.

In the administration of President Richard Nixon, virtually all limits were taken off and the Shah was allowed to buy just about everything he wanted. But his powerful foreign friends couldn't save him from his domestic enemies and his exit from Teheran was followed by the entrance of Ayatollah Khomeini and his virulently anti-Western regime. Together with our allies, we then built up Iraq as a counterpoise to Iran.

Subsequent events have dramatically illustrated that in arming the enemy of your enemy you are not necessarily making a new friend. Instead, the result may be only that subsequent conflicts in an area of heavy arms sales will result in death and devastation exponentially greater than if restraint had been exercised.

IN THE AFTERMATH OF THE GULF WAR, THE BUSH administration has given mixed signals about its plans for conventional arms sales in the Middle East. Secretary of State James Baker has said that the United States should seek international cooperation "to reduce arms flow into an area that is already overmilitarized." But shortly thereafter the administration told Congress that it was considering selling over \$23 billion of arms in the next year to Saudi Arabia, the United Arab Emirates, Bahrain, Egypt and Turkey. Moreover, Secretary Baker's deputy, Lawrence Eagleburger, declared during the Gulf crisis: "It is a policy of the United States that our diplomatic posts abroad should support the marketing efforts of US companies in the defense trade arena as in all other spheres of commercial activity." The sad history of overmilitarizing the Middle East apparently will not be allowed to interfere with business as usual.

Accordingly, it seems clear that the proliferation of modern weaponry throughout the Third World is basically a supply-side problem. What is needed is a fundamental reassessment of the policy of seeking stability by heavily arming the potential combatants. It is the responsibility of the major suppliers – Germany and Brazil, for example, along with the five permanent members of the UN Security

Council – to live up to their responsibility to achieve a more secure world by developing strict constraints on arms sales.

THE MIDDLE EAST IS THE LOGICAL TEST CASE, but not the only problem area. Some useful initiatives have been presented. President Bush has called for steps to prevent the development of weapons of mass destruction. Among other proposals, he has called for a cut-off of the production and importation of weapons-grade fissionable materials in the Middle East. The proposal should be broadened to make it a global policy. An international treaty commitment should be achieved to end further production of plutonium and highly-enriched uranium. President Bush has the germ of a good idea. But it is not a new idea, having been put forward by President Eisenhower almost forty years ago.

Some other useful arms control ideas have been advanced. US Senators John Kerry and Hank Brown proposed earlier this year that the President be required to report to the Chairman of the Senate Foreign Relations Committee and the Speaker of the House at least sixty days before announcement of an arms sale to the Middle East. A Canadian initiative last February has major merit. The proposal is that the five permanent members of the Security Council agree that weapons sold to the Middle East will never again include those weapons that are limited by the treaty on Conventional Armed Forces in Europe (CFE). That would mean no sales of battle tanks, armoured combat vehicles, artillery, combat aircraft and attack helicopters. As with a nuclear weapons material cut-off, this inhibition should be given global application.

SUPPLY-SIDE RESTRAINT BASED ON THE DEFINITIONS already worked out by the twenty-two countries that are parties to the CFE Treaty would cover the most destabilizing weapons and would save a lot of negotiating time. It would also prevent a potential unplanned and unfortunate consequence of the Treaty. Since equipment of the types covered by the Treaty can no longer be sent to Europe, much of it might be made available for sale into other

the US strategic nuclear force. For a decade, the US Navy has successfully resisted all efforts to bring sea-based tactical nuclear weapons to the negotiating table. Brushing aside this position, on 27 September Bush announced that the United States would unilaterally denuclearize most of its naval vessels – “the bottom line is that under normal circumstances, our ships will not carry tactical nuclear weapons.”

AS FOR THE LINK BETWEEN NUCLEAR FORCES IN Europe and North America, this was already partly undermined by the growing European concerns about the continued deployment of short-range nuclear weapons in Germany and elsewhere. On 27 September, Bush performed a remarkable turnaround by accepting the long-standing Soviet position and proposing the elimination of about 2,300 ground-based theatre nuclear weapons. The Soviets, Bush said, “should go down the road with us,” meaning that they should dismantle and eliminate “their entire inventory of ground-launched theatre nuclear weapons.” Amen, say those who have been delegated to watch the Beirut docks.

While the Bush proposals of 27 September will certainly attract their critics, it would be foolish not to recognize the break with the past which has now taken place. Will the Bush administration be as keen to undertake further changes which will cut more deeply into the nuclear stockpile? It is here that certain characteristics of the new style will affect both the US moves to come and the interests of its allies, including Canada.

These proposals were not only a departure from the START processes, they were also taken with the minimum of allied contribution. “Consultations” took place just hours before the speech in order to protect its dramatic impact, reinforcing the growing sense that unilateralism is the new style in Washington. Increased impatience with the cumbersome procedures of multilateral alliance diplomacy may now follow, as well as greater indifference to the special pleadings of allies.

IN THE NEGOTIATIONS ON A CHEMICAL WEAPONS convention, for example, the United States has reneged on its previous commitment to a strict verification regime with few signs of embarrassment or respect for those allies, including Canada, who have continued to support the long-standing Western position on intrusive inspection. A similarly unilateral approach may be in the offing with regard to the amendment or abrogation of the ABM Treaty, where the view of allies are unlikely to weigh heavily in future US overtures to the Soviets.

If Canada and other states want to influence changing US approaches to strategic arms control, in the next year it will be necessary to reassess the direction and goals of US policy,

and to identify policies which serve broad national and multinational interests. Some of the leading agenda items are the following:

First, against whom are the post-START 8,000 US strategic weapons now to be targeted? Lacking any more convincing foe, the target is presumably still the Soviet Union, shrunk by the loss of the Baltic states and now further confounded by the emergence of self-declared nuclear-weapon free republics. The disintegration of the Soviet Union, therefore, points up the need to plan for radical reductions in strategic forces to bring them down to around 1,000 warheads by the end of the decade.

The Canadian interest in this process is direct. In his 27 September speech, President Bush also announced that all US strategic nuclear forces would be brought under a single Strategic Command. This is reminiscent of a report in January 1991, confirmed by Canadian officials, that the Pentagon was considering a proposal to combine in one strategic command, the surveillance assets and interceptor forces of the bi-national North American Aerospace Defence Command (NORAD) with the strategic offensive forces of the US air force and navy.

Second, the US Senate has now formally supported the deployment of a ground-based ABM system by 1996, and called for the amendment of the ABM Treaty to permit a country-wide defence. The coverage of the proposed system would include a very large area of Canada, and the ABM system would almost certainly be commanded by the proposed single Strategic Command. It is not too soon, therefore, to ask whether the Senate's ABM system would help the search for very low levels of nuclear weapons, or whether, as many critics contend, the move to deploy ballistic missile defences will lead other nuclear weapons states to respond by increasing their offensive capability.

THIRD, IF EUROPE, NOW SEEKING TO DIVEST itself of nuclear weapons, is no longer the ignition point for a Soviet-American confrontation, the huge remaining strategic arsenals will confront each other, albeit at a very low level of tension, on a transpolar axis. Accordingly, this may be an ideal time to explore the possibilities of pooling radar warning information with a view to making the circumpolar north totally

transparent to all interested parties. This now includes not only Canada and the Scandinavian states, but also the new Baltic states, which, like Canada, will find themselves caught up in strategic nuclear issues as a consequence of their location.

Fourth, Canada should once again address the question of nuclear weapon testing. In his reply to Bush, Gorbachev announced a one-year moratorium on testing at Novaya Zemlya. All of the northern states have a strong interest in supporting this moratorium and preventing the reactivation of an environmentally fragile test site. But there is also a broader interest. A ban on nuclear weapon tests is likely to be just as important at the 1995 NPT Review Conference as it was in 1990, when the inability to agree on this issue ultimately reduced the conference to a stalemate.

THE NON-PROLIFERATION REGIME IS AT A CRUCIAL stage in its development: the number of its supporters, especially among the declared nu-

clear weapon states and the near nuclear weapon states has never been greater, but the technologies which encourage proliferation are less and less controllable. The Soviet moratorium provides an opportunity to initiate a long-lead approach to the 1995 Review Conference. As a first step, a conference could be called of all the neighbours of the Soviet Union affected by Novaya Zemlya. There would, of course, be a prominent hold-out – the United States. Notwithstanding, there is not only safety, but also effectiveness in numbers.

A circumpolar discussion to consider alternatives to further testing at Novaya Zemlya (if all else fails, why not let the Soviets test in Nevada?) could not be completely ignored in Washington. Half-hearted pleas by Canadian diplomats acting in isolation most certainly will be.

Of course, it is not these proposals that are new, but the political context. On 27 September, President Bush tried to reassert control of the politics of nuclear weapons, but in the light of the ongoing disintegration in the Soviet Union it is not clear that will be able to maintain the familiar nuclear dialogue. Arms control after the coup will not bear much resemblance to the encrusted processes of the past twenty years. The challenge now is to help shape the new agenda, and that can begin by defining the course which will make nuclear weapons increasingly irrelevant.

Kathryn Adams

# REBIRTH OF THE CAMBODIAN NATION

*Accords signed in Paris in October might at long last  
put an end to Cambodia's misery.*

BY GÉRARD HERVOUET

IN A BUDDHIST TEMPLE IN PHNOM PENH TWO PYTHONS WERE OBSERVED, a sign predicting that a king would return. Cambodia clings to symbols and, for the vast majority of Khmers, Prince Norodom Sihanouk embodies the glorious tradition of Angkor. The prophesy of the pythons was borne out by one of the first real consequences of the 23 October 1991 Paris Accords on Cambodia – the return of Prince Norodom Sihanouk to Phnom Penh.

At an extraordinary congress of the Revolutionary Party of the Cambodian People on 17 and 18 October 1991, the party of the current Prime Minister, Hun Sen, chose to reject its old Marxist-Leninist ideology and instead restore basic liberties. The right to free enterprise and a multi-party political system would henceforth be guaranteed. In this context, it is crucial to ask whether the alliance between Prince Sihanouk and Prime Minister Hun Sen will survive the planned election campaign, which has, to all intents and purposes, already begun.

The alliance probably will survive because the Khmer Rouge is still the common enemy of Hun Sen's regime in Phnom Penh, of Sihanouk's supporters, and of the third faction fighting for power headed by Son Sann. In its determination to thwart the Khmer Rouge and win the upcoming elections, whatever the cost, the Phnom Penh regime has even repudiated its fundamental ideological principles – a change that was met with approval from Prince Sihanouk who indicated his pleasure that Cambodia was "the first country in Indo-China to be decommunized."

THE HISTORY OF CAMBODIA'S CONFLICT IS TOO COMPLEX TO SUMMARIZE, but it is important to remember that in spring 1991, there seemed to be no real prospect of a settlement. After difficult negotiations, and under pressure from the five permanent members of the Security Council, a "framework agreement" was arrived at in late November 1990, which defined the fundamental principles on which a final settlement might be based.

The document established the composition and structure of a Supreme National Council (SNC) which has an equal number of representatives from each of the three resistance factions, with half its members (six) belonging to the current government. The framework agreement also establishes proposals for setting up the United Nations Provisional Authority in Cambodia (UNTAC), outlines its mandate, specifies the conditions for a ceasefire, for elections and the repatriation of refugees, and also lays down the principles of a new constitution.

Although unquestionably a positive achievement, the document left at least two problems unresolved: formal mention of the "genocide" committed by the Khmer Rouge after they came to power in 1975, and complex questions relating to the demobilization and disarmament of the forces in being on all sides. But in spite of the fact that a ceasefire has been observed by the four factions since May 1991, little prospect of further progress seemed likely until very recently. A meeting of the SNC in Jakarta in early June ended in failure, underlined by the Khmer Rouge's resistance to extending the ceasefire. One positive feature of the meeting was the evident willingness of Prince Sihanouk and Hun Sen to move the settlement process forward without the Khmer Rouge.

The SNC, at a meeting on 24 and 25 June at Pattaya, in south-east Thailand, concluded its work on a particularly positive note. Prince Sihanouk announced that the parties had agreed on an unconditional ceasefire effective 24 June, and that the opposition factions undertook to stop receiving arms from other countries. The SNC also announced its intention to set up its headquarters in Phnom Penh and to act as Cambodia's representative at the United Nations. Pending the arrival of the UN mission and the holding of general elections, the factions agreed to respect the status quo with regards to sections of Cambodia each controlled.

AN HISTORICALLY SYMBOLIC, BUT INFORMAL GATHERING OF THE SNC was held on 16 and 17 July, this time in Beijing. China made obvious its desire to influence the resolution of the Cambodian question, and in meeting Prime Minister Hun Sen for the first time, the Chinese authorities expressed their support for him and encouraged him to distance himself from the Vietnamese government. The SNC further accelerated the movement towards peace by announcing that it had unanimously chosen Prince Sihanouk as its President. The final communique from Beijing also indicated that the Prince had "decided henceforth to remain neutral and to act as a conciliator, not belonging to any one faction or political party."

Once again back in Pattaya in late August, SNC members reached agreement on the two important points left unresolved since 1990. With respect to "genocide," the government abandoned its basic requirement which guaranteed "against a return to the practices of the recent past." Even more importantly, the SNC accepted a French proposal advocating the demobilization of seventy percent of the armed forces of each faction, together with their weapons and equipment. And further, that the remaining thirty percent would be concentrated with their weapons, in cantonments under the supervision of the United Nations. The parties also agreed that once both bodies were set up in Phnom Penh, if no consensus could be reached on coordinating specific activities of the SNC and UNTAC, the final decision would be taken by Prince Sihanouk, as President.

PROSPECTS FOR ENDING THE CAMBODIAN WAR, AN INDIRECT RESULT OF East-West, Sino-Soviet and Sino-Vietnamese confrontations, have benefited from the recent shifts in international power, and basic changes in the course of contemporary history brought about by decomposition of the Soviet empire. The influence exerted by the permanent members of the Security Council has weighed heavily on the various protagonists unyielding positions. In any case, the Five's actions have had a positive influence on China which, in the wake of Tiananmen Square and the international turmoil following the Persian Gulf War, is sorely in need of a boost in credibility.

As a result of their continued support over the years for the Khmer Rouge, Chinese leaders had put themselves in a tight corner. During visits to Beijing over the past two years, a number of Chinese leaders

have spoken to me of their determination to put an end to a policy that consistently tarnished their international image. However, China felt it could not make any concessions on Cambodia unless Vietnam agreed to give in first on certain Chinese demands.

Conforming to the long tradition of the conflict-ridden Sino-Vietnamese relationship, Vietnam's leaders paid a visit to China. A secret meeting in Chengdu in early September laid the groundwork for agreements which paved the way for a normalization of relations between the two countries. In August, changes in Vietnam's political structure and the replacement of the Minister of Foreign Affairs, Nguyen Co Thach, by Nguyen Manh Cam, clearly pleased the Chinese who were only too happy to see the departure of the person whom they considered responsible for the deterioration of relations between the two countries.

THE RESOLUTION OF THE CONFLICT IN CAMBODIA IS DIRECTLY LINKED TO the end of the antagonistic relationship between China and Vietnam. The fallout from the breakup of the Soviet empire, drove both protagonists to find a *modus vivendi*. While the Paris Accords underscore the failure of Vietnam's policy on Indo-China, the Vietnamese communist party may have been willing to pay this price in order to ensure the future support of its Chinese brother. It is also possible that Beijing gave Vietnam assurances about its intentions with respect to the Paracel and Spratly Islands in the South China Sea – both island groups being the subject of a serious territorial dispute between the two countries.

Three agreements, capped by a final accord, were signed in Paris on 23 October 1991. The first agreement, which has the status of a treaty, is the most important. Entitled "Agreement on a Comprehensive Political Settlement of the Cambodia Conflict," it lays down the conditions for establishing peace in Cambodia and placing it under the partial supervision of the United Nations. Essentially, the document reiterates the framework agreement of 26 November 1990, with clarification of those points which remained vague or had been deliberately omitted.

In this respect, Articles 15, 16 and 17 of Part III, which deal with human rights and prevent "new violations of human rights" from occurring are of particular interest. These provisions were formulated in order to compensate for the complete absence from the settlement of a reference linking the Khmer Rouge with genocide. The wording of a particularly diplomatically phrased paragraph reflects the kinds of compromises made:

Above all, in view of the tragic recent history of Cambodia, states participating in the Conference undertake to promote and encourage respect for human rights and fundamental freedoms in Cambodia, which are stated in the relevant international instruments to which they are parties.

For many, provisions like this are scant compensation for wiping clean the Khmer Rouge slate and allowing them full participation in the peace and electoral processes.

The principal document contains five appendices the extent of which show the cautious and meticulous work that has gone into them: (1) the mandate of UNTAC; (2) withdrawal, ceasefire and related measures; (3) elections; (4) repatriation of refugees and Cambodian displaced persons; (5) the principles of a new constitution. Appendix II clarifies methodically and with precision the military functions of the UN Transitional Authority. Implementation of every provision, however, will require good faith on the part of all the Cambodian factions. It is already clear that demobilizing seventy percent of the armed forces of

each will not be easy. One of the big problems here is doubt about the reliability of the figures on which percentage calculations are to be based.

In the short term, one of the most difficult tasks will be the repatriation of refugees. There are approximately 350,000 living in camps on the border with Thailand. The UN High Commissioner for Refugees (UNHCR) will supervise operations to return the refugees to their country of origin. In addition to the logistical difficulties of moving refugees within Cambodia, minefields and ongoing violent efforts by the Khmer Rouge to subjugate and control groups of displaced persons, pose an enormous threat.

Attention must also be given to the conditions under which these people are to be resettled. What are their rights when seeking lost land and property? What can be done to avoid having them congregate, together with demobilized troops, around cities such as Phnom Penh? What immediate steps can be taken to deal with the shortage of schools and hospitals and to establish an infrastructure capable of meeting the demands of the population – expectations now raised by the hope of a peace at last regained.

In an effort to face up to these economic difficulties, the signatories in Paris agreed to support a "Declaration on the reconstruction and recovery of Cambodia." This thirteen-point document contains a number of guarantees of generous economic assistance to help rebuild the country. There is every reason to believe that these promises will be kept. Many knowledgeable observers regard Cambodia's chances of rapid recovery as better than Vietnam's. Japan, to name only one outside country, has already arranged to provide considerable assistance in agricultural development.

In addition to its military responsibilities, UNTAC will supervise the organization and holding of "free and impartial" elections. Planned for the spring of 1993, the Cambodian people will elect a constituent assembly of 120 members to draft and adopt a new constitution. This body will subsequently become a legislative assembly, from which the new Cambodian government will be formed. One of the problems resolved by the Paris accords was the question of voter eligibility. The principal document states:

Every person who has reached the age of eighteen at the time of application to register, or who turns eighteen during the registration period, and who either was born in Cambodia or is the child of a parent born in Cambodia will be eligible to vote in the election.

DESPITE THE EXPLICIT WORDING OF THIS PROVISION, IMPLEMENTATION will not be easy. Not only will it be difficult for many, especially refugees, to establish proof of age and birthplace, but there are already indications that some of the names already on the electoral lists will be challenged.

The second accord is entitled: "Agreement Concerning the Sovereignty, Independence, Territorial Integrity and Inviolability, Neutrality and National Unity of Cambodia." The length of the title and uses of multiple terms for the same concept are indications of just how conscious its framers are of a grim history which no one can afford to repeat.

The commitment of the international community to put an end to Cambodia's misery is unambiguous. And while it may seem a banal idea, it cannot be overstated that much now depends on Cambodians themselves. It is up to them to rebuild their country, and to resist any interference by neighbours, some of whom are all too clearly inclined,

over the medium and long term, to regard a neutral and non-Marxist Cambodia as a threat to their own regimes.

(translation by Sogestran, Jane Boulden and Michael Bryans)

## FROM THE DIRECTOR

*"Smart" sanctions before "smart" weapons*

IN THE POST-BERLIN WALL WORLD, WE WANT not only to push back the threat of nuclear weapons, but also the threat and use of all weapons. So far, both the experience and the outlook are mixed. The UN itself and peaceful approaches to the settlement of disputes have been greatly strengthened. At the same time, a major challenge to order was launched by arms in Kuwait, and was ultimately suppressed by the massive use of ultra-modern weaponry. Some political and military leaders seem ready to opt out of modern arms races, but others feel the need to race harder and faster, and we are still far from gaining acceptable controls on the supply of arms.

Disputes and conflicts will persist and even proliferate, and most of the time, culprits and aggressors will be hard to identify. In these cases, the international community has the duty to help resolve disputes, avert and contain conflicts, observe and monitor truces, and try to promote confidence and cooperation in the place of conflict. There are unparalleled opportunities for the United Nations in peace-making, peacekeeping, and peace-building, and Canada is better placed than almost any country to help realize this potential.

When clear aggressors cross borders, or when wrong-doers overthrow elected governments or crush internal minorities, there is unprecedented international will to react with firmness. The immediate call is not necessarily a call to arms – although many call for what they call “peacekeeping forces” in situations which fail the tests for effective peacekeeping – but almost everyone instantly calls for sanctions, as *the* means of pressure, short of armed force.

It is alarmingly clear, however, that the long and heated debates on sanctions against South Africa, Iraq and others have not noticeably improved the quality of policy thinking or public understanding on this “peaceful weapon” in the cause of order. As we grope our way toward some kind of new world order, it is now vital to get a better handle on the use of

sanctions as an instrument of pressure short of military force.

Sanctions have the immediate appeal of “doing something,” or worse, of being seen to do something, in situations which are largely beyond the control of outside actors. This symbolic impact of sanctions, both on the target and sender countries, may actually have some value in itself, but we also need to know whether, and when, these pressures can make a real difference to the offending behaviour of the target authorities.

Last January, the authors of the most comprehensive catalogue of sanctions experience, Gary Hufbauer and his colleagues from the Institute of International Economics in Washington, plunged into the policy debate. On the basis of a probability model derived from 115 cases since 1914, they said there was a virtual certainty that sanctions could reverse the Iraqi occupation of Kuwait. Common sense now tells most people that such a model must be wrong – Saddam would not have backed down to sanctions.

THIS SUMMER, A VISITING RESEARCHER AND I examined carefully the criteria in the Hufbauer study, and concluded that they gave too little weight to political-behavioural factors.\* When we added two such factors to their twelve, we found that the possibility of predicting the success of sanctions in this wide range of cases was increased by a substantial margin.

First, the judgement of whether a regime that is a target for sanctions is virtually invulnerable to domestic opposition (like Stalin’s USSR, Saddam’s Iraq, or Communist China) is, not surprisingly, a powerful gauge of whether sanctions will change its behaviour. Thus, in circumstances where the pain resulting from outside economic pressures cannot be transmitted to the rulers themselves, the efficacy, morality, and, where possible, the “pinpoint” targeting of such sanctions must be very carefully weighed by those who would impose them.

Second, the judgement of whether the change of behaviour sought by sanctioning countries is of primary or secondary importance to the target regime, has an even more powerful effect on the likely success or failure of sanctions.

Like most of the Hufbauer findings, neither of these relationships is startling in itself, and

the quality of the conclusions coming out of a model depends on the quality of the judgments going in. However, these aids to organized thinking about sanctions can improve on the confused and emotional discussion of the past.

In an important, recent test – Western reactions to the Soviet coup – the wealth of historical experience suggests that this time economic sanctions against the Soviet Union were effective and would have continued to be, as they hardly ever have before. The outcome of this struggle for power and the direction of Soviet society was, of course, mainly determined by internal factors. For once though, a Soviet regime – the short-lived junta – was, and would have remained, vulnerable to domestic opposition from various sources, so that the pain resulting from outside pressures could be felt by the rulers themselves.

Even though the Soviet junta’s stakes in resisting Western pressures were obviously of primary importance to them, the possibility was also there that they would compromise or even retreat in the short term, and the threat of total non-cooperation from the outside world was clearly of substantial, if not decisive, influence. Popular discontent could no longer be totally stifled, nor could alternative power centres or social visions. Even the half-measures of market reform undertaken up till now would have been a beacon of hope in an abyss, and the prospect of serious outside help and integration into the real economy of the world would have remained a compelling vision. In such a medium- to long-term standoff, the withholding of economic cooperation by the West would have been a critical lever for resolving it favourably.

SWEEPING ECONOMIC SANCTIONS, EVEN WHEN they can be effective, are still a blunt instrument, and like other weapons, they can cause a great deal of “collateral damage.” Building on the work of Hufbauer and his colleagues have done, in the light of the tests of experience, we may even be able to “target” sanctions much more in the future – to develop “smart” sanctions.

This analysis is an urgent and overdue challenge for those who have a responsibility to select and apply the tools of international pressure. Nor is the better analysis of sanctions beyond the capacity – or the responsibility – of those outside governments who often advocate sanctions so strongly.

– BERNARD WOOD

\*The Institute analysis referred to in this article was carried out largely by Rajeev Dehejia, working with the author.

the US strategic nuclear force. For a decade, the US Navy has successfully resisted all efforts to bring sea-based tactical nuclear weapons to the negotiating table. Brushing aside this position, on 27 September Bush announced that the United States would unilaterally denuclearize most of its naval vessels – “the bottom line is that under normal circumstances, our ships will not carry tactical nuclear weapons.”

AS FOR THE LINK BETWEEN NUCLEAR FORCES IN Europe and North America, this was already partly undermined by the growing European concerns about the continued deployment of short-range nuclear weapons in Germany and elsewhere. On 27 September, Bush performed a remarkable turnaround by accepting the long-standing Soviet position and proposing the elimination of about 2,300 ground-based theatre nuclear weapons. The Soviets, Bush said, “should go down the road with us,” meaning that they should dismantle and eliminate “their entire inventory of ground-launched theatre nuclear weapons.” Amen, say those who have been delegated to watch the Beirut docks.

While the Bush proposals of 27 September will certainly attract their critics, it would be foolish not to recognize the break with the past which has now taken place. Will the Bush administration be as keen to undertake further changes which will cut more deeply into the nuclear stockpile? It is here that certain characteristics of the new style will affect both the US moves to come and the interests of its allies, including Canada.

These proposals were not only a departure from the START processes, they were also taken with the minimum of allied contribution. “Consultations” took place just hours before the speech in order to protect its dramatic impact, reinforcing the growing sense that unilateralism is the new style in Washington. Increased impatience with the cumbersome procedures of multilateral alliance diplomacy may now follow, as well as greater indifference to the special pleadings of allies.

IN THE NEGOTIATIONS ON A CHEMICAL WEAPONS convention, for example, the United States has reneged on its previous commitment to a strict verification regime with few signs of embarrassment or respect for those allies, including Canada, who have continued to support the long-standing Western position on intrusive inspection. A similarly unilateral approach may be in the offing with regard to the amendment or abrogation of the ABM Treaty, where the view of allies are unlikely to weigh heavily in future US overtures to the Soviets.

If Canada and other states want to influence changing US approaches to strategic arms control, in the next year it will be necessary to reassess the direction and goals of US policy,

and to identify policies which serve broad national and multinational interests. Some of the leading agenda items are the following:

First, against whom are the post-START 8,000 US strategic weapons now to be targeted? Lacking any more convincing foe, the target is presumably still the Soviet Union, shrunk by the loss of the Baltic states and now further confounded by the emergence of self-declared nuclear-weapon free republics. The disintegration of the Soviet Union, therefore, points up the need to plan for radical reductions in strategic forces to bring them down to around 1,000 warheads by the end of the decade.

The Canadian interest in this process is direct. In his 27 September speech, President Bush also announced that all US strategic nuclear forces would be brought under a single Strategic Command. This is reminiscent of a report in January 1991, confirmed by Canadian officials, that the Pentagon was considering a proposal to combine in one strategic command, the surveillance assets and interceptor forces of the bi-national North American Aerospace Defence Command (NORAD) with the strategic offensive forces of the US air force and navy.

Second, the US Senate has now formally supported the deployment of a ground-based ABM system by 1996, and called for the amendment of the ABM Treaty to permit a country-wide defence. The coverage of the proposed system would include a very large area of Canada, and the ABM system would almost certainly be commanded by the proposed single Strategic Command. It is not too soon, therefore, to ask whether the Senate’s ABM system would help the search for very low levels of nuclear weapons, or whether, as many critics contend, the move to deploy ballistic missile defences will lead other nuclear weapons states to respond by increasing their offensive capability.

THIRD, IF EUROPE, NOW SEEKING TO DIVEST itself of nuclear weapons, is no longer the ignition point for a Soviet-American confrontation, the huge remaining strategic arsenals will confront each other, albeit at a very low level of tension, on a transpolar axis. Accordingly, this may be an ideal time to explore the possibilities of pooling radar warning information with a view to making the circumpolar north totally

transparent to all interested parties. This now includes not only Canada and the Scandinavian states, but also the new Baltic states, which, like Canada, will find themselves caught up in strategic nuclear issues as a consequence of their location.

Fourth, Canada should once again address the question of nuclear weapon testing. In his reply to Bush, Gorbachev announced a one-year moratorium on testing at Novaya Zemlya. All of the northern states have a strong interest in supporting this moratorium and preventing the reactivation of an environmentally fragile test site. But there is also a broader interest. A ban on nuclear weapon tests is likely to be just as important at the 1995 NPT Review Conference as it was in 1990, when the inability to agree on this issue ultimately reduced the conference to a stalemate.

THE NON-PROLIFERATION REGIME IS AT A CRUCIAL stage in its development: the number of its supporters, especially among the declared nu-

clear weapon states and the near nuclear weapon states has never been greater, but the technologies which encourage proliferation are less and less controllable. The Soviet moratorium provides an opportunity to initiate a long-lead approach to the 1995 Review Conference. As a first step, a conference could be called of all the neighbours of the Soviet Union affected by Novaya Zemlya. There would, of course, be a prominent hold-out – the United States. Notwithstanding, there is not only safety, but also effectiveness in numbers.

A circumpolar discussion to consider alternatives to further testing at Novaya Zemlya (if all else fails, why not let the Soviets test in Nevada?) could not be completely ignored in Washington. Half-hearted pleas by Canadian diplomats acting in isolation most certainly will be.

Of course, it is not these proposals that are new, but the political context. On 27 September, President Bush tried to reassert control of the politics of nuclear weapons, but in the light of the ongoing disintegration in the Soviet Union it is not clear that will be able to maintain the familiar nuclear dialogue. Arms control after the coup will not bear much resemblance to the encrusted processes of the past twenty years. The challenge now is to help shape the new agenda, and that can begin by defining the course which will make nuclear weapons increasingly irrelevant.

# REBIRTH OF THE CAMBODIAN NATION

*Accords signed in Paris in October might at long last  
put an end to Cambodia's misery.*

BY GÉRARD HERVOUET

IN A BUDDHIST TEMPLE IN PHNOM PENH TWO PYTHONS WERE OBSERVED, a sign predicting that a king would return. Cambodia clings to symbols and, for the vast majority of Khmers, Prince Norodom Sihanouk embodies the glorious tradition of Angkor. The prophesy of the pythons was borne out by one of the first real consequences of the 23 October 1991 Paris Accords on Cambodia – the return of Prince Norodom Sihanouk to Phnom Penh.

At an extraordinary congress of the Revolutionary Party of the Cambodian People on 17 and 18 October 1991, the party of the current Prime Minister, Hun Sen, chose to reject its old Marxist-Leninist ideology and instead restore basic liberties. The right to free enterprise and a multi-party political system would henceforth be guaranteed. In this context, it is crucial to ask whether the alliance between Prince Sihanouk and Prime Minister Hun Sen will survive the planned election campaign, which has, to all intents and purposes, already begun.

The alliance probably will survive because the Khmer Rouge is still the common enemy of Hun Sen's regime in Phnom Penh, of Sihanouk's supporters, and of the third faction fighting for power headed by Son Sann. In its determination to thwart the Khmer Rouge and win the upcoming elections, whatever the cost, the Phnom Penh regime has even repudiated its fundamental ideological principles – a change that was met with approval from Prince Sihanouk who indicated his pleasure that Cambodia was "the first country in Indo-China to be decommunized."

THE HISTORY OF CAMBODIA'S CONFLICT IS TOO COMPLEX TO SUMMARIZE, but it is important to remember that in spring 1991, there seemed to be no real prospect of a settlement. After difficult negotiations, and under pressure from the five permanent members of the Security Council, a "framework agreement" was arrived at in late November 1990, which defined the fundamental principles on which a final settlement might be based.

The document established the composition and structure of a Supreme National Council (SNC) which has an equal number of representatives from each of the three resistance factions, with half its members (six) belonging to the current government. The framework agreement also establishes proposals for setting up the United Nations Provisional Authority in Cambodia (UNTAC), outlines its mandate, specifies the conditions for a ceasefire, for elections and the repatriation of refugees, and also lays down the principles of a new constitution.

Although unquestionably a positive achievement, the document left at least two problems unresolved: formal mention of the "genocide" committed by the Khmer Rouge after they came to power in 1975, and complex questions relating to the demobilization and disarmament of the forces in being on all sides. But in spite of the fact that a ceasefire has been observed by the four factions since May 1991, little prospect of further progress seemed likely until very recently. A meeting of the SNC in Jakarta in early June ended in failure, underlined by the Khmer Rouge's resistance to extending the ceasefire. One positive feature of the meeting was the evident willingness of Prince Sihanouk and Hun Sen to move the settlement process forward without the Khmer Rouge.

The SNC, at a meeting on 24 and 25 June at Pattaya, in south-east Thailand, concluded its work on a particularly positive note. Prince Sihanouk announced that the parties had agreed on an unconditional ceasefire effective 24 June, and that the opposition factions undertook to stop receiving arms from other countries. The SNC also announced its intention to set up its headquarters in Phnom Penh and to act as Cambodia's representative at the United Nations. Pending the arrival of the UN mission and the holding of general elections, the factions agreed to respect the status quo with regards to sections of Cambodia each controlled.

AN HISTORICALLY SYMBOLIC, BUT INFORMAL GATHERING OF THE SNC was held on 16 and 17 July, this time in Beijing. THE RESOLUTION OF THE CONFLICT IN CAMBODIA IS DIRECTLY LINKED TO the end of the antagonistic relationship between China and Vietnam. The fallout from the breakup of the Soviet empire, drove both protagonists to find a *modus vivendi*. While the Paris Accords underscore the failure of Vietnam's policy on Indo-China, the Vietnamese communist party may have been willing to pay this price in order to ensure the future support of its Chinese brother. It is also possible that Beijing gave Vietnam assurances about its intentions with respect to the Paracel and Spratly Islands in the South China Sea – both island groups being the subject of a serious territorial dispute between the two countries.

Three agreements, capped by a final accord, were signed in Paris on 23 October 1991. The first agreement, which has the status of a treaty, is the most important. Entitled "Agreement on a Comprehensive Political Settlement of the Cambodia Conflict," it lays down the conditions for establishing peace in Cambodia and placing it under the partial supervision of the United Nations. Essentially, the document reiterates the framework agreement of 26 November 1990, with clarification of those points which remained vague or had been deliberately omitted.

In this respect, Articles 15, 16 and 17 of Part III, which deal with human rights and prevent "new violations of human rights" from occurring are of particular interest. These provisions were formulated in order to compensate for the complete absence from the settlement of a reference linking the Khmer Rouge with genocide. The wording of a particularly diplomatically phrased paragraph reflects the kinds of compromises made:

Above all, in view of the tragic recent history of Cambodia, states participating in the Conference undertake to promote and encourage respect for human rights and fundamental freedoms in Cambodia, which are stated in the relevant international instruments to which they are parties.

For many, provisions like this are scant compensation for wiping clean the Khmer Rouge slate and allowing them full participation in the peace and electoral processes.

The principal document contains five appendices the extent of which show the cautious and meticulous work that has gone into them: (1) the mandate of UNTAC; (2) withdrawal, ceasefire and related measures; (3) elections; (4) repatriation of refugees and Cambodian displaced persons; (5) the principles of a new constitution. Appendix II clarifies methodically and with precision the military functions of the UN Transitional Authority. Implementation of every provision, however, will require good faith on the part of all the Cambodian factions. It is already clear that demobilizing seventy percent of the armed forces of

each will not be easy. One of the big problems here is doubt about the reliability of the figures on which percentage calculations are to be based.

In the short term, one of the most difficult tasks will be the repatriation of refugees. There are approximately 350,000 living in camps on the border with Thailand. The UN High Commissioner for Refugees (UNHCR) will supervise operations to return the refugees to their country of origin. In addition to the logistical difficulties of moving refugees within Cambodia, minefields and ongoing violent efforts by the Khmer Rouge to subjugate and control groups of displaced persons, pose an enormous threat.

Attention must also be given to the conditions under which these people are to be resettled. What are their rights when seeking lost land and property? What can be done to avoid having them congregate, together with demobilized troops, around cities such as Phnom Penh? What immediate steps can be taken to deal with the shortage of schools and hospitals and to establish an infrastructure capable of meeting the demands of the population – expectations now raised by the hope of a peace at last regained.

In an effort to face up to these economic difficulties, the signatories in Paris agreed to support a "Declaration on the reconstruction and recovery of Cambodia." This thirteen-point document contains a number of guarantees of generous economic assistance to help rebuild the country. There is every reason to believe that these promises will be kept. Many knowledgeable observers regard Cambodia's chances of rapid recovery as better than Vietnam's. Japan, to name only one outside country, has already arranged to provide considerable assistance in agricultural development.

In addition to its military responsibilities, UNTAC will supervise the organization and holding of "free and impartial" elections. Planned for the spring of 1993, the Cambodian people will elect a constituent assembly of 120 members to draft and adopt a new constitution. This body will subsequently become a legislative assembly, from which the new Cambodian government will be formed. One of the problems resolved by the Paris accords was the question of voter eligibility. The principal document states:

Every person who has reached the age of eighteen at the time of application to register, or who turns eighteen during the registration period, and who either was born in Cambodia or is the child of a parent born in Cambodia will be eligible to vote in the election.

DESPITE THE EXPLICIT WORDING OF THIS PROVISION, IMPLEMENTATION will not be easy. Not only will it be difficult for many, especially refugees, to establish proof of age and birthplace, but there are already indications that some of the names already on the electoral lists will be challenged.

The second accord is entitled: "Agreement Concerning the Sovereignty, Independence, Territorial Integrity and Inviolability, Neutrality and National Unity of Cambodia." The length of the title and uses of multiple terms for the same concept are indications of just how conscious its framers are of a grim history which no one can afford to repeat.

The commitment of the international community to put an end to Cambodia's misery is unambiguous. And while it may seem a banal idea, it cannot be overstated that much now depends on Cambodians themselves. It is up to them to rebuild their country, and to resist any interference by neighbours, some of whom are all too clearly inclined,

over the medium and long term, to regard a neutral and non-Marxist Cambodia as a threat to their own regimes.

(translation by Sogestran, Jane Boulden and Michael Bryans)

## FROM THE DIRECTOR

*"Smart" sanctions before "smart" weapons*

IN THE POST-BERLIN WALL WORLD, WE WANT not only to push back the threat of nuclear weapons, but also the threat and use of all weapons. So far, both the experience and the outlook are mixed. The UN itself and peaceful approaches to the settlement of disputes have been greatly strengthened. At the same time, a major challenge to order was launched by arms in Kuwait, and was ultimately suppressed by the massive use of ultra-modern weaponry. Some political and military leaders seem ready to opt out of modern arms races, but others feel the need to race harder and faster, and we are still far from gaining acceptable controls on the supply of arms.

Disputes and conflicts will persist and even proliferate, and most of the time, culprits and aggressors will be hard to identify. In these cases, the international community has the duty to help resolve disputes, avert and contain conflicts, observe and monitor truces, and try to promote confidence and cooperation in the place of conflict. There are unparalleled opportunities for the United Nations in peace-making, peacekeeping, and peace-building, and Canada is better placed than almost any country to help realize this potential.

When clear aggressors cross borders, or when wrong-doers overthrow elected governments or crush internal minorities, there is unprecedented international will to react with firmness. The immediate call is not necessarily a call to arms – although many call for what they call “peacekeeping forces” in situations which fail the tests for effective peacekeeping – but almost everyone instantly calls for sanctions, as *the* means of pressure, short of armed force.

It is alarmingly clear, however, that the long and heated debates on sanctions against South Africa, Iraq and others have not noticeably improved the quality of policy thinking or public understanding on this “peaceful weapon” in the cause of order. As we grope our way toward some kind of new world order, it is now vital to get a better handle on the use of

sanctions as an instrument of pressure short of military force.

Sanctions have the immediate appeal of “doing something,” or worse, of being seen to do something, in situations which are largely beyond the control of outside actors. This symbolic impact of sanctions, both on the target and sender countries, may actually have some value in itself, but we also need to know whether, and when, these pressures can make a real difference to the offending behaviour of the target authorities.

Last January, the authors of the most comprehensive catalogue of sanctions experience, Gary Hufbauer and his colleagues from the Institute of International Economics in Washington, plunged into the policy debate. On the basis of a probability model derived from 115 cases since 1914, they said there was a virtual certainty that sanctions could reverse the Iraqi occupation of Kuwait. Common sense now tells most people that such a model must be wrong – Saddam would not have backed down to sanctions.

THIS SUMMER, A VISITING RESEARCHER AND I examined carefully the criteria in the Hufbauer study, and concluded that they gave too little weight to political-behavioural factors.\* When we added two such factors to their twelve, we found that the possibility of predicting the success of sanctions in this wide range of cases was increased by a substantial margin.

First, the judgement of whether a regime that is a target for sanctions is virtually invulnerable to domestic opposition (like Stalin's USSR, Saddam's Iraq, or Communist China) is, not surprisingly, a powerful gauge of whether sanctions will change its behaviour. Thus, in circumstances where the pain resulting from outside economic pressures cannot be transmitted to the rulers themselves, the efficacy, morality, and, where possible, the “pinpoint” targeting of such sanctions must be very carefully weighed by those who would impose them.

Second, the judgement of whether the change of behaviour sought by sanctioning countries is of primary or secondary importance to the target regime, has an even more powerful effect on the likely success or failure of sanctions.

Like most of the Hufbauer findings, neither of these relationships is startling in itself, and

the quality of the conclusions coming out of a model depends on the quality of the judgements going in. However, these aids to organized thinking about sanctions can improve on the confused and emotional discussion of the past.

In an important, recent test – Western reactions to the Soviet coup – the wealth of historical experience suggests that this time economic sanctions against the Soviet Union were effective and would have continued to be, as they hardly ever have before. The outcome of this struggle for power and the direction of Soviet society was, of course, mainly determined by internal factors. For once though, a Soviet regime – the short-lived junta – was, and would have remained, vulnerable to domestic opposition from various sources, so that the pain resulting from outside pressures could be felt by the rulers themselves.

Even though the Soviet junta's stakes in resisting Western pressures were obviously of primary importance to them, the possibility was also there that they would compromise or even retreat in the short term, and the threat of total non-cooperation from the outside world was clearly of substantial, if not decisive, influence. Popular discontent could no longer be totally stifled, nor could alternative power centres or social visions. Even the half-measures of market reform undertaken up till now would have been a beacon of hope in an abyss, and the prospect of serious outside help and integration into the real economy of the world would have remained a compelling vision. In such a medium- to long-term standoff, the withholding of economic cooperation by the West would have been a critical lever for resolving it favourably.

S WEEPING ECONOMIC SANCTIONS, EVEN WHEN they can be effective, are still a blunt instrument, and like other weapons, they can cause a great deal of “collateral damage.” Building on the work that Hufbauer and his colleagues have done, in the light of the tests of experience, we may even be able to “target” sanctions much more in the future – to develop “smart” sanctions.

This analysis is an urgent and overdue challenge for those who have a responsibility to select and apply the tools of international pressure. Nor is the better analysis of sanctions beyond the capacity – or the responsibility – of those outside governments who often advocate sanctions so strongly.

– BERNARD WOOD

## DEFENCE NOTES

### NATO Summit in Rome

Meeting in Rome on 7 and 8 November, the NATO heads of state issued a lengthy communique outlining a "New Strategic Concept" for the alliance. Seeking to respond to the pace of change in Europe, the communique dealt at some length with the unique position of NATO as a security bridge between Europe and North America. "NATO," it commented, "embodies the transatlantic link by which the security of North America is permanently tied to the security of Europe," and it called for "a framework of interlocking institutions tying together the countries of Europe and North America."

Despite this reaffirmation of the inseparable transatlantic link, the Rome meeting took place amidst continuing uncertainty about the full implications of a Franco-German proposal to expand their joint army brigade. In mid-October, Presidents Mitterrand and Kohl wrote to other European leaders suggesting that, as part of a EC treaty on political union, the joint brigade could be expanded to a corps of multinational units under the control of Western European Union. This organization, a leftover from the early 1950s, played little or no role while the threat of a Soviet attack glued the NATO members together, but it has come to the fore as the possible institutional basis for a European security system.

The Rome communique appeared to support this movement, referring to "the process of developing a European security identity," and acknowledging that, with the strengthening of the European pillar, "the European members of the alliance will assume a greater degree of responsibility for the de-

fence of Europe." More informally, however, US leaders do not appear certain about the intentions of France and Germany. President Bush was quoted as saying: "If, my friends, your ultimate aim is to provide independently for your own defence, the time to tell us is today."

### Nuclear Weapons in Europe

The "New Strategic Concept" added little that was new in describing the previously agreed reorientation of NATO forces towards smaller, more mobile units with greater emphasis on reinforcement. However, following the sweeping measures announced by President Bush on 27 September to withdraw army and navy tactical nuclear weapons, the Rome communique, of necessity, dealt with the place of nuclear weapons in NATO strategy. The communique reaffirmed that US dual-capable aircraft, (those able to carry both conventional and nuclear weapons) supplemented if necessary by naval forces, would continue to contribute "sub-strategic" nuclear forces to European defence, thus maintaining the trans-atlantic link to the strategic nuclear forces of the United States.

At the same time, the Rome meeting addressed the question of Soviet nuclear forces, the control of which has become a matter of increasing concern to NATO. Shortly after the August coup, the new Soviet chief of Staff, Vladimir Lobov, insisted that tactical nuclear weapons were under strict control, explaining that key components of the weapons were kept under separate authority and "must be brought together" in order to arm the weapon. Other US reports have suggested that Scud missiles are accompanied by special KGB units holding the warheads in separate trailers. The KGB and the Soviet army have separate command channels, both of which must authorize firing of the missile. Such reassurances notwithstanding, leaders at the Rome summit made clear their concerns about Soviet nuclear weapons. Despite the dissenting

views of France, other NATO countries – including Canada – indicated that future aid to the Soviet Union would be tied to reassurances that all nuclear weapons were under a single authority with satisfactory security procedures.

### Canadian Defence Policy

On 17 September, just four years after the 1987 Defence White Paper promised a major build-up of Canadian forces, Defence Minister Marcel Masse revealed the long-awaited revised plan for the future structure of the armed forces. Mr. Masse refrained from specifically identifying the future threats which the Canadian forces might face, noting instead that the East-West confrontation has given way "to an ill-defined, relatively uncertain situation with respect to possible threats to security and world peace."

Although the statement contained few surprises, a number of key issues were apparently resolved. First, the two Canadian bases at Baden-Soellingen and Lahr in southern Germany will be closed in 1994 and 1995 respectively. Canada will continue to maintain a task force of 1,100 military personnel in Europe, with the location and nature of the force yet to be decided. In addition, Canada will continue the commitment to provide one battalion group to the NATO Composite Force, and will maintain one brigade and two squadrons of CF-18s to be placed at NATO's disposal in the event of a European crisis, and "capable of intervening anywhere in the world."

The Masse announcement also indicated that the Canadian navy will focus its activities more generally on Canadian coastal waters with less emphasis on the specific task of protecting the sea-lines of communication to Europe. Instead of a third batch of six Canadian Patrol Frigates, long-run plans envisage the procurement of six fast patrol corvettes, and twelve coastal

patrol vessels to be operated by the naval reserve and capable of mine counter-measures. The submarine replacement programme appeared to narrowly survive the review, with the promise of "up to three of an eventual six" conventionally-powered submarines.

Unlike the 1987 White Paper, the review offers no specific time frame for the reorientation of the armed forces. Recognizing the reality of the deficit, however, Masse indicated that "over the next few years" the level of defence budget increases would exceed only marginally, if at all, the rate of inflation. In this situation, the key to maintaining an effective military is the percentage of the budget allocated to the procurement of new equipment. The review promised to increase this percentage from 22 to 26 percent in four years, with a "target figure" of 30 percent.

In addition to reducing the overall numbers of military personnel from 84,000 to 76,000, therefore, the statement revealed the military concern that "unnecessary infrastructure [i.e. bases] should be eliminated immediately," but then promptly recognized that "socioeconomic reality militates against this prospect." A review of proposals for base closings is underway. [For more on this subject see page 5]

Among many references which indicated that in the future the forces will be structured primarily for the surveillance and patrol of Canadian territory, the review also promised an increased surveillance capability in the Arctic. In early November, the difficulties and responsibilities of the Canadian military in the Arctic were unhappily illustrated by the crash of a resupply plane on approach to the military base at Alert. Despite the courageous efforts of the rescuers, it seemed apparent that the resources needed to respond promptly to military or civilian air or sea accidents in the far north are not in place.

– DAVID COX

## REPORT FROM THE SECURITY COUNCIL

### Yugoslavia

As the role of the UN is redefined in the post-Cold War era, the limits of Security Council intervention in the internal affairs of a member state were once again tested in the case of Yugoslavia. On 25 September, the Council unanimously adopted Resolution 713, which "strongly urges" the parties to the conflict in Yugoslavia to observe a ceasefire and decided that all states shall "immediately implement a general and complete embargo on all deliveries of weapons and military equipment to Yugoslavia."

The foreign ministers of eleven of the fifteen Council members participated in adopting the resolution. Although some states had privately attempted to have the Council send UN peacekeepers to the area, China and the non-aligned states were said to be strongly against any such UN involvement.

On 25 October the Secretary-General issued a report that, among other things, noted that the arms embargo was being violated. He did not name those responsible. Resolution 713 imposes no penalties on states that violate the embargo.

### Cambodia

On 31 October, the Council unanimously adopted Resolution 718, which formally recognized the accord signed in Paris eight days before by the combatants in the Cambodian conflict. Resolution 718 calls on the Secretary-General to submit a detailed estimate of the United Nations Transitional Authority in Cambodia (UNTAC) which will administer the country at least until free elections are held. The document brought the world body a step closer to launching what is expected to be one of the largest and

most expensive peacekeeping operations in its history.

The complexity of the undertaking is hinted at in the resolution, which calls on all the parties to the conflict in Cambodia to comply fully with the 23 October Paris peace agreement. The reason for the Council's call can be traced back to 16 October, when UN Secretary-General Javier Perez de Cuellar warned of plans by the combatants to repatriate their followers to Cambodia. In a sharp statement, the Secretary-General warned that "the existence of such plans raises a doubt about the commitment of the parties concerned" to the peace accords.

On 16 October, the Council unanimously adopted Resolution 717 establishing the United Nations Advance Mission in Cambodia (UNAMIC) whose duty is to assist in maintaining the current ceasefire and to prepare for the arrival of UNTAC. The over 250 members of UNAMIC will be responsible for facilitating communications between the military headquarters of the four Cambodian parties to the dispute, as well as to train civilians on how to avoid injury from land mines and booby traps.

### El Salvador

On 30 September, the Council reaffirmed its support for the completion of a peace process in El Salvador by unanimously adopting Resolution 714. The document also welcomed the agreement signed five days before in New York by the government and guerrillas of the *Frente Farabundo Marti para la Liberacion Nacional* (FMLN).

### Haiti

On 3 October, the president of the Security Council, ambassador Chirmaya Rajaninath Gharekhan of India issued a statement which "condemned strongly" the overthrow of Haitian president Jean-Bertrand Aristide. The statement, which is non-binding, also urged the "restoration of the legitimate authority in Haiti." The presi-

dential statement represented a compromise between those countries pushing for more forceful action and those which feared that binding Council action could set a precedent for future international intervention.

### Iraq

On 15 August, amid reports of worsening civilian conditions inside Iraq, the Council adopted Resolution 706 which allows Baghdad to sell limited amounts of oil for the purpose of meeting essential civilian needs like food and other essentials. The resolution also demands that Baghdad comply with its obligations to co-operate in the identification and destruction of chemical, biological and nuclear weapons as well as ballistic missiles.

The Council held off authorizing Iraq to sell a specific amount of oil until the Secretary-General presented a report on measures to monitor the sale of oil and distribution of food. Resolution 706, which was adopted by a vote of 13 in favour, with Cuba voting against and Yemen abstaining, also requires Iraq to pay up to thirty percent of its oil revenue to a special fund intended to compensate victims of its invasion of Kuwait on 2 August.

On 19 September, the Council adopted Resolution 712, which sets a ceiling of \$1.6 billion in the amount of oil that Iraq is allowed to export in order to meet its humanitarian needs. However, Baghdad was sharply critical of the resolution and complained that as a result of the strict monitoring regime Iraq had been put under UN "trusteeship." While Baghdad stopped short of categorically ruling out any sale of oil, as of the beginning of November, no sale had taken place and as a result, no food had been purchased. An Iraqi diplomat told a reporter that his countrymen would "rather eat dirt."

On 12 October, the Council adopted Resolution 715, which in effect, established the most intrusive and wide-ranging arms con-

trol regime ever established in UN history against any country. Not only did it authorize the UN Special Commission and the International Atomic Energy Agency (IAEA) to move unhindered inside Iraq, but it granted inspectors wide-ranging powers of search and seizure. Iraq's ambassador complained that the resolution turned the Special Commission into "the High Commissioner for Iraq, as in the old colonial days."

Resolution 715 was an outgrowth of the ceasefire terms for the end of the Persian Gulf War. It was adopted after weeks of diplomatic skirmishes with Baghdad that had led the US and some allied governments to warn of military action if Iraq persisted in obstructing the work of UN inspectors charged with locating and scrapping its weapons of mass destruction. Through most of September, Baghdad refused to allow three UN helicopters to operate in its airspace – a clear contravention of Resolution 707 authorizing the UN teams to use aircraft inside Iraq.

During September, Iraq also detained a UN inspection team for several days in a parking lot after UN officials discovered documents relating to Iraq's clandestine nuclear programme. Afterwards, UN officials said the documents offered conclusive proof that the regime's secret nuclear programme was aimed at producing an atomic bomb.

### New Members

The number of UN members rose to 166 after the Security Council recommended to the General Assembly on 12 September the admission of three Baltic states – Estonia, Latvia and Lithuania. On 9 August, the Council had recommended the admission of the Democratic People's Republic of Korea (North Korea) and the Republic of Korea as well as of the Marshall Islands and the Federated States of Micronesia. □

— TREVOR ROWE

## REPORT FROM THE HILL

### UN Interests

The third session of the 34th Parliament resumed on 16 September and continued until just before Christmas. Among the most tantalizing stories during the fall session was the suggestion that Prime Minister Brian Mulroney was in contention for the position of Secretary-General of the United Nations. The Prime Minister made it clear, however, in response to a query from Opposition Leader Jean Chrétien on 22 October, that he had not put his name on the official list of candidates. In that case, Mr. Chrétien inquired the next day, "why the name of the Prime Minister has not been withdrawn from this list" and what instructions Canadian diplomats abroad had been given in relation to his candidacy. To this there was no definitive answer until 28 October, when Mr. Mulroney instructed Yves Fortier, Canada's ambassador to the UN, to withdraw his name from any further consideration.

The United Nations was also the subject of a special debate in the House on a private member's motion introduced by Conservative MP Walter McLean. McLean is the Prime Minister's special representative on African questions and has for some years been a mainstay for Canada in New York during the UN General Assembly each fall. Mr. McLean moved on 19 September, "that the government promote a summit level meeting at the United Nations on global security, to examine ways of implementing and strengthening the United Nations peacekeeping and enforcement mechanisms." Among the other

speakers during the debate were PC MP Louise Feltham and Liberal MPs Warren Allmand and Christine Stewart.

### The Soviet Coup and After

The House was not sitting at the time of the attempted coup in the Soviet Union on 19 August, but the Prime Minister immediately suspended the package of food aid and technical assistance that had only been restored to the Soviet Union a month before at the London economic summit of the Group of Seven leading industrialized countries. His initial show of resolve, however, was succeeded the following day by more cautious words from Secretary of State for External Affairs Barbara McDougall who, in a statement that drew sharp criticism from opposition party spokespersons, warned against precipitous action against the new Soviet regime and said that Ottawa would take a wait-and-see attitude to measure the transition of power. It was the principles of democratization that Mr. Gorbachev espoused rather than his reinstatement on which Ottawa was focussing, she said.

Following a meeting of NATO foreign ministers in Brussels on 21 August, however, Mrs. McDougall said Canada was fully in accord with NATO's condemnation of the coup and insistence on the restoration of Mikhail Gorbachev to power. Moreover, on 26 August, the minister announced the establishment of diplomatic relations with Lithuania, Latvia and Estonia, making Canada one of the first Western countries to do so.

### The Coup in Haiti

On 30 September, External Affairs Minister McDougall strongly condemned the coup by rebel elements of the Haitian armed forces which ousted the

recently-elected government of Jean-Bertrand Aristide. On 2 October, she attended an emergency Foreign Ministers' meeting of the Organization of American States (OAS) in Washington, which produced a tough eleven-point resolution calling for cutting all aid to Haiti and otherwise isolating it politically and economically. She also took part in an OAS mission to Haiti on 4 October and met briefly with the coup leaders in an unsuccessful attempt to convince them to restore the Aristide government.

In the Commons on 1 and 2 October, Liberal External Affairs critic Lloyd Axworthy supported the government's condemnation. He referred to a speech the Prime Minister gave at Stanford University in California on 29 September, quoting him as saying that the advancement and promotion of human rights must overtake considerations of national sovereignty. Mr. Axworthy then asked whether Canada was asking either the UN or the OAS to intervene in Haiti. While not answering the question directly, the Prime Minister did say "We want the thugs who have usurped power in Haiti out and we want the democratically elected president back in." On 8 October, the Liberal critic asked again what options the government was pursuing. In his response, the Prime Minister quoted President Aristide as saying that military intervention would not be considered and that economic and diplomatic boycotts would be the strategy of the Haitian people.

### Yugoslavia

The deteriorating situation in Yugoslavia also received the attention of the House on several occasions during the fall. On 18 September, Mrs. McDougall made it clear that the government believed it was time for the UN Security Council to consider the matter. In response to a question from Opposition Leader Jean Chrétien on 7 October, following

an attack by the Yugoslav federal military on the Croatian capital of Zagreb, Trade Minister Michael Wilson indicated that Canada supported all attempts to resolve the conflict, whether through the European Community (EC), the Conference on Security and Cooperation in Europe (CSCE), or some other institutional framework.

On 24 October, Liberal MP David Kilgour requested that the Speaker consider the granting of an emergency debate on the situation, following heavy shelling of Dubrovnik and the failure of an EC-brokered peace plan. The Chair refused, but called on all three parties to agree among themselves to hold such a debate. Later that day, NDP External Affairs critic Svend Robinson called on the government to condemn the attack on Croatia in the strongest possible terms and to impose with the EC sanctions against the Yugoslav government. In a supplementary question, he asked whether the government would support a UN peace-keeping force in the Nagorno-Karabakh region of the former Soviet republic of Azerbaijan to separate disputing Armenians and Azerbaijanis. In reply, Michael Wilson said that the government was discussing both matters with the EC and other partners to arrive at the most effective means of handling these conflicts.

However, on 28 October, Mrs. McDougall cast doubt on an economic embargo despite urging from Liberal External Affairs critic Lloyd Axworthy, saying it would hurt the people it is intended to help. She did agree with the Liberal critic on 1 November to raise the issue of a humanitarian airlift of goods to the besieged people of Dubrovnik with member states of the EC and the UN.

— GREGORY WIRICK

## ARMS CONTROL DIGEST

### Nuclear Arms Initiatives

■ On 27 September, President Bush announced a series of sweeping changes in the US nuclear posture. Calling on the USSR to reciprocate, he stated that the US would unilaterally withdraw and destroy all of its 2,150 ground-launched tactical nuclear weapons (nuclear artillery shells and short-range ballistic missile warheads) deployed in Europe, South Korea, and at home. The US would also withdraw all of its naval tactical nuclear weapons from sea, including nuclear-tipped, long-range, land-attack cruise missiles (SLCMs) and bombs aboard carrier- and land-based naval aircraft. Approximately half of these (estimated to number between 1,825 and 2,525) would be destroyed, while the others (including the more modern SLCMs) would be stored in central locations from which they could be re-deployed in a crisis.

As for strategic nuclear weapons, the US would remove from alert all of its strategic bombers, as well as those intercontinental ballistic missiles (ICBMs) scheduled for deactivation under START. Elimination of the latter would be accelerated (rather than extending over the seven-year period mandated by START). At the same time, the President terminated the programmes for making mobile the existing MX and planned Mid-Getman ICBMs; cancelled the replacement for the nuclear short-range attack missile (SRAM) for strategic bombers; and established a unified US Strategic Command to oversee all air-, land-, and sea-launched strategic nuclear weapons.

Turning to formal negotiations, he reiterated an earlier US proposal for a total ban on multiple-warhead (MIRVed) ICBMs, and called on the USSR to permit the limited deployment of non-nuclear defences

against limited ballistic missile attacks. Finally, in order to help prevent the inadvertent or unauthorized use of nuclear weapons, he proposed discussions with the USSR on improving safety procedures and command-and-control arrangements.

President Gorbachev more than matched the US moves in an announcement on 5 October, stating that all Soviet ground-launched tactical nuclear weapons, including mines, would be destroyed; and the nuclear warheads of anti-aircraft missiles, as well as all naval tactical nuclear weapons, would be removed, some being destroyed and others stored centrally. Further, the Soviet President proposed that, "on a reciprocal basis," all naval tactical nuclear weapons be destroyed, and all nuclear bombs and missiles from the tactical air forces be removed and stored.

Regarding strategic weapons, Gorbachev announced that all heavy bombers, as well as 503 ICBMs (including 134 MIRVed ones) would be taken off alert; work on modernizing Soviet SRAMs and small mobile ICBMs would be discontinued; MIRVed, rail-mobile ICBMs would be frozen at their current number and confined to their permanent bases; and three ballistic missile submarines with 48 launchers were now being "removed from our combat forces." The USSR would reduce its number of accountable strategic nuclear warheads by 1,000 more than required by START, to a total of 5,000 within seven years. Gorbachev called for further cuts of approximately 50 percent in the remaining number of strategic offensive weapons.

On other matters, Gorbachev announced a one-year moratorium on nuclear weapons tests; called for a negotiated end to the production of fissionable weapons materials; agreed to begin "detailed dialogue" with the US on nuclear weapons safety; announced the establishment of a single operational command for all Soviet strategic

nuclear weapons; and called on all the nuclear powers to jointly pledge the "non-first-use" of nuclear weapons.

On 17 and 18 October, the NATO defence ministers welcomed the US and Soviet announcements and decided to cut in half the number of air-delivered weapons in NATO's European stockpile as well, from about 1,400 to 700. Together with the elimination of 700 short-range ballistic missiles and 1,500 nuclear artillery shells, this will amount to an 80 percent cut in NATO's existing stockpile of "sub-strategic" nuclear weapons.

French tactical nuclear weapons are not included in the NATO cut-backs, but France announced in August that it would reduce production of its new Hades short-range ballistic missile from 120 to 30 units, and place them in storage.

### Biological Weapons Review

The Third Review Conference of the 1972 Biological and Toxin Weapons Convention met in Geneva from 9 to 27 September. Among other things, it agreed to expand data exchanges among the Treaty's 118 parties to cover biological defence research programmes, as well as vaccine production facilities; called on the parties to ensure that biological agents, toxins, weapons, equipment or means of delivery are not transferred to other states if there is a danger of their being used illegally (although it failed to agree on a "trigger list" of such items); and approved the establishment of an "ad hoc group of governmental experts" to identify possible future verification measures.

Just prior to the conference, on 5 September, the foreign ministers of Argentina, Brazil, and Chile signed a declaration banning the development, manufacture, and use of chemical and biological weapons by their countries.

### Arms Transfers and the Five

As agreed at their Paris meeting last July, the five Permanent Members of the UN Security Coun-

cil met again in October in London to develop guidelines governing the transfer of conventional weapons, especially to the Middle East. The guidelines adopted for global use listed three criteria for proposed transfers, emphasizing recipients' legitimate self-defence needs; and pledged the parties to avoid transfers that would aggravate existing armed conflicts, increase tensions in an area, or "seriously undermine" a recipient's economy. Regarding the Middle East in particular, the Five (responsible for 85 percent of arms supplies to the area) agreed to inform each other about all transfers to the region of major weapons systems. They also reaffirmed the importance of maintaining strict controls on the export of equipment related to weapons of mass destruction, agreeing to study the further harmonization of national policies

### Defence and Space Talks

At the US-Soviet Defence and Space Talks in Geneva in October, the US for the first time agreed to discuss specific limits on the scope and timing of defensive deployments, to accommodate its planned Global Protection Against Limited Strikes (GPALS) system. The plan would require replacement or amendment of the 1972 ABM Treaty, which limits ballistic missile defences to 100 ground-based interceptors at a single site. GPALS is said to call for 750 ground-based and 1,000 space-based interceptors, capable of handling up to 200 incoming warheads at once. According to the US, however, it would not undermine the credibility of offensive retaliatory forces.

Since the failed coup in August, Soviet officials have expressed increasing interest in cooperating with the US to build such defences against inadvertent, unauthorized, or third-party nuclear attacks. However, the US has denied reports that it is willing to help build a Soviet system or plans to share its technology.

### Code of Peace: Ethics and Security in the World of Warlord States

Dorothy V. Jones

*Chicago and London: University of  
Chicago Press, 1991, 208 pp.,  
US \$24.95, cloth.*

Dorothy Jones has produced an extraordinarily perceptive and elegantly written book on the question of peace ethics in international relations. The work was recently awarded the prestigious Lionel Gelber prize, awarded annually for the best book on international relations written in English.

The code of peace, as defined by the author, constitutes "a set of authoritative principles and rules of conduct" which guides relations between states. The code of peace, which is composed of a number of underlying principles, is intended to inhibit the war-making mode of sovereign states. With camera-like precision, Jones focuses on seemingly isolated historical episodes, individual political figures and specific conference texts and successfully integrates these diverse strands in tracing the historical development of those ethical principles which collectively constitute the code of peace.

The book advances three central propositions: first, there exist ethical standards which guide the conduct of international relations; moreover, they are not merely theoretical postulates advanced by moral philosophers or peace researchers, but principles endorsed by governments themselves after considerable experience and reflection, and registered in numerous conventions, treaties, pro-

ocols, and declarations. Second, these ethical standards which arose from a Eurocentric system have in our time become truly global in scope. Third, their existence matters, for ethical principles of peace provide a common basis to evaluate states' performance in international relations. In some instances, as for example in the context of the 1975 Conference on Security and Cooperation in Europe (CSCE) Helsinki Accord and human rights in Eastern Europe, these principles form a common basis for action.

Concerning the first proposition, the author takes the corpus of some seventy-nine international protocols, treaties, conventions, and declarations as convincing evidence for the existence of a comprehensive code of ethics of peace. This particular peace code incorporates nine distinct principles on which states are in essential agreement: the sovereign equality of states; territorial integrity and political independence; non-intervention in the internal affairs of states; peaceful settlement of disputes; abstention from the threat or use of force; fulfilment in good faith of international obligations; cooperation with other states; and respect for human rights and fundamental freedoms.

Two auxiliary principles – creation of an equitable international economic order and protection of the environment – are also listed. There exists broad, but no universal, consensus on these last two; with the differences arising less over the principles themselves than the strategies to implement them.

Historically, the development of these peace principles can be traced to the 19th century, even though many of them have their origin in the peace system of Westphalia. Prior to World War I,

there was a tendency to invoke principles, like inter-state solidarity, which were abstract and clearly at variance with the reality of acute inter-state rivalry. The League of Nations Covenant of 1919 sought to avoid the vagueness and ambiguity of such principles by shifting the argument to a set of concrete obligations and by using the League machinery as a problem-solving instrument.

In contrast, the UN Charter of 1945, in the words of the author, is a halfway house that contains some abstract statement of principles but falls short of designating the protection of human rights and essential freedoms a necessary condition for international peace and security.

With respect to the universality of the peace code, the author cites numerous regional and global declarations which reflect most or all of these principles. In this context it is interesting to note that the 1955 Bandung conference, which launched the non-alignment movement, reiterated at least seven of the nine underlying peace principles even though the latter had evolved from the Eurocentric system of power politics that the non-aligned nations strove to reject.

"In the final analysis," Ms. Jones notes, "it made little difference whether a state was new or old, African, Asian, or European. The problems of the state as a state were the same, and the principles invoked to help solve the problems were the same as well." The important contribution of the new states assembled at Bandung was to add a more dynamic element like international social justice to the more static traditional principles of sovereignty, territorial integrity and non-intervention.

The third key proposition contained in the book is that peace ethics do matter in the conduct of international relations. However, this section is the least developed aspect of the work. One basic

shortcoming in translating the peace code into concrete action stems from the inherent contradictions between several of its supporting principles. In policy practice, the principles of sovereignty, territorial integrity and non-intervention frequently clash with those of human rights and self-determination. Even morally scrupulous statesmen, and they are a rare breed, may be hard pressed in implementing the peace code when faced with such contradictions.

To be sure, such contradictions can sometimes be mitigated. Jones cites the 1920 Aaland Islands dispute in which the ultimate aim of the islanders for cultural and linguistic autonomy could be safeguarded by an enlightened Finnish minority policy without the formal exercise of self-determination, an option which the League ruled to be incompatible with the principle of Finnish sovereignty and integrity. In some cases these contradictions may be transcended altogether, as occurred with the human rights provisions of the Helsinki Accord after the fall of communism in Eastern Europe and the end of the Cold War.

As a student of international relations, this reviewer would have welcomed an attempt by the author to provide a critical evaluation which sought to distinguish between the mere rhetoric of peace ethics as a public relations exercise, and their actual function in taming the warlord mode that is present in every sovereign state in the international system.

## LETTERS TO THE EDITOR

### Disparaging the peace movement?

Charlotte Gray, in "Home Grown Skirmishes" (Autumn 1991), presents her disparaging assessment of Canadian peace movements, especially their responses to the Persian Gulf crisis. Canadian Physicians for the Prevention of Nuclear War (CPPNW) is one of the groups she criticizes. Our position on the Gulf war stems from our 1988 Mission Statement which says, "because of our concern for global health, we are committed to the prevention of war and to the promotion of non-violent means to resolve conflict." CPPNW's opposition to military action by the US-led coalition was founded upon reliable evidence that sanctions were working very effectively and likely would achieve Iraq's withdrawal from Kuwait without resort to bombardment and invasion.

After the fighting, our firm conviction is that the human and material costs of modern warfare, both nuclear and "conventional," are so enormous that this world cannot continue to tolerate or support such methods for solving international problems any longer. CPPNW's clear, forthright statements were anything but "a mushy middle road," as suggested in the article.

Charlotte Gray misunderstands Canada's peace movement if she thinks it was in disarray during the crisis. The differences among the various groups are trivial in comparison to the many areas of agreement, especially their shared opposition to our country becoming an aggressive partner in the vicious and unnecessary Gulf War.

Public opinion was clearly opposed to the war before Canada

joined the coalition. After the decision was made to send Canadian troops, however, public opinion shifted to support the coalition, because many people felt that it would be an act of national disloyalty to oppose a war in which Canada was engaged. For many peace workers it never was incongruous to be supportive of our armed forces who were in a war zone, under orders, and there through no fault of their own, and at the same time to oppose the Persian Gulf war.

Undoubtedly, the peace movement was short on alternatives to that war, as suggested by the author. Now the time is ripe for consideration of alternatives to all wars.

Past President, CPPNW*

### "Home Grown Skirmishes" Found Wanting

A critical analysis, in *Peace & Security*, of policies advocated by groups and individuals in the peace movement, particularly in the context of the Gulf crisis, would be most welcome. It strikes me as central to the CIIPS mandate to carry out such critical challenges. Unfortunately, Charlotte Gray's piece, in my view, didn't come close to fulfilling the requirements of critical analysis. In fact, I regard it as an affront.

First, the article seriously misrepresents the status or condition of the peace movement. It is variously described as in "crisis," "disarray," "running out of power," "galvanized" by the war, and in a "brief frenzy." That there are difficulties, reassessments, debates and so on within the peace movement is certainly true, and welcome, but Ms. Gray's characterizations are simply caricatures that do not have even the remotest link to something that could be described as factual. They certainly have nothing to do

with the peace group I'm most familiar with.

In Project Ploughshares, our membership is undiminished, fundraising is on track, our influence on policy issues such as arms transfers is substantial and growing in Canada and at the United Nations, we have a joint project with CIIPS on monitoring the arms industry, etc. Perhaps you would like to supplement Ms. Gray's venting with some real information in future issues.

Second, readers are told that "peace activists did not produce solutions." And just who was it that did produce the solutions? In the same issue, the article by Janice Gross Stein makes it clear that neither the war nor those who supported it produced any solutions: the physical and economic damage to the region will take a very long time to overcome, which means that "the prospects for redistribution of wealth between the rich and the poor, and the management of conflict that grows out of inequities of resource ownership, are hardly bright"; it is "also unlikely in the foreseeable future [that] political participation and democratization in the heartland of the Arab Middle East" will be expanded; and, it turns out, "the war has also made it more, not less, difficult to resolve the Israeli-Palestinian conflict." On top of all that, Saddam Hussein remains. Are these the solutions that "peace activists" failed to produce?

We advocated reliance on sanctions. There is, it is true, no guarantee that sanctions would have solved anything in the short or even long run. But I think it turns out that we were right to warn that direct military action would not solve the fundamental conflict issues, and that the quick expulsion of Saddam's forces from Kuwait would impose a level of human and physical damage that could not be justified.

Third, is Ms. Gray's characterization of Project Ploughshares as reflecting "turn-the-other-cheek

pacifism." This is simply wrong. In fact, I am later referred to as following a just-war line of analysis. I can't escape the feeling that this is phrased in such a way – referring to the "turn-the-other-cheek pacifism of Mennonites and Quakers" – as to be dismissive of the position. The intent, it seems to me, is to characterize this as a kind of knee-jerk, sectarian point of view that doesn't need to be taken seriously.

Ms. Gray's point that the "just war" analysis which we pursue precluded military action to enforce sanctions, needs comment. The use of military force to enforce the UN sanctions was appropriate. But military enforcement of sanctions is in fact realistic if they enjoy broad support and respect. Enforcement is feasible only if there is broad voluntary adherence to the sanctions (which there was in this case), and if infractions or attempted infractions are the exception. In the event of "wholesale sanctions-busting," attempts at military enforcement would likely be futile.

Ms. Gray put it differently, saying our position precluded military action in the case of "blatant sanction-busting." In fact, our position was and is that in case of clear and blatant violations of sanctions, in a context of general adherence, monitoring and enforcement are both possible and positive. The problem arises when violations are wholesale – in other words when the situation is not one of general adherence, but of general disregard for sanctions. Then enforcement is futile.

This is analogous to police-law enforcement. Police are equipped to deal with "blatant" but isolated or occasional law-breaking, e.g. traffic violations, robberies, smuggling and so on. If, however, you have a situation of general disregard for the law, wholesale violation of laws, it soon becomes clear that the problem is not lack of enforcement capability, but lack of respect for the law. Piling on the firepower at that point does little good.

In the case of drug trafficking, for example, it is broadly understood that the wholesale violations won't be solved by more policing,

but by programmes to deal with demand and the conditions that lead to the wholesale disregard of the law. The point I was making about enforcing sanctions was the same one. As long as sanctions were generally respected and adhered to, as they were, there was a genuine role for military enforcement – dealing with blatant violators. But if the international community acted in general disregard for the sanctions, then clearly there would be no possibility of making them effective through sheer brute force.

*Peace & Security* was certainly right in wanting to examine the role of the Canadian peace movement in the context of Canada's response to the Gulf crisis – it's a job that still needs to be done. *Ernie Regehr, Project Ploughshares, Waterloo*

#### A blow to the peace movement

"Home Grown Skirmishes" by Charlotte Gray is very disturbing in its denigration of the attempts by the peace movement to provide another way of looking at international affairs in general and of the Gulf War in particular. The author would appear not to have consulted any of the vast literature produced by various peace movement organizations in Canada and in the US. Had she done so she would have seen that much of their focus is on prevention of violence in the resolution of conflict and the need to address problems of poverty, environmental destruction, torture and terror throughout the world.

Most groups want strict control of the arms trade and many would like to see an end to all military production except in very limited situations. The arms trade is seen as wasteful and harmful to all concerned since it is a mis-allocation of scarce resources, especially in the face of such grave human needs.

Nobody in the peace movement feels they have all the answers nor do they pretend to do so. Why should they be unfairly characterized as being unequal to the task of finding alternatives to military actions after they have started? Charlotte Gray's article is a blow to the peace movement. We thought that the dialogue had been elevated to a higher level in the pursuit of a peaceful world. *Jean Smith, Peace Magazine, Toronto*

#### What does Canada need armed forces for anyway?

In "Defence Policy For a Nice Country" (Autumn 1991), Desmond Morton describes the problems of designing a defence policy for Canada on the assumption that we must prepare for future military conflicts. I would ask: why? Do we need a military establishment in Canada to defend against invasion? Hardly. No country would attempt to invade Canada unless they were out for world conquest. And we couldn't stop them anyway.

Do we plan to forestall a possible future invasion of Canada by fighting abroad? If this is so, then

we must believe in fighting a nuclear war, since this is what would inevitably arise in such a scenario. Do we want to defend Canadian interests abroad? Mr. Morton must think so, for he says: "This matters to a Canada that depends utterly on world trade for its standard of living." In other words he is suggesting that we kill people in a war to maintain our living standard.

Do we need a military force to fight for world peace? I would agree that Canada could contribute to a UN police force but it should be strictly under UN command. Canada could contribute personnel or simply money.

Do we want a military force in Canada in case of domestic unrest? Mr. Morton answers: "Canadians are nearly unanimous in rejecting force as an option." If it takes an army to put down an uprising then we are obviously on the wrong track. Maintaining a military for such an eventuality is an admission of political failure.

The pragmatic answer to these five questions is that we don't need a military establishment at all, except as an emergency response team. A trained group of people could deal with all man-made or natural emergencies in a national context. Such a body need not have submarines, tanks, bomber aircraft, long-range naval craft or anything designed to fight a war.

*E.P. Wilson, Gabriola, B.C.*

#### Barton Awards Programme

The Institute invites applications for its Awards Programme, designated the Barton Awards in honour of its first Chairman, former UN Ambassador William Barton.

The programme is open to both academics and non-academics who wish to enter or continue studies in the field of international peace and security. The programme is intended to encourage expertise and scholarship in that area by supporting Canadians and permanent residents who wish to pursue their studies at institutions abroad or in Canada.

The Institute expects to make eleven awards: two fellowships valued at up to \$30,000 and nine scholarships at up to \$14,000 each. Applications will be assessed by an independent selection committee and decisions will be announced in May 1992.

Applicants must be Canadian citizens or permanent residents whose experience or academic qualifications enable them to pursue advanced study.

The deadline for applications for the 1992–1993 academic year is 1 February 1992.

For further information and application forms please write to: The Barton Awards Programme, Canadian Institute for International Peace and Security, 360 Albert Street, Ottawa, Ontario K1R 7X7

#### Peace and Security Competitions Fund Procedures and Deadlines

For the semi-annual competition with deadline of 30 June 1992, the Fund will be interested in receiving applications to support projects that would make thoughtful contributions to issues related to international peace and security on the 125th anniversary of Confederation in 1992. It is our understanding that Canadians will be invited by Parliament to reflect in their various fields on the record of opportunity and achievement in that record and on challenges for the future.

30 June for an October decision

30 November for a March decision

## LETTER FROM KUWAIT BY JOCELYN COULON

**The Kuwait Airways plane begins its descent to the Emirate. It is almost midnight on this early October night.**

**In a matter-of-fact voice, a flight attendant announces to the passengers that shortly they will be able to see the burning oil wells.**

As the plane approaches the landing-strip, Kuwait's oilfields are clearly visible. In a few weeks, all this will be just a bad memory. To the great relief of Kuwaitis and Kuwait's Finance Minister, teams of mainly US and Canadian firefighters will have extinguished all the oil fires. The destruction of 735 oil wells by the Iraqis, accomplished in the last few hours before they evacuated Kuwait at the end of February, cost the Emirate the tidy sum of US \$45 million in lost export revenue.

The firefighters worked hard, especially the Canadians. When they arrived in Kuwait in April they thought they could put out perhaps one fire a day. But thanks to new technology and reinforcements from countries as varied as Iran, Romania and China, by the summer they were able to accelerate the rate of fire extinctions to four a day. And it is the firefighters from a Canadian company based in Alberta which holds the record: more than 160 fires extinguished compared to the vaunted American Red Adair team who managed barely a hundred.

The oil has caused enormous environmental destruction across Kuwait – spills in huge quantities on land and sea. The oil fires formed large clouds of smoke saturating the air with millions of tiny drops of black oil – this in one of the Middle East's most modern and aseptic societies. The experience has been very traumatic for Kuwaitis. Every morning since liberation, they ask themselves whether the air they are going to breathe that day will make them sick, or whether their clothes will be soiled the moment they step outside.

If the problem of the oil well fires is almost solved, the same

cannot be said for the difficulties created by the thousands of mines and bombs strewn throughout the country. Planted across Kuwait during the Gulf War by both sides, the Iraqi forces in particular dumped and buried them along tens of kilometres of Kuwait's southern border with Saudi Arabia. The daily human tragedies caused by these mines and unexploded bombs goes largely unnoticed by the outside world.

Two types of explosive were used during the war. While the multinational coalition used bombs, the Iraqis had a predilection for mines. Every time the allies bombed the Emirate or southern Iraq, they loosed hundreds of

portant buildings and strategic sites. Here too, the allied forces began the meticulous task of defusing. The French took care of the beaches. They removed, almost always by hand, more than 15,000 mines. The Canadians looked after the demilitarized zone between Kuwait and Iraq where they have neutralized some 8,000 explosive devices. There are still more to find, and teams from the UK, Pakistan, Egypt and Bangladesh are still cleaning up, but not without tragic accidents. The day I left, six Egyptian soldiers died trying to defuse a mine.

Before setting out to visit the southern sector of the demilitarized zone, one of the most heavily mined areas of Kuwait, I paid close attention to the leaflets distributed in all the hotels. Presented was a detailed description of the size, colour and purpose of the explosives found all over the country, accompanied by a drawing of the device in question. I kept this paper with me.

**“UNIKOM has been faced with a task not foreseen in its original mandate: to spot Iraqi civilians who've come to dig up mines in Kuwait.”**

small bombs aimed at particular targets – not all of them exploded. Although the coalition forces have located and defused thousands of them, some are especially difficult to find. Equipped with small parachutes, when the wind blows they move around, making the task of locating them that much harder. A few weeks ago, some young Kuwaitis were killed in their own school yard after running over one of these devices.

But the explosives which wreak most havoc are those left by the Iraqis. Throughout their seven-month occupation of Kuwait, Iraqi forces buried all sorts of mines. They were everywhere: along the Saudi border, along the Gulf coast, in the sea itself, in among the oilfields, and in certain im-

Our helicopter leaves Dohar where the headquarters of the UN Iraq-Kuwait Observer Mission (UNIKOM) has been set up temporarily. The machine heads for lookout post S4 on the border between Iraq, Kuwait and Saudi Arabia. After meeting up with some of the UNIKOM staff, we take off again to fly over the minefields which are easily discernible from the air. The helicopter is piloted by two Chileans who scan the ground for Kuwaitis or Iraqis who might have penetrated the demilitarized zone. For some weeks now, UNIKOM has been faced with a task not foreseen in its original mandate: to spot Iraqi civilians who've come to dig up mines in Kuwait. In

most instances, these people – children, women and old men – are hurt, or worse, killed outright by stepping on a mine. And each time, the military personnel of UNIKOM have to rush in with a helicopter or a truck to evacuate the victims to the nearest hospital.

After about fifteen minutes in the air, the pilots point out some Iraqi civilians running across the sand. When they catch sight of the helicopter, they stand still and wave to us. One of them is carrying a long shovel used to unearth mines. If the group manages to collect a few and get back across the frontier into Iraq, the Iraqi military will pay for them. Apparently, the Iraqi army is attempting to replenish its stock of munitions. But more often than not, payment for these mad escapades into the minefields comes in the form of a trip to the hospital with a missing limb, or even death. And so it is the poorest Iraqis who pay.

For the moment, the Chilean pilots can do nothing. They relay the position of the Iraqis to headquarters from where a truck will be sent to pick up the intruders and take them back across the border – until the next time. One of the pilots told us that some Iraqis, already missing limbs, return to try their luck again. At UNIKOM headquarters, the spokesperson, Abdellatif Kabbaj, shows me photographs of maimed Iraqis.

Back in Dohar, I greet Canadian soldiers who, for six months, have been building and moving UN observation posts, and ridding the demilitarized zone of mines – all in temperatures between 40 and 65 degrees Celsius. The car which takes me back to the hotel has no air-conditioning so I decide to plunge into the ocean to cool off. But then I recall the mines, still floating about in the Persian Gulf. Perhaps the bathtub in the hotel isn't so bad after all.

## LETTRE DU KOWEÏT

PAR JOCELYN COULON

**L'avion des lignes aériennes koweïtiennes amorce sa descente vers l'émirat. Il est presque minuit en cette nuit du début octobre.**

Soudain, d'une voix nonchalante, une hôtesses annonce aux passagers que, dans quelques minutes, ils pourront apercevoir les puits de pétrole en feu. Au fur et à mesure que l'avion s'approche de l'aéroport, les puits des champs pétroliers du sud du Koweït apparaissent clairement. Les flammes sont de plus en plus hautes et dégagent une épaisse fumée noire. Le ciel est illuminé et d'une étrange couleur dorée.

Dans quelques semaines tout cela ne sera qu'un mauvais souvenir. Les équipes de sapeurs-pompiers, principalement des compagnies américaines et canadiennes, auront terminé l'extinction des feux, pour le plus grand bonheur des Koweïtiens et de leur ministre des Finances. La destruction de 735 puits de pétrole par les Irakiens, quelques heures avant leur retrait du Koweït à la fin de février dernier, a fait perdre à l'émirat la pondérable somme de 45 milliards de dollars américains en exportation de pétrole. Les sapeurs-pompiers ont bien travaillé, surtout les Canadiens. Lorsque ils sont arrivés en avril, ils avaient estimé pouvoir éteindre un puits par jour. Mais des cet été, grâce à de nouvelles technologies et à des renforts venus de pays aussi différents que l'Iran, la Roumanie et la Chine, le rythme des extinctions s'est accéléré. Maintenant, ce sont quatre puits qui sont sapeurs-pompiers d'une compagnie internationale de pétrole. Les experts matinsés alors que les experts américains de la célèbre équipe de Red Adair arrivent difficilement à une centaine.

L'incendie des puits de pétrole a causé de lourds dégâts environnementaux au Koweït avec les déversements de pétrole à terre et dans la mer, la formation d'immenses nuages de fumée noire au-dessus du pays et la présence dans l'air de cette société parmi les plus modernes et les plus asseptisées du Proche-Orient, de millions de petites gouttelettes de pétrole noir. Tout cela a provoqué bien des traumatismes. Depuis la libération des champs pétroliers du sud du Koweït, les Irakiens ont été semés à travers le pays. Elles ont été semées à travers le Koweït pendant la guerre du Golfe par les forces alliées mais surtout par les Irakiens, qui en ont déversé et enterré sur des dizaines de kilomètres à la frontière entre le Koweït et l'Arabie saoudite. Ces mines et des bombes qui jonchent le pays, sont sur le point d'être réglées, il n'en va pas de même des problèmes de saccage des installations pétrolières. Si les problèmes entraînés par le sacage de quelques minutes après souilles quelques minutes après souilles, ils auront mis les pieds dehors.

Il est presque minuit en cette nuit du début octobre. L'avion des lignes aériennes koweïtiennes amorce sa descente vers l'émirat. Il est presque minuit en cette nuit du début octobre.

## «Depuis quelques semaines, le personnel de la MONUIK est confronté à une tâche qui n'était pas prévue dans son mandat : repérer les civils irakiens qui entrent au Koweït pour déterrer des mines.»

Irakiens. Tout au long des sept mois d'occupation, les forces irakiennes ont enterré des mines de tous formats dans certains édifices et points stratégiques. Là encore, les forces alliées ont procédé à un minutieux déminage. Les Français se sont occupés des plages de l'émirat. Ils ont enterré 8 000 engins. Néanmoins, il en reste encore et des équipes de Britanniques, de Pakistanaïses, d'Égyptiens et de Bangladaïses s'affairent tous les jours à nettoyer le pays. Non sans mal. Le jour de mon départ, six soldats égyptiens sont morts en tentant de décamorcer une de ces mines. Avant de partir visiter le secteur sud de la zone déminatisée, un des endroits les plus minés du Koweït, j'ai lu attentivement les informations présentes dans un feuillet distribué dans tous les hôtels. On y décrit la

taille, la couleur et l'usage des explosifs qu'on peut trouver dans le pays. Chaque description est accompagnée d'un dessin de la mine ou de la bombe en question. J'emporte le papier avec moi. Notre hélicoptère quitte Doha où est installé provisoirement le quartier général de la Mission d'observation des Nations Unies en Irak et au Koweït (MONUIK). L'appareil se dirige vers le poste d'observation 54 situé à la frontière entre l'Irak, le Koweït et l'Arabie saoudite. Après avoir rencontré quelques membres du personnel de la MONUIK, nous redescendons le tracé est bien visible depuis les airs. L'hélicoptère est piloté par deux Chiliens qui scrutent attentivement le sol à la recherche de Koweïtiens ou d'Irakiens qui pénètrent dans la zone déminatisée. Depuis quelques semaines, le personnel de la MONUIK est confronté à une tâche qui n'était pas prévue

Durant la guerre du Golfe, deux types d'explosifs ont été utilisés au Koweït. La coalition multinationale s'est servie de bombes tandis que les Irakiens avaient une prédilection pour les mines. Chaque fois que les alliés bombardaient l'émirat ou le sud de l'Irak, leurs avions larguaient de 200 à 300 bombes de petit format au-dessus d'objectifs particuliers et toutes n'explosaient pas. Si les militaires de la coalition en ont répétés des milliers, il n'est pas toujours facile de localiser. Certaines bombes sont munies d'un petit parachute et lorsque le vent souffle, elles peuvent se déplacer, rendant la tâche de désamorçage extrêmement difficile. Il y a quelques semaines, de jeunes Koweïtiens sont morts dans la cour d'une école après avoir heurté une de ces bombes. Mais les explosifs qui font le plus de ravage sont ceux laissés par les

dans son mandat : repérer les civils irakiens qui entrent au Koweït pour déterrer des mines. La plupart du temps, ces civils – enfants, femmes et vieillards – se blessent ou pire, meurent en sautant sur une mine. Chaque fois, les militaires de la Mission d'observation de l'ONU doivent dépêcher un véhicule ou un hélicoptère pour évacuer les victimes vers l'hôpital le plus proche. Après une quinzaine de minutes de vol, les pilotes nous montrent des civils irakiens qui courent dans le sable. À la vue de l'hélicoptère, ceux-ci s'immobilisent et nous sautent à la main. L'un d'eux transpire une longue pelle qui servira à porter une mine. Si le groupe parvient à s'emparer de plusieurs dizaines de sapes-pompiers, principalement des compagnies américaines et canadiennes, auront terminé l'extinction des feux, pour le plus grand bonheur des Koweïtiens et de leur ministre des Finances. La destruction de 735 puits de pétrole par les Irakiens, quelques heures avant leur retrait du Koweït à la fin de février dernier, a fait perdre à l'émirat la pondérable somme de 45 milliards de dollars américains en exportation de pétrole. un point de vue instinctif, secrétaire, qu'il n'est pas besoin de prendre

L'affirmation de Mme Gray, à savoir que l'analyse de la «guerre juste», qui est la nôtre et qui interdit

pour faire appliquer des sanctions, la mort qu'on s'y attèle. Le recours à la force armée pour obliger à appliquer les sanctions de l'ONU

était approuvé. Toutefois, ce n'est, en fait, réaliste que si les sanctions

beneficient d'un large soutien et du respect général. L'application n'est

possible que si l'adhésion volontaire aux sanctions est très étendue (ce

qui était le cas, en l'occurrence) et que si les infractions qu'on tentait de

cas de violations généralisées des sanctions, il serait probablement

vain d'en appeler à l'armée. Mme Gray a formulé autrement

en disant que notre position écartait la possibilité d'intervention militaire

sa cas de «violation flagrante des sanctions». Or, notre position était

et risquait en cas de violations manifestes et flagrantes des sanctions, la surveillance et l'application coercitive sont toutes des possibilités

des violations sont inévitables, l'adhésion d'un groupe

mais même après des sanctions. C'est alors que le recours à la force

grant délit. En revanche, si la communauté internationale avait en

général passé outre aux sanctions, il aurait manifestement été impossible

de les faire accepter par la force. L'article de Charlotte Gray intitulé

«Toutes incertaines» est très inquietant dans sa dénigration des

efforts déployés par le mouvement pacifiste pour jeter un autre éclair

rage sur les relations internationales en général et sur la guerre du Golfe

en particulier. L'auteur semble ne pas avoir consulté l'économie docu-

mentation publiée par différentes organisations pacifistes au Canada

qu'elle se serait aperçue qu'elles insistent essentiellement sur la

prévention de la violence dans le règlement des différends et sur la

nécessité de s'atteler à la tâche pour éradiquer la pauvreté, arrêter la

destruction de l'environnement, et faire cesser la torture et le commerce

un strict contrôle du commerce des armements et beaucoup aime-

raient voir cesser toute production militaire, sauf dans des situations

concernées, étant donné qu'on y engloberait des ressources peu

## Programme de bourses Barton

Dans le cadre de son programme des «Bourses Barton», ainsi appelé en

l'honneur de son premier président, M. William Barton, ancien ambassadeur

du Canada à l'ONU, l'Institut invite les personnes intéressées à déposer leur

dossier de candidature. Le programme est ouvert aux universitaires et aux

autres personnes qui veulent entreprendre ou poursuivre des études sur la paix

et la sécurité internationales. Il entend favoriser l'accroissement des compé-

tences et des connaissances de haut niveau dans ce domaine, en appuyant

soutiendraient poursuivre des études dans des institutions au Canada et l'étranger.

L'Institut compte choisir onze récipiendaires, deux d'entre eux recevront

chacun une bourse de «fellow» de 30 000 \$ maximum et les neuf autres

bénéficient chacun d'une bourse d'étude de 14 000 \$ maximum. Un

comité de sélection indépendant évaluera les candidatures et rendra ses

décisions en mai 1992.

Les candidats doivent être citoyen(ne)s canadien(ne)s ou

immigrant(e)s reçu(e)s pourvu(e)s d'expérience ou des compétences

universitaires leur permettant de poursuivre des études supérieures.

Les candidatures pour l'année universitaire 1992-1993 doivent

être reçues avant le 30 novembre, pour la sélection de mars

et le 30 juin, pour la sélection d'octobre

présente l'avenir.

## Dénigre-t-on le mouvement pacifiste ?

Dans «Jouites intestines»

(automne 1991), Charlotte Gray

présente son évaluation déformante

des mouvements pacifistes cana-

diens, notamment de leurs réactions

face à la crise du golfe Persique.

Médécins canadiens pour la préven-

tion de la guerre nucléaire (MCPGN)

est un des groupes qu'elle critique.

Notre position sur la guerre du

Golfe découle de notre énoncé de

mission de 1988 qui dit : «Parce que

notre préoccupation est la santé en

général, nous voulons contribuer

à la prévention de la guerre et à la

résolution des conflits par des

«moyens non violents.» L'opposition

de MCPGN à l'intervention mili-

taire par la coalition dirigée par

les États-Unis reposait sur des

preuves solides que les sanctions

s'avéreraient très efficaces et qu'elles

auraient probablement conduit au

retrait irakien du Koweït sans

bombardement ni invasion.

Maintenant les combats terminés,

nous sommes fermement conva-

incus que les coûts humains et

matériels d'une guerre moderne,

si énormes que le monde ne peut

continuer de tolérer que l'on prenne

les armes pour résoudre des pro-

blèmes internationaux. Les déclara-

tions claires et nettes de MCPGN

étaient tout sauf «floues bleues».

Pour reprendre les termes employés

dans l'article.

Charlotte Gray ne comprend pas

le mouvement pacifiste canadien si

elle pense que la confusion y régnait

pendant la crise. Les désaccords

entre les divers groupes sont mini-

mes comparés à leurs nombreux

points d'entente, d'autant que tous

s'opposaient à ce que notre pays

du Golfe, brutale et inutile.

L'option publique était mani-

festement contre la guerre avant que

le Canada se joigne à la coalition.

Après qu'on a eu décidé d'envoyer

des troupes, toutefois, il y a eu un

revirement et elle a pris le parti de

cette même coalition. En effet, bien

des gens pensaient que ce serait un

acte de déloyauté que de s'opposer

à un conflit dans lequel leur pays

était engagé. Pour beaucoup de

pacifistes, il n'a jamais paru incon-

gru de soutenir nos forces armées

qui se trouvaient dans la zone de

combat, sur ordre et sans l'avoir

cherché, et de s'opposer dans le

même temps à la guerre du Golfe.

Indéniablement, le mouvement

pacifiste n'avait guère d'autre solu-

tion à proposer à la place du conflit

armé, comme le laisse entendre

l'auteur. À présent, l'heure a sonné

de réfléchir à des moyens d'éviter

toutes les guerres.

*D'Joanna Santa Barbara.*

*Présidente de MCPGN.*

*D'Alex M. Bryans.*

*Président sortant de MCPGN.*

Une analyse critique des poli-

tiques préconisées par des groupes

et des individus du mouvement

pacifiste, notamment dans le con-

texte de la crise du Golfe, serait très

bien venue dans *Paix et Sécurité*.

Relever ce genre de défi est à mon

sens une des tâches essentielles

qui incombent à l'ICPSI aux termes

de son mandat. Malheureusement,

l'article de Charlotte Gray est,

un affront.

Tout d'abord, l'article dénature

gravement le statut et la situation du

mouvement pacifiste. On le décrit

soit comme étant en «crise», en

plein «désarroi», «essoufflé», «gal-

vanisé» par la guerre et secoué par

une «brève frénésie». Qu'il y ait des

difficultés, des révélations, des

débats, etc., au sein du mouvement

pacifiste, c'est certainement vrai, et

heureusement, mais l'interprétation

qu'en donne Mme Gray est simple-

ment caricaturale et sans le moindre

rapport avec la réalité. En tout cas,

je n'y retrouve en rien le groupe

pacifiste que je connais.

À Projet Ploughshares, le nombre

de nos membres ne baisse pas ; on

continue de collecter des fonds ; sur

les transferts d'armements, notre in-

fluence est importante et croissante

au Canada et aux Nations Unies ;

l'ICPSI sur la surveillance du

secteur de l'armement, etc., etc.

Vous souhaitez peut-être com-

pléter la diatribe de Mme Gray par

quelques vraies informations dans

les prochains numéros.

Ensuite, on dit aux lecteurs que

«les pacifistes n'ont pas proposé de

solutions». Mais qui en a proposé ?

Dans le même numéro [de *Paix et*

*Sécurité*], l'article de Mme Janice

Gross Stein explique clairement que

ni la guerre ni ceux qui la prônaient

n'ont apporté de solution. Il faudra

beaucoup de temps à la région pour

se remettre des dommages matériels

et économiques qu'elle a subis.

ce qui signifie que «des perspectives

de redistribution de la richesse

entre riches et pauvres, et la gestion

des conflits qui découlent de la

répartition inégale des richesses et

des ressources, ne sont guère bril-

lantes». Elle poursuit : «Une plus

grande participation et une démo-

cratisation accrue au cœur du

Moyen-Orient arabe sont elles

aussi improbables dans un proche

avenir». Et d'ajouter : «La guerre

a rendu le règlement du conflit

israélo-palésinien plus difficile, et

non le contraire.» Pour couronner

le tout, Saddam Hussein est toujours

au pouvoir. Est-ce que ce sont là

les solutions que les «pacifistes»

ont omis d'avancer ?

Nous préconisons de s'en reme-

tre aux sanctions. Certes, on ne peut

garantir qu'elles auraient réglé quoi

que ce soit à court ni même à long

terme. Cependant, je crois que nous

avons raison d'attirer l'attention sur

le fait que l'intervention militaire ne

résoudrait pas les problèmes fonda-

mentaux du conflit et que l'expul-

sion rapide des forces irakiennes du

Koweït passerait par des destructions

humaines et matérielles.

Enfin, Mme Gray décrit Projet

Ploughshares comme un mouve-

ment pacifiste où l'on prône de

«tendre l'autre joue». Elle se trompe

tout bonnement. En fait, elle me

présente plus loin dans l'article

comme participant d'une analyse de ce

qu'est une guerre juste. Je ne puis

empêcher de penser que cette

phrasede «l'autre joue» -est formulée de

manière et des Quakers, qui prône de

façon péjorative. L'intention, il me

semble, est de présenter cela comme

analyse fouillée qui n'est ni percu-

taurie ni décevante, les principaux

faits marquants de son évolution.

En toile de fond, bien sûr, le con-

flit israélo-arabe et son rôle central

dans le développement des idéolo-

gies, de l'arabisme unitaire à l'isla-

lisme radical, en passant par les

diverses tentes du socialisme, dont

le baathisme. Variété d'idées qui té-

moignent de la difficulté des élites

de la région, à la tête d'États aux

configurations ambiguës et artificiel-

les, à se situer convenablement de-

vant un Occident de plus en plus

présent, notamment au plan culturel.

Citant le cas de l'Irak, l'auteur ré-

sulte bien l'impuissance et la limite de

l'oeuvre politique de l'élite arabe

issue de l'administration ottomane.

Elle a réussi à fonder un État dans

une société totalement hétérogène et

à le doter d'une idéologie qui en dé-

truit le cadre. En même temps, les

lites internes à cette élite, qui expro-

ment le plus souvent des initiatives

personnelles, et l'appel fait à des

puissances extérieures pour réaliser

des objectifs politiques fragilisent le

sage de l'analyse et de la réflexion

dont le but est «de favoriser le pas-

salement du processus révolutionnaire

en Europe centrale ; le rôle de la nou-

velle Allemagne unifiée ; et enfin

les enjeux et les acteurs dans la for-

mation d'une nouvelle Europe. Les

auteurs proposent ensuite dix mesures

dont le but est «de favoriser le pas-

sage de l'analyse et de la réflexion

abstraite à l'action concrète».

Si chaque chapitre retient l'atten-

tion par sa présentation équilibrée

des réalités, des espoirs et des pro-

bèmes, les dix mesures proposées

tiennent souvent de l'intépidité et

de l'audace. Ici s'impose une ques-

tion à laquelle on n'a pas encore de

réponses : est-ce que les esprits, les

structures politiques et intellectuel-

les et les hommes d'État ont suffi-

samment évolué pour aller dans les

directions proposées ? Quelle que

soit la réponse, il nous semble que

une meilleure coordination des ef-

forts d'aide déjà lancés par les pays

d'Europe de l'Ouest. Il ne serait pas

difficile alors d'assurer les autres

mesures ; privilégier l'Europe cen-

Rédigé en cinq mois et publié

avant le coup manqué en Union so-

viétique en août 1991, cet ouvrage

représente un effort intéressant d'a-

l'analyse et de prospective surtout sur

l'Europe centrale. Comme l'écrivent

les auteurs, cet essai «se veut avant

tout un guide raisonné et lucide pour

comprendre et saisir les enjeux, les

chances et les risques qui s'ouvrent

à l'Europe en devenir». L'effort

n'est pas manqué : l'ouvrage invite

effectivement à la réflexion.

Les cinq chapitres du livre exami-

nent respectivement l'importance de

l'année 1989, surtout comme aboutis-

sement du processus révolutionnaire

déclenché deux siècles plus tôt ;

l'Union soviétique et les perspec-

tives auxquelles elle est appelée à

faire face ; les difficultés de la démo-

cratie, du marché et du nationalisme

en Europe centrale ; le rôle de la nou-

velle Allemagne unifiée ; et enfin

les enjeux et les acteurs dans la for-

mation d'une nouvelle Europe. Les

auteurs proposent ensuite dix mesures

dont le but est «de favoriser le pas-

sage de l'analyse et de la réflexion

abstraite à l'action concrète».

Si chaque chapitre retient l'atten-

tion par sa présentation équilibrée

des réalités, des espoirs et des pro-

bèmes, les dix mesures proposées

tiennent souvent de l'intépidité et

de l'audace. Ici s'impose une ques-

tion à laquelle on n'a pas encore de

réponses : est-ce que les esprits, les

structures politiques et intellectuel-

les et les hommes d'État ont suffi-

samment évolué pour aller dans les

directions proposées ? Quelle que

soit la réponse, il nous semble que

une meilleure coordination des ef-

forts d'aide déjà lancés par les pays

d'Europe de l'Ouest. Il ne serait pas

difficile alors d'assurer les autres

mesures ; privilégier l'Europe cen-

trale ; responsabiliser l'aide ; créer

une politique de formation et relever

le défi culturel dans les domaines du

livre et de l'audio-visuel.

## CONDENSE SUR LA LIMITATION DES ARMEMENTS

corité mondiale, enoncés et  
priorités devant régir les trans-  
fertes et l'accès sur les besoins  
légitimes d'aide et de soutien  
financiers. Le document exho-  
rte à éviter les transferts in-  
appropriés et à privilégier les  
transferts directs aux armées en

une région donnée, ou de nuire gravement à l'économie d'un pays bénéficiant. Quant au Moyen-Orient, les Cinq (qui fournissent 85 p. 100 des armes abouissant dans la région) ont convenu de se tenir mutuellement informés sur tous les transferts de gros systèmes d'armement dans cette partie du monde. Ils ont aussi réaffirmé l'importance d'assujettir à des contrôles stricts à l'échelle de la planète l'exportation de matériels associés aux armes de destruction massive.

## Les armes défensives et spatiales

Aux pourparlers américains-soviétiques, sur les armes défensives et spatiales, qui ont eu lieu à Genève en octobre, les Etats-Unis ont accepté pour la première fois de discuter de limites bien définies quant à l'entrevue et au calendrier d'exécution des déploiements de dispositifs de défense, afin de modifier en conséquence les systèmes SPAL S-75.

l'efficacité du système GRALS (tro-  
tection globale contre des trappes  
limitées) dont ils envisagent de se  
doter. Voilà qui supposerait le rem-  
placement ou la modification du  
Traité ABM de 1972, qui limite les  
défenses contre les missiles batis-  
tiques à 100 intercepteurs basés au  
sol, à un seul endroit. Le GPALS,  
quant à lui, nécessiterait 750 inter-  
cepteurs, terrestres et 1 000 engins  
spatiaux, ce qui constituerait un  
réservoir capable d'arrêter jusqu'à  
200 ogives en même temps.

mois d'août, l'URSS s'est montrée de plus en plus désireuse de coopérer avec les États-Unis pour contraindre de telles défenses contre les attaques nucléaires déclenchées par inadvertnance, non autorisées, ou lancées par des tierces parties. Cependant, les États-Unis ont nié avoir dit qu'ils étaient prêts à aider l'URSS à doter d'un tel système, ou qu'ils envisageaient de partager leur technologie avec elle. □

il a demandé que soit négociée la fin de la production d'armes fissiles pour la fabrication d'armes, il a accepté d'amorcer un dialogue sérieux avec les États-Unis sur la sécurité dans l'emploi des armes nucléaires. Il a annoncé la mise sur pied d'un seul commandement opérationnel pour toutes les armes nucléaires stratégiques de son pays ; enfin, il a exhorté chacune des puissances nucléaires à s'engager à ne jamais recourir la première aux armes atomiques.

Les 17 et 18 octobre, les ministres de la Défense des pays de l'OTAN ont approuvé aux déclarations des États-Unis et de l'URSS et ils ont décidé de réduire de moitié le nombre d'armes air-sol existant dans l'Armée de l'Organisation en Europe, l'élimination de 700 missiles balistiques à courte portée, on obtient une réduction de 80 p. 100 des stocks existants d'armes nucléaires «pré-stratégiques» de l'OTAN.

Les armes nucléaires tactiques de la France ne sont pas touchées par les coupes effectuées par l'OTAN, mais ce pays a annoncé en août qu'il constituerait seulement trente missiles balistiques à courte portée *Hades*, au lieu de 120, et qu'il les entreposerait directement.

## Les armes biologiques

La Troisième Conférence d'examen de la Convention de 1972 sur les armes biologiques et à toxines a eu lieu à Genève du 9 au 27 septembre. Les 118 parties au notamment convenu d'assujettir aussi aux règles sur les échanges de données les programmes de recherche sur la défense biologique et les installations de production des vaccins, et de s'assurer que les agents biologiques, les toxines, les armes, l'équipement ou les vecteurs connexes ne sont pas transférés à d'autres États risquant de servir à des fins illégales.

## Les transferts d'armes

Comme ils en avaient convenu à Paris en juillet dernier, les cinq membres permanents du Conseil de sécurité de l'ONU se sont de nouveau réunis en octobre à Londres pour élaborer des lignes directrices sur le transfert des armes conventionnelles, surtout au Moyen-Orient. Les lignes directrices, qui ont une

L'élimination totale des ICBM mitrès, et il a invité l'URSS à autoriser le déploiement de certaines défenses non nucléaires contre des attaques limitées par missiles balistiques. Et finalement, afin d'aider à empêcher le recours par inadvert-

plus que donner suite aux propos de son homologue américain. Le 5 octobre en effet, il a déclaré que toutes les armes nucléaires tactiques sont-elles soviétiques, y compris les mines, seraient détruites : en outre, l'URSS retirerait du service les ogives nucléaires des missiles antiaériens et

tionnelles, les autres seraient détruites, les autres seraient entreposés en un lieu central. Le président soviétique a par ailleurs proposé que les armes nucléaires, agissant conjointement en cela, détruisent toutes les armes nucléaires tactiques navales et qu'elles retirent du service et centrent toutes les bombes et sous-missiles nucléaires équipant

les forces armées locales. S'agissant des armes stratégiques, M. Gorbatchev a annoncé que l'URSS cesserait de garder ses bom-

barriers jours en état d'alerte permanente et qu'elle ferait de même à l'égard de 503 ICBM (dont 134 engins mirvés) ; le pays mettrait fin à la modernisation de ses SRAM et de ses petits ICBM mobiles, et il n'augmenterait pas le nombre de ses ICBM mirvés montés sur rails ; en outre, ces engins n'quittraient pas les bases permanentes. Enfin, M. Gorbachev a fait savoir que s'il pays

était en train de relâcher de son ordre de bataille trois sous-marins munis de quarante-huit lanceurs de missiles balistiques. L'URSS est disposée à éliminer 1 000 ogives nucléaires stratégiques, l'entente START (5 000 se-ront donc détruites sur une période de sept ans. M. Gorbachev a par ailleurs préconisé d'éliminer envi-ron la moitié du reste des armes stratégiques offensives.

## Les armes nucléaires

■ Le 27 septembre, le président Bush a annoncé une série de changements radicaux dans l'arsenal nucléaire américain. En outre, l'URSS lui a déclaré que son pays renouvellerait et développerait unilatéralement toutes ses 2 150 armes nucléaires tactiques soi-soi (obus d'artillerie nucléaire et ogives montées sur des missiles balistiques à courte portée) déployés en Europe, en Corée du sud et aux États-Unis. Ceux-ci vont également retirer du

service toutes leurs armes nucléaires employées en mer, y compris les missiles de SLCM et les bombes équivalentes (dont les avions embarqués et les avions de l'aéronavale basés à terre). Environ la moitié de ces engins (on pense qu'il y en a entre 1 825 et 2 252) seraient détruits, tandis que le reste (dont les SLCM plus modernes) serait transféré aux États-Unis.

Quant aux armes nucléaires stra-

légiques, les États-Unis cesseraient de garder en état d'alerte permanente tous leurs bombardiers stratégiques, et ils feraient de même dans le cas des missiles balistiques intercontinentaux (ICBM) devant être détruits aux termes de l'entente START. Le pays accélérerait l'élimination de ces derniers engins (au lieu de le faire le Traité START). M. Bush a mis fin

rendre mobiles les *MX* actuels et les programmes ayant pour objet de les transformer en *CBM Midge* dans le futur. Le projet est d'ailleurs, le plus ambitieux, le plus complexe et le plus coûteux de la stratégie d'attaque à court terme (SRAM) équilibrant les bombardiers stratégiques ne sera pas remplacé par un engin plus moderne ; enfin, M. Bush a créé un Commandement stratégique unifié qui sera chargé de surveiller toutes les armes nucléaires et les stratégies air-sol.

# EN DIRECT DE LA COLLINE PARLEMENTAIRE

L'ONU

La 34<sup>e</sup> législature a repris les travaux de sa trisixième session le 16 septembre et elle les poursuivra jusqu'à la veille de Noël. Le public latin voulant que le premier ministre ait droit à une rumeur persis- roney a cependant bien précisé, après avoir été interrogé par le Chef de l'Opposition, M. Jean Chrétien, de 22 octobre, qu'il n'avait pas inscrit son nom sur la liste officielle des candidats. Le lendemain, M. Chrétien s'est demandé pourquoi le nom du premier ministre n'avait pas été retiré de cette liste et quelles directives les diplomates canadiens à l'étranger avaient reçu à cet égard. Aucune réponse définitive n'a été fournie avant le 28 octobre, date où M. Mulroney a donné ordre au M. Yves Fortier, ambassadeur du Canada à l'ONU, d'annuler officiellement sa candidature. Les Nations Unies ont également fait l'objet d'un débat spécial à la Chambre, par suite d'une motion déposée par le député conservateur Walter MacLean. Celui-ci est le représentant spécial du premier ministre pour les questions africaines et, tous les automnes depuis quelques années, il fait partie de la délégation canadienne à l'Assemblée générale de l'ONU à New York. M. MacLean a proposé le 19 septembre que le gouvernement réclame à l'ONU une réunion au sommet sur la sécurité mondiale, pour que les États membres cherchent des moyens de mettre en oeuvre et de renforcer les mécanismes onusiens de maintien de la paix et de l'ordre. # À L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

## Yougoslavie

Alors que le rôle des Nations Unies est redéfini en cette époque de l'après-Guerre froide, les limites de l'intervention du Conseil de sécurité dans les affaires intérieures d'un État membre sont une fois de plus mises à l'épreuve par ce qui se passe en Yougoslavie. Le 25 septembre, il a adopté à l'unanimité la résolution 713, par laquelle il «exhortait vivement les parties au conflit yougoslave à observer un cessez-le-feu et demandait à tous les États de décréter «immédiatement un embargo général et total sur toutes les livraisons d'armes et de matériels militaires à la Yougoslavie».

Preuve de l'importance attachée à un règlement pacifique du différend, les ministres des Affaires étrangères des onze des quinze États membres du Conseil ont participé à l'adoption de la résolution. Alors que certains États avaient essayé à titre personnel de convaincre le Conseil d'envoyer des casques bleus dans la région, la Chine et les pays non alignés se sont fermement opposés, dit-on, à une telle intervention des Nations Unies.

Les États-Unis et la Grande-Bretagne s'opposaient également à une intervention de l'ONU et préféraient que l'affaire se règle grâce à des efforts régionaux déployés par les Européens. Le 25 octobre, le Secrétaire général a publié un rapport créant, entre autres, état de violation de l'engagement signé cinq jours auparavant à New York par le gouvernement et les guérilleros du *Fronte Farabundo Martí para la Liberación* (FMLN).

## El Salvador

Le 30 septembre, le Conseil a réaffirmé son soutien au processus de paix engagé au Salvador en adoptant la résolution 714, dans laquelle il se félicite également de l'accord signé cinq jours auparavant à New York par le gouvernement et les guérilleros du *Fronte Farabundo Martí para la Liberación* (FMLN).

Le 3 octobre, le président du Conseil de sécurité, l'ambassadeur Chharmaya Rajanmath Charekhan (Inde), a déclaré «condamner vigoureusement le renversement du président de Haïti, M. Jean-Bertrand Aristide. De plus, cette déclaration, force obligatoire, appelait instamment au «rétablissement de l'autorité légitime en Haïti». La

## Cambodge

Le 31 octobre, le Conseil a adopté à l'unanimité la résolution 718 reconnaissant officiellement l'accord signé à Paris huit jours plus tôt par les parties au conflit cambodgien. La résolution 718 enjoignait au Secrétaire général de présenter un coût estimatif détaillé de l'Autorité provisoire des Nations Unies au Cambodge (APRONUC) qui administrera le pays au moins jusqu'à la tenue d'élections libres. Le document

déclarait encore l'insistance mondiale du lancement de ce qui devrait être une des opérations de maintien de la paix les plus importantes en taille et les plus chères de son histoire. La complexité de l'entreprise est sous-entendue dans la résolution qui fut cambodgienne de se conformer

## Irak

Le Conseil a continué de consacrer beaucoup de temps à ce qui se passait en Irak. Le 15 août, au vu des rapports faisant état d'une aggravation de la situation des civils dans ce pays, le Conseil a adopté la résolution 706 autorisant Bagdad à vendre des quantités limitées de pétrole afin de pouvoir faire face à des besoins civils essentiels comme la nourriture. La résolution demandait aussi à Bagdad de se conformer à ses obligations de coopération dans la recherche et la destruction d'armes chimiques, biologiques et nucléaires, ainsi que de missiles balistiques. Le Conseil s'était refusé à autoriser l'Irak à vendre une quantité donnée de pétrole tant que le Secrétaire général n'aurait pas remis son rapport sur les mesures visant à contrôler la vente de pétrole et la distribution de nourriture. Par ailleurs, la résolution 706, adoptée par treize voix contre une (Cuba) et une abstention (le Yémen), demandait à l'Irak de verser 30 p. 100 de ses revenus pétroliers à un fonds spécial destiné à dédommager les victimes de son invasion du Koweït le 2 août.

Le 12 octobre, le Conseil a adopté la résolution 715 qui, en fait, créait le régime de limitation des armements le plus indiscipliné et le plus complet jamais établi dans l'histoire

## Nouveaux membres

Le nombre des membres de l'ONU est passé à 166 après que le Conseil de sécurité a recommandé à l'Assemblée générale d'admettre les trois pays baltes, soit l'Estonie, la Lettonie et la Lituanie. Le 9 août, le Conseil avait recommandé l'admission de la République de Corée (Nord) populaire de Corée (Corée du Sud), ainsi que celle des Îles Marshall et des États fédérés de Micronésie.

## - TREVOR ROWE

# CHRONIQUE DE LA DÉFENSE

## Sommet de l'OTAN à Rome

Lors du dernier Sommet de l'OTAN, tenu à Rome les 7 et 8 novembre derniers, les chefs d'État membres ont décrit dans un long communiqué le «nouveau concept stratégique» de l'Organisation. Constatant la rapidité des changements en Europe, ils ont évoqué en détail, la position unique de l'OTAN, «point» de sécurité entre l'Europe et l'Amérique du Nord. «L'OTAN, ont-ils déclaré, incarne le lien transatlantique par lequel la sécurité de l'Amérique du Nord est en permanence liée à celle de l'Europe». Cela dit, ils ont demandé la création d'un «escadron d'organismes interdépendants» qui unirait les pays d'Europe et d'Amérique du Nord.

Cette réaffirmation du lien transatlantique indissoluble n'a pas empêché une certaine incertitude d'assombrir le Sommet quant aux futures conséquences d'une éventuelle expansion de la brigade mixte franco-germano-popolose par Bonn et Paris. À la mi-octobre, les présidents Mitterrand et Kohl avaient écrit à leurs homologues européens pour leur soumettre l'idée suivante : l'aire de la brigade mixte d'un corps d'unités multinationales placé sous le contrôle de l'Union ouest-européenne, ce dans le cadre d'un traité de la CE sur l'union politique. L'Union ouest-européenne, relique du début des années 1950, n'a joué qu'un rôle très mineur alors que la menace d'une attaque soviétique tissait des liens très étroits au sein de l'OTAN. Cependant, on considère aujourd'hui qu'elle pourrait former le noyau institutionnel d'un système de sécurité européen.

Le communiqué de Rome semblerait approuver cette idée, puisqu'on y parle du «processus d'élaboration de l'identité européenne en matière de sécurité» et qu'on y reconnaît qu'avait une Europe plus forte, «les membres européens de l'Alliance assumeraient une plus grande part de leur responsabilité dans la défense de leur continent». Plus officieuse-

## Les armes nucléaires en Europe orientale et occidentale

Le «nouveau concept stratégique» apporte peu de précision quant à la décision prise plus tôt de réorganiser les forces de l'OTAN en unités plus petites et plus mobiles, en insistant davantage sur leurs modalités de renforcement. Cependant, après les mesures impessionnantes annoncées par le président Bush le 27 septembre et visant à retirer les armes nucléaires tactiques basées au sol et en mer, l'OTAN se devait, dans son communiqué de Rome, de traiter de la place des armes nucléaires dans sa stratégie. Elle a donc réaffirmé que les accords pouvaient être équipés d'armes nucléaires et d'armes conventionnelles, assistés au besoin par les forces navales, continueront de fournir à l'Europe une défense «prestratégique», et maintiendront ainsi le lien transatlantique avec les forces stratégiques des États-Unis.

En outre, il a été question au Sommet de Rome des forces nucléaires soviétiques. L'OTAN se demandait avec une inquiétude croissante de savoir si elles relèvent. Peu après le coup d'État du mois d'août, M. Vladimir Lobov, le nouveau chef d'État major soviétique, a insisté sur le fait que les armes nucléaires tactiques étaient gardées sous stricte surveillance. Il a expliqué que les éléments clés de ces systèmes relevaient d'autorités distinctes dont l'accord était nécessaire pour armer les missiles. Selon des rapports américains, dans le cas des missiles *Scud*, des unités spéciales du KGB transportent les ogives dans des remorques séparées. Le KGB et l'armée dépendent de hiérarchies différentes, et tant l'une que l'autre doivent autoriser le tir du missile. Malgré ces assurances, les chefs d'État présents au Sommet de Rome ont clairement exprimé leur inquiétude au sujet des armes nucléaires soviétiques. La première ministre Mulroney aurait déclaré que les 30 000 armes nucléaires que possèdent l'URSS sont placées sous une «surveillance très peu stricte».

Malgré le désaccord de la France, les autres pays de l'OTAN – dont le Canada – ont fait savoir que toute aide future à l'URSS dépendrait de l'assurance que toutes les armes nucléaires sont placées sous la responsabilité d'une seule autorité qui applique des mesures de sécurité satisfaisantes.

## La politique de défense canadienne

Le 17 septembre, juste quatre ans après la promesse, formulée dans le Livre blanc de la défense de 1987, de renforcer considérablement l'Armée canadienne, le ministre de la Défense, M. Marcel Masse, révélait le plan révisé tant attendu de la structure future des forces armées. Se gardant de préciser à quels menaces éventuelles les forces canadiennes pourraient avoir à faire face à l'avenir, M. Masse a préféré rap-

peeler que la confrontation Est-Ouest avait fait place à «une situation mal définie, assez incertaine pour ce qui est des menaces pouvant peser sur la sécurité et sur la paix mondiale.» Si la déclaration comportait peu de surprises, certains problèmes clés semblaient cependant avoir été résolus. En premier lieu, les bases canadiennes de Baden-Soellingen et de Lahm, dans le Sud de l'Allemagne, seront fermées en 1994 et 1995 respectivement. Le Canada conservera une force opérationnelle de 1 100 militaires en Europe, son affectation et sa nature restant à définir. En outre, Ottawa continuera de fournir, suivant ses engagements, un groupe de bataillon à la Force combinée de l'OTAN, et maintiendra une brigade et deux escadrons de CF-18 à la disposition de l'Alliance, dans l'éventualité d'une crise en Europe, mais «capable aussi d'intervenir Par ailleurs, il ressort de la déclaration de M. Masse que la marine canadienne concentrera ses activités plus généralement dans les eaux côtières nationales, accordant une place moindre à la protection des lignes de communication maritimes vers l'Europe. Au lieu d'un troisième groupe de six frégates de patrouille rapides et douze bâtiments de patrouille côtière qui seront affectés à la Réserve navale

et pourront servir dans la lutte contre les mines. Apparemment, le programme de remplacement des sous-marins survit tout juste à l'examen, puisque le ministre a promis l'acquisition d'un plus grand sous-marin à propulsion classique, sur les six envisagés. Contrairement au Livre blanc de 1987, l'examen ne précise aucune échéance pour la compression et la réorganisation des forces armées. Cependant, le ministre, conscient de la réalité du déficit, a fait savoir que, «durant les toutes prochaines années», les augmentations du budget de la défense, s'il y en a, ne seraient qu'à peine supérieures au taux de l'inflation. Dans cette situation, c'est dans le pourcentage du budget alloué aux achats de nouveaux équipements que l'armée trouvera les moyens de persévérer son efficacité. Dans l'examen, on promet de faire passer ce pourcentage de 22 à 26 p. 100 en quatre ans. Outre réduire l'ensemble des effectifs militaires de 84 000 à 76 000 personnes, le ministre a aussi évoqué dans sa déclaration le souci «d'éliminer immédiatement des infrastructures inutilisées» (c.-à-d. des bases), mais en s'empareant de reconnaître que «la réalité socio-économique s'oppose à cette perspective». Des propositions de fermeture de bases sont à l'étude. [Pour plus de précisions sur le sujet, voir page 5.]

Entre autres nombreuses réflexions qui donnent à penser qu'à l'avenir, les forces seront essentiellement structurées pour la surveillance et la patrouille dans les limites du territoire canadien, on promet également une capacité de surveillance accrue dans l'Arctique. Début novembre, les difficultés et les responsabilités de l'armée canadienne dans cette région ont été tristement illustrées par l'accident d'un avion de ravitaillement qui s'est écrasé en phase d'approche de la base militaire d'Almer. Sans rien envier aux efforts ni au courage des équipes de secours, il semble évident que les ressources nécessaires pour réagir rapidement en cas d'accidents militaires ou civils, aériens ou maritimes, dans le Grand Nord ne sont pas en place.

— DAVID COX

Le dénouement du conflit cambodgien est lié à la fin des rapports conflictuels entre la Chine et le Viêt-nam. Les nécessités de la désagrégation de l'Empire soviétique ont contraint les deux protagonistes à trouver un terrain d'entente, mais il y a tout lieu de croire que de multiples dossiers bilatéraux ont figuré à l'ordre du jour des nombreuses réunions publiques et secrètes de ces derniers mois. Les Accords de Paris marquent l'échec de la politique vietnamienne en Indochine, mais le Parti communiste vietnamien a peut-être gagné la paix d'un surris qui lui assurera le soutien à venir du Parti communiste chinois. On peut également formuler comme hypothèse que Beijing aura rassuré Hanoi sur les intentions chinoises à propos des îles Paracels et des îles Spratly, objets de litiges maritimes sérieux entre les deux pays.

À ces multiples facteurs, on doit ajouter un changement des perceptions observées entre les factions de la résistance cambodgienne et le gouvernement de Phnom Penh. Il est en effet apparu ces derniers mois qu'il importait d'atténuer la puissance attribuée aux Khmers rouges et à leur capacité de reprendre le pouvoir. De multiples indicateurs font croire que l'armée régulière cambodgienne est en mesure de circonscrire leur action, et c'est d'ailleurs sur le terrain politique que les Khmers rouges ont désormais convenu de relâcher leur image.

Ce sont trois accords chapeautés par un acte final qui ont été signés à Paris le 23 octobre 1991. Le premier accord, qui a force de traité, est à l'évidence le plus important. Intitulé «Accord pour un règlement politique global du conflit du Cambodge», ce document précise les modalités de l'instauration d'un paix véritable au Cambodge et à la mise en tutelle partielle du pays par les Nations Unies. Le texte reprend l'essentiel du «document-cadre» du 26 novembre 1990, mais il clarifie les points restés vagues ou volontairement omis. On y remarquera tout spécialement les articles 15, 16 et 17 de la partie III, qui traitent des droits de l'Homme et de la violation des signataires de les promouvoir et d'empêcher que «de nouvelles atteintes aux droits de l'Homme se produisent».

Formulées pour compenser l'omission de toute condamnation du «génocide» perpétré par les Khmers rouges, ces dispositions figurent également dans l'acte final : il s'agit de quelques lignes dont le style souligne la difficulté que les parties ont eu à parvenir à un compromis. Dans ce dernier texte, en effet, un paragraphe à la facture particulièrement diplomatique traduit les compromis ayant abouti à son libellé, qui se lit ainsi : «Avant les États participant à la Conférence s'engagent à promouvoir et à encourager le respect effectif des droits de l'Homme et des libertés fondamentales au Cambodge formués dans les instruments internationaux pertinents auxquels ils sont parties». L'annexe V du premier document reprend une formulation voisine : «La tragédie que le Cambodge a vécue récemment exige que des mesures spéciales soient prises pour assurer la protection des droits de l'Homme». Pour de nombreux observateurs, il s'agit là encore d'une faible compensation pour effacer l'Histoire et permettre aux Khmers rouges d'être partie de plein droit au processus de paix et aux prochaines élections.

Le document principal comporte cinq annexes dont les dimensions importantes soulignent le soin avec lequel on a défini diverses modalités : 1) le mandat de l'APRONUC, 2) le retrait, le cessez-le-feu et les mesures connexes, 3) les élections, 4) le rapatriement des réfugiés et des personnes déplacées cambodgiennes, l'annexe II clarifie le mieux possible les fonctions militaires de l'APRONUC. Il n'en reste pas moins que toutes les dispositions font appel à la bonne foi des protagonistes cambodgiens. Or, et c'est déjà, on est convaincu que la démobilisation de 70 p. 100 des forces armées de chacune des factions ne sera pas chose aisée. Comment obtenir concrètement des certitudes sur les chiffres de base à partir desquels les pourcentages seront calculés ?

À court terme, une des tâches les plus délicates sera le rapatriement des réfugiés. Près de 350 000 attendent dans les camps à la frontière de la Thaïlande. Sur le plan opérationnel, on a prévu que le Haut Commissariat des Nations Unies pour les réfugiés (HCR) supervise tous les aspects de la réinsertion de ces personnes dans leur pays d'origine. Outre les difficultés logistiques du déplacement des réfugiés sur le territoire cambodgien, divers dangers réels devront être surmontés. La dispersion des champs de mines et le banditisme (les pressions exercées par les Khmers rouges pour asservir une partie de ces personnes déplacées) constituent d'énormes contraintes sur le plan de la sécurité. En outre, il convient de s'interroger sur les conditions de la réinstallation de ces personnes : à quels droits, par exemple, peuvent-elles prétendre pour récupérer des propriétés et terres perdues depuis leur départ ? Comment les empêcher de s'agglommer, avec les soldats démobilisés, autour des villes, et plus particulièrement de Phnom Penh ? Comment enfin remédier à très court terme au manque d'écoles et d'hôpitaux et mettre en place une infrastructure pour satisfaire à des exigences de survie amplifiées maintenant par l'espoir d'une paix retrouvée ?

Pour faire face à ces difficultés, les signataires des accords de Paris ont accepté d'appuyer une «déclaration sur le relèvement et la reconstruction du Cambodge». Le document contient bon nombre de garanties d'octroi d'une aide généreuse à la reconstruction de l'État cambodgien. Il y a tout lieu de croire que ces promesses seront tenues. Le Japon, pour ne citer que ce pays, a d'ores et déjà prévu l'octroi d'une aide importante qui visera plus particulièrement le développement agricole. Mises à part ses fonctions militaires, l'APRONUC s'occupera de l'organisation et de la conduite des élections au Cambodge. Avec les élections «libres et impartiales», prévues pour le printemps de 1993, le peuple se dotera d'une assemblée constituante de 120 membres qui élaborera et approuvera une nouvelle constitution cambodgienne, puis se transformera en assemblée législative d'où sera issu le nouveau gouvernement cambodgien. Le texte signé à Paris a permis de trouver une solution à l'épineuse question de l'éligibilité comme électeur. Le point 4 de l'annexe III du document principal précise en effet ce qui suit : «Toute personne qui aura atteint l'âge de dix-huit ans lors de la présentation des demandes d'inscription sur les listes electorales, ou qui l'atteindra au cours de la période d'inscription, qui est née au Cambodge, ou dont l'un des deux parents est né au Cambodge, aura le droit de prendre part aux élections». Malgré le libellé explicite et judicieux de cette disposition, il y a tout lieu de croire qu'elle ne sera pas d'une application aisée, car certains noms figurant sur les listes electorales seront refusés. Le second accord, qui a lui aussi force de traité, s'intitule : «Accord relatif à la souveraineté, l'intégrité et l'inviolabilité territoriales, l'indépendance, l'unité nationale du Cambodge». La longueur du titre et la multiplication des termes illustrent l'engagement de la collectivité internationale est aujourd'hui sans ambiguïté : il est banal, mais d'une extrême vérité, de dire que beaucoup reposent maintenant sur les Cambodgiens eux-mêmes. Il leur appartient de reconstruire leur pays et de dénoncer avec éclat toute ingérence de certains voisins trop enclins, certainement, à considérer à plus ou moins long terme, un Cambodge neutre et non marxiste comme une menace à leur propre régime.

Le dénouement du conflit cambodgien est lié à la fin des rapports conflictuels entre la Chine et le Viêt-nam. Les nécessités de la désagrégation de l'Empire soviétique ont contraint les deux protagonistes à trouver un terrain d'entente, mais il y a tout lieu de croire que de multiples dossiers bilatéraux ont figuré à l'ordre du jour des nombreuses réunions publiques et secrètes de ces derniers mois. Les Accords de Paris marquent l'échec de la politique vietnamienne en Indochine, mais le Parti communiste vietnamien a peut-être gagné la paix d'un surris qui lui assurera le soutien à venir du Parti communiste chinois. On peut également formuler comme hypothèse que Beijing aura rassuré Hanoi sur les intentions chinoises à propos des îles Paracels et des îles Spratly, objets de litiges maritimes sérieux entre les deux pays.

À ces multiples facteurs, on doit ajouter un changement des perceptions observées entre les factions de la résistance cambodgienne et le gouvernement de Phnom Penh. Il est en effet apparu ces derniers mois qu'il importait d'atténuer la puissance attribuée aux Khmers rouges et à leur capacité de reprendre le pouvoir. De multiples indicateurs font croire que l'armée régulière cambodgienne est en mesure de circonscrire leur action, et c'est d'ailleurs sur le terrain politique que les Khmers rouges ont désormais convenu de relâcher leur image.

Ce sont trois accords chapeautés par un acte final qui ont été signés à Paris le 23 octobre 1991. Le premier accord, qui a force de traité, est à l'évidence le plus important. Intitulé «Accord pour un règlement politique global du conflit du Cambodge», ce document précise les modalités de l'instauration d'un paix véritable au Cambodge et à la mise en tutelle partielle du pays par les Nations Unies. Le texte reprend l'essentiel du «document-cadre» du 26 novembre 1990, mais il clarifie les points restés vagues ou volontairement omis. On y remarquera tout spécialement les articles 15, 16 et 17 de la partie III, qui traitent des droits de l'Homme et de la violation des signataires de les promouvoir et d'empêcher que «de nouvelles atteintes aux droits de l'Homme se produisent».

Formulées pour compenser l'omission de toute condamnation du «génocide» perpétré par les Khmers rouges, ces dispositions figurent également dans l'acte final : il s'agit de quelques lignes dont le style souligne la difficulté que les parties ont eu à parvenir à un compromis. Dans ce dernier texte, en effet, un paragraphe à la facture particulièrement diplomatique traduit les compromis ayant abouti à son libellé, qui se lit ainsi : «Avant les États participant à la Conférence s'engagent à promouvoir et à encourager le respect effectif des droits de l'Homme et des libertés fondamentales au Cambodge formués dans les instruments internationaux pertinents auxquels ils sont parties». L'annexe V du premier document reprend une formulation voisine : «La tragédie que le Cambodge a vécue récemment exige que des mesures spéciales soient prises pour assurer la protection des droits de l'Homme». Pour de nombreux observateurs, il s'agit là encore d'une faible compensation pour effacer l'Histoire et permettre aux Khmers rouges d'être partie de plein droit au processus de paix et aux prochaines élections.

Le document principal comporte cinq annexes dont les dimensions importantes soulignent le soin avec lequel on a défini diverses modalités : 1) le mandat de l'APRONUC, 2) le retrait, le cessez-le-feu et les mesures connexes, 3) les élections, 4) le rapatriement des réfugiés et des personnes déplacées cambodgiennes, l'annexe II clarifie le mieux possible les fonctions militaires de l'APRONUC. Il n'en reste pas moins que toutes les dispositions font appel à la bonne foi des protagonistes cambodgiens. Or, et c'est déjà, on est convaincu que la démobilisation de 70 p. 100 des forces armées de chacune des factions ne sera pas chose aisée. Comment obtenir concrètement des certitudes sur les chiffres de base à partir desquels les pourcentages seront calculés ?

À court terme, une des tâches les plus délicates sera le rapatriement des réfugiés. Près de 350 000 attendent dans les camps à la frontière de la Thaïlande. Sur le plan opérationnel, on a prévu que le Haut Commissariat des Nations Unies pour les réfugiés (HCR) supervise tous les aspects de la réinsertion de ces personnes dans leur pays d'origine. Outre les difficultés logistiques du déplacement des réfugiés sur le territoire cambodgien, divers dangers réels devront être surmontés. La dispersion des champs de mines et le banditisme (les pressions exercées par les Khmers rouges pour asservir une partie de ces personnes déplacées) constituent d'énormes contraintes sur le plan de la sécurité. En outre, il convient de s'interroger sur les conditions de la réinstallation de ces personnes : à quels droits, par exemple, peuvent-elles prétendre pour récupérer des propriétés et terres perdues depuis leur départ ? Comment les empêcher de s'agglommer, avec les soldats démobilisés, autour des villes, et plus particulièrement de Phnom Penh ? Comment enfin remédier à très court terme au manque d'écoles et d'hôpitaux et mettre en place une infrastructure pour satisfaire à des exigences de survie amplifiées maintenant par l'espoir d'une paix retrouvée ?

Pour faire face à ces difficultés, les signataires des accords de Paris ont accepté d'appuyer une «déclaration sur le relèvement et la reconstruction du Cambodge». Le document contient bon nombre de garanties d'octroi d'une aide généreuse à la reconstruction de l'État cambodgien. Il y a tout lieu de croire que ces promesses seront tenues. Le Japon, pour ne citer que ce pays, a d'ores et déjà prévu l'octroi d'une aide importante qui visera plus particulièrement le développement agricole. Mises à part ses fonctions militaires, l'APRONUC s'occupera de l'organisation et de la conduite des élections au Cambodge. Avec les élections «libres et impartiales», prévues pour le printemps de 1993, le peuple se dotera d'une assemblée constituante de 120 membres qui élaborera et approuvera une nouvelle constitution cambodgienne, puis se transformera en assemblée législative d'où sera issu le nouveau gouvernement cambodgien. Le texte signé à Paris a permis de trouver une solution à l'épineuse question de l'éligibilité comme électeur. Le point 4 de l'annexe III du document principal précise en effet ce qui suit : «Toute personne qui aura atteint l'âge de dix-huit ans lors de la présentation des demandes d'inscription sur les listes electorales, ou qui l'atteindra au cours de la période d'inscription, qui est née au Cambodge, ou dont l'un des deux parents est né au Cambodge, aura le droit de prendre part aux élections». Malgré le libellé explicite et judicieux de cette disposition, il y a tout lieu de croire qu'elle ne sera pas d'une application aisée, car certains noms figurant sur les listes electorales seront refusés. Le second accord, qui a lui aussi force de traité, s'intitule : «Accord relatif à la souveraineté, l'intégrité et l'inviolabilité territoriales, l'indépendance, l'unité nationale du Cambodge». La longueur du titre et la multiplication des termes illustrent l'engagement de la collectivité internationale est aujourd'hui sans ambiguïté : il est banal, mais d'une extrême vérité, de dire que beaucoup reposent maintenant sur les Cambodgiens eux-mêmes. Il leur appartient de reconstruire leur pays et de dénoncer avec éclat toute ingérence de certains voisins trop enclins, certainement, à considérer à plus ou moins long terme, un Cambodge neutre et non marxiste comme une menace à leur propre régime.

# RECRIER L'ÉTAT DU CAMBODGE

Les Accords de Paris ont permis de mettre un terme à vingt  
ans de guerre au Cambodge et placent le pays sous la tutelle  
des Nations Unies jusqu'à la tenue d'élections libres.

PAR GÉRARD HERVOUET

ANS UN TEMPLE BOUDDHISTE DE PHNOM PENH, DEUX PYTHONS ONT  
été trompés. Il annoncent qu'un roi est de retour. Le signe ne peut  
signifier le 23 octobre 1991 par dix-huit ministres des Affaires étran-  
gères et le Secrétaire général des Nations Unies. En attendant les effets  
concrets de la mise sous tutelle du pays par les Nations Unies, le Cambodge  
s'accroche aux symboles et, pour une grande majorité des Khmers, Norodom  
Sihanouk incarne toujours la tradition glorieuse d'Angkor.

Les 17 et 18 octobre derniers, un Congrès extraordinaire du Parti révo-

lutionnaire du peuple cambodgien a mis au rancart l'idéologie marxiste-  
léniniste. Le Congrès du parti a également affirmé que, désormais, toutes les  
libertés étaient rétablies, la libre entreprise garantie et le droit de créer un  
parti politique assuré. Dans ce contexte, peut-on considérer que l'alliance  
contre le prince Sihanouk et le premier ministre Hun Sen survivra à la cam-  
pagne électorale déjà amorcée dans les faits ? Il y a tout lieu de le croire

puisque les Khmers rouges demeurent toujours l'ennemi commun du régime  
actuel de Phnom Penh, des Sihanoukistes et de la faction de Son Sann. Pour  
s'opposer aux Khmers rouges et gagner à tout prix les élections à venir, le  
régime de Phnom Penh est donc parvenu à renier ses principes idéologiques  
fondamentaux. Le prince Sihanouk est satisfait et s'est félicité à Paris du fait

que le Cambodge soit « le premier pays d'Indochine à être décommunisé ».

En quelques mois, le Cambodge a donc, à son tour, connu les effets de  
ces extraordinaires accélérations de l'Histoire qui, depuis 1989, bousculent  
les scénarios les plus audacieux. À partir du 26 novembre 1990, « une for-  
mule cadre » avait, sous la pression des cinq membres permanents du Con-  
seil de sécurité, défini les bases fondamentales des progrès obtenus après  
des négociations extrêmement tumultueuses. Le texte avait établi les moda-  
lités de fonctionnement d'un Conseil national suprême (CNS). Ce Conseil

compte un nombre égal de représentants de chacune des trois factions de la  
résistance mais la moitié de ses membres (six) appartient au gouvernement  
actuellement au pouvoir à Phnom Penh. Le texte du 26 novembre 1990  
formulait également des propositions pour établir l'Autorité provisoire des  
Nations Unies au Cambodge (APRONUC) : il précisait le mandat de cette  
Autorité, définissait les conditions de cessez-le-feu et celles des élections  
et du rapatriement des réfugiés, et il énonçait les principes d'une nouvelle

constitution au Cambodge.

ACQUIS POSITIF INDUBITABLE, CE DOCUMENT LAISSAIT TOUTEFOIS EN SUSPENS  
au moins deux points d'achoppement à savoir : la mention du « génocide »  
de 1975, et les questions complexes de la démobilisation et du désarmement  
perpétré par les Khmers rouges lors de leur passage au pouvoir à partir  
de 1975, et les questions complexes de la démobilisation et du désarmement  
des forces en présence. Malgré un cessez-le-feu observé par les quatre fac-  
tions depuis le mois de mai 1991, aucun progrès tangible ne semblait envi-  
sageable à court terme. Au début de juin, la réunion du CNS à Djakarta fut  
considérée comme un échec souligné par la résistance des Khmers rouges à  
accepter la reconduction du cessez-le-feu. Aspect plus positif, la rencontre  
Sihanouk et de Hun Sen d'aller de l'avant en écartant les Khmers rouges.

Les 24 et 25 juin 1991, le CNS réuni dans le sud-est de la Thaïlande, à  
Pattaya, terminait ses travaux par des conclusions particulièrement encourage-  
antes. Le prince Sihanouk annonçait en effet que les parties étaient con-  
venues d'un cessez-le-feu inconditionnel et illimité à partir du 24 juin ;  
les factions s'engageaient à ne plus recevoir d'armements provenant de

l'étranger. Le CNS prévoyait également établir son quartier général à  
Phnom Penh et représenter le Cambodge aux Nations Unies. En attendant  
l'intervention des Nations Unies et la tenue d'élections générales, les  
facteurs acceptaient de respecter le *statu quo* dans la partie du territoire  
cambodgien que chacune d'elles contrôlait.

Les 16 et 17 juillet, une réunion informelle, historique et symbolique du  
CNS se tenait à Beijing. La Chine affirmait ainsi avec éclat sa volonté d'in-  
fluer sur un règlement à venir de la question cambodgienne. En rencontrant  
pour la première fois Hun Sen, elle cautionnait ce dernier et le forçait un  
peu plus à s'affranchir du Vietnam. La rencontre accéléra encore le mou-  
vement vers la paix puisque le communiqué final annoncera le choix uni-  
nime du prince Sihanouk comme président du Conseil national suprême.  
Le texte précisait aussi que le prince « a décidé dès maintenant de rester  
neutre et d'agir comme un conciliateur sans appartenir à aucune faction, ni  
à aucun parti politique ».

C'EST DE NOUVEAU À PATTAYA QUE LES MEMBRES DU CNS PARVENAIENT, DU  
26 au 29 août, à s'entendre sur deux points importants mentionnés précé-  
demment à savoir : la question du « génocide » et celle du désarmement des  
forces de chacune des factions. À propos du génocide, le gouvernement  
abandonna la formule minimale à laquelle il tenait, soit celle d'une garantie  
« contre un retour aux pratiques d'un passé récent ». Plus important encore,  
le CNS accepta une proposition de la France qui préconisait de démobiliser  
70 p. 100 des forces de chacune des factions avec armes et équipements.  
En outre, il fut accepté de regrouper le reste (30 p. 100) avec ses armements  
dans des cantonnements placés sous la surveillance de l'APRONUC. À cette  
même réunion, les parties convièrent que, si aucun consensus n'était obtenu  
pour coordonner les activités du CNS et celles de l'APRONUC, une fois  
les deux organismes établis à Phnom Penh, le prince Sihanouk, comme  
président du CNS, prendrait la décision finale.

Enfin, le 21 septembre à New York, les membres du CNS, appuyés par  
les co-présidents de la Conférence de Paris et les cinq membres permanents  
du Conseil de sécurité, s'entendirent pour adopter comme mode de scrutin  
le système de représentation proportionnelle par province auquel tenaient  
les trois factions coalisées contre le gouvernement Hun Sen.

La désintégration de l'Union soviétique a modifié le rapport des  
forces dans le système international. Le conflit cambodgien, qui avait in-  
directement découlé de l'affrontement Est-Ouest et des confrontations  
sino-soviétiques et sino-vietnamiennes, ne pouvait que bénéficier de ce re-  
tourne ment fondamental de l'Histoire contemporaine. L'intervention mas-  
sive des membres permanents du Conseil de sécurité pèse lourdement sur  
la détermination des factions antagonistes. Elle a toutefois pesé davantage  
sur la politique chinoise qui, dans le contexte « post Tian anmen » et dans  
celui des turbulences de la guerre au Moyen-Orient, n'avait d'autre choix  
que celui de se refaire rapidement une certaine crédibilité.

Le soutien accordé aux Khmers rouges par les dirigeants chinois enfer-  
maît ces derniers dans un dilemme herméétique. Lors de nos visites à Beijing  
ces deux dernières années, plusieurs responsables à Beijing nous communi-  
quaient leur détermination à en finir avec une politique qui tenait à l'écart  
toute leur image à l'extérieur. La Chine ne pouvait rien concevoir  
avant de contraindre d'abord le Vietnam à plier le premier devant les  
exigences chinoises.

Une fois encore, conformément à la longue tradition des rapports con-  
flicts sino-vietnamiens, les dirigeants de Hanoi se sont rendus en Chine.  
Le 3 septembre 1990, la réunion secrète de Chengdu a rendu certainement

préjudiciablement vital entre les armes nucléaires «préstratégiques» en Europe et la force stratégique nucléaire américaine. Depuis dix ans, la Marine américaine a réussi à résister à tous les efforts déployés pour inscrire dans les négociations des armes nucléaires tactiques basées en mer. Le 27 septembre, balayant cette opposition, M. Bush a annoncé que les États-Unis démilitariseront unilatéralement la plupart des navires de leur flotte, d'essentiel étant que, dans des circonstances normales, nos bâtiments ne transporteront pas d'armes nucléaires tactiques».

Quant au lien entre les forces nucléaires en Europe et en Amérique du Nord, il était déjà sape en partie par le malaise croissant que suscite en Europe le déploiement permanent d'armes nucléaires de courte portée en Allemagne et ailleurs. Le 27 septembre, le président Bush a effectué un remarquable virage à 180° en acceptant la vieille proposition de Soviétiques et en proposant lui-même d'éliminer quelque 2 300 armes nucléaires de théâtre basées au sol. Les Soviétiques, a-t-il expliqué, «devraient marcher de concert avec nous», ce qui veut dire qu'ils devraient démanteler et éliminer «tout leur arsenal d'armes nucléaires de théâtre basées au sol».

Amén, répondent ceux que l'on a désignés à la surveillance du port de Beyrouth.

Les propositions formulées le 27 septembre par George Bush ne manquent pas d'être critiquées, mais il serait ridicule de ne pas reconnaître la rupture avec le passé qui vient d'avoir lieu. Le gouvernement Bush mettra-t-il autant d'ardeur à entreprendre d'autres changements qui entraîneraient plus encore les arsenaux nucléaires ? C'est là que certaines caractéristiques du nouveau système militeront sur les prochains gestes des Américains et sur les intérêts de leurs alliés, y compris du Canada.

Ces propositions du 27 SEPTEMBRE NE TRANCHENT PAS SEULEMENT AVEC LES PROCESSUS START, chéant pas seulement avec les processus START, elles étaient de plus présentes après un minimum de consultation avec les alliés. En fait, ils ont été «consultés» que quelques heures avant le discours afin de préserver l'effet de surprise, ce qui renforce l'impression grandissante que Washington opic pour l'unilatéralisme. Il se peut que, désormais, les ennuyeuses procédures de la diplomatie multilatérale interalliée suscitent une impatience accrue, et que les requêtes spéciales des alliés soient reçues avec une plus grande indifférence.

Dans les négociations relatives à une convention sur les armes chimiques, par exemple, les États-Unis sont revenus sur leur attachement antérieur à un régime de vérification strict, sans attendre à un régime de respect vis-à-vis des mêmes alliés, dont le Canada, qui continuait d'appuyer la position occidentale favorable aux inspections «intrusives».

Washington pourrait adopter une approche tout aussi unilatérale au sujet de la modification ou de l'abrogation du Traité ABM, pour lequel il est improbable que l'option des alliés ait de l'importance dans de futures ouvertures américaines à l'égard des Soviétiques.

Si le Canada et d'autres États veulent infléchir les attitudes changeantes des États-Unis en matière de limitation des armements, il leur faudra, dans

le courant de l'année à venir, réexaminer l'orientation et les objectifs de la politique américaine et déterminer quelles politiques servent l'ensemble des intérêts nationaux et internationaux. Voici quelques points clés à étudier.

Premièrement, contre qui les 8 000 armes stratégiques américaines de l'après-START sont-elles maintenant tournées ? En l'absence d'ennemi plus convaincant, probablement toujours contre l'Union soviétique, réfléchi par la perte des pays baltes et encore plus déconcertée par l'émergence de républiques autoproclamées non dotées d'armes nucléaires. La désintégration de l'URSS souligne donc la nécessité de réduire considérablement les forces stratégiques de manière à ce qu'il ne reste plus qu'un millier d'ogives d'ici à la fin de la décennie.

L'INTÉRÊT DU CANADA DANS CE PROCESSUS EST direct. Dans son discours du 27 septembre, le président Bush a également annoncé que toutes les forces nucléaires stratégiques seraient rassemblées sous un commandement stratégique unique. Cela rappelle un rapport du mois de janvier 1991, confirmé par des fonctionnaires canadiens, selon lequel les États-Unis envisageaient de combiner en un seul commandement

John Deeks

QU'ARTIÈREMENT, LE CANADA DEVRAIT DE nouveau s'intéresser à la question des essais nucléaires. Dans sa réponse au président Bush, Mikhaïl Gorbatchev a annoncé un moratoire d'une année sur les essais à Novaya Zemlya. Tous les États nordiques ont fortement insisté à appuyer ce moratoire et à prévenir la réactivation d'un polygone d'essais écologiquement fragile. La question de l'interdiction des essais nucléaires n'est pas aussi importante à la conférence A l'époque, l'impossibilité de s'entendre sur une telle interdiction avait enflé la conférence dans une impasse.

Le régime de la non-prolifération en est à une étape cruciale de son développement. En effet, le nombre de ses partisans, notamment parmi les États possédant officiellement l'arme nucléaire et parmi ceux qui sont sur le point de s'en doter n'a jamais été si grand, mais les techniques qui favorisent la prolifération sont de moins en moins contrôlables. Le moratoire soviétique offre l'occasion de commencer à se pré- parer bien à l'avance à la conférence de 1995. En premier lieu, on pourrait organiser une conférence réunissant tous les pays voisins de l'URSS touchés par les essais de Novaya Zemlya. Il y aurait, bien entendu, un grand absent : les États-Unis. Néanmoins, l'union n'est pas seulement garante de la sécurité mais aussi d'efficacité. Une assemblée circumpolaire à laquelle on discuterait de solutions de remplacement à la stratégie de la dissuade, ce ne sont pas des propositions qui sont nouvelles mais la conjoncture politique. Le 27 septembre, le président Bush a essayé de reprendre les rênes en matière de limitation des armes nucléaires, mais à l'Union soviétique, il n'est pas certain qu'il sera possible de maintenir le dialogue habituel sur la question. Après le coup d'État, la limitation des armements ne ressortira guère à ce qu'elle a été pendant ces vingt dernières années. Le problème dorénavant consistait à aider à définir le nouveau programme, ce qui peut commencer par le choix de la voie qu'il rendra les armes nucléaires de plus en plus dépassées.

Plus le régime de la non-prolifération en est à une étape cruciale de son développement, en effet, le nombre de ses partisans, notamment parmi les États possédant officiellement l'arme nucléaire et parmi ceux qui sont sur le point de s'en doter n'a jamais été si grand, mais les techniques qui favorisent la prolifération sont de moins en moins contrôlables. États baltes qui, comme le Canada, se trouveront confrontés à des problèmes nucléaires stratégiques en raison de leur position géographique.

## NOTE DE LA DIRECTION

Des sanctions «réfléchies» avant des armes «intelligentes».

DANS UN MONDE LIBRE DU Mur de BERLIN,

menace des armes nucléaires : nous cherchons

aussi à empêcher le recours aux armes en général.

À ce stade-ci, le passé et l'avenir se confondent.

On a renforcé grandement l'ONU elle-même et

les formules pacifiques de règlement des diffé-

rends. Parallèlement, au Koweït, un pays a lancé

un défi de taille en recourant aux armes, et en fin

de compte, c'est en déployant massivement con-

trairens à quitter le Koweït. On sait désormais

que le monde a

été erroné : Saddam n'aurait pas cédé devant

les sanctions.

ET ÊTRE UN CHERCHEUR EN VISITE À L'INSTITUT

les douze critères employés dans l'étude Hul-

bauer, et nous avons conclu qu'ils n'accorderaient

pas assez d'importance aux facteurs politico-

comportementaux. \* Nous avons constaté que

l'ajout de deux de ces facteurs aux douze autres

permettait de prédire sensiblement mieux les

chances de succès des sanctions dans une vaste

gamme de cas.

Tout d'abord, il faut voir si un régime visé par

des sanctions est à toutes fins utiles à l'abri de

l'opposition à l'intérieur de ses frontières

mêmes (songeons, par exemple, à l'URSS sous

Staline, à l'Irak de Saddam, ou la Chine commu-

niste), car la réponse (et ce n'est pas surprenant)

nous aidera beaucoup à savoir si les sanctions mo-

diffèrent le comportement du régime. Ainsi, dans

les circonstances où les dirigeants ne risquent

pas de souffrir personnellement des pressions

économiques extérieures, ceux qui voudraient en

exercer doivent soigneusement en évaluer l'effi-

cacité et la moralité, et, si possible, se soucier des

«cibles» qu'elles toucheraient précisément.

En second lieu, il faut savoir si le changement

des sanctions importe beaucoup ou peu aux yeux

du régime visé, car cela aura un effet encore plus

puissant sur les chances de succès ou d'échec des

sanctions.

Comme la plupart des conclusions de Hufbauer,

ni l'une ni l'autre des deux relations décrites ci-

dessus du modèle dépend de celle des hypothèses

issues du modèle.

\* L'analyse de l'institut dont il est question ici a

principalement été exécutée par Rajeev Dehejia, qui

travaillait avec l'auteur.

16 HIVER 1991 1992

les sanctions comme moyen de pression, avant

«Quelqu'un fait quelque chose» au sujet d'une

situation échappant en grande partie à l'emprise

des intervenants extérieurs ! Voilà l'attrait immé-

diat des sanctions, ou pire, l'impression que cela

crée. L'incidence symbolique des sanctions, tant

sur les pays visés qu'on sur ceux les imposant, a

sans doute une certaine valeur en soi, mais il im-

porte aussi de savoir si (et quand) les pressions

exercées peuvent vraiment amener les autorités

visées à modifier leur comportement.

En janvier dernier, les auteurs du répertoire le

plus complet jamais publié sur l'histoire des

sanctions, M. Gary Hufbauer et ses collègues de

*Institute of International Economics* à Washing-

ton, se sont immergés dans le débat sur la ques-

tion. Se fondant sur un modèle probabiliste établi

à partir de 115 cas survenus depuis 1914, ils ont

affirmé qu'il était à peu près certain que l'appli-

cation de sanctions pourrait contraindre les

Irakiens à quitter le Koweït. On sait désormais

dans la plupart des milieux que ce modèle devait

être erroné : Saddam n'aurait pas cédé devant

les sanctions.

et moi-même avons examiné soigneusement

les douze critères employés dans l'étude Hul-

bauer, et nous avons conclu qu'ils n'accorderaient

pas assez d'importance aux facteurs politico-

comportementaux. \* Nous avons constaté que

l'ajout de deux de ces facteurs aux douze autres

permettait de prédire sensiblement mieux les

chances de succès des sanctions dans une vaste

# RECRIER L'ÉTAT DU CAMBODGE

Les Accords de Paris ont permis de mettre un terme à vingt et un ans de guerre au Cambodge et placent le pays sous la tutelle des Nations Unies jusqu'à la tenue d'élections libres.

PAR GÉRARD HERVOUET

ANS UN TEMPLE BOUDDHISTE DE PHNOM PENH, DEUX PYTHONS ONT été aperçus : ils annoncent qu'un roi est de retour. Le signe ne peut être trompeur, il confirme la réalité des Accords sur le Cambodge signés le 23 octobre 1991 par dix-huit ministres des Affaires étrangères et le Secrétaire général des Nations Unies. En attendant les effets concrets de la mise sous tutelle du pays par les Nations Unies, le Cambodge s'accroche aux symboles et, pour une grande majorité des Khmers, Norodom Sihanouk incarne toujours la tradition glorieuse d'Angkor.

Les 17 et 18 octobre derniers, un Congrès extraordinaire du Parti révolutionnaire du peuple cambodgien a mis au rancart l'idéologie marxiste-léniniste. Le Congrès du parti a également affirmé que, désormais, toutes les libertés étaient rétablies, la libre entreprise garantie et le droit de créer un parti politique assuré. Dans ce contexte, peut-on considérer que l'alliance entre le prince Sihanouk et le premier ministre Hun Sen survivra à la campagne électorale déjà amorcée dans les faits ? Il y a tout lieu de le croire puisque les Khmers rouges demeurent toujours l'ennemi commun du régime de Phnom Penh.

Le prince Sihanouk est satisfait et s'est félicité à Paris du fait que le Cambodge soit «le premier pays d'Indochine à être démocratique». En quelques mois, le Cambodge a donc, connu les effets de ces extraordinaires accélérations de l'Histoire qui, depuis 1989, bousculent les scénarios les plus audacieux. À partir du 26 novembre 1990, «une force multiple cadre» avait, sous la pression des cinq membres permanents du Conseil de sécurité, défini les bases fondamentales des progrès obtenus après des négociations extrêmement humbles. Le texte avait établi les modalités de fonctionnement d'un Conseil national suprême (CNS). Ce Conseil comptait un nombre égal de représentants de chacune des trois factions de la résistance mais la moitié de ses membres (six) appartenait au gouvernement actuel de Phnom Penh. Les Sihanoukistes et la faction de Son San. Pour s'opposer aux Khmers rouges et gagner à tout prix les élections à venir, le régime de Phnom Penh est donc parvenu à renier ses principes idéologiques fondamentaux.

L'étranger. Le CNS prévoyait également établir son quartier général à Phnom Penh et représenter le Cambodge aux Nations Unies. En attendant l'intervention des Nations Unies et la tenue d'élections générales, les factions acceptaient de respecter le *sine qua non* dans la partie du territoire cambodgien que chacune d'elles contrôlait.

Les 16 et 17 juillet, une réunion informelle, historique et symbolique du CNS se tenait à Beijing. La Chine affirmait ainsi avec éclat sa volonté d'influer sur un règlement à venir de la question cambodgienne. En rencontrant pour la première fois Hun Sen, elle cautionnait ce dernier et le forçait un peu plus à s'affranchir du Vietnam. La rencontre accélérera encore le mouvement vers la paix puisque le communiqué final annoncera le choix unanime du prince Sihanouk comme président du Conseil national suprême. Le texte précisera aussi que le prince «a décidé des maintenant de rester neutre et d'agir comme un conciliateur sans appartenir à aucune faction, ni à aucun parti politique».

C'EST DE NOUVEAU À PATTAYA QUE LES MEMBRES DU CNS PARVENAIENT, DU 26 au 29 août, à s'entendre sur deux points importants mentionnés précédemment à savoir : la question du «génocide» et celle du désarmement des forces de chacune des factions. À propos du génocide, le gouvernement abandonna la formule minimale à laquelle il tenait, soit celle d'une garantie «contre un retour aux pratiques d'un passé récent». Plus important encore, le CNS accepta une proposition de la France qui préconisait de démobilitiser 70 p. 100 des forces de chacune des factions avec armes et équipements. En outre, il fut accepté de regrouper le reste (30 p. 100) avec ses armements dans des cantonnements placés sous la surveillance de l'APRONUC. À cette même réunion, les parties convinièrent que, si aucun consensus n'était obtenu pour coordonner les activités du CNS et celles de l'APRONUC, une fois les deux organismes établis à Phnom Penh, le prince Sihanouk, comme président du CNS, prendrait la décision finale.

Enfin, le 21 septembre à New York, les membres du CNS, appuyés par les co-présidents de la Conférence de Paris et les cinq membres permanents du Conseil de sécurité, s'entendirent pour adopter comme mode de scrutin le système de représentation proportionnelle par province auquel tenaient les trois factions coalisées contre le gouvernement Hun Sen. La désintégration de l'Union soviétique a modifié le rapport des forces dans le système international. Le conflit cambodgien, qui avait indirectement découlé de l'affrontement Est-Ouest et des confrontations sino-soviétiques et sino-vietnamiennes, ne pouvait que bénéficier de ce renouveau fondamental de l'Histoire contemporaine. L'intervention massive des membres permanents du Conseil de sécurité a pesé lourdement sur la détermination des factions antagonistes. Elle a toutefois pesé davantage sur celui des turbulences de la guerre au Moyen-Orient, n'ayant d'autre choix que celui de se refaire rapidement une certaine crédibilité.

Le soutien accordé aux Khmers rouges par les dirigeants chinois en ces derniers dans un dilemme hémétique. Lors de nos visites à Beijing, ces deux dernières années, plusieurs responsables à Beijing nous communiquaient leur détermination à en finir avec une politique qui tenait d'avantage chaque jour leur image à l'extérieur. La Chine ne pouvait rien concéder avant de contraindre d'abord le Vietnam à plier le premier devant les exigences chinoises.

Une fois encore, conformément à la longue tradition des rapports conflictuels sino-vietnamiens, les dirigeants de Hanoi se sont rendus en Chine. Le 3 septembre 1990, la réunion secrète de Chengdu a rendu certainement

Etats baltes qui, comme le Canada, se trouveront confrontés à des problèmes nucléaires stratégiques en raison de leur position géographique.

QUATRIÈMEMENT, LE CANADA DEVAIT DE nouveau s'intéresser à la question des essais nucléaires. Dans sa réponse au président Bush, Mikhaïl Gorbatchev a annoncé un moratoire d'une année sur les essais à Novaya Zemlya. Tous les Etats nordiques ont fortement insisté à appuyer ce moratoire et à prévenir la réactivation d'un polygone d'essais écologiquement fragile. La question de l'interdiction des essais nucléaires n'est pas si importante à la conférence d'examen du TNP en 1995 qu'elle l'a été en 1990. A l'époque, l'impossibilité de s'entendre sur une telle interdiction avait enfoncé la conférence dans une impasse.

Le régime de la non-prolifération en est à une étape cruciale de son développement. En effet, le nombre de ses participants, notamment parmi les Etats possédant officiellement l'arme nucléaire et parmi ceux qui sont sur le point de s'en doter, n'a jamais été si grand, mais les techniques qui favorisent la prolifération sont de moins en moins contrôlables. Le moratoire soviétique offre l'occasion de commencer à se pré-

parer bien à l'avance à la conférence de 1995. En premier lieu, on pourrait organiser une conférence réunissant tous les pays voisins de l'URSS touchés par les essais de Novaya Zemlya. Il y aurait, bien entendu, un grand absent : les Etats-Unis. Néanmoins, l'union soviétique n'est pas seulement garante de la sécurité mais aussi d'efficacité. Une assemblée circumpolaire à laquelle on discuterait de solutions de remplacement à la reprise des essais à Novaya Zemlya (si tout le reste échoue, pourquoi ne pas laisser les Soviétiques faire leurs essais au Nevada ?) ne pourrait pas être complètement ignorée à Washington. Des plaidoyers diens agissent isolément le

Evidemment, ce ne sont pas ces propositions qui sont nouvelles mais la conjoncture politique, Le 27 septembre, le président Bush a essayé de reprendre les rênes en matière de limitation des armes nucléaires, mais à la lumière de la désintégration inéluctable de l'Union soviétique, il n'est pas certain qu'il sera possible de maintenir le dialogue habituel sur la question. Après le coup d'Etat, la limitation des armements ne ressemble à rien de ce qu'elle a été pendant ces vingt dernières années. Le problème dorénavant consiste à aider à définir le nouveau programme, ce qui peut commencer par le choix de la voie qui rendra les armes nucléaires de plus en plus dépassées.

Kathryn Adams

le courant de l'année à venir, réexaminer l'orientation et les objectifs de la politique américaine et des intérêts nationaux et internationaux. Voici quelques points clés à étudier.

Premièrement, contre qui les 8 000 armes stratégiques américaines de l'après-TART sont-elles maintenant tournées ? En l'absence d'ennemi plus convaincant, probablement toujours contre l'Union soviétique, retirée par la perte des pays baltes et encore plus déconcertée par l'émigration de républicains auto-proclamés non dotés d'armes nucléaires. La désintégration de l'URSS souligne donc la nécessité de réduire considérablement les forces stratégiques de manière à ce qu'il ne reste plus qu'un millier d'ogives d'ici à la fin de la décennie.

L'INTÉRÊT DU CANADA DANS CE PROCESSUS EST confirmé par des fonctionnaires canadiens, selon lequel les Etats-Unis envisageaient de combiner les forces nucléaires stratégiques seraient toutes président Bush a également annoncé que toutes les forces nucléaires stratégiques seraient toutes direct. Dans son discours du 27 septembre, le

Deuxièmement, le Sénat américain appuie maintenant officiellement le déploiement d'un système ABM terrestre d'ici à 1996 et il a demandé la modification du Traité ABM pour permettre une défense du pays entier. Le système envisagé, qui couvrirait une très large portion du Canada, relèverait presque à coup sûr du commandement stratégique unique susmentionné. Il n'est donc pas prématuré de demander si le système ABM appuyé par le Sénat contribuerait à une réduction consistante des arsenaux nucléaires ou si, au contraire, la décision de déployer des défenses anti-missiles balistiques inciterait d'autres pays détenteurs d'armes nucléaires à répondre par un accroissement de leur capacité offensive.

Troisièmement, si l'Europe, qui cherche à présenter à se défendre des armes nucléaires, n'est plus le point de départ d'une confrontation américano-soviétique, les énormes arsenaux stratégiques restants seront opposés l'un à l'autre, un axe transatlantique. En conséquence, c'est peut-être le moment ou jamais d'explorer les possibilités d'une mise en commun des informations glanées par les stations de détection afin de rendre la région circumpolaire nord totalement transparente pour toutes les parties intéressées. En l'occurrence, il s'agit non seulement du Canada et des pays scandinaves, mais aussi des nouveaux

prendriment vital entre les armes nucléaires «pérestroïques» en Europe et la force stratégique nucléaire américaine. Depuis dix ans, la

Marine américaine a refusé à résister à tous les efforts déployés pour inscrire dans les négociations les armes nucléaires tactiques basées en mer. Le 27 septembre, balayant cette opposition, M. Bush a annoncé que les Etats-Unis dénucléariseraient unilatéralement la plupart des navires de leur flotte, «l'essentiel étant que, dans des circonstances normales, nos bâtiments ne transporteront pas d'armes nucléaires tactiques».

Quant au lien entre les forces nucléaires en Europe et en Amérique du Nord, il était déjà sape en partie par le malaise croissant que suscite en Europe le déploiement permanent d'armes nucléaires de courte portée en Allemagne et ailleurs. Le 27 septembre, le président Bush a effectué un remarquable virage à 180° en acceptant la vieille proposition des Soviétiques et en proposant lui-même d'éliminer quelque 2 300 armes nucléaires de théâtre basées au sol. Les Soviétiques, a-t-il expliqué, «devraient marcher de concert avec nous», ce qui veut dire qu'ils devraient démanteler et éliminer «tout leur arsenal de l'Amérique du Nord (NORAD) et les forces stratégiques offensives de l'armée de l'air et de la

Marine américaines. Deuxièmement, le Sénat américain appuie maintenant officiellement le déploiement d'un système ABM terrestre d'ici à 1996 et il a demandé la modification du Traité ABM pour permettre une défense du pays entier. # ROMPRE AVEC LES VIEILLES HABITUDES

La meilleure façon d'empêcher des pays de se constituer d'énormes  
arsenaux, c'est de convaincre les principaux marchands de cesser

de leur vendre des armes.  
PAR PAUL C. WARRKE

L'NE FAUT PAS QUE L'ÉCRASANTE VICTOIRE  
militaire des forces alliées engagées dans  
l'opération Tempête du désert masque  
l'échec politique qui est en grande partie à  
l'origine de la crise du golfe Persique. Entre 1981  
et 1988, l'Irak a acheté pour quelque 48 milliards  
de dollars d'armes modernes détenues par un pays  
occidental. C'est alors qu'avec nos alliés, nous  
avons décidé d'armer l'Irak pour en faire le

Sous le président Richard Nixon, presque  
toutes les limites ont été levées et le shah pouvait  
acheter pratiquement tout ce qu'il voulait. Pour-  
tant, ses puissants amis étrangers n'ont pu le  
sauver de ses ennemis intérieurs, et son départ  
de Téhéran a été suivi par l'arrivée de l'ayatollah  
Khomeiny et de son régime fanatiquement anti-  
occidental. C'est alors qu'avec nos alliés, nous  
avons décidé d'armer l'Irak pour en faire le

depuis lors, de tragiques événements ont  
contrecoupés de l'Irak.  
Depuis lors, de tragiques événements ont  
contrecoupés de l'Irak.  
Depuis lors, de tragiques événements ont  
contrecoupés de l'Irak.

Il paraît donc manifeste que la prolifération des  
armements modernes à travers le tiers-monde est  
fondamentalement un problème d'offre. Ce qu'il  
faut, c'est une révision complète de la politique  
jusqu'aux deniers les éminents combattants. Il in-  
combe aux principaux fournisseurs, c'est-à-dire à  
l'Allemagne et au Brésil, par exemple, en plus  
des cinq membres permanents du Conseil de  
sécurité de l'ONU, d'assumer leurs responsabi-  
lités, à savoir : de ramener la sécurité dans le  
monde en imposant des restrictions sévères aux  
ventes d'armes.

Le shah d'Iran était l'un de nos principaux  
clients. Les décideurs américains voyaient en lui  
un proconsul durable qui protégerait les intérêts  
occidentaux au Moyen-Orient. Chaque printemps,  
la liste du matériel qu'il souhaitaient obtenir. En  
concentration avec nos homologues du Départe-  
ment d'État, nous réduisions cette liste, mais à sa  
visite suivante dans la capitale, le shah dinait  
avec le président Johnson et la plupart des armes  
rayées étaient remises sur la liste.

En matière de transferts d'armements.  
clients. Les décideurs américains voyaient en lui  
un proconsul durable qui protégerait les intérêts  
occidentaux au Moyen-Orient. Chaque printemps,  
la liste du matériel qu'il souhaitaient obtenir. En  
concentration avec nos homologues du Départe-  
ment d'État, nous réduisions cette liste, mais à sa  
visite suivante dans la capitale, le shah dinait  
avec le président Johnson et la plupart des armes  
rayées étaient remises sur la liste.

Par ailleurs, pendant de nombreuses années, les  
Etats-Unis ont mis sur le shah d'Iran pour main-  
tenir la paix et la stabilité dans la région du golfe  
Persique. Force m'est de reconnaître une certaine  
complicité dans cette politique impudique puis-  
que, à la fin des années 1960, j'occupais au sein  
du gouvernement Johnson le poste de secrétaire  
adjoint à la Défense pour les affaires internationa-  
les, bureau qui assumait une grande responsabilité  
en matière de transferts d'armements.

Alors, Science.  
employés dans une estimation du Bulletin of  
Atomic Scientists.

Le Moyen-Orient est le banc d'essai logique,  
mais pas la seule région touchée. Des mesures  
utiles ont été proposées. Le président Bush a de-  
mandé que l'on prenne des dispositions pour  
prévenir la mise au point d'armes de destruction  
massive. Entre autres, il a demandé l'arrêt de la  
production et de l'exportation vers le Moyen-  
Orient de matières fissiles pouvant entrer dans la  
fabrication d'armes. La proposition devrait être  
élargie pour s'appliquer au monde entier. Les  
Etats devraient s'engager, par voie de traité, à ne  
plus produire de plutonium ni d'uranium forte-  
ment enrichi. Le président Bush a la l'embryon  
d'une bonne idée. Mais ce n'est pas une idée  
neuve, car le président Eisenhower l'avait déjà  
avancée il y a presque quarante ans.

D'autres idées saluables en matière de limita-  
tion des armements ont été présentées. Les séna-  
teurs américains John Kerry et Hank Brown ont  
proposé plus tôt cette année de faire obligation au  
président des Etats-Unis d'informer le président  
du Comité des affaires étrangères du Sénat et le  
président de la Chambre des représentants de  
toute vente d'armes au Moyen-Orient au moins  
soixante jours avant de l'annoncer officiellement.  
Le Canada a eu une idée remarquable en février  
dernier. Il a proposé que les cinq membres per-  
manents du Conseil de sécurité conviennent de ne  
plus jamais vendre aux pays du Moyen-Orient  
des armes visées par le Traité sur les forces con-  
ventionnelles en Europe (TFCB). Cela signifierait  
ne plus leur vendre de chars de combat, de véhi-  
cules de combat blindés, de pièces d'artillerie,  
d'aéronefs de combat et d'hélicoptères d'assaut.  
Quant aux matériaux pouvant servir à la fabrica-  
tion d'armes nucléaires, l'interdiction proposée  
devrait s'étendre à la terre entière.

En imposant aux fournisseurs des limites  
vingt-deux pays parties au Traité sur les FCE, on  
couvrirait la plupart des armes déséquilibrantes et  
On éviterait aussi une éventuelle conséquence  
négative du Traité susmentionné.

La meilleure façon d'empêcher des pays de se constituer d'énormes  
arsenaux, c'est de convaincre les principaux marchands de cesser  
de leur vendre des armes.  
PAR PAUL C. WARRKE

Il faut, en somme, réaliser au départ que les terroristes modernes, en s'inspirant d'otages, doivent pour parvenir à leurs fins, tenir aussi la presse en otage et qu'il incombe donc à cette dernière de systématiquement résister à leur emprise. C'est une entraîne que, face au terrorisme, la presse doit parfois, pour conserver son intégrité, accepter de s'imposer le silence.

Soutenir le contraire, affirmer que la liberté de la presse n'existe que si celle-ci résiste à toute forme de censure en toute circonstance, c'est en fait limiter le rôle de la presse à n'être que le porte-voix de toutes les voix, même de celles de la dictature, de l'oppression et du mensonge.

Qu'on ne se leurre pas. La presse ne peut s'acquiescer de son rôle que si elle conserve toujours le choix de se taire, de garder le secret *off the record*, pour autant que CNN transmette une information plus vraie que les autres réseaux parce qu'elle le fait en direct et sans filtrage.

Dans cet esprit, venons-en à la question de savoir si les journalistes contribuent à la résolution des conflits ou s'ils en prolongent la durée.

Une chose est acquise au départ, nous ne revenons pas en arrière. Le citoyen qui a eu accès à une presse libre, hautement technologique, capable de diffuser en direct des événements qui se déroulent au bout du monde, ne se contentera plus de la dépêche télégraphique ou de la radio.

En parallèle, les médias font partie de l'événement, le nombre d'attaques de presse en étant la preuve la plus parlante. La recherche de l'information n'est plus une simple tâche de l'époque des négociations diplomatiques secrètes, d'où rien ne filtre est donc parfaitement illusoire.

Cette nouvelle dynamique continue à mon sens à l'accélération des règlements, mais qui sait si elle n'encourage pas aussi la multiplication des crises. En simplifiant la communication, est-ce que la médiation moderne n'a pas aussi donné au moindre groupuscule l'occasion de se manifester, de s'exprimer ?

L'effondrement du bloc de l'Est n'aurait-il pas produit sans la télévision, la télécopie, le satellite, bref : la communication moderne, l'opposé, les terroristes du Hezbollah n'auraient-ils pu s'imposer, n'aurait-elle de ces mêmes instruments ?

Les médias doivent défendre systématiquement contre la censure leur «droit» de savoir et, avec la même énergie, la même détermination, dire ou de taire.

Bernie Ikenberry

L'Iran de Khomeiny, ce n'était pas le Viet-nam d'Ho Chi Minh et pourtant, la crise des otages était un second Viet-nam.

Fallait-il, en somme, que la presse s'en tienne à une réaction primaire face à la crise, sombrant dans la plus abjecte démagogie qui ferait de l'Islam en 1980, ce que fut le bolchévisme durant les années 1950, la pire des menaces à la sécurité internationale des États-Unis et le prétexte à une cruelle chasse aux sorcières ?

Cette critique se faisait entendre il y a onze ans, mais il était tellement plus «rentable» alors, pour les *networks*, de sombrer dans les sensations-lisantes d'autant plus, du reste, que Jimmy Carter, en s'enveloppant dans la crise au lieu de gouverner — croyant qu'il aurait ainsi plus facilement raison de Ted Kennedy —

Pourtant, nous ne pouvons pas nous empêcher de constater que la crise des otages en Iran aurait connu une issue différente ? Pour ma part, je le crois.

Les médias américains, en jouant à outrance sur la corde de l'humiliation patriotique, sont vite devenus eux-mêmes les otages de la crise qu'ils entendaient couvrir «objectivement».

Puis ils rendaient imprévisible le règlement rapide de la crise, plus ils jouaient le jeu des ayatollahs, qui pouvaient alors à loisir hausser les épaules.

Une prise d'otage est par définition une négociation. Il est dans l'intérêt du ravisseur d'imposer son calendrier quant aux échéances immédiates. Si les médias jouent le jeu de ces ultimatum, ils jouent le jeu des terroristes.

Il ne faut certes pas conclure ici que la presse exige de la réserve et de la mesure, le contraire est naïf. La recherche de la vérité des outils quotidiens du journaliste. Prendre le secret, le silence, font en quelque sorte partie de la diffusion de certains faits, etc.

Le secret, le silence, font en quelque sorte partie de la diffusion de certains faits, etc.

Il ne faut certes pas conclure ici que la presse exige de la réserve et de la mesure, le contraire est naïf. La recherche de la vérité des outils quotidiens du journaliste. Prendre le secret, le silence, font en quelque sorte partie de la diffusion de certains faits, etc.

On ne peut aujourd'hui traiter de cette question sans parler de l'effet CNN (*Cable Network News*) dans la médiation moderne. Question : tout diffuser en direct constitue-t-il un progrès ?

Il est curieux que cette question occupe les débats journalistiques en 1991, alors qu'on croit les chaînes américaines de radio et particulièrement CBS, refusant de diffuser quoi que ce soit en différé, affirmant que tout traitement de la nouvelle brève était contraire à l'éthique de l'information.

Des journalistes comme Edward R. Murrow et William Shirer soutenaient l'inverse, affirmant que le direct n'avait un sens que si l'on pouvait

Ainsi, une équipe de télévision doit-elle accepter de monter à bord d'un avion dont les passagers sont tenus en otages ? Si la réponse d'entrée de jeu est oui, où s'arrêteront alors les concessions lorsque les terroristes réclameront la diffusion intégrale et sans traitement journalistique de leur message, sans quoi un passager sera exécuté devant les caméras ?

On voit tout de suite se dessiner une spirale infernale d'autant plus inexorable qu'à l'inverse, nul ne peut jurer qu'en optant de se tenir à l'écart, la presse aiderait les otages.

Il faut, en somme, réaliser au départ que les terroristes modernes, en s'inspirant d'otages, doivent pour parvenir à leurs fins, tenir aussi la presse en otage et qu'il incombe donc à cette dernière de systématiquement résister à leur emprise. C'est une entraîne que, face au terrorisme, la presse doit parfois, pour conserver son intégrité, accepter de s'imposer le silence.

Soutenir le contraire, affirmer que la liberté de la presse n'existe que si celle-ci résiste à toute forme de censure en toute circonstance, c'est en fait limiter le rôle de la presse à n'être que le porte-voix de toutes les voix, même de celles de la dictature, de l'oppression et du mensonge.

Qu'on ne se leurre pas. La presse ne peut s'acquiescer de son rôle que si elle conserve toujours le choix de se taire, de garder le secret *off the record*, pour autant que CNN transmette une information plus vraie que les autres réseaux parce qu'elle le fait en direct et sans filtrage.

Dans cet esprit, venons-en à la question de savoir si les journalistes contribuent à la résolution des conflits ou s'ils en prolongent la durée.

Une chose est acquise au départ, nous ne revenons pas en arrière. Le citoyen qui a eu accès à une presse libre, hautement technologique, capable de diffuser en direct des événements qui se déroulent au bout du monde, ne se contentera plus de la dépêche télégraphique ou de la radio.

En parallèle, les médias font partie de l'événement, le nombre d'attaques de presse en étant la preuve la plus parlante. La recherche de l'information n'est plus une simple tâche de l'époque des négociations diplomatiques secrètes, d'où rien ne filtre est donc parfaitement illusoire.

Cette nouvelle dynamique continue à mon sens à l'accélération des règlements, mais qui sait si elle n'encourage pas aussi la multiplication des crises. En simplifiant la communication, est-ce que la médiation moderne n'a pas aussi donné au moindre groupuscule l'occasion de se manifester, de s'exprimer ?

L'effondrement du bloc de l'Est n'aurait-il pas produit sans la télévision, la télécopie, le satellite, bref : la communication moderne, l'opposé, les terroristes du Hezbollah n'auraient-ils pu s'imposer, n'aurait-elle de ces mêmes instruments ?

Les médias doivent défendre systématiquement contre la censure leur «droit» de savoir et, avec la même énergie, la même détermination, dire ou de taire.

# DIRE OU SE TAIRE ?

La place qu'occupent les médias dans les conflits internationaux  
et l'éthique journalistique.  
PAR JEAN PELLETIER

LES PRISES D'OTAGES, INSTRUMENTS DE CHANTAGE des plus primitifs et barbares dans les conflits humains, constituent-elles encore des outils efficaces de négociation à cause de l'omniprésence des médias modernes ? Autrement dit, y aurait-il moins de prises d'otages si les médias refusaient de s'en faire l'écho ?

Le moindre responsable des relations avec la presse dans un ministère des Affaires étrangères, répondrait à ces deux questions par l'affirmative. Sans la couverture des médias, soutiendrait-il, les terroristes perdent l'avantage qu'ils détiennent au départ, celui de forcer l'issue d'un conflit à leur profit par la terreur. Sans le concours des médias, ils ne peuvent en effet « influencer » l'électorat du pays auquel ils s'en prennent. Sans la curiosité des journalistes, toujours à l'affût de réactions officielles, ils ne peuvent forcer la porte de la Maison-Blanche, de l'Élysée ou du 10 Downing Street pour se faire entendre.

La prise d'otages est l'arme du dernier recours. C'est vrai. Une arme hautement sophistiquée néanmoins et d'autant plus foudroyante qu'elle atteint, grâce aux satellites, des millions de cibles, du simple téléspectateur (électeur) dans le confort de sa maison au plus omnipotent des chefs d'État enfermé dans son abri anti-atomique à l'autre bout du monde.

COUVRIR OU NE PAS COUVRIR ? MONTRER OU CENSURER ? Dire ou se faire ? La est la question. Il n'y a pas de réponse simple et encore moins universelle. Avant il est faux de croire que les médias se font malgré eux ravisseurs quand ils rapportent une prise d'otage, autant on ne peut soutenir que leur rôle est « neutre » quand ils deviennent, en quelque sorte, le canal par lequel la négociation se déroule. La crise des otages américains en Iran, de 1979 à 1981, aura en quelque sorte « modératisé » la prise d'otage de Khominey, entretenant au départ la certitude que son geste allait porter ses fruits contre l'Amérique de Jimmy Carter. Cette certitude, Téhéran l'avait.

Crise à un usage extrêmement habile de la médiatique moderne, le régime des ayatollahs ne s'était-il pas hissé au pouvoir et n'avait-il pas eu raison du shah avec à peine quelques coups de feu tirés ? Il savait donc en novembre 1979 que, pour gagner contre la Maison-Blanche ou à tout le moins la « tenir en respect », il lui fallait atteindre les Américains chez eux, dans leur foyer.

Du jour au lendemain, la diplomatie traditionnelle fut donc supplannée par la caméra vidéo, le correspondant en direct devenant le chargé d'affaires, le satellite, le seul canal diplomatique écoute.

LES IMAGES D'OTAGES AMÉRICAINS PARADÉS DANS LES rues de Téhéran, les yeux bandés, les mains ligotées, marqueront l'opinion publique américaine, et pour longtemps. Un an plus tard, en fait, ces images permirent l'élection d'un Ronald Reagan qui n'avait qu'une promesse, « never again ».

Les médias américains, dans ce jeu, furent des complices actifs. Particulièrement la télévision. Si aujourd'hui Ted Koppel est ce qu'il est, l'un des journalistes les plus écoutés et respectés, c'est largement à cause d'une émission quotidienne qui vit le jour en novembre 1979 intitulée « *America held Hostage* ».

Quel titre absurde quand on y pense aujourd'hui ! Ce n'était pas l'Amérique mais cinquante-trois diplomates qui étaient gardés en otage. Qu'à cela ne tienne, Jimmy Carter allait jouer le jeu, s'enfermant dans la Maison-Blanche pour ne plus en sortir, liant son sort à celui de ses compatriotes enfermés dans les sous-sols de la chancellerie américaine à Téhéran. Un titre absurde, inventé sans doute par un rédacteur de nouvelles incapable de résister à une manchette choc, allait devenir pourtant, en quelques semaines, une description objective de la réalité politique américaine. À partir du moment où la diplomatie traditionnelle se retirait du tableau, les médias allaient occuper le vide. Les journalistes dans l'Iran de Khominey, durant la crise des otages, jouaient d'une plus grande immunité diplomatique que les diplomates eux-mêmes.

La PERCEPTION DU CONFLIT PAR UN ÉLECTEUR SUR-chauffé par la presse devint plus importante que la crise ne l'était en réalité. Alors que la Maison-Blanche aurait dû se tenir au-dessus du débat que lui imposait la presse, elle choisit de s'y abaisser. À partir de ce moment-là, seule une victoire militaire aurait pu échouer l'impasse. Une opération fut certes tentée mais échoua lamentablement dans le désert iranien. Le sort politique de Jimmy Carter était alors jeté. La presse américaine, durant ces longs mois difficiles, a-t-elle eu raison de s'acquitter de son rôle comme elle D'abord, s'il est essentiel de rapporter les faits, fallait-il le faire avec un tel pathos ? Fallait-il jouer le jeu du ruban jaune, du calendrier qui s'allonge, jour après jour, sans aucun espoir de règlement prochain ?

# FERMER DES BASES MILITAIRES UNE AFFAIRE DÉLICATE

renabilité, la fermeture de bases favoriserait une meilleure affectation des fonds du Pentagone ; elle a des missions indépendantes et impartiales pour examiner la question. C'est ainsi que la Commission de la réorganisation et de la fermeture des bases (Secrétaire à la Défense) a vu le jour en mai 1988. Dans son premier rapport paru en décembre de la même année, la Commission a installations. Le Département de la Défense leur approbation.

La valeur militaire de chacune. Elle fonde de la structure des forces armées s'est demandée comment elle ait aussi pris en compte les effets de l'étude.

Accéder par la suite. Le Secrétaire à la Défense, se penche alors sur les fondations, peut différer de Congrès et le Pentagone statue en- mais ils doivent le faire sans y modifier les sont pas carrément rejetés, es sont des lors mises en oeuvre.

Faciliter le redressement des localités après la fermeture des bases militaires

Il existait depuis 1961 un programme du gouvernement américain dont l'objectif est de réduire au minimum l'incidence des décisions de la Défense sur les collectivités. Il s'appela d'abord Programme d'ajustement économique et, en 1970, il acquit un autre statut, celui de Comité présidentiel de l'ajustement économique (EAC). Cette instance comprend des représentants de dix-huit agences et départements fédéraux.

L'EAC a pour mission d'aider les localités à mettre en oeuvre des stratégies pour remédier aux effets de la fermeture des bases ou de la réduction des activités dans ces dernières. Vu la procédure adoptée par l'EAC, la création d'un conseil directeur local ou d'un groupe de travail qui comprend des représentants des divers milieux (gens d'affaires, syndicats, etc.) est considérée comme étant essentielle au processus. Comme l'EAC est un organisme «interministériel», les parties touchées ont plus facilement accès aux subventions et autres formes d'aide financière accordées par d'autres instances gouvernementales.

Selon le Département américain de la Défense, sur une période de trente ans, plus de 80 p. 100 des collectivités touchées par la fermeture d'une base ont réussi, après quelques années, à remplacer les emplois et revenus civils perdus. Entre 1961 et 1990, 158 104 emplois civils se sont substitués aux 93 424 annulations postes civils qui découlaient autrefois des activités des bases militaires ajoutant huit fermées ou réorganisées.

Le Groupe consultatif au Canada

En constituant un groupe consensuel sur la fermeture des bases, M. Masse reconnaît la nécessité de dépolitiser le processus et d'élaborer une méthode normalisée pour régler les problèmes afférents à la fermeture des bases. Le groupe consensuel ministériel sur l'infrastructure de la Défense compte trois membres civils : Harry Graschuk, comptable agréé albertain le présidera, et il aura à ses côtés Kathryn M. Bindoo, professeur et l'Université Memorial (Terre-Neuve), et Guy Fournier, ingénieur civil du Québec. Le groupe fixera les critères du processus décisionnel, il élaborera une méthode de calcul des économies nettes, il prendra en compte l'équité régionale et la dualité s'enseignera sur l'expérience acquise par d'autres gouvernements dans ce contexte. On s'attend à ce qu'il dépose son rapport d'ici mai 1992.

*Mme Boulden est chercheuse pigiste basée à Kingston.*

- JANE BOLDEN

**FER**  
**DES BASES**  
**UNE AFFAIR**

En annonçant les changements, M. Masse a été droit au but : pour réaliser des économies dès que possible, il faut immédiatement éliminer les éléments d'infrastructure inutiles. Cependant, il s'est empressé d'ajouter que la conjoncture socio-économique militait contre une telle démarche, et il a fait savoir qu'un groupe consultatif impartial serait créé pour aider le gouvernement à établir un processus décisionnel dont il pourra se servir afin de «rationaliser» l'infrastructure de la Défense canadienne.

Au cours des deux dernières années, le gouvernement a constaté que la fermeture de bases provoque de vives réactions. En 1989, le ministre de la Défense nationale (MDN) avait annoncé que sept bases fermeront et qu'il réduirait l'envergure des opérations dans sept autres, afin d'économiser près de 3 milliards de dollars sur une période de quinze ans. La nouvelle avait suscité une vive opposition de la part des collectivités visées, dont l'économie locale risquait d'être torpillée ; le gouvernement fit l'objet d'attaques violentes parce qu'il avait pris sa décision sans avoir donné aux localités le temps de songer à des formules de remplacement ou de monter pourqu岸 les bases devraient rester ouvertes.

La fermeture de bases canadiennes, dans le passé

Am cours de l'été 1991, l'État a envisagé de fermer cinq gouvernements anonymes qui étaient cités dans les rapports à prendre diverses mesures pour inciter les villes closes à ouvrir leurs portes aux investisseurs étrangers. Le gouvernement fédéral cherchait à dissiper les inquiétudes en garantissant aux villes qu'il tiendrait compte des effets économiques de la fermeture des bases et qu'aucune détérioration ne serait prise tant que les villes en question n'auraient pas eu la chance de faire valoir leurs avantages.

Depuis 1964, le MDN a fermé environ soixante-dix installations, dont vingt-quatre stations radars du vieux réseau CAPDIN/Pinterre. À la fin de 1988, dix-huit stations avaient fermé et servaient désormais à d'autres fins : parcs industriels, complexes domiciliaires, école privée pour enfants perturbés, maisons de retraite, et installations de formation et de logement pour les autochtones. Des 900 employés civils, seulement douze n'ont pas pu se trouver un autre travail. La mise sur pied de comités locaux de réaffectation des installations a favorisé la réussite de cette transition. Les comités ont bénéficié de subventions versées dans le cadre de divers programmes gouvernementaux affectés au développement industriel et à la main-d'œuvre.

Décision : où faire tomber le couperet ?

Pendant au moins une décennie, les États-Unis ont essayé de se doter d'un processus décisionnel qui empêcherait le Pentagone de faire des choix unitaires, qui éviterait de longues diatribes entre les membres du Congrès recherchant à protéger leur propre région contre l'effondrement économique et qui, parallèlement, montrerait que la fermeture de bases est nécessaire pour garantir l'efficacité et la rentabilité du réseau national des bases militaires. En 1977, le Congrès a adopté une loi qui assujettissait à son approbation la fermeture de toute base comptant au moins 300 employés civils, ou la reorganisation de toute installation qui touchait soit 1 000 employés civils, soit la moitié de la main-d'œuvre civile totale à la base. En outre, la loi obligeait expressément le Département de la Défense à se plier aux exigences procédurales de la Loi sur la politique environnementale nationale. Ces exigences étaient tellement rigoureuses qu'elles ont empêché le Département de fermer certaines bases.

En 1983, une équipe d'experts-conseils du secteur privé mise sur pied par le président pour étudier la limitation des coûts a reconnu qu'un processus

fonctions de secrétaire général du Parti. Dans un élan désespéré, le chef du Parti de Biélorussie en a appelé au Parlement en rébellion organisée pour qu'il proclame l'indépendance, ce qui présente-rat l'avantage de délier le sort du Parti biélorusse de celui du PCUS, de plus en plus menacé par la tournure radicale prise par les événements à Moscou. Les députés anti-communistes ont saisi l'occasion et, après avoir posé certaines conditions, ils ont offert d'appuyer la proposition.

Il se peut que la DIRECTION DU PARTI ait rem- porté une victoire, car ses activistes «exclusifs» du nationalisme ont provoqué au lendemain du coup d'Etat avorté des violences politiques, une polarisation et un personnelisme extrême et du pouvoir.

L'UKRAINE CONSTITUE SANS doute le cas le plus difficile pour les décideurs occidentaux. Avec plus de 50 millions d'habitants et un territoire riche en agricul- ture et en industries, l'Ukraine est, avec la Russie, la dernière de l'ancienne URSS. De son sort dépendra en partie celui de ses voisins. Il y a dans la république un fort élan démocratique. Quand le parlement ukrainien a proclamé l'indépen- dance le 24 août 1991, il a été décidé qu'un référendum aurait lieu le 1<sup>er</sup> décembre à ce sujet.

(Les résultats de ces consultations n'étaient pas connus à l'heure où le présent article a été mis sous presse.)

L'interprétation des résultats dépend d'une évaluation soignée de la procédure électorale elle-même. La question soumise à référendum était-elle formulée de façon ambiguë ? A-t-on respecté le vote à bulletin secret ? Toutes les par- ties ont-elles pu s'exprimer avant le vote ? La présidence était-elle contestée ? Dans quelle me- sure le candidat favori (le président avant l'élec- tion, M. Leonid Kravchuk) a-t-il pu influencer le vote par ses vieilles relations au sein du Parti ?

Si l'indépendance est votée à une majorité écrasante en Crimée et dans la partie orientale des russifiées de l'Ukraine, ainsi que dans la par- tie occidentale de cette dernière, on en déduira qu'il existe un consensus national solide sur la question. En revanche, si l'on note des différen- ces régionales substantielles, cela pourrait signi- fier qu'une Ukraine indépendante sera sans doute confrontée à des tensions croissantes dans des ré- gions où les Russes et autres minorités sont assez nombreuses. En cas de succès du référendum sur l'indépendance, les dirigeants de la république devront peut-être une coopération économique avec d'autres parties de l'ancienne URSS d'un oeil plus conciliant. A l'inverse, ils pourraient y trouver la légitimité d'une résistance accrue à tout compromis sur l'autonomie économique de l'Ukraine. Or, une résistance soutenue à une union économique existant avec d'autres parties

**Le nationalisme peut facilement empoisonner le terrain sur lequel les nouvelles institutions démocratiques sont édifiées.**

La culture traditionnelle, les rites garantis pas l'issue, l'absence de processus démocratique. En avril 1991, 99 p. 100 de la population se serait prononcée en faveur de l'indépendance nationale, mais des pressions ont été exercées sur les électeurs. En ef- fet, dans les régions où la majorité a voté contre l'indépendance, on a menacé les habitants de leur refusar la citoyenneté géorgienne ou des droits de propriété. L'attitude équivoque de Gamsakhurdia pendant le coup d'Etat puis la répression qu'il a organisée contre l'opposition après son échec ont déclenché des manifestations où l'on réclamait sa démission. Des heurts violents ont opposé le gou- vernement et ses détracteurs dans les rues de la

capitale. Thibault, L'entrepreneur partait violon de demandes d'autonomie émanant de minorités nationales (des Ossètes du Sud, par exemple) vivant en Géorgie a été particulièrement pernicieux. Une révolution nationale profonde a eu lieu en Géorgie, mais la révolution sociale n'a pas encore conté le pouvoir à un régime démocratique tenu de rendre des comptes à l'électorat. Gamsakhur- dia et son entourage ont rejeté le modèle com- muniste et ses institutions, mais l'absence de traditions démocratiques indigènes et la domina- tion à court terme, pour le moins, de la variante «exclusifs» du nationalisme ont provoqué au

lendemain du coup d'Etat avorté des violences politiques, une polarisation et un personnelisme extrême et du pouvoir.

L'UKRAINE CONSTITUE SANS doute le cas le plus difficile pour les décideurs occidentaux. Avec plus de 50 millions d'habitants et un territoire riche en agricul- ture et en industries, l'Ukraine est, avec la Russie, la dernière de l'ancienne URSS. De son sort dépendra en partie celui de ses voisins. Il y a dans la république un fort élan démocratique. Quand le parlement ukrainien a proclamé l'indépen- dance le 24 août 1991, il a été décidé qu'un référendum aurait lieu le 1<sup>er</sup> décembre à ce sujet.

(Les résultats de ces consultations n'étaient pas connus à l'heure où le présent article a été mis sous presse.)

L'interprétation des résultats dépend d'une évaluation soignée de la procédure électorale elle-même. La question soumise à référendum était-elle formulée de façon ambiguë ? A-t-on respecté le vote à bulletin secret ? Toutes les par- ties ont-elles pu s'exprimer avant le vote ? La présidence était-elle contestée ? Dans quelle me- sure le candidat favori (le président avant l'élec- tion, M. Leonid Kravchuk) a-t-il pu influencer le vote par ses vieilles relations au sein du Parti ?

Si l'indépendance est votée à une majorité écrasante en Crimée et dans la partie orientale des russifiées de l'Ukraine, ainsi que dans la par- tie occidentale de cette dernière, on en déduira qu'il existe un consensus national solide sur la question. En revanche, si l'on note des différen- ces régionales substantielles, cela pourrait signi- fier qu'une Ukraine indépendante sera sans doute confrontée à des tensions croissantes dans des ré- gions où les Russes et autres minorités sont assez nombreuses. En cas de succès du référendum sur l'indépendance, les dirigeants de la république devront peut-être une coopération économique avec d'autres parties de l'ancienne URSS d'un oeil plus conciliant. A l'inverse, ils pourraient y trouver la légitimité d'une résistance accrue à tout compromis sur l'autonomie économique de l'Ukraine. Or, une résistance soutenue à une union économique existant avec d'autres parties

aggraver la désorganisation économique dont souffrir la région entière. Les gouvernements occidentaux devraient se méfier des réactions rapides ou toutes faites lan- dis qu'ils se font un chemin dans les dédales de la guerre des souverainetés qui sévit actuellement. L'ancien URSS, il faut examiner soigneuse- ment les revendications historiques, passer au crible les processus électoraux et référen- daires, et vérifier les cartes de vote de soi-disant porte-parole nationaux. En outre, il faut aussi évaluer les conséquences pratiques du soutien ap- porté à des revendications indépendantistes. Le gouvernement soviétique, aussi douteux que soit son assise morale, ou légale, a, depuis la Seconde Guerre mondiale, maintenu une sorte de paix in- ternationale sur ces terrains rongés par les con- flits que sont l'Europe centrale et d'Asie. Il faut maintenant payer les coûts de cette «pax sovie- tica». Non seulement la «paix» était imposée par la force (une inégalité peut-être), mais en plus, en étouffant des griefs. Or, lorsqu'on étouffe des griefs, ce sont les préjugés et les stéréotypes qui supplantent dialogue et compréhension. L'identité risque de se définir en termes d'opposition à l'autre, plutôt qu'en fonction d'une connaissance de soi. Ces confusions ont un prix une fois les carcans secoués.

LES VANNES DES TROUBLES RÉGIONAUX ONT ÉTÉ grandes ouvertes par l'éclatement final du pou- voir communiste. La guerre des souverainetés alimentée déjà le brasier des violences régionales au Nagorny-Karabakh et ailleurs. De plus, le ch- mage et la course aux ressources peut aboutir à des différences régionales ont déjà causé de vio- lents affrontements dans plusieurs endroits en Asie centrale. Cependant, des problèmes encore plus graves menacent d'éclater si les États émer- gents ne trouvent pas un *modus vivendi*. Des dé- placements de population massifs, l'apparition de nouvelles dictatures régionales, des querelles frontalières et des accrochages au sein de popula- tions mélangées, une détérioration aggravée du bien-être économique, des échauffés servant de boucs émissaires et des conflits armés régionaux sont autant de conséquences possibles si l'on ne trouve pas de terrain d'entente.

Il est donc indispensable d'étudier soigneuse- ment chaque revendication d'indépendance. Dans l'ancienne URSS, au manque de tout, y compris de temps. Au cours des tout derniers mois, l'his- toire s'est emballée. En conséquence, il faut faire face simultanément à de nombreuses crises. Or, dans certaines des anciennes républiques, les dirigeants ne sont nullement rompus aux rouages des négociations, des marchandages et des compromis. Chaque groupe de population est confronté à une crise d'identité qui sera longue à apaiser.

Le savoir-faire de la collectivité internationale en matière de règlement pacifique des différends constitue sans doute un cadavre bien plus vital que la fameuse reconnaissance diplomatique. Une nouvelle accélération de l'indépendance risque- rait, dans certains cas, de faire dérailler le train de la démocratisation, des réformes économiques, d'une véritable autodétermination nationale et d'une paix authentique et durable.

En Biélorussie (qui s'est rebaptisée «Répu-  
blique de Biélorussie» le 19 septembre 1991),  
les événements ont pris un tour plus compliqué.  
Les soviétologues ont longtemps considéré les  
Biélorusses, dont l'histoire et la culture présen-  
tent de nombreux points communs avec celles  
des Russes voisins, parmi les candidats les moins  
probables à de sérieuses aspirations séparatistes.  
Jusqu'à récemment, les mouvements d'opposi-  
tion étaient bridés. Cependant, la résistance popu-  
laire à l'ordre établi a surgi en avril 1991, lorsque  
Moscou a décrété une hausse des prix d'en  
viron 170 p. 100 dans les magasins d'État,  
que l'approvisionnement ne s'est pas amélioré et  
que les salaires n'ont augmenté que de 60 roubles  
par mois, le salaire moyen mensuel étant de

dire qu'elle ne pouvait guère faire pire que l'équipe du Kremen et qu'elle pourrait sans doute faire beaucoup mieux. Le gouvernement biélorussse a commencé à sentir les tensions. Le jour du coup d'État, ceux qui étaient membres du Parti au moment de leur élection (quel-que 85 p. 100 des députés du parlement) étaient déjà de plus en plus partagés sur la bonne stratégie à adopter, même si la direction du parlement était encore aux mains de communistes loyaux envers le Parti.

À ce moment du putsch, les organes centraux du Parti ont exprimé leur soutien au Comité d'urgence. La position du Parti en a été d'autant plus délicate à l'effondrement du putsch, non seulement parce que sa direction était au moins complice par passivité, mais aussi parce que M. Gorbatchev avait ostensiblement abandonné le navire en démissionnant de ses

Dans certaines républiques, les dirigeants ne sont nullement rompus aux rouages des négociations, des marchandages et des compromis.

UN DEUXIÈME FACTEUR À EFFRAYER QUELQUES-UNS des dirigeants les plus conservateurs des républiques (par exemple, en Ouzbékistan, en Azerbaïdjan, au Tadjikistan et, enfin, au Turkménistan). Ces dirigeants, qui étaient simultanément à la tête du Parti et du gouvernement dans les républiques, sont sentis directement menacés lorsque le Congrès des députés de l'URSS a suspendu toutes les activités dudit Parti après le coup d'État. Pour ne pas avoir pris nettement position pour ou contre ouvertement appuyé les putschistes, ils marchaient déjà sur des œufs depuis l'échec du coup d'État. Ils essayaient de sauver leur propre base de soutien politique en sauvant les mêmes organisations communistes et les bureaucraties en place.

Tandis que ces dirigeants n'aborde pas leurs casquettes nationales, certains abandonnent le navire du Parti, d'autres se sont enfoncés en adhérent à des partis nouvellement formés, succédant locaux du vieux communisme central, et d'autres encore étaient évincés du pouvoir par leurs parlementaires, car leur comportement compromet tant était trop évident pour garantir ne fût-ce qu'un minimum de crédibilité. À l'opposé de ce qui se passait dans les pays baltes, la soutien déclaré de l'élite à l'indépendance traduit l'occurrence d'une tentative pour conserver d'anciennes relations au pouvoir au lieu d'en forger de nouvelles.

Le nationalisme des dirigeants n'avait pas grand chose à voir avec des aspirations à l'autocratie nationale et à la démocratie mais beaucoup avec la préservation d'une élite. Dans ces régions, la révolution sociale en est à ses premières étapes ou reste à déclencher, mais jusqu'à-là, il ne faudrait confondre l'indépendance avec une stratégie clairement définie pour

l'entente de gigantisme et dont la stratégie consiste à relier toutes les régions entre elles par un réseau d'entreprises exerçant un semi-monopole. Ces usines ont injecté quantité de Russes dans la région baltic à mesure que les ministères moscovites chargés de l'économie recrutèrent de la main-d'œuvre pour les nouveaux géants. Les recenseurs russes atteignaient considérablement le poids des nationaux estoniens et lettons, renforçant ainsi la détermination des populations autochtones à résister farouchement à toute assimilation à la culture russe et soviétique. Dans certains endroits, les Russes constituaient aujourd'hui le gros de la main-d'œuvre.

Lorsque ces usines et entreprises seront privatisées, rationalisées ou scindées en plus petites unités, il est presque certain qu'il y aura du chômage et que des ouvriers devront aller ailleurs ; dans certaines régions, les Russes seront les principales victimes. Les épreuves que réserve la réforme économique pourraient donc être considérées comme les signes d'une discrimination technique et ajouter des tensions ethniques la longue liste des autres souffrances qui front de partir avec la mélanomphose économique et politique. En dernière analyse, cependant, il se peut fort que les Baltes soient capables de gérer ces heurts avec une relative civilité, comme leur combat pour l'indépendance de ces dernières années l'a déjà démontré. Toutefois, ailleurs dans l'ancienne URSS, les tensions prennent déjà un tour plus agressif.

Si l'échec du coup d'Etat a permis aux Baltes de faire valoir leur vieille revendication d'indépendance, les lendemains radicaux du putsch fourni à des dirigeants d'autres républiques des raisons différentes d'entrer dans la ronde indépendante. Deux événements ont revêtu une importance particulière. Premièrement, si la défaite des putschistes a été une victoire pour la Russie, comme on le clame haut et fort là-bas et à

**A**près le putsch manqué du mois d'août en URSS, une vague nationaliste a balayé les couloirs des gouvernements de l'empire agonisant. En novembre, treize des quinze républiques soviétiques avaient proclamé leur indépendance. Certaines, comme les trois républiques baltes (la Lettonie, la Lituanie et l'Estonie), l'Arménie et la Géorgie, avaient déjà manifesté avant le coup d'Etat leur intention d'accéder à l'indépendance, mais entre la fin août et la fin octobre, la plupart des autres ont été gagnées par la fièvre indépendantiste.

SEULS LA RÉPUBLIQUE FÉDÉRATIVE DE RUSSIE ET LE

Kazakhstan (peuple de presque autant de Russes que de Kazakhs) ont fait tache, probablement parce qu'ils formeront le cœur de toute nouvelle union à dominante russe et que, l'ancien centre étant mort, ils ne feraient, en définitive, que se déclarer indépendants par rapport à eux-mêmes.

(Cette nouvelle fureur indépendantiste laissait une impression de déjà vu parmi les soviéto-logues, car en 1989 et 1990, une «fanfare de souverainetés» avait traversé le pays de part en part. Cette fois, cependant, les républiques ne réclamaient pas seulement la direction de leurs propres affaires, mais elles affirmaient aussi, du moins en apparence, leur droit à la pleine reconnaissance au sein de la communauté internationale.

Le coup d'Etat lui-même constituait à la fois une réponse et un stimulant à cette marée montante de nationalismes. À la veille même de la signature d'un nouveau traité de l'union, les lieutenants déloyaux de Mikhaïl Gorbatchev sont passés à l'action pour empêcher l'accord qui aurait trans-

féré nombre de pouvoirs du centre aux républiques qui s'affirmaient. Seules cinq républiques entendaient signer la nouvelle entente le 20 août (la République fédérative de Russie, le Kazakhstan, la Biélorussie, le Tadjikistan et l'Ouzbékistan), suivies peu-être de quatre autres (l'Ukraine, le Turkménistan, le Kirghizistan et l'Azerbaïdjan) au cours du mois suivant.

Ceux qui ont organisé le coup d'Etat ont bien compris que le 20 août marquerait la capitulation du Kremlin devant les exigences fondamentales des républiques, au risque d'entraîner le dépérissement de l'Etat soviétique, quoique guère au sens où Marx et Lénine l'entendaient. Paradoxalement, la tentative de putsch a accéléré le processus même que ses instigateurs essayaient d'enrayer. Comme l'a fait remarquer un commentateur soviétique :

Si dans d'autres pays, un putsch est habituellement l'affaire d'une douzaine de matraqueurs qui sont ensuite jetés en prison alors que les anciens dirigeants continuent de vivre comme si de rien n'était, le putsch du mois d'août est sans précédent. Pratiquement toute la direction de l'Union [soviétique] – l'appareil répressif..., le pouvoir législatif..., le Parti..., tous les dirigeants pouvaient être simultanément inculpés en vertu de divers articles du code pénal.

De plus, lorsque tout l'appareil gouvernemental, constitué de criminels ou de leurs complices, est à ce point désavoué par le peuple, il ne peut

reser en place. L'entière direction gouvernementale s'effondre dans un néant politique d'où naît un autre gouvernement. Cela a été le cas, mais ce n'est pas un seul gouvernement qui a émergé.\*

Les actes des conspirateurs ont révélé la corruption, la trahison, la stupidité et l'arrogance profondes qui gouvernaient les décisions des organes centraux, ce qui a alimenté les forces centrifuges qui déchiraient l'union. Le projet de traité de l'union a été sabordé et, le 21 août, quand le putsch a tourné au fiasco, les concessions qu'il comportait étaient déjà trop limitées pour satisfaire même les républiques les plus conscientes.

Si l'on examine la carte géographique, on se demande où certaines républiques voulaient en venir avec leurs déclarations. Les régions plus petites ou moins développées pouvaient-elles vraiment espérer et souhaiter accéder à une pleine indépendance ? Qui se cache derrière leurs superbes discours, et quoi ? Par ces déclarations, revendiquent-elles vraiment leur droit à l'autodétermination nationale et à la souveraineté populaire, comme l'Occident aimerait à le croire ? Ou, tel Janus, ont-elles un second visage, plus sombre et peu reluisant ?

Comme tout dans l'ancienne URSS aujourd'hui, les généralisations vont bon train et sont habituellement erronées. Or, malgré la gloriole, il faut toujours lire entre les lignes pour discerner le vrai message. Les déclarations d'indépendance signifient-elles tout ce qu'on veut qu'elles signifient ? Au-dessus de tout ce qu'une des anciennes républiques doit être comprises selon ses propres termes. Néanmoins, le sens des proclamations varie considérablement d'un endroit à l'autre, même si l'on retrouve quelques tendances communes.

POUR LES BALTES, LES DÉCLARATIONS TRADUISSENT sans nul doute une volonté véritable d'accès à l'indépendance, aspiration nationale depuis que leurs pays sont devenus les pions de plus grandes puissances à la signature du perfide Pacte Molotov-Ribbentrop, en 1939. Le 6 septembre 1991, l'Etat soviétique lui-même a reconnu l'indépendance des républiques baltes par un rejet patial des institutions et du pouvoir communiste. De nouvelles procédures et de nouvelles institutions démocratiques sont à peu près mises en place et, depuis deux ans, on assiste à une authentique révolution nationale et sociale.

Certes, des problèmes subsistent et il arrive que le nationalisme se monte sous son visage le plus inquiétant. Par exemple, les droits de l'individu seront-ils aussi bien protégés que la collectivité des peuples baltes qui s'affirment ? Comment les minorités nationales seront-elles

Paix et Sécurité paraît tous les trois  
mois. Ce bulletin vise à informer la  
population canadienne sur les activités

de l'Institut et à favoriser l'expression  
de toutes les opinions ayant cours ou  
appuy sur les questions de paix et de  
sécurité. Les opinions formulées dans  
chaque article sont exclusivement celles  
de l'auteur. N'hésitez pas à nous faire  
part de vos observations et idées.

Tout texte de Paix et Sécurité peut être re-  
pris dans des périodiques, revues ou autres  
médias imprimés, à condition que l'Institut  
en accorde préalablement l'autorisation  
express écrite, et à condition que ces pé-  
riodiques, revues ou autres médias imprimés  
citant leur source, les droits d'auteur des  
illustrations, dessins, graphiques et autres  
travaux artistiques figurent dans Paix et  
Sécurité conjointement à l'artiste qui les a  
réalisés et ne soustraient être réimprimés ou  
reproduits sous quelque forme que ce soit  
sans l'autorisation expresse écrite de l'Ins-  
titut et de l'artiste. • Les institutions édu-  
catives peuvent photocopier les textes de  
Paix et Sécurité, à condition que ce soit en  
tiroge limité. • Paix et Sécurité est mem-  
bre de la Canadian Periodical Publishers  
Association et le magazine est catalogué  
dans l'index de périodiques canadiens.  
contenus de Paix et Sécurité sous forme  
de microfilms en s'adressant à la Société  
Microfilmée limitée, à Toronto.

prendre garde, car depuis l'effon-  
drement du communisme central en  
URSS, la porte est grande ouverte  
aux dictatures régionales.  
Le retour du prince Sihanouk  
au Cambodge est de bon augure  
pour la population khmère. Avec les  
accords signés à Paris en octobre  
dernier, le pays sera désormais sous  
la tutelle des Nations Unies jusqu'à  
la tenue d'élections libres. Gérard  
Hervouet soutient que des tâches  
très délicates attendent les membres  
de la mission de l'ONU dans ce  
pays au cours des prochains mois,  
et qu'il revient d'abord et avant tout  
à la population cambodgienne de  
reconstituer le pays.  
Richard Steyn affirme que "il ne  
faudra rien de moins qu'un miracle  
politique pour assurer l'instauration  
de la démocratie en Afrique du  
Sud. Il analyse une série de facteurs  
pouvant influencer la situation en  
ce temps où le Parti national de  
M. F.W. de Klerk et le Congrès na-  
tional africain de M. N. Mandela  
vivent encore leur «lune de miel».  
Dire ou se taire ? Dire à tout  
prix, quand on est journaliste ?  
Jean Pelletier dit non. Evoquant  
l'expérience qu'il a vécue comme  
correspondant du journal *La Presse*  
qui a débuté en 1979, M. Pelletier  
affirme que les médias doivent  
défendre leur droit de savoir, mais  
force leur droit de dire ou de taire.

DE L'INSTITUT

PARUES DANS LE

DERNIER TRIMESTRE

Guide sur les politiques

canadiennes relatives à la

limitation des armements,

la défense et à la solution des

conflits 1991, 351 pages.

Les aspects civils du main-

tien de la paix : procés-

verbal résumé de l'atelier

des 9 et 10 juillet 1991, à

Ottawa, par Robin Hay,

Document de travail n° 36,

octobre 1991, 41 pages.

Document de travail n° 37,

par Jeanne Kirk Laux,

octobre 1991, 41 pages.

Les propositions faites par le pré-  
sident George Bush le 27 septembre  
dernier ont donné une nouvelle tou-  
nure aux négociations sur les arme-  
ments nucléaires. David Cox passe  
en revue les propositions américaines  
et recommande de surveiller de près  
certains points clés de la politique  
des États-Unis en matière de limi-  
tation des armements dans les  
prochains mois.  
À l'évidence, la meilleure façon  
d'empêcher des pays de se consti-  
tuer des arsenaux, c'est de convain-  
cre les fournisseurs de cesser de leur  
vendre des armes. Paul Warnke  
soutient que la prolifération des  
armements modernes dans le tiers-  
monde est d'abord et avant tout  
fonction de l'offre. Il faut rétablir la  
sécurité dans le monde en limitant  
rigoureusement les ventes d'armes.  
Le Groupe  
consultatif ministériel sur l'infras-  
tructure de la Défense, qui déposera  
son rapport au printemps de 1992,  
tient des audiences un peu partout  
au Canada. Jane Boulden résume  
l'expérience américaine concernant  
la fermeture de bases militaires.  
Enfin, Jocelyn Coulon, qui s'est  
rendu au Koweït en octobre dernier  
décrir des drames humains que les  
médias internationaux passent trop  
souvent sous silence.

## NOTE FROM THE EDITORS

This is, in all probability, the final issue of *Peace & Security* magazine which will be published by the Canadian Institute for International Peace and Security. As reported inside, the Minister of Finance announced in his budget statement of 25 February that it was the intention of the Government to disband the Institute.

*Peace & Security* began life in the spring of 1986, and its intended readership was what we termed the "interested, but non-expert public" – readers who wanted to know about an international issue, but who had neither the time nor the inclination to read weighty tomes. Its design and illustration were intended to attract readers, to expand the numbers of people interested in the issues, to put superior international affairs writing and quality design into an intelligent and engaging bilingual magazine.

*Peace & Security* grew and changed during its six-year history. Originally twelve pages in each language, it became twenty-four. Our distribution list began in 1986 at 2,500; this issue will be mailed to 8,500 addresses.

From the very beginning the only preconceived notion the editors had about what constituted a good article for our readers was that it be intellectually honest, with a fair regard for the facts of an issue, and that it fit into the relatively limited space we had available. Neither we nor the Institute in general had an ideological axe to grind. We were tough on our writers and are convinced that this usually resulted in better writing for our readers.

Something else we tried from the very beginning was to publish quality original writing in both official languages. While editing and publishing in two languages simultaneously is expensive, and presents formidable editorial challenges, the magazine and, we believe, its readers, gained enormously from the increased range and quality of writing this enabled us to present. We made conscious effort to bring to our readers perspectives from outside Canada as well.

We are grateful to a number of people who provided advice and counsel during *Peace & Security's* brief life: **Geoffrey Pearson**, the Institute's first executive director, supported the development of the magazine; his successor, **Bernard Wood**, has been an enthusiastic participant in its growth. **John Walker**, **Mary Taylor**, **David Cox**, **Roger Hill**, **Mark Heller**, **Hilary Mackenzie**, **Madeleine Poulin**, **Charlotte Gray** and **Jocelyn Coulon** were all members of the editorial board at one time or another and contributed ideas, excellent articles, and much needed constructive criticism.

Staff members **Dianne DeMille**, **Bradley Feasey**, **Eva Bild**, **Veronica Baruffati**, **Samantha Hayward**, **Dick Seldenthuis** and **Veronica Suarez** played roles at various times. Staff of the Institute library, in particular **Susan Connell** and **Katherine Laundry**, provided timely and indispensable research support to the editors. **Philip Lemieux** and his staff supplied crucial administrative and budgetary help, not to mention well-

timed moral support. Our translators at Sogestran Inc., under the direction of **Denis Bastien**, were instrumental in helping us provide high quality, other-language versions of our stories. And, of course, we are grateful to members of the Institute's Board of Directors who over the years continued to underwrite what must have seemed at the beginning to have been an improbable venture.

Finally, **Jeannette Hanna** of Spencer Francey Peters, was present at the creation and has been the inspiration behind the design and "look" of the magazine and its evolution over the years. Jeannette and **Kathy Dyer**, responsible for electronic production, were indefatigable in their support for this slightly unusual enterprise. The magazine's printers from the start, Somerset Graphics in the person of **Ian Budge**, consistently gave us results of the highest quality.

This issue's cover story features a roundtable on Japan. *Peace & Security* magazine brought together four Japanese international affairs specialists and commentators in Tokyo to talk about how they saw their country's place in the community of nations. The resulting conversation provides some surprising insights into the much written about but little understood subject of how Japanese view themselves and the rest of the world.

As for the editors of *Peace & Security*, the only thing left for us to say is *sayonara*.

– **Nancy Gordon**, **Michael Bryans**  
and **Hélène Samson**

The Canadian Institute for International Peace and Security was created by an act of the Parliament of Canada in 1984 to increase knowledge and understanding of the issues relating to international peace and security from a Canadian perspective. The Institute does not advocate policy positions, nor is it part of the government decision-making apparatus. The Institute is a Crown Corporation. Members of its Board of Directors are appointed by the Government of Canada after consultation with all recognized parties in the House of Commons. These provisions help to ensure the independence of the Institute.

## FROM THE DIRECTOR

# The Future of the Institute and *Peace & Security Magazine*

**U**NDER EXTRAORDINARY CIRCUMSTANCES, MICHAEL Bryans, the editor of *Peace & Security* has offered me this page in my capacity as representative of his publisher (the Institute) to communicate with our 9,000 readers about some vital developments.

In the Federal Budget of 25 February 1992, the Minister of Finance announced the Government's intention to "wind up" or otherwise eliminate twenty-one diverse entities financed by the Federal Government, including the Canadian Institute for International Peace and Security.

The Institute's Board of Directors has stated that the Government's decision is completely unjustified in the light of the record of performance under the Institute's mandate from Parliament and is likely to result in a major loss of the Canadian taxpayers' investment. The Board and many others, inside and outside Canada, have called for the decision to be reversed. The dissolution of such a body would be especially damaging and untimely in a period when the international situation is undergoing such radical change and when the Institute, and collaborators under its programmes, have been in the forefront of shaping Canadian understanding, response and initiative.

The Government's totally unexpected decision seems in part to have been based on an image of all crown corporations as inefficient, duplicative and bureaucratic bodies. Such a view has no application whatever to our small and lean organization. It has been custom-built and honed to fill the gaps and strengthen the critical mass in Canada's national capabilities as envisaged by all parties in Parliament in 1984. Its functions of independent, imaginative and risk-taking activity cannot be filled by government. Its achievements in upgrading and concerting the efforts of universities, non-governmental organizations and others across the country could now be lost, as will the focal point and clearing-house for this work in Canada which has come to be widely known and respected around the world.

The distinguished Massachusetts Institute of Technology professor Lincoln Bloomfield, one of the non-Canadian members of the Board, believes that this decision will "give a powerful negative message to the world about Canada's role in this new era, where Canadian leadership is more essential than ever." Numerous reactions of a similar character are flowing in from other countries as the news reaches them.

The Institute's Board of Directors has received legal counsel as to its responsibilities under the law in these extraordinary circumstances. As the Government recognizes, the Institute will continue to exist, and must continue to pursue the purposes set out in

its Act, until that Act is repealed by Parliament. Moreover, the Minister of Finance is obliged under law to continue allocating funds, at the minimum rate of \$5 million annually, until the Act is repealed. It cannot be predicted with any certainty when the new law (Bill C-63) will receive final passage, although it received first reading in Parliament on 10 March.

In the meanwhile, as prudent managers, the Institute's Board, while continuing to pursue its functions under the law, must take into account the unequivocal intention of the Government to wind up the Institute and to "transfer the necessary continuing resources to the Department of External Affairs."

We are thus seeking clarification of the government's intention and discussing what will be required to discharge the Institute's existing commitments, to continue to execute its mandate while winding down in anticipation of the repeal of the Act, and to ensure the maximum conservation and use for Canada of the extremely valuable assets which have been built up in its programmes and its people.

Specifically, the Institute wishes to provide assurance of its intention to:

- honour its firm existing commitments to present holders of scholarships, fellowships, grants and contracts;

- protect the rights and interests of its employees up to the best levels of public and private sector practice;

- obtain the earliest possible indications from the Government of whether it will be possible to proceed further with pending projects and with competitions for scholarships, fellowships and grants. All applicants will be advised as soon as any information is available and they are requested *not* to contact our offices; and

- honour all its normal commercial commitments.

This magazine, of course, has earned a place of central importance and respect in both the Institute's work and in the dialogue among the communities concerned with peace and security, across Canada and abroad. The Institute's Board members and many others, are deeply conscious of the hard-earned value of this asset, and the need to do everything possible to sustain it in some acceptable way.

We hope that this is not the last issue of *Peace & Security* that you will receive, but it may be. If so, we will all be much the poorer in the future, but not less responsible for maintaining the effort to deepen knowledge and understanding of these vital questions in an era of incredible change and challenge. □

— BERNARD WOOD

## To Express Your Concern ...

*Because of the need for parliamentary action to implement the Government's stated intentions, and the special all-party support for the Institute from its conception, the Commons Standing Committees on External Affairs and/or National Defence would thus be the most appropriate forum in which Canadians and others could raise their interests, concerns and suggestions. The addresses are:*

*Clerk and Members of the  
Standing Committee on  
External Affairs  
180 Wellington Street  
Ottawa, Ontario

Facsimile: (613) 996-1962  
and/or*

*Clerk and Members of the  
Standing Committee on  
National Defence  
(same address as above)  
Facsimile: (613) 992-7974*

# JAPAN ASCENDANT

*Wealth, Power, Responsibility in a Turbulent World*

## ROUNDTABLE

### THE PANELISTS

#### RYUKICHI IMAI

*is the former ambassador of Japan to Kuwait, Mexico and the Conference on Disarmament. He holds a doctorate in nuclear engineering.*

#### HISANORI ISOMURA

*is a consultant based in Tokyo, and was most recently the Director General of NHK, the Japan Broadcasting Corporation. The many positions he has held in his career at NHK include foreign correspondent, bureau chief and region director general in Southeast Asia, Washington and Paris respectively.*

#### SEIZABRO SATO

*is Director of Research at the International Institute for Global Peace in Tokyo, and Director of the international institutions project of the Japan Forum on International Relations.*

#### AKIHIKO TANAKA

*is Associate Professor of International Politics at the Institute of Oriental Culture, University of Tokyo. His specialties include contemporary international relations in East Asia, theories of international politics and Japan-US relations.*

*This roundtable is based on a discussion held in Tokyo on 7 February 1992. The moderator was Bernard Wood, Chief Executive Officer of the Canadian Institute for International Peace and Security.\**

**Bernard Wood:** We are meeting very soon after the visit of Mr. Bush to Tokyo with all the publicity that surrounded it, and the recrimination that has followed. Our challenge is to step back from those immediate events and look a little more deeply at some of the long-term trends in relation to Japan's power and responsibility in the world.

The first question that I would like to raise relates to the long-standing assumption about the basis of Japanese foreign policy. I remember, as recently as the 1970s, a classic analysis of Japanese foreign policy based on the idea of Japan's vulnerability – a resource poor country dependent on foreign markets, on secure sea lines of communication and so on – a Japan always forced to compensate for vulnerability. Is this still an underlying long-term perception in Japan, because, of course, the view now in much of the rest of the world is of a Japan of overpowering strength?

**Akihiko Tanaka:** There are many Japanese who still behave on the assumption you have just described: Japan as a country that is resource poor, and vulnerable to the changes in the world. On the other hand, there is an increasing sense of power. But many in this society do not define what this power constitutes and what it implies. In the late 1980s, among influential Japanese opinion circles, topics such as the decline of the United States, became very

of the system is undergoing great change. I have the sense that in among these uncertainties, there are dangerous attitudes among some Japanese who believe in a more ominous kind of Japanese power, and at the same time they are neglecting the responsibilities entailed by having these notions. Statements made by some politicians in this country after the Bush visit reflect a strange combination of arrogance and irresponsibility.

**Seizabro Sato:** I'd like to differentiate between two levels: one is the Japanese perception of the weakness of Japan, and the other is of Japanese readiness to take on the kind of role larger responsibilities in the international community would involve. Since the 1970s, there have been tremendous changes in Japanese perception of their own strengths and weaknesses. Following the oil crisis of 1973, there was a very strong national consensus on Japan's vulnerability. We were desperate, given that ninety-nine percent of our oil came outside, primarily from the Middle East where there was a lot of instability. Within ten years, Ezra Vogel wrote a famous book, *Japan As Number One: Lessons For America*.

Then our second oil crisis began, ignited by the Iranian revolution and our sense of vulnerability increased. But by the mid-1980s the world energy market changed from a seller's market to a buyer's market, for various reasons, and our self-confidence came back. When the Gulf War started, there was very strong opinion in Japanese society that we did not need to participate. Of course, this neglected the basic nature of the crisis, but there was no serious sense among Japanese regarding the potential for an oil crisis.

**Wood:** Not even as much as there should have been because of Japan's vulnerability?

fashionable. Even before Paul Kennedy's, *The Rise and Fall of the Great Powers* became a best seller, there had been several similar books which sold very well in this country. So the Japanese are somehow saying that US power is declining, at least in the relative sense, while Japanese power is on the ascendancy. Bush's recent visit to Japan, in the eyes of many Japanese, reflected this change.

We also need to consider the end of the Cold War. Many believe that the fundamental nature

\*For their invaluable assistance in arranging this roundtable the editors wish to thank Yasuko Itoh, Ron Purver, and Mary Taylor.

**Sato:** "Even if Hussein occupies Kuwait, they still have to sell their oil, and as long as we have money we can get it." This was a widely shared opinion among the Japanese. So the sense of vulnerability that comes from a poor resource base has almost disappeared. The second process of change in the Japanese system was already pointed out by Professor Tanaka: the end of the Cold War and of *Pax Americana*. Most Japanese now think that the international game has changed from a game based on military power, to a wealth game based on economic capabilities. According to this way of thinking, we are then in a much better position.

**Hisanori Isomura:** Because all the other participants here are scholars or eminent diplomats, I'd like to contribute a common man's view. The Japanese still harbour a strong persecution complex toward the outside world, although, as you might well know, Japan in the past has often been the perpetrator – especially towards our Asian friends. For example, in its history Japan has been faced with three "Black Ship" periods. The first, everyone knows, was the flotilla commanded by Commodore Perry in 1853, that contributed to the end of Japan's century-old isolation. The second Black Ship, in my judgement, was the arrival of occupation forces for the first time in our history, led by General MacArthur, which naturally changed the entire system of pre-war Japan. The third one is now in the offing, led by President Bush surrounded by eighteen prominent businessmen. This black ship is in the form of what has become internationally known as *Gaiatsu* or outside pressure, which alters our direction.

Another example: the President of *Keidanren* [Japanese Federation of Economic Organizations] last year made a trip around Europe and all the members of this delegation were struck by the fact that Europeans are feeling threatened by Japanese economic power – especially in key sectors like automobiles, semiconductors and computers. Even our closest friends among the Europeans – the Germans – judging by what its leaders say about Japan, have come to sound like Mrs. Cresson [Prime Minister of France]: "If we let Japanese expansion go on like this, one day we will be conquered." While we still feel vulnerable to many outside pressures, these outsiders look on Japan as a giant.

**Ryukichi Imai:** It is very unfortunate that the perception of newly acquired power is taking the form of believing that other people are not

really as good as we are. This is the wrong way to look at this power if we are to make use of it.

**Wood:** The idea of interdependence is one which recognizes that you have power, but that nobody has unlimited power and that you are dependent on others. Has that idea sunk in?

I don't think it has sunk in within our societies, but because Japan has gone through this transition in the last two decades perhaps it might have taken hold?

## A Common European House in which there will be two guest rooms ...

**Sato:** Japan being dependent on foreign countries is nothing new. Japan has a relatively long history, since the very beginning, about 1,500 years, of being dependent on Chinese civilization. And as Western powers came to East Asia, in the last 450 years we have been importing more advanced technologies, etcetera from them. So being dependent is a natural condition for most Japanese; it is taken for granted.

And now that more and more Japanese realize that other countries are also dependent on Japan, there is no difficulty for Japanese to recognize interdependence. But Japanese perception is quite different from the American. Americans started their country as completely independent from the old world in Europe. Independence is a natural state for Americans. So it has to be more difficult for Americans to accept the reality of interdependence. For Japanese, interdependence is an improvement on vulnerability.

**Tanaka:** We have long been accustomed to dependency that is true, but I am not sure that the Japanese can behave more or less naturally in a state of mutual dependency. It may be the case that the Japanese are accustomed to the situation where when you are dependent, you are then subject to those who you depend on. But when you have some other party dependent on you, then some Japanese behave as if they were in a superior position.

**Sato:** For reasons why it is so difficult for many Japanese to behave naturally in a world that is entering the age of interdependence, look at two possibilities, both of which are unique to Japanese history. Japan was at the edge of the Chinese Empire from the very beginning until the mid-19th century. And since the mid-19th century Japan has been at the periphery of Western civilization, until

quite recently. So there is a sense of being a victim, of being smaller, that is widely shared. It is natural among Japanese that they are not asked to play a role as a leading power in the world. Setting the rules for the international community is not what we are accustomed to.

The other reason is that there is a very strong sense of uniqueness. Japan is different from Korea; we are separated by sea from the Chinese mainland so there is a very strong sense of being different from China. And this sense of being unique persists when we deal with Westerners. Japan is a member of the G-7, but Japan is the only non-Caucasian member. And among Asians there is also a real sense of being different from other Asians.

**Wood:** Somebody said once that prestige is the price paid to power. And I wonder to what extent prestige, that sense of power and confidence and the sense of not being on the periphery any more, is now an important thing for the Japanese people?

**Isomura:** I should say rather mixed. We have such a persecution complex and a kind of Buddhist fatalism. We live in a land where there are constantly natural disasters like earthquakes and tidal waves. So even if Ezra Vogel called us "number one" – while this naturally sounds very agreeable to us – I do not think the common Japanese people believe this kind of compliment. We always feel vulnerable.

**Tanaka:** As a general observation, I agree, but in the last five or six years I have sometimes sensed a rising confidence among business people and some bureaucrats who deal with economic affairs in the country – a sense that what Japan has done in the past forty-five years is essentially correct, that these achievements should be acknowledged, and that some of the elements of Japanese success could constitute a model for other parts of the world.

The areas where the Japanese are most confident, of course, are Japanese management in business. But even in foreign affairs I have heard an increasing number of Japanese engaged in economic assistance programmes saying that the manner in which Japan has conducted economic assistance in the developing countries has essentially proven sound.

**Imai:** Without being able to define what this power really is all about, an element that is not well recognized or embodied in our foreign policy is the sense of *noblesse oblige*. People

... one for  
Canadians, the  
other for Americans,  
but none  
for Asians.

still consider the pros and cons, counter-proposals, and level of comfort and so on. The problem, and this may be one of the debatable points, is how Japanese policy is decided internally. Put very bluntly, the policies are formulated by the bureaucrats, passed on to politicians and then they express themselves.

When you look at the actual mechanism of when you have the Prime Minister say something about something, you can see two people walking around saying, "well, what should he say, what have you negotiated with the Ministry of Finance, what did the Minister of Finance say? Well, they say they haven't any money and so we will have to change the speech in such a way so as to not to give a clear commitment but only to indicate..." and so on. That is how policy is actually made, I am afraid, and if that is the case, we certainly do not have much room for imaginative and forward looking ideas in foreign policy.

**Wood:** We have been discussing primarily internal factors, but what about the external climate – the danger that the more or less open multilateral systems are going to close down. In the sweep of a decade, is there a concern now that the Americans and the Europeans feel so threatened, and are so internally preoccupied, that protectionism will become the rule, that this GATT round will fail and the multilateral system is just not going to be what it used to be?

**Sato:** There is a lot of concern, but at the same time there is a very strong conviction that even if this regionalism and protectionism continues to grow, the world economy will not be broken down into blocs such as we saw in the 1930s. We have invested so massively both in North America and Europe that Japanese economic activities are already firmly rooted in these economic zones. They could not exclude us anyway. That is the optimists' view. If the Europeans and the Americans are foolish enough to try to exclude us they will suffer from that.

**Wood:** But the idea of an Asian bloc, even as an insurance policy, is not taken seriously in Japan?

**Isomura:** I have just returned from a trip to Europe where I sensed a lot of fear on the part of Europeans that one day the United States, and perhaps Canada, will gang up with Asia or with Japan and confront them. That was just after the visit of President Bush to Japan where Japanese and American governments concluded a *de facto* managed trade agreement. The Europeans, naturally, are not very happy about that.

And this is our nightmare, that one day the Americans might do the same with the Europeans, from whom they are descended. Again, from the Japanese common man's perspective, Japan should be permitted to at least knock at

the door of the common European house – a house in which there will be two guest rooms – one for Canadians, the other for Americans, but none for Asians.

**Sato:** There are pessimists worrying about the widening gap between North and South. Because of the end of the Cold War, wealthy northern countries are likely to neglect the importance of the South. As long as the Soviet Union supported radical leaders in the South, we had to support the moderates. But now that the USSR has stopped supporting national liberation movements in the Third World, we can safely neglect many of the developing countries. In addition, the simultaneous economic recessions spreading throughout the Western world, including Japan, are discouraging the new effort to provide economic assistance and markets to the Third World. And last, the changes in the former communist countries are so fascinating that attention – and money follows attention – will cause the North-South gap to grow. This in the long run will cause serious trouble.

**Imai:** The Rio conference in June will certainly bring out the environmental problems, and we will not be able to maintain the "polluter pay" principle. The advanced, industrial countries will have to pay for the pollution caused by developing countries, otherwise their economies won't stand up. We are heading for a North-South confrontation. Whether you can make economic sense out of it, gain from it or lose, is very much up to the most powerful players.

**Wood:** I remember it was conscious decision made in Japan more than a decade ago to focus more on North-South relations than most of the members of the G-7. In Canada we felt very comfortable with that emphasis; we were your natural allies in the G-7 on that. Since then, Japan has become the largest ODA [Official Development Assistance] donor in the world. You mentioned, Professor Sato, the distraction of attention towards Eastern Europe, but obviously Japan has not been swept away totally by this. There is a sense in Japan that to some degree ODA has worked, not a sense widely shared in most of the industrialized countries. Do you think that emphasis will continue?

**Sato:** Since the end of the Cold War, there has been a growing pressure in Japan as well as the Western democracies to reduce military expen-

ditures. And at the same time, there is almost a national consensus here that ODA should continue to grow. But having said that, Japan's position in Asia – and I am including not only Northeast Asia and Southeast Asia, but South Asia including Bangladesh, Pakistan and so on – is that the share of the Japanese economy in these huge areas which includes nearly half the population of the world, is seventy percent. This is about the same proportion as the US economy is of the Western hemisphere, and much bigger than Germany's position in Europe.

So while among Europeans there is a built-in anxiety regarding the omnipresence of the Germans, our economy is twice as big as that of unified Germany and there are no big economies in Asia like the UK or Italy. So you can understand Asian sentiment towards Japan. It cannot be very comfortable sitting just next door to such a giant; as a Canadian you can understand that. Many parts of Asia were occupied and colonized by the Japanese, so they have a built-in fear. The best solution for Japan is to get together with North Americans and Europeans; other Asians welcome that.

**There are  
so many frustrations  
with our friends across  
the Pacific that there is  
a risk of a repetition  
of the past.**

**Wood:** So the multilateral order really is a very important insulator?

**Sato:** Yes.

**Tanaka:** Even in economic terms I think the importance of having a multilateral framework can be demonstrated. Last year, Japan's exports to east Asia exceeded Japan's exports to the United States. This argument says that Japan has now an option of choosing between East Asia and North America. But economically it is erroneous because those East Asian countries depend very much upon the markets in North America. You simply cannot cut these in two and consider that the Asian market has the same value as the North American. So the option to go with Asia doesn't make any sense.

**Wood:** We have to assume the irrational could happen. Look at the GATT negotiations now: they drag and drag, and from the point of view of consumers all over the world it makes absolute sense for a successful conclusion, yet they could still fail. If GATT failed and Japan felt that it had to choose an option, does the alliance with North America make more sense than the Asian option? Or is that an unfair question?

**Tanaka:** If for political reasons, we have somehow to confront the options you've set out – to choose between the North American and Asian markets – that means we have completely failed in our diplomacy.

**Wood:** The rest of us, too...

The end of the Cold War obviously changes the chessboard in a dramatic way. I heard a very interesting analysis the other day which pointed out that among the four great powers of the North Pacific region – Japan, US, China, and Russia – the only bilateral relationship which has never really been good in this century, is that of Japan and Russia. All the others have fluctuated in alliances and confrontations, but the one that has consistently been bad is Japan and Russia. Obviously the continuing territorial problem, the long legacy of hostility or, frostiness at a minimum, between Japan and the Soviet Union doubled the logic of the American alliance as the basic security arrangement for Japan. How much of that has now disappeared?

**Sato:** The major purpose of the US-Japan alliance since WW II has been to deter the Soviet Union. But the interesting thing is that in spite of the diminishing of the Soviet or Russian threat, the importance of US alliance remains almost the same. There is no plan for the US to radically reduce its military presence in Japan. The US is withdrawing from the Philippines. And once North Korea changes its policies and the Korean peninsula is united, on the basis of the South's economy – and it will be, sooner or later – then the US will withdraw from South Korea as well. But the US will not withdraw from Japan, and the reason why is very obvious: it nicely fits American interests, and Japan's, and the interests of most Asian countries as well.

**Wood:** And this continues to be a first-priority interest for Japan as well, in the sense that it removes the need for Japan to increase its own military expenditures?

**Sato:** It's important not only for Japan, but the US is the only country whose military presence is welcomed by most Asian countries, and Japan's facilities are an absolute precondition for the US maintaining forward deployment of forces in the Eastern Pacific. So this security arrangement has very formal roots and it supported by the international community in the region.

**Isomura:** Basically I agree, however, there is a beginning of what some critics call the *Kembei* phenomenon in the minds of some Japanese. Translated literally, *Kembei* means a dislike of the United States. It's not straight forward anti-Americanism, but still, we are a little fed up with the fact that we have always been under the US umbrella and always dependent on it.

## Most Japanese think that the international game has changed ...

During the crisis in the Gulf, the mass media in Japan often referred to the fact that whenever President Bush picked up his phone to call Mr. Kaifu, our then Prime Minister, he called it the "Bush phone." [In Japan, fast calling, touch tone phones are called "push phones."] In a way, the Japanese delivered an Automatic Teller Machine. Secretary Baker referred to it as the cheque book diplomacy of Japan, but it was ATM diplomacy. This weakness of our politicians has also contributed to a kind of self-hatred for our politicians. However, most reasonable people say that we should have close ties with the United States for the foreseeable future. But there are some nuances to it.

**Wood:** I see a lot of different strands of opinion and concern in Japan which converge on this issue. There is *Kembei*, there is traditional pacifism, there is what you might call a risk-minimizing strategy which says we continue to pursue economic diplomacy and economic goals which have served us well and if there is reduced threat and reduced relevance of military power generally, then so much the better. There is the internationalist view which could be compatible with the sense of taking more direct responsibility, some of it channelled towards the United Nations. And then there are strong nationalist views, cutting across *Kembei*, but more assertive.

**Isomura:** This is not emerging as a national sentiment, and that is fortunate for us. But still, Japanese feel like we are being cornered by our European friends – a cornered rat bites the cat. And that was the cause of our surprise attack at Pearl Harbour. We were encircled by the Americans, British, Dutch and so on. There are so many frustrations in the economic field with our friends across the Pacific and with our friends in Europe, that there is a slight risk of a repetition of the past.

**Imai:** A natural arrangement is for Japan and the US to cooperate. The burden-sharing will be different, but between us we have forty percent of world GNP, and it is an appropriate arrangement for the two countries to be militarily allied. There is a major restructuring of the relationship, and obviously when you go through that sort of process there will be some strong expressions of different views.

As for the problem of Russia, we don't really know what Russia is going to be like – whether it is going to be a country, many coun-

tries with nuclear weapons or what. It is fortunate in a way that we have the Northern Territories issue which will prevent us from having to make quick decisions about what to do about Russia. It is time to wait. We really don't know what is going to happen.

**Tanaka:** In the past, the strongest argument for the maintenance of the alliance [with the Americans] was the fact of the Soviet Union. And the strongest argument in opposition to the alliance was the possible entanglement in a US-USSR world war. So with the disappearance of the Soviet threat, the strongest arguments both for and against the alliance have also disappeared. The reasonable argument for the alliance, what was probably the more enduring factor, is emerging – which is what Professor Sato mentioned. But this may not have taken root among the general public and whether it does depends very much on relations with the United States. This is what is important about such sentiments among Japanese.

In my generation, under forty, I don't believe there is any anti-Russian sentiment at all. There is indifference, but then many of us don't know much about Russia. And the value of the Northern Territories issues among the Japanese, particularly under forty, is decreasing. The territories issue has long been a very symbolic one, but it doesn't mean much in material terms. The islands don't have much of a natural resource base, except for fishing. And the territorial issue was once symbolic because it was unjustly occupied by an evil empire, and now that the evil empire is gone, to many Japanese it seems futile simply to press and press for the return of the islands.

As Ambassador Imai said, the general consensus about Russia is that we should wait. But since everybody knows that a large-scale financial contribution to Russia is impractical in any case, I think Japan

should at least make a real symbolic commitment to the betterment of the Russian federation now and had better not wait.

If the Russians are successful, then I think it is important in terms of our international interest for the Japanese to be the ones to help the Russians. If they fail, it is better for the Japanese to have committed to the success of a democratic Russia, otherwise the Japanese may be criticized by others for the Russian failure.

**Sato:** About the Japan-US alliance: there is an argument against the alliance that says, let's replace the bilateral alliance by a multilateral, CSCE-type one.

... from a  
game based on  
military power,  
to a wealth game  
based on economic  
capabilities.

**Wood:** Or even Secretary Baker's references to APEC [Asia Pacific Economic Cooperation] and the ASEAN first ministers conferences as a mechanism.

**Sato:** But this argument is not convincing. First of all, even in Europe the CSCE has failed to solve the many regional conflicts, like Yugoslavia, and between Russia and Ukraine. Second, in the Asian region it is much more difficult to establish that kind of huge, region-wide, multi-lateral security framework. We might have some regional framework like ASEAN, and a Two plus Four scheme on the Korean peninsula is possible, but it is premature for us to think about a region-wide security framework.

**Wood:** We have been talking essentially about what the industrialized market economies should be doing. And the interesting question that underlies a lot of this is how do we make this "we" more effective. The G-7 has been a kind of framework, although there is great debate as to how much coordination of what kinds can be managed through the G-7. Your traditional special link with the Americans is very important, but with the end of the Cold War, the Security Council has begun to be effective. How are we going to manage these political consultation issues among the industrialized market democracies?

**Isomura:** Among industrial democracies, Japan is the only country which has no framework for political consultations in a multilateral forum. So the G-7, for the time being, is the only high-level consultation forum in which Japan can participate. And inside G-7 France objects to talking about political things there, so the G-7 will not be a political forum for multilateral consultation. The fact is, though, they do talk about a little about political subjects. From the European side, there is a growing interest in having a permanent political consultation with Japan. This type of forum should be expanded or otherwise, and this is more delicate problem, Japan should have a permanent seat on the UN Security Council. This is more difficult, probably.

**Wood:** It is not a difficult thing from a Canadian point of view, we have been urging this for years, but I know there are some others...

**Sato:** In the UN, Japan's role should grow and in order to encourage the Japanese to take on a bigger responsibility, other countries should accept Japan as a member of the Security Council. Otherwise, it is going to be very difficult for the government to convince the Japanese people to pay higher taxes for a bigger contribution to the UN. Maybe we can change the decision making process of the

Council – abolishing vetoes and having a two-thirds majority decision, something like that. Then there is the strengthening of the G-7.

**Tanaka:** I am not sure whether the Japanese are ready to fulfil the responsibilities that a permanent seat on the Security Council entails. Unless the Japanese domestic process could somehow produce the framework by which Japan could fulfil the responsibility of a permanent member, it could be rather irresponsible of the Japanese to accept a seat.

**Wood:** You raise the question about accepting responsibilities, but perhaps we are at the stage of redefining the responsibilities as well. Japan is a major power. One way or another it will accept major responsibilities for security. It is not a nuclear weapon state and we should not assume that being a nuclear state and being a permanent member of the Security Council is synonymous. What does the responsibility of becoming a permanent member of the Security Council mean?

**Imai:** I think even in *Asahi Shimbun* [a large daily newspaper in Tokyo] there will be an editorial in favour of some arrangement. They will have conditions, but they will be generally in favour of the idea. And that represents a change of opinions and perceptions in Japan. In due course you will have to redefine some of the obligations under Chapter Seven threat to peace and security. But one has to expect a convergence of the willingness to accept responsibilities of some kind, if they are well defined. And permanent membership is a problem not only for Japan but for Germany as well, because then you are talking about three West European countries and the General Assembly is certainly not going to accept that.

**Sato:** Look at China. What kind of responsible role has China been playing? They didn't send any troops to the Gulf, and their contribution is limited to 0.77 percent of the total cost of the UN. Japan is assessed at two and a half percent. If China is a legitimate permanent member of the Security Council, why not Japan? The Permanent Five scheme won't survive. That is the other side of the coin of my argument for the importance of the G-7. The G-7 is a club of wealthy, advanced democracies, which naturally has a bigger responsibility over the management of the global affairs. But the United Nations includes everybody and the decision making process should be more democratic.

**Wood:** The quality of the relationship between Canada and Japan is very different from that of the US or Europe with Japan. We have relatively few frictions, for a number of reasons, and the phenomenon of Japan bashing is hardly known in Canada. Ambassador Kitamura takes the view that among the G-7 partners Canada could potentially be especially useful to Japan because it is a logical bridge to North America and to Europe, and because of the relative depth of the experience in Canada in multilateral diplomacy generally, peace keeping and so on – areas that are now so important to Japan. I have a sense that this potential strategy expressed from a Japanese viewpoint is not very widely shared, and that Canada does not loom large enough in Japanese thinking to be seen as useful. Is that true; is he overstating the case?

**Tanaka:** In terms of multilateralism, Japan should pay more attention to Canada. For example, without having permanent membership on the Security Council Canada has been quite influential in the UN. We could learn a lot. And then peacekeeping operations – I am in great favour of Japanese participation in peace-keeping operations. Also, in the regional area, in order to prevent the complete failure of policy to which you alluded – Japan being forced to choose between Asia and the Pacific – it is important for Japan to realize that the United States is not in North America all alone.

**Isomura:** In the media business, bad news always makes good news and it is fortunate that we have few points of contention with you. But from my experience as being responsible for national television in Japan, I had the opportunity to meet with my colleagues in Canada. I don't know if Canadians are aware of the merit of being able to play the role of bridge between different countries. You need to be aware of the tremendous effect you can have being able to mediate between different places. Especially after 1993, Europe will be a huge entity and Japan should know much more about it. Canada can play a mediator role, and let us know what the European trends are.

**Imai:** I think of Canada as representing what was for the Western alliance a characteristic that Europe increasingly lacks and what the only remaining superpower lacks, and that is a good, commonsense approach to international relationships. That is what you have referred to as a bridge, and we appreciate that. We will need to call on your capabilities as a bridge, more and more.

## If China is a legitimate permanent member of the Security Council, why not Japan?

# FRANCE'S NUCLEAR ALBATROSS

*France is burdened with thirty years of defence doctrines and nuclear hardware that are irrelevant in the new Europe.*

BY FRÉDÉRIC BOZO

**W**ITH THE DISINTEGRATION OF THE EAST AND THE END OF THE Cold War, France lost the central tenet that justified and organized its defence policy. In the years to come, the nation's principal challenge – France being constantly in need of a mission – will be either to invent a new policy, or more probably, live without one.

To understand what is at stake in adapting France's defence capabilities to the post-Cold War period, one has to begin with the legacy of the past. This legacy consists, in the first instance, of a conceptual framework, which from the time of Charles de Gaulle to the present has been made up of three core beliefs: the permanence and centrality of the nation state as player in the international strategic game; the inevitable evolution of European and global systems beyond the US-USSR bipolar confrontation; and finally, the necessity for the North Atlantic alliance (NATO) to mature into a strategic alliance tying Europe and the United States together as equals.

The legacy also consists of hardware – a complex of military forces – and the doctrines and processes for using them, the most important characteristic of which is the almost complete primacy afforded to nuclear weapons. Under these doctrines, France has created and deployed over three decades a unique nuclear weapons arsenal – one that would make it into a “mini-superpower.” From this springs the desire for real technological independence, and the determination to deploy the complete spectrum of nuclear systems, strategic and tactical, organized into the familiar air, land and sea “triad.” In spite of subscribing to “minimum deterrence” as a theory, France has continually modernized and expanded its nuclear arsenal. And, of course, this nuclear preoccupation represents a considerable cost, usually making up more than thirty percent of the country's total annual expenditures on military equipment.

THE MILITARY EMPHASIS ON NUCLEAR WEAPONS DURING THE PAST THIRTY years was a carefully chosen strategic doctrine which focussed above all on the prevention of a conflict that could escalate uncontrollably towards a nuclear apocalypse. Hence the rationale behind France's opposition to NATO's doctrine of “flexible response,” which was seen by France as risking the reintroduction of large scale conflict to Europe.

Since the 1960s, France's conventional armed forces, the poor cousin in the French military, have been structured on the basis that nuclear weapons were the preeminent force. Even the idea of protracted combat in Central Europe was ruled out by strategic concepts that emphasized nuclear deterrence. As a result, French conventional forces were characterized until now, by relatively modest quantities of both equipment and soldiers.

This military legacy is also tied up with France's relationship to NATO. France's military break with NATO in 1966 was at the time mostly attributed to the country's search for greatness, and by some commentators to a temptation towards achieving a status of “non-belligerence.” In fact, however, the break had more subtle objectives, and was pragmatic

in the way it was carried out. While the restoration of a certain amount strategic sovereignty to France was no doubt an issue, the rupture with NATO was above all a question of anticipating the obsolescence and disintegration of the two military blocs. France looked to the day when the idea of a strategically autonomous Western Europe would actually come to pass.

If France's 1966 decision truly marked a rupture within the alliance, it also left room afterwards for a France-NATO relationship that was unique. This relationship was perfectly satisfying from a military point of view, meeting France's commitments to the common defence and obligations as a Western ally, while at the same time reinforcing the country's own strategic and military independence.

SINCE 1989, HOWEVER, THREE STRATEGIC REVOLUTIONS HAVE BROUGHT these essential principles of French defence and security policy into serious question: the fall of the Berlin Wall in 1989, the crisis and war in the Gulf in 1990 and 1991, and the Maastricht summit of the European Community in 1991. First of all, the primacy of nuclear weapons as an instrument for balancing Europe's tensions can only become more doubtful as time goes on. While the atom bomb remains an essential component in France's security, most of the scenarios for conflict one can envisage in Europe (Yugoslavia, for example) are not likely to engage France's vital interests and therefore do not justify recourse to the threat to use nuclear weapons, much less to their effective use. So atomic weapons have become for France, like they have for other nuclear states, “weapons of last resort.” Having invested so much, France must now reduce the part nuclear weapons play in its defence policy, both in terms of hardware and in strategic doctrine.

Of course, the role and structure of conventional forces must now also change. Configured to face the massive threat in Europe, trained and equipped for a brief but violent confrontation; these forces are ill-adapted to the new European situation. France's participation in collective security operations now requires mobile forces capable of prolonged engagement, far from their bases, regardless of whether they engage in combat or not.

CLEARLY, FRANCE ANTICIPATED THESE STRATEGIC REQUIREMENTS TO SOME extent in the early 1980s by creating a rapid action force, or *Force d'action rapide* (FAR), and beginning in 1989, sketching out an ambitious project for rationalizing and restructuring the army – the *Armées 2000* plan. Nevertheless, the effort needs to be deepened, and in the end what should emerge is an army that is smaller in size, better equipped, more capable of operating with forces of other countries, and more able to take part in distant operations.

As for new regional conflicts around the world with which France must be prepared to deal, the nature of the security problems in the “South” are not essentially different from those of Eastern Europe, the Balkans, or the former Soviet Union: border conflicts, confrontations among minorities, the dangers associated with the proliferation of ballistic missiles, and nuclear and chemical weapons. France's participation

in "Desert Storm" highlighted the difficulties of adapting the military instrument to these new strategic realities. Operation "Daguet," involving barely 16,000 soldiers out of a total of close to 500,000, was not essential to the mostly American plan for the liberation of Kuwait. However, the French division, well adapted to its role on the American forces' flank, showed obvious competence and was a useful contribution to the campaign overall.

While sending this division was the result of maximum effort on the part of France, it was still too small, both in comparison with the UK, which managed to send twice as many soldiers, and in comparison with France's own ambitions. The Gulf experience brought out the true extent of the French forces' deficiencies in logistics and mobility. But the main reason for the modest showing in numbers of soldiers fielded stems from a more fundamental structural problem: conscription. While national service may be appropriate to a military whose primary vocation is defending the country's vital interests, conscription is incompatible with missions stemming from collective security which necessarily involve operations far from home territory.

FOR THE SAME REASONS, THE CONFLICT ALSO CONFIRMED THAT A DEFENCE policy resting primarily on nuclear weapons is hardly suitable for international policing missions. Implicity recognizing this during the conflict, President François Mitterrand excluded the possibility of French resort to nuclear weapons, regardless of what course the hostilities might take. Even if the risks of nuclear proliferation in the South (and now in the East) justify the maintenance of a sizeable French nuclear deterrent, the new strategic environment obliges France to re-focus its defence efforts in favour of conventional forces.

A third strategic revolution emerges from the likely future course of the former Western bloc. The Maastricht summit of late 1991 opened the path to political union and eventual common defence among EC members. Much is at stake here for France, because a Europe politically and strategically united would demand more harmony in these areas than did NATO – an alliance which France kept at arm's length. And so there is a double challenge: France must at one and same time continue to be the engine for the strategic unification of Western Europe, of which Maastricht was just the start, by proposing concrete initiatives in the areas of defence and security; and France must also accept the consequences this process will have, both real and symbolic, for its own strategic independence. Obviously, the stakes are especially serious in the nuclear domain, where the *national* character of nuclear decision-making will no doubt be retained for some time to come, but where the *European* dimension of the nuclear deterrent must inevitably grow in importance. In the same manner, to the extent that a single European strategic entity becomes a reality, the issue of NATO also grows in significance.

In this context, greater French participation in NATO's decision-making processes seems necessary – in the Military or the Defence Planning Committees, for example. A return to integrated military structures, however, would not be appropriate, as this would make little sense in the contemporary European political context, and what's more, no one is asking for it.

The challenges presented to French defence policy makers are thus considerable. However, the transformation of the French defence forces, both in its doctrines and internal structures, will be all the more difficult for two reasons. First, there is politics. Until now, the national consensus on defence policy has been in favour of a clear and convincing doc-

trine based on the assumption that France has a role and mission in the world, things that today are rather difficult to imagine. Further, the new strategic realities that influence defence policy call into question central assumptions of French national culture – the most important among these being conscription. And finally, the exigencies of current domestic politics – particularly the upcoming series of elections – is highly unfavourable for a long-term effort aimed to resolve these problems.

Then there are the constraints caused by economic trends and France's financial situation. It would be an illusion to imagine that defence spending is going to exceed 3 percent of GDP, and the current trend is somewhere between 2.8 and 2.9 percent. And money is not the only problem: there are considerable economic and social stakes for the country involved in the future health of French defence industries. In sum, the options available to the government are very few and would tend to favour carrying on more or less as before.

THERE HAS BEEN SOME DISCERNABLE MOVEMENT ON THE NUCLEAR weapons front in the last few months, however. While one hesitates to speak of reductions in the nuclear arsenal, it is clear that the growth in their numbers has been interrupted – something unimaginable a few years ago. A plausible outcome is that the strategic ground-to-ground element of the nuclear triad will be abandoned because of the imminent obsolescence of the missiles deployed on the Albion Plateau, and the

decision not to proceed with a mobile ground-based missile. The sea-based weapons will remain the backbone of the deterrent force thanks to a new generation of ballistic missile submarines. And last, the decision to postpone indefinitely the operational deployment of Hades missiles, and the possibility that these will be included in treaty bargaining that would eliminate short-range mis-

siles in Europe, means that France is heading towards the abandonment of a tactical (or "pre-strategic") nuclear capacity. Eventually, the French deterrent will rest exclusively on a simple strategic "dyad." In short, the preeminence of nuclear weapons is plainly under challenge.

At the same time, the new structure of conventional forces is becoming evident – especially the ground forces. By 1995 the current level of 280,000 will decline to about 225,000. To help achieve this objective, the length of compulsory military service has been reduced to ten months, and the professional, voluntary units within the *Force rapide* will be reinforced. Furthermore, a new command structure will be adopted for the army, placing more emphasis on inter-army operations, and on creating "modular" military formations allowing for more flexible management of the forces during crisis situations.

IN SPITE OF THESE NEW TRENDS, HOWEVER, FRANCE'S DEFENCE POLICY IN 1992 is characterized by great uncertainty. Crucial choices remain to be made in many cases – the largest outstanding one being what to do about conscription. This system has been in crisis for many years, it responds less and less to the republican requirement of universality, is ill-equipped to cope with the new strategic realities, and is too far gone for a quick fix. Other painful decisions will also need to be taken in the years to come: equipment and programmes, defence industries, nuclear doctrine, and relations with NATO and Europe – items that have been put off until now. Perhaps even more serious is the fact that France has yet to engage in a true national debate on defence and security issues. Such a debate is essential in order to clarify the choices the future holds and above all, to elicit the nation's consent.

Jerry Kolacz

# A CLEAR GATHERING OF MIRACULOUS SUCCESS

*Winning the Nobel Peace Prize drew world attention to Aung San Suu Kyi's political struggle, and to Myanmar's brutal authorities.*

BY JOHN BADGLEY

**T**HE NOBEL PEACE PRIZE FOR 1991 awarded Burma's Aung San Suu Kyi focused world opinion upon her, and upon the country's dreaded junta, the State Law and Order Restoration Council. Expecting to crush her spirit and the upstart opposition she led, SLORC, as it is known, had placed her under house arrest in July 1989. Instead, the tactic backfired and her National League for Democracy captured eighty percent of the seats in elections in May 1990. In eschewing armed resistance, Aung San Suu Kyi's electoral success stripped Burma's regime of any lingering legitimacy, and revealed its power base to be simply guns and a willingness to use them.

Decrees issued since SLORC's coup d'état on 18 September 1988 have justified brutal oppression with regulations originally written and used by the British during colonial rule, and with edicts created by U Nu, the country's first prime minister, who resorted briefly to martial law during his own term of office.

Since the coup, a series of historical treatises published by SLORC's chairman, General Saw Maung, and its intelligence chief, Major General Khin Nyunt, reveal extraordinary xenophobia and distortions of fact. An indicator of their mindset was the redesignation of Burma as "Myanmar," the Burmese language term used by ethnic Burmans for their empire – a step akin to that of the Khmer Rouge in changing Cambodia to Kampuchea, and the Nazi determination that Germany should be called the Third Reich.

Tyrants generally rewrite their own history, but the innovation of SLORC's new Historical Commission was to pretend allegiance to the rule of law by holding free elections, then flagrantly violate the very civil codes and criminal laws it claimed to preserve while securing enormous financial benefits for its confederates.

BURMA'S CIVIL STRIFE OVER THE FOUR DECADES since independence in 1948 has been labelled an "insurgency." Both ethnic and ideological guerrilla forces have fought Rangoon's armies, usually in isolation from each other, and with devastating consequences for the economy and for Burma's people. General Saw Maung estimated the population has suffered over a

million casualties, probably an exaggeration but closer to the truth than ever admitted by General Ne Win, the *éminence grise* who overtly governed between 1958 and 1960, and again from 1962 to 1988. Ne Win has covertly guided policy since, but remains obscured behind the State Council, a demonic wizard in a land not unlike Oz, where the Queens of Light and Darkness struggle for dominance.

THANKS TO THE NOBEL PEACE PRIZE, THE world has now met the good queen, Aung San Suu Kyi – literally, "clear gathering of miraculous success" – daughter of Aung San. Her father founded Burma's independence army during the Japanese occupation, and later led the Anti-Fascist People's Freedom League (AFPFL) in its drive for independence. Ne Win, one of his trusted lieutenants, took over his military role when Aung San became president of the AFPFL. Aung San's task was two-fold: negotiate independence from Britain, and find common ground among fractious domestic groups, Burma's two communist parties and the larger ethnic minorities. He was remarkably successful on both counts, but tragically was assassinated six months before independence.

Ne Win struggled for years to build the army into a force able to dominate the various rebels in order to enable U Nu's democratically elected government to create a rational economic process that would modernize the entire country. But the government's devout socialism frightened foreign investors, already uncertain about profits in a nation plagued by ideological and ethnic warfare. Burma slowly fell behind most of its Southeast Asian neighbours.

Justifying his coup d'état by the failings in the economy and threats to the constitutional structure from minorities, Ne Win led the military from the battlefield into politics in 1962. He launched an aggressive development scheme, the "Burmese Way to Socialism," which was, in fact, motivated by xenophobic fears of indigenous Chinese and Indian owned business. But Ne Win's goals were compromised by his own political and administrative ineptitude: corruption grew and the insurgencies continued to smoulder. By 1988, the stage was set for

a major explosion that led to his resignation as chairman of Burma's only legal political party, the Burma Socialist Program Party.

Two governments came and went in quick succession. The first, lead by Ne Win's amanuensis and former body guard, General Sein Lwin, attempted to suppress mounting popular demonstrations by force, mowing down thousands in the streets. It ended after only eighteen days. The second regime, led by Dr. Maung Maung (one of Burma's leading authors and jurists) lasted ten days longer than the first, but was marked by strong peace overtures to the National League for Democracy (NLD), and promises of an open economy, freedom of the press, and liberalization of travel. Still the demonstrations grew larger.

On 26 August 1988, five hundred thousand people gathered in the shadow of Rangoon's most famous shrine, the Shwe Dagon Pagoda, to hear Aung San Suu Kyi speak out for freedom. She had returned to Burma only months before after twenty years abroad.\* Among those listening was Dr. Sanda Win, Ne Win's favourite daughter, a British-trained physician, and no less ambitious than Aung San's daughter. Watching her father being challenged by Aung San Suu Kyi, she perceived a competing queen for the throne.

SANDA WIN SET ABOUT REDEEMING HER FATHER'S place in history. Playing on his obsession with security, she moved from her post as a gynaecologist in a medical school to major in the army, with sole responsibility for the old man's health. Ne Win's daughter not only became his chief diagnostician, but also his gate-keeper. With Military Intelligence chief General Khin Nyunt's help, she kept him informed about his enemies.

Sanda Win's capacity for malevolence was observed during the uprisings of 1988, when fellow doctors allege she supplied pain-deadening, fear-suppressing narcotics to agents who were then sent out to give poisoned drinking water to student marchers and demonstrators. The agents were themselves then hacked to death

\*Aung San Suu Kyi left Burma at age fifteen, continued her education in India, earned history honours at Oxford University and established a career in New York at the United Nations. Her key writings are found in *Freedom From Fear*, Viking Press, 1991.

by mobs. Captured Burmese soldiers report a similar fear-suppressing drug being used in suicide attacks against entrenched insurgent armies.

Perhaps most frightening to the Burmese public is her association with Military Intelligence, which has a well-documented reputation for torturing students and opposition politicians. According to Amnesty International some ten thousand people have "disappeared," and thousands more languish in prisons. While it is a bit romantic to see Sanda Win as the Queen of Darkness – a demonic reincarnation from a classic Ramayana tale – it is nonetheless a powerful incentive among followers of Aung San Suu Kyi who see her pitted against Sanda Win in an epic contest.

Complicating this struggle between good and evil by the daughters of modern Burma's founding fathers, is the reality of a society of forty-one million people, where over a hundred ethnic dialects are spoken, and where ethnic Burmans constitute two-thirds of the population, Karens another ten percent, the Shans and Arakanese some one and a half to two million each, and all the other minorities totalling under a million.

ALTHOUGH BURMA IS A SHANGRI-LA TOURIST destination, a land of meditation centres and serene beauty, it shares with all societies a lively connection between money and politics. While the vast majority of people live barely above subsistence level, the national economy is dominated by a few hundred families, military officers and civilian collaborators who award import-export licenses, regulate investment ventures, connive with smugglers, and surreptitiously trade heroin and opium. Ne Win has been especially adept in protecting loyal officers, who "triple-dip" with high salaries as members of the military, as civilian administrators, and through pensions of land, businesses, and access to scarce foreign goods denied even most middle class Burmese.

Like a giant pyramid scheme, a generation of Burmese have tolerated increasing corruption and abuse of human rights with the hope that they too would come out ahead; but tragedy is now upon them. The government has passed into the hands of Orwellian criminals who govern by using every form of double-speak and intimidation. The good people who struggled to make the system just and workable, now despair for their children.

For decades after independence a tacit arms embargo by the international community kept warfare in Burma at a low intensity. Limited amounts of Chinese weapons flowed to the Burma Communist Party (BCP), Western countries and private corporations supplied

Rangoon's military, while the ethnic insurgents traded teak, jade, opium, and cattle for arms and ammunition from China and Thailand. Few modern weapons were introduced into the savage little battles that characterized Burmese warfare. However, Beijing's decision to stop aiding the BCP reflected a change in their political judgement as to how China's interests could best be served. Recurrent animosity with India and the ongoing struggle with Vietnam through the 1980s prompted a desire for a stable southeastern frontier. The Chinese sought allies with the military in both Bangkok and Rangoon, and large weapons sales to Thailand in the mid-1980s were followed by a US \$1.2 billion deal with Burma in 1990.

Aircraft, helicopters, large field guns, medical and logistic supplies, and vast amounts of ammunition boosted Burma's military almost overnight. In the fall of 1991 the Karens successfully reopened their insurgency in the Irawaddy delta, and set battles against entrenched positions have become more frequent as Rangoon's armies have grown (from 160,000 to 280,000 in five years), and the numbers of casualties have increased accordingly.

A major irony is the financial gain SLORC has received from Western petroleum companies, which have poured millions into Burma since 1988, even while their governments have condemned the human rights abuses. Engaging in the hunt for oil and gas contributes hard currency vital to keeping the regime afloat, and despite recent widespread condemnation by the world's democracies, an unprecedented unanimous resolution by the Third Committee of the UN General Assembly demanding the release of all political prisoners and recognition of the 1990 election results – the situation remains unchanged.

IT IS ECONOMIC MISMANAGEMENT INSIDE THE country and the greed of the leadership that is likely to prove the regime's undoing. Although goods are plentiful, inflation has driven the prices of imports and even basic foods beyond the reach of many people. Even the families of

soldiers, protected in the past from such hardships, are now suffering. Anyone not linked to SLORC struggles for survival. It is also true that the opposition that briefly coalesced around the NLD in the 1990 elections seems shattered; the multiple fractures of ethnicity, competing economic interests, and the corruption endemic in Burma's massive narcotics trade (over half the heroin on the world market now comes from the Golden Triangle in the Shan States) gives little hope that any well-managed regime can pull itself quickly out of the ruins when SLORC finally collapses.

The international community must be prepared to move quickly in helping Aung San Suu Kyi reform the NLD and carry out the mandate given by the population in the 1990 election. Time will be needed to form a new constitution responsive at last to minority interests, and to recruit the thousands of Burmese, abroad and at home, who are competent to manage government. New textbooks must be written, the universities and education system restructured, the courts reformed, and private corporations given a chance to grow apart from the machinations of public officials. A United Nations presence will very probably be called for, and substantial economic assistance required.

AUNG SAN SUU KYI IS A NOVICE POLITICIAN and an inexperienced administrator, although her UN work on administrative and budget questions engaged her in large policy issues. Assuming she survives incarceration, she will have rough sailing ahead indeed, given the fractious divisions within Burma, and the enormous problems left by Ne Win and SLORC.

Burma's neighbours will play a decisive role in shaping a successor government. The ASEAN countries, China, and India have common interests in stability. With the manoeuvring necessary to survive the Cold War a waning habit, abetting a neighbour's corruption and state terror is not in the interest of adjacent governments who are themselves seeking foreign investment, millions of tourists, and leadership roles in the region.

Burma's immediate future is bleak, but the longer run could well be brighter. Japan and the other Western democracies will be important sources of finance, as they are in Eastern Europe and the former Soviet republics, but their roles will be most crucial in helping the country re-enter the world after nearly thirty years of isolation. The abuse of its citizens by Ne Win and the regimes he fostered has cost an entire generation its birthright. Until very recently, no foreign government condemned his policies – a contradiction it has taken far too long to correct.

# OPERATION ZERO – FIDEL'S LAST HURRAH?

*For the first time since the 1959 revolution Fidel Castro's charisma might not be enough to keep the old regime alive.*

BY EDGAR J. DOSMAN AND JOHN M. KIRK

**W**ITH THE OVERTHROW OF COMMUNISM in Eastern Europe, it was commonplace in 1989 to predict that Cuba's Fidel Castro would himself soon be overthrown. And without doubt, Cuba is now facing the most severe crisis of its thirty-three year revolution: shortages in fuel have led to many problems, food has been rationed more seriously than at any time in the last thirty years, the number of buses in use has been cut by almost half, the workday reduced by nearly thirty percent, and subsidized workplace meals eliminated.

But a political analogy with Central and Eastern Europe fails to take into account the basic differences between Cuba and the Eastern bloc countries. Unlike them Cuba was not carved out of post-World War II Europe, but rather saw a popular revolution unite opponents of dictator Fulgencio Batista in a widely supported coalition. And unlike leaders in Eastern Europe, Fidel Castro has remained popular among important sectors of his population. Finally, the short-sighted obsession with Cuba held by Washington has been skilfully used by Castro to rally nationalistic sentiment behind the revolution.

THE GOVERNMENT OF CUBA HAS SOUGHT TO lessen the difficulties faced by Cubans by imaginative means: some 700,000 bicycles have been imported from China, 100,000 oxen have been trained for agricultural work (with another 100,000 currently in training) carrier pigeons are being used again to deliver some mail, baby chicks have been provided to households for people to raise, and a massive effort has been put in place to encourage people to work in the countryside producing food. Comparisons with Eastern Europe aside, the question remains whether all this will suffice to shore up the Castro government – or whether the long-suffering populace will rebel against continued adversity.

The most obvious cause of the current crisis is the demise of the Soviet Union, upon which Cuba has depended since the United States broke off diplomatic relations in January 1961. Some basic statistics show the level of that

dependency: 75% of Cuba's trade, 40% of its food imports and 90% of its fuel were tied up with the Soviet Union. The demise of the socialist bloc in Eastern Europe had some impact on Cuba's centrally planned economy, but the unravelling of the USSR sealed its fate. Its principal market and supplier have disappeared in one fell swoop, and the disorganization and in-fighting among the Commonwealth of Independent States augurs ill for Cuba's trade prospects with this traditional market.

A FURTHER FACTOR TO BE EXAMINED IS THE ROLE of the Cuban government. For more than three decades, the ruthless, brilliant, cantankerous, innovative and single-minded leadership of Fidel Castro has directed the national political strategy. To a large degree it has worked: Cuba's social network (particularly in the fields of education, health care and job creation) is exemplary for any country, developed or not. In short, the model was a viable development option for Cuba – as long as the relationship with Moscow held firm.

In a speech given in November 1991 to celebrate the thirtieth anniversary of the massive literacy campaign of 1961 (which reduced illiteracy from 24% to 4%) President Castro explained the essential strength of the Cuban revolutionary model. He compared his government's approach to the current "special period," with measures capitalist governments typically employ in tough economic times. In Cuba no workers had been laid off, no schools or hospitals closed, no factories boarded up. Supplies had been severely reduced, he noted, but this had been done on a basis that was equitable for all. In this he was absolutely correct, for the revolutionary ethos encountered in Cuban society – unlike the system found in the former socialist bloc – clearly has fostered a political "conciencia" or social awareness.

What Fidel did not explain was that instead of dividing up available resources equitably (so that all Cubans received similar benefits), the "pie" could have been far larger if the government – and he in particular – had been more pragmatic. For more than thirty years his gov-

ernment has shrugged off adversity, developing its personalistic approach to politics, while ignoring all those who disagreed. It worked in the past – but then he had always had the Soviet safety net.

Even in today's omnipresent difficulties – the *Comandante en Jefe* embodies many national characteristics. Fidel is the person who has brought this small country – population eleven million – to the centre of the world stage on many occasions, and who has carefully nurtured the nationalism and sense of dignity which is such a component of the Cuban identity, and which is so often misunderstood by Western political commentators.

Fidel Castro still enjoys widespread personal popularity in Cuba. His tireless endeavours on behalf of his people, electrifying public rapport, and widely recognized communication skills are legendary. Yet it is also true that his power base and popularity are slowly and steadily shrinking, and that many are quietly questioning whether Fidel is up to the challenges posed by a post-Soviet world. The irony of the current dilemma is that, for most Cubans, the revolution without Fidel is inconceivable, yet in order to progress in the 1990s it is abundantly clear that a radically new approach is required. It is a paradox which has to be resolved if the Cuban revolution is to survive, since the traditional policy of "muddling through" by means of charismatic appeals and political voluntarism is no longer viable.

THE COMMUNIST PARTY OF CUBA – LIKE ITS First Secretary – is also facing a crisis of identity. Despite small perquisites for its members, the party has never been the elitist organization found in the Soviet Union or Eastern Europe. Cubans are not rushing out to burn their party cards or renounce their memberships. Yet the October 1991 congress of the party showed clearly that it has to reform itself radically if it wants to retain the loyalty of the Cuban people.

One major step taken in October was to allow Cubans – for the first time – to elect their deputies to the National Assembly. That this absolutely necessary first step should only be taken more than thirty years after the revolutionary victory speaks volumes about the

reasons behind the political crisis facing Cuba. During all that time, Cubans have been socialized to believe that the government knew best, and responded en masse with cries of *Comandante en Jefe, ordene!* ("Commander in Chief, tell us what to do"). The time has clearly arrived for the revolutionary government to have more faith in the population at large, and to decentralize its authority.

THE WESTERN MEDIA TRADITIONALLY MISREPRESENTS Cuba, largely because it does not understand the revolutionary ethic which permeates its very essence. The Cuban people are indeed a revolutionary people: they have put the entire "developed" world to shame by their extremely generous civilian and humanitarian aid programmes throughout the developing world, and traditionally have inculcated a spirit of cooperation and sharing in domestic chores. Perhaps just as important, they are fully aware that life for Cuban exiles in the United States is not that easy – with scarce job opportunities, as well as racism and limited access to health care facing exiles there.

At the same time they are distraught at the idea of continued (and apparently endless) belt-tightening that is expected of them. An increasing number also feel that it is time for them to have more say in the direction of the government's policies, and to be given greater access to information. The world has changed irrevocably, they claim, yet the government – Fidel Castro especially – continue with the basic approaches of three decades ago. The economic model is clearly unworkable, the Communist Party largely incapable of resolving the nation's difficulties, and significant political change is needed if Cuba is to weather the international storm roaring all around it. Yet so far the government has given little indication that it means to make any significant changes.

ONE INNOVATIVE IDEA BEING PURSUED BY THE government shows the degree of desperation felt by Fidel Castro. It involves a piece of legislation – Law 50, enacted a decade ago, but only recently pursued with some determination – that eagerly seeks foreign investment. Joint enterprises are sought, combining foreign investment and resources with domestic plant and skilled labour. Generous provisions in the law allow profits to be repatriated in hard currency, with the industry eventually passing to Cuban hands.

At the same time that foreign capital is being wooed, individual Cubans are largely forbidden from seeking to develop their own

talents. This approach to the idea of capitalism as a catalyst for socialist development is of course heresy from the perspective of Marxist theory. The fact that a double standard should be applied to the Cuban people is, moreover, a matter for great concern. In addition, the continued emphasis on foreign tourism to bring in badly-needed hard currency, continues to frustrate Cubans who are increasingly isolated from the best beaches, hotels and restaurants, and excluded from the "dollar stores" where foreigners only can shop.

IT IS STILL TOO EARLY TO SAY WHAT WILL evolve in Cuba. A direct military intervention by the United States (as seen in Grenada or

to the revolutionary cause, encouraging them to tighten their belt and wait for better days. Yet this is a process of ever-diminishing returns, and for the first time in thirty-three years the charisma might not be sufficient.

Whether Castro succeeds or not, it is clearly time for a series of dramatic changes – both of the revolutionary leadership and of the economic model – and not just the relative tinkering that resulted from the recent party congress. While the Cuban population is clearly in favour of maintaining the gains of the revolution, they want the same rights being offered foreign investors, and they seek a greater political say over their lives. Perhaps most important, they seek some hope for a stable economic environment in which they can again have sufficient food and medicine.

THE CURRENT CRISIS IN CUBA confronts Canadian policy-makers with the need to evaluate alternative scenarios. It is not impossible to imagine one which would benefit Canadian interests and harmonize with Canada's traditional policy of support for Cuba's right to determine its own destiny. Such an option would involve an evolution of democratic electoral practices and the introduction of sufficient market mechanisms to allow the reintegration of Cuba in the inter-American family. This process of gradual change would

take place within the context of the revolution, building on its foundations in the post-Soviet era under internal Cuban leadership. This option would be heartily endorsed by Mexico, Venezuela, Colombia and Brazil, Cuba's most significant Latin American neighbours. For Canada this scenario would permit not merely the retention but the expansion of trade, investment and scientific and technological cooperation, building on our well-deserved prestige within Cuba for having maintained relations since the revolution in 1959.

While Canada has a clear interest in Cuba's gradual, peaceful integration into the inter-American system, our ability to influence the course of events is severely constrained. Canada's divergence from US policy towards Cuba from the time of the revolution, and its intermittent criticisms of American actions against Cuba, have become a symbol of our autonomy in inter-American foreign policy. Unfortunately these policy differences have had little impact in Washington. In these circumstances, the reintegration of Cuba in the Americas will be a formidable test for Canadian foreign policy as we seek an active and constructive role with our Latin partners in the newly emerging inter-American system.

Panama) is unlikely, as is an internal coup. Yet pressure is building from below with the economic squeeze, and this may embolden extremist elements in the powerful US Cuban community. A combination of seige mentality in Havana and the triumphalist noose-tightening in Miami could aggravate the present crack-down on dissidents in the face of a perceived national security threat. However, the continued popularity of Fidel Castro – despite the awesome economic difficulties facing the nation – should not be underestimated.

The most likely scenario, therefore, is the continuation of the current approach by the government, with Castro again seeking to kickstart an ailing economy while acting as a catalyst for revolutionary unity. It has worked on many occasions before, although never have the storm clouds gathering on the horizon loomed so ominously. The government's strategy will entail an ongoing appeal to nationalist sentiment, while the economy grinds down relentlessly, and the next stage of the official plan (gloomily, but accurately entitled "Operation Zero") is steadily prepared. In the past, Fidel Castro's clear convictions and charisma have been sufficient to rally Cubans

# FIGHTING GOD, MAGHREB'S POLITICAL TURMOIL

*The successes achieved by Islamic fundamentalists in Algeria's first democratic elections are a serious threat to peace and stability throughout the region.*

BY ABDELHAMID GMATI

**T**HE SPECTACULAR SUCCESS OF THE Islamic Salvation Front (FIS) in Algeria's first democratic elections\* last December has profound implications for the varied populations and governments of the North Africa Maghreb region, other Arab countries, and the rest of the free world. The precedent of Iran is disquieting – an unease only increased by the fact that FIS's victories were won at the ballot box, whereas in Iran, Islamists seized power by force.

Reactions to the win were immediate and intense: "Algeria's future was ruined," "freedom and human rights buried." An immense demonstration on 2 January drew more than 300,000 people into the streets "to save democracy." FIS and its sympathizers were conciliatory; "Algeria is not Iran," they said. But what is going on? Is there reason to fear these new Islamists? Are they a threat to the region and to the stability of international relations in general?

WHILE ISLAMIC FUNDAMENTALISM HAS RECENTLY become a political and social force that cannot be ignored, the origins of the movement go back to the beginning of this century, and to Egypt. Here, theologians advocated fundamentalism as a weapon against colonial masters and as a safeguard for Arab-Muslim culture against the dangers of assimilation. Islamic political movements gradually took shape supporting embryonic Arab nationalism where it was strong, and at the same time trying to fill the political vacuum whenever nationalism failed. Even former Egyptian president Gamal Abdel Nasser, who for a while was the standard-bearer of Arab unity and nationalism, had serious problems with his "muslim brothers." Nasser violently suppressed the fundamentalists and they remained a minority grouping confined to Egypt and Sudan, only heard from via occasional acts of violence.

\*The first round of voting in the legislative elections was held 26 December 1991. The fundamentalists of FIS emerged victorious, with 24.9% of the 13.3 million registered voters and 47.5% of the votes cast: very close to an absolute majority (188 seats out of 430). The second round, planned for 16 January 1992, was postponed following the resignation on 11 January of the President of the Republic, Chadli Benjedid.

Towards the middle of the 1970s, Islamism appeared in the countries of the Maghreb. First in the mosques, where the speeches of the new *imams* had become political, virulently denouncing the governments of the region and the West; then in the street, where the first of the beards and veils, or *hidjab*, began to appear. The wearing of beard and veil sprang from the desire of fundamentalists to be separate from what they judged to be an "impure" environment.

IT IS NOW CLEAR THAT IT WAS THE EXISTING regimes themselves that fostered fundamentalist movements. The moment they achieved independence, the countries of the Maghreb launched into vast development efforts centred on secularism and modernity. But at the same time, they sought to serve their own ends and advance reforms more effectively by embracing religion on behalf of the state. Furthermore, beginning in the 1960s, they played religion off against the political left in order to counteract the Marxists, by introducing religious instruction into the schools, multiplying the number of places of worship, encouraging theological teaching and promoting, to the point of excess, programmes for Arabization and Islamization.

Before long, however, the Maghreb countries were in crisis. To failed economic policies, the absence of democracy, and the monolithic nature of single party governments, were added the leaderships' corruption and poor management. The omnipresence of the state fostered a privileged class and created a welfare mentality among the population. Existing inequalities were exacerbated, unemployment rose and out-migration from rural areas led to overcrowding in urban regions – a whole population felt itself abandoned and destitute. The young felt utterly disoriented by the arrival of consumer culture and found themselves excluded from the system. With the resulting profound identity crisis, and in the absence of another motivating ideology, the return to ancestral values and to religion became for many the only recourse.

It was in this climate of widespread disaffection that fundamentalism flourished. First, in Tunisia, it profited from the secularism of the regime that had promulgated the *Code du statut personnel*, a law that abolished polygamy

and gave women equal rights with men. Enshrining as it did the emancipation of women, the law was never completely accepted either within the country, or in the wider Arab world. In fact, Tunisian authorities had to retreat before Algerian and Saudi pressure, among others, and abandon plans for more reform to the laws of succession, inheritance and adoption.

Finding their recruits from among unemployed and disenchanting youth, the fundamentalists did well for themselves denouncing Tunisia's impious, atheistic regime for being incapable of resolving society's problems, enslaved to the West, and at one with the devil. In vain, the regime tried to outdo the Islamists at their own game by broadcasting prayers on radio and television, closing bars, and instituting programmes of Islamic instruction and the like. But nothing helped; the agitation continued and the fundamentalism of the "barbus" – the beards – permeated all layers of society.

The Islamic Tendency Movement (MTI) which in 1989 took on the name *Ennahdha*, the "rebirth," in order to get around Tunisia's new election laws prohibiting open political party affiliation with religious groups, arranged a series of violent incidents at universities and in tourist centres. The response of the government oscillated between repression and rapprochement.

A SIMILAR SCENARIO UNFOLDED IN ALGERIA, where the situation was exacerbated by the socialist economic experiment, even though care had been taken to eliminate expressions such as "the class struggle" or "the abolition of private property" from public discourse. The current of fundamentalism spread to the mosques, the university, the coffee houses, and the street. While many factions sprang up, it was the Islamic Salvation Front, created in February 1989, that proved to be the most steadfast. The first to profit from the new winds of democracy that followed the 1988 riots in the capital Algiers, FIS quickly obtained legal recognition, and in 1990 carried off municipal elections brilliantly, winning mayoralty races in the large cities, including Algiers.

In Morocco the story is different. As early as 1961 the then King Mohammed V (father of

the current sovereign Hassan II) established himself both as head of state and as leader of the religious community. Claiming to be descended from the prophet Mohammed, he marginalized the traditional religious leaders so as to personally embody Islamic legitimacy. Despite Morocco's multi-party approach to politics generally, the King holds his power by "divine right" and is above the law. No one can criticize him, put his person in question, or contest his acts. As a result, fundamentalist movements in Morocco have been confined mostly to the cultural realm and have not been able to present alternative political solutions. This may be changing, judging from recent bloody events at the university, where Islamic fundamentalist students clashed violently with their leftist counterparts. The resulting arrests, injuries, and deaths from this episode, almost certainly guarantee there will be other incidents.

WHAT IS ISLAMIC FUNDAMENTALISM? CONTRARY to appearances, it is not an organized movement; at its core it is a feeling of shared identification, of affirmation of self and of one's differences, in the cultural sense. As the Egyptian historian Mohammed Said Al-Ashmaoui states in his book *L'Islamisme contre l'Islam*, it is not a question of theological controversy, but rather of being against certain kinds of political regimes. The Koran is invoked mostly as a substitute for existing norms and socio-political reference points, as a way to clearly set the movement apart from the cultures of the West, and not as a metaphysical and religious resource. Generally, people become attached to a charismatic personality in the movement, rather than to an organization and its particular programme.

The ultimate goal of Islamic fundamentalism is the creation of "Islamic Republics" along the lines of Iran, Saudi Arabia and Sudan. Nothing substantial is spelled out in the economic, political and social arenas, other than that democracy will be guaranteed by the *Choura* – or, as its name in Arabic indicates, consultative assembly, itself not defined. The judicial apparatus will be regulated by the *Charia*, Islamic law, based above all on tradition – the Koran contains only eighty verses dedicated to legal matters, out of a total of 6,200. There is also the rejection of Western democracy, and above all a diminution in the status of women – something of a major preoccupation of the fundamentalists.

Until now, the Islamists' strategy has been limited to harassment and violent action. In Algeria, three weeks before last December's elections, they attacked a frontier post of the National Guard, causing injuries and some deaths. The army retaliated, arresting

the majority of the members of the group responsible, who, it turned out, had been trained in Afghanistan. In Tunisia, the fundamentalist plot uncovered last May aimed at assassinating the Chief of State would have used, among other sophisticated weapons, American *Stinger* missiles furnished by the Afghan *moudjahidin*.

The Iranian revolution has undoubtedly served as catalyst, an example that was followed in Sudan and Pakistan. And all of these fundamentalist groups, while forthrightly nationalistic, have not neglected to cultivate relationships among themselves. They have even established a kind of fundamentalist "internationale," with headquarters in Khartoum, Sudan. But Iran of the Shia and Saudi Arabia of the Wahhabi are to some extent competing for the leadership of these fundamentalist forces. The competition is purely political of course, since in the religious domain both practice a conception of Islam that closes the door to all progress and turns in on itself.

For the middle class as well as for most of the senior government and private sector officials, Islamic fundamentalism is regressive and retrograde – an obstacle to scientific and technological progress. And even though disenchantment with the present social and economic conditions runs throughout the population, many still refuse to come out in favour of the *barbus* – the "beards."

IN ALGERIA, IT WAS THE ARMY THAT DECIDED TO put a brake on fundamentalist power, which it regarded as an obstacle to its own power and ambitions. An April 1991 editorial in the army newspaper *Al Jaich* explained the concerns of a military traumatized by the Gulf War, and made a point of opposing what it considered to be the beginnings of Western hegemony. At the same time, it did not hesitate to brand the fundamentalists the "objective allies of this Western strategy." Still, the army is anxious to accelerate the country's access to science and technology, and to rebuild its own military arsenal, nuclear weapons not excluded.

For fundamentalists the "Satanism" of the West is a recurrent theme, with the Americans and French being the most strongly condemned for their actions during the Gulf crisis. This position has religious roots to be sure, but secularism and all that stems from it – like democracy – is a threat to the fundamentalists' power and is held up to ridicule. But this position serves electoral purposes as well.

As in the case of Iran, a fundamentalist regime needs an external enemy. There would certainly be relationships with the West, based on economic self-interest, but these would be limited and difficult. For the Maghreb as a whole, the prices of raw materials and energy (oil and gas) would likely be unstable and OPEC's internal dynamics would change substantially with the reinforcement of the "hard-line" camp (Iran, Iraq, Libya, and Algeria). The Maghreb market, representing nearly 100 million people, could not long remain the private preserve of France – something Islamic leaders have already hinted at.

Since the fundamentalists are nationalists first and are not united, even if they do forge links among themselves, it is unlikely that their nations' international policies can be unified. We can expect conflict where national interests diverge, and some observers believe that in the Maghreb and elsewhere, the question of borders inherited from the colonial era will be the first point of confrontation. "Little" Tunisia thus has everything to fear from an Algeria ruled by fundamentalists. Tunisia's social and political system, tilting towards democracy and economic liberalism under the current leadership, would be under severe threat.

THE PROBLEM NOW IS HOW TO CONFRONT AND combat what a significant portion of the population considers to be a serious menace. The regimes in power have not been able to subdue the fundamentalists, either by repression, or conciliation – as former Algerian president Benjedid learned to his cost. While the wind of democracy has begun to blow through the region – in Tunisia and Algeria – fundamentalism amounts to religious dictatorship, and those in power ask themselves: "must we allow the enemies of democracy to use democracy to destroy it?"

The installation in Algeria of the High State Council to run the country and wage a fierce battle against FIS is hotly debated by democratic purists. Some see in the Council the only hope for a democratic transition; the only chance to plant democracy on solid foundations. There are still others who go as far as to prefer a military dictatorship – at least the people can rise up against the army; it is much harder to fight God.

# MOVING MOUNTAINS IN RIO

*We should probably not expect very much from June's UN "Earth Summit" in Rio de Janeiro – then again, maybe we'll be surprised.*

BY DAVID RUNNALLS

**I**N JUNE, UP TO SEVENTY-FIVE PRIME MINISTERS AND PRESIDENTS WILL meet in Rio de Janeiro to discuss the fate of the earth. Before you conclude that this is just more alarmist eco-babble, consider the basic question facing the Earth Summit. If we cannot adequately provide for the present population of the planet without placing undue strains on the environment, is it realistic to expect to be able to furnish a decent standard of living for twice as many?

Few would deny that our present population is already putting severe strains on many of the planet's vital systems, yet many of the almost five and a half billion people in the world place relatively small burdens on the environment. More than one and a half billion people live in wretched poverty, garbage dumps, shanty towns or resourceless rural areas. In the last fifteen years, the number of poor people have increased by 81% in Africa, 55% in Asia and more than doubled in Latin America. The United Nations estimates that 500 million people in the Third World are either unemployed or underemployed – equal to the entire work force of the industrialized world. At the same time, the demographers tell us that we cannot escape a doubling of world population to ten billion by the middle of the next century and some place it as high as fourteen billion.

THIS IS PRECISELY THE QUESTION WHICH FACED THE WORLD COMMISSION on Environment and Development (the Brundtland Commission, after its Chair, the Norwegian Prime Minister). In its ground breaking 1987 report, the Commission pointed out that the earth's economy and its ecology were so closely interlocked that economic policies which ignored that reality were bound for failure. One of the keys to its new, "sustainable development" agenda which has made it so popular is that it appears to be a "win-win" programme. It points toward a world which is more prosperous as well as ecologically more sustainable by merging elements of the traditional environmental agenda with elements of the traditional economic agenda. The result is growth of a radically different kind: growth which is far less energy and raw material intensive, which helps to preserve the world's ecological capital rather than run it down, and which is far more equitably distributed both within and among the nations of the world. Although some are deeply suspicious of such an approach, it has found a good deal of favour with the Canadian public.

Brundtland made the environment into a mainstream economic issue of the same level of importance as job creation, export growth and the like. Recognizing this, the Secretary-General of the Rio meeting, Maurice Strong, decided to raise the ante. Strong persuaded the UN General Assembly that at least part of the meeting should be a heads-of-government summit, bringing together those with real economic power.

Unfortunately, the delegates to the UN General Assembly who laid out the work programme for the Rio conference did not learn the lessons of the Brundtland Report. Instead of planning a conference on sustainable development, they set the conference down the path toward a discussion of environment and development (the official name for the Rio

meeting is the United Nations Conference on Environment and Development – UNCED). Inevitably, this has led the delegates to the meetings preparing for the conference back into stale 1970s rhetoric about whether or not environment and development are compatible goals. This in turn has led to a serious North-South split which has crystallized around two separate and largely contradictory agendas.

CANADA'S AGENDA FOR 1992, LIKE THAT OF MOST OF THE NORTHERN developed world, is mainly focused on climate change, the loss of biological diversity in the tropics, deforestation, and the health of the oceans. Although global conventions for the first two are currently being negotiated on tracks separate from the 1992 conference, these issues will be at the centre of the Brazil meeting. The 1988 Toronto Conference on the Changing Atmosphere has been succeeded by a series of meetings designed to produce a framework convention on global warming by the time of the Rio Conference, but recent sessions have concluded with little agreement being reached. The US remains adamantly opposed to any targets for the reduction of carbon-dioxide emissions and the critical Japanese delegation has yet to definitively declare itself.

The second convention, on biological diversity, is moving very slowly, the victim of a North-South dispute over the use of genetic material in biotechnology. Many developing countries are unwilling to devote more resources to protecting their vast store of genetic material unless they can derive some benefit from the value of that material to the Northern pharmaceutical and biotechnology industries. At the moment, they receive no financial compensation for genetic material removed from their tropical forests, for example, and used in the development of new drugs.

Canada has also been involved in efforts to begin negotiations on a new international forestry convention. This convention would be concerned with forestry in the temperate regions as well as in the tropics. The convention has been put on hold indefinitely because of the strong opposition of many of the tropical forestry exporting countries, led by Malaysia. It is likely that UNCED will produce only a statement of principles.

THE SOUTHERN AGENDA IS BASED ON THE KNOWLEDGE THAT MOST OF these global problems have been caused, or at least aggravated, by the industrialized countries. The Northern OECD countries contain roughly 20% of the world's population and yet produce 80% of the greenhouse gases which are changing the world's climate. Over 90% of the chlorofluorocarbon gases which are destroying the planet's ozone layer are produced in the developed world. Yet, most of the discussions in the negotiations so far have focused on the developing world, rather than on the steps the North must take to lessen its own impacts in these areas.

The developing countries have feared this programme from the beginning. Although many realize that global environmental change may affect them even more than the industrialized countries, an agenda which is exclusively environmental threatens to divert attention away from their priorities for economic development. Furthermore, many of them feel that an action plan derived from an environmental agenda will hamstring them with new conditions for foreign aid and loans,

restrictions on their use of fossil fuels and new "green" import barriers confronting their export products to the North.

Instead, they want the conference to address the whole range of issues relating to the availability of resources for development, including debt, declining raw material and commodity prices, the problem of market access for their products, and increased funds from both development assistance agencies and from the private sector. And for once in an international negotiation, the developing countries feel that they have a reasonable card to play. None of the major global environmental problems can be solved without their full co-operation.

For instance, even if the US and the other developed countries took steps to reduce their carbon dioxide emissions, this effort would be reduced to naught if India and China pursue their ambitious goals to build some three hundred new coal-fired generating stations over the next two decades. In the words of a document prepared by the South Secretariat (an organization of developing countries) for the recent meeting of the Group of 15 developing countries in Caracas: "UNCED is an international conference where the North is seeking environmental concessions from the South, and where the South can make such concessions in return for firm concessions from the North to restructure global economic relations."

WHAT CAN BE EXPECTED FROM RIO DE JANEIRO IN JUNE? MANY FEEL THAT the solution to these problems will eventually lie in some sort of "grand bargain" between the North and the South. Such a compact would involve a commitment by the developed countries to substantially reduce their emissions of greenhouse gases and to leave enough "ecological space" for the developing countries to increase their emissions as they develop.

This is emerging as a key demand from the Third World. It would involve substantial transfers of new financial resources to the developing countries to be used not only to ease the transition to more sustainable forms of energy use and forestry practices, but also to help eliminate some of the present deficits of food, housing, clean water and unemployment. Some estimates place the amount of money required at about US \$130 billions a year. In exchange, the developing countries would make commitments to more sustainable forestry practices, reductions in population growth rates, decreases in military spending and more sustainable patterns of energy use. At best, the Rio meeting will make a modest start in this direction.

How far can UNCED get in merging the competing agendas and unblocking the financial channels? At the moment, prospects look decidedly glum. In the words of Maurice Strong, "never have the rich felt so poor." The governments have agreed to talk about money at what will be the final conference preparatory meeting in New York in March. There is a rumour that Japan might be preparing a rich financial package – as much as US \$10 billions. On the other hand, the Americans are broke and the Europeans are obsessed with Eastern Europe. Technology transfer is also a staple of these international discussions, but when the developing country rhetoric of technology transfer on "preferential and non-commercial terms" and the developed country homilies on the sanctity of intellectual property are stripped away, little progress seems to have been achieved.

The substantive centrepiece of the Rio conference is an ambitious set of documents called "Agenda 21." This document runs to hundreds of pages and contains a set of action plans on everything from toxic wastes to poverty, economic growth and the environment. It will also contain a series of price tags, adding up to the sorts of billions of dollars mentioned earlier. Previous international conferences have seen most such documents "pre-negotiated" in preparatory committees, but little progress has been made with the stickier parts of Agenda 21 and governments will have to work at least minor miracles in New York to get it ready for Rio.

There seems surprisingly little pressure on governments to come to

agreements at Rio. The developing countries seem determined to hold out for a comprehensive deal. In fact, many of their delegations would be given a hostile reception if they returned home with only an action plan on "northern" issues. At the same time, the multi-billion dollar price tag on this deal has allowed many of the developed countries to ignore the whole thing as unrealistic. The present US administration under George Bush, worried about a neo-isolationist opposition determined to criticize it for excessive attention to foreign issues, and leery of substantive changes in US energy policy, will attempt to block real progress on climate change.

And Canada? The Canadian delegation under John Bell of External Affairs and Arthur Campeau of Environment Canada, has been consistently among the best led and most effective in the preparatory process. However, now that the conference is entering its last, most crucial session, it is becoming clear that Canada has little to offer on many of the key questions. These require the kind of Cabinet involvement and high level political leadership that has not yet been forthcoming.

PREVIOUS UN CONFERENCES ON THE ENVIRONMENT, WATER, DESERTS AND renewable energy have concentrated exclusively on the problems of developing countries, but this time the global nature of the issues facing UNCED will require the developed countries to take the first step towards a solution. At home, there seems to be little understanding of the relationship between Canadian domestic policy and our ability to influence the course of the negotiations. Agenda 21 presents a vast array of issues, many of them areas of provincial jurisdiction. If Canada is to play a positive role, much remains to be done in setting our priorities and consulting with provinces on central issues such as forestry, climate change and fisheries.

For instance, Canada is the highest per capita user of energy in the developed world. Although the government has pledged to freeze carbon dioxide emissions at 1990 levels by the year 2000, it is well known that few steps have been taken to achieve that goal. Canada has led the discussions on forestry in the Rio preparatory process, yet our domestic forestry policies are widely perceived to be unsustainable. The epithet "Brazil of the North," coined by the Brazilian Environment Minister, is beginning to stick.

In early February, in a move that offers at least the hope that Cabinet is now seized with the problem, the Prime Minister gave his old friend Mr. Campeau, in addition to his current responsibilities at Environment, the job as his Personal Representative to UNCED with ambassadorial rank. Nonetheless, if the Prime Minister is to join his other colleagues in some meaningful actions in Rio, several mountains will need to be moved in the next two months. [

## DEFENCE NOTES

### Soviet Nuclear Arsenal

Amidst continued political upheaval in the former Soviet Union, the command and control of the Soviet nuclear arsenal dominated defence issues through the winter months. The specific location of strategic nuclear weapons in the former Soviet Union is well understood because the data exchanges required by the recently completed agreement between the US and USSR to reduce strategic nuclear weapons (START) provide detailed information on their deployments. Russia aside, the Ukraine, Kazakhstan and Belarus are home to 352 ICBMs, 70 strategic bombers and 3,138 associated nuclear warheads. The largest concentration is in the Ukraine, which has 176 ICBMs and two heavy bomber bases. Kazakhstan has one bomber base and 104 of the formidable SS-18 ten-warhead ICBMs. Belarus is the base for 72 mobile SS-25 ICBMs.

In contrast to the geographically limited deployment of the strategic nuclear forces, approximately fifteen thousand tactical nuclear weapons are distributed throughout the CIS republics. Of these, more than 9,000 are in Russia, 2,700 in Ukraine, 650 in Kazakhstan, and in excess of 1,000 in Belarus. In contrast also to the strategic weapons, the tactical weapons may be subject to less strict control, including the possibility that older systems might be fired mechanically without the use of an electronic key.

Meeting in Brest on 8 December 1991, the leaders of Russia, Ukraine and Belarus signed a declaration creating the Commonwealth of Independent States (CIS). In Article 6 of the declaration the parties agreed to "common control over nuclear armaments which will be regulated by special agreement."

Two weeks later, at Alma Ata

Two weeks later, at Alma Ata on 21 December, Kazakhstan, the fourth of the republics home to Soviet strategic nuclear forces, joined the others in the nuclear weapons agreement. The four republics also designated Marshall Yevgeny Shaposhnikov as commander of the armed forces. Since the larger republics later made plans to establish their own armed forces, it seemed likely that Shaposhnikov's most important task would be to command the strategic forces under the joint control of the four republics.

Following his resignation on 25 December, Mikhail Gorbachev handed Shaposhnikov a black briefcase containing the nuclear command codes for Soviet strategic forces. In early January, Shaposhnikov was reported to have said that only two such briefcases existed: "One is in the possession of the President of Russia, and the other is in my hands." At about the same time, however, Ukraine President Leonid Kravchuk was quoted as saying: "In a few days a device will be installed in my office that will be able to, when necessary, block the nuclear button."

Meeting in Minsk on 30 December, the eleven CIS republics formally recognized "the need for joint command of strategic forces and for maintaining unified control of nuclear weapons and other weapons of mass destruction" of the former Soviet Union. The power of decision on the use of nuclear weapons was conferred on the president of the Russian Federation "in agreement with" the heads of the three other nuclear republics.

The Minsk agreement also described plans for the elimination of all nuclear weapons outside the Russian Federation. The Ukraine will dismantle its strategic nuclear weapons by the end of 1994, and its tactical weapons by July 1992. No schedule is set out for Belarus, but in both cases the elimination will involve the "participation" of Russia. Some ambiguities remained about the republic commit-

ments to denuclearization. Belarus officials, for example, have since indicated that their desire to become non-nuclear will necessarily be affected by political considerations, especially diplomatic recognition by the West.

The elimination of the strategic forces in Kazakhstan is not mentioned in the Minsk agreement. At the Alma Ata meeting Kazakhstan declined to join the other republics in promising to join the Non-Proliferation Treaty, giving rise to fears that Kazakhstan might seek to obtain sole possession of the nuclear weapons on its territory.

Finally, although the Ukraine has reiterated its intention to eliminate the strategic nuclear forces on its territory, military and political tensions between the Ukraine and Russia have raised further questions about the disposition of tactical nuclear weapons. In particular, the two republics have been at odds over the disposition of the Black Sea fleet. In early February it was still unclear how the balance of the Black Sea fleet – 2 helicopter carriers, 54 submarines and 43 surface combatants – would be divided. Elements of the fleet are known to be equipped with tactical nuclear weapons.

### US Nuclear Arsenal and Defence Budget

In his State of the Union message on 29 January, President Bush announced cuts in the US strategic arsenal which, as subsequently elaborated in the administration's 1993 budget request, bring the existing plans for force modernization to a halt. Bush announced that B-2 bomber production would end after completion of the twenty planes already procured. The small, mobile ICBM programme (Midgetman) is cancelled, as is the SSN-21 Seawolf attack submarine. All new production of the MX ten-warhead missile will be stopped, the production of the advanced cruise missile will be ended at 640 missiles, and production of the advanced W-88 warhead for the Trident II missile

will be halted. With the end of the W-88, all new warhead production in the US has ended.

Combined with a number of other changes in US military force development, the thrust of the administration's 1993 defence budget request is to change the emphasis of US military posture from the previous concern with war in Europe, to flexible forces able to respond to regional conflicts. The budget request is for US\$277.9 billion, which constitutes a 7 percent reduction from 1992.

### Star Wars

In the midst of cuts in the strategic forces, the Strategic Defense Initiative (SDI) appears to be prospering. The SDI budget will increase approximately 30 percent in FY 1993 to US\$4.36 billion. The programme is now intended to provide Global Protection Against Limited Strikes (GPALS), defined as the capability to repel an attack consisting of 200 warheads. It is focused on early deployment of a ground-based ballistic missile defence, followed by the addition of a space-based system. Brilliant Pebbles is now defined as system that would place 1,000 small, non-explosive missiles in orbit. Brilliant Eyes is a space-based surveillance and tracking system.

While both Brilliant Eyes and Brilliant Pebbles would require amendment or abrogation of the Anti-ballistic Missile Treaty (ABM) signed by the US and USSR in 1972, the ground-based system proposed for deployment in 1996 would, in its first phase, be compatible with the treaty. Boris Yeltsin is apparently less concerned than his predecessor about the preservation of the ABM Treaty. In addressing the January summit of the Security Council, he called for a joint SDI programme, arguing that it would engage Soviet scientists who might otherwise "drift abroad and spread nuclear technology into other countries." □

— DAVID COX

## REPORT FROM THE SECURITY COUNCIL

### New Secretary-General

On 21 November, the Security Council voted to elect Egyptian Deputy Prime Minister, Dr. Boutros Boutros-Ghali as Secretary-General. He officially replaced Javier Perez de Cuellar on 1 January. Boutros-Ghali, who received eleven yes votes and four abstentions in a secret ballot, won out over Zimbabwe's Finance Minister, Bernard Chidzero. His election was portrayed as a victory for African countries who had insisted the next leader of the world body be someone from their continent.

### Summit Of The 15

On 31 January, with the publicly declared aim of reinforcing the new Secretary-General and the world body as a whole, British Prime Minister John Major organized and presided over a special summit session of the Security Council. Major, who is expected to call an election this year, and whose profile was generally expected to be enhanced by the summit, succeeded in drawing the heads of government of thirteen out of fifteen Council members to the event, with the foreign ministers of Hungary and Zimbabwe filling in for their heads of government.

During their meeting, the leaders adopted a joint declaration calling for, among other things: the Secretary-General to submit to the Council by July 1992 recommendations for "strengthening and making more efficient ... the capacity of the UN for preventive diplomacy, for peacemaking and for peacekeeping," and further suggesting that the analysis cover the role of the UN in "identifying potential crises and areas of instability"; a worldwide ban on chemical weap-

ons; and greater efforts to restrict the proliferation of nuclear weapons and weapons of mass destruction.

### Mission to Cambodia

In a possible prelude to an equal, if not larger, peacekeeping operation, the Council voted unanimously 8 January to dispatch 1,124 UN personnel to Cambodia. The task of this mission, was to begin clearing mines, and to train local personnel in mine clearance. The force would join the United Nations Advance Mission in Cambodia (UNAMIC) which is already there. The action was prompted by a desire to facilitate the later deployment of the much larger United Nations Transitional Authority in Cambodia (UNTAC).

### Condemning Israeli Deportations

On 6 January, the Council voted unanimously to adopt a resolution that "strongly condemns" Israel's decision to deport twelve Palestinian civilians from the Occupied Territories. It was the strongest language ever backed by the US against Israel in the UN. The vote came as the Jordanian, Lebanese, Palestinian and Syrian negotiators postponed their departures for peace talks in Washington in protest of Israel's plan. After the vote, the delegations announced they would travel to Washington to resume negotiations.

### Yugoslavia's Fragile Cease-fire

On 27 November, the Council voted unanimously to "strongly" urge the parties in the Yugoslav conflict to comply with a cease-fire agreement signed four days earlier in Geneva, Switzerland. However, fighting continued and on 15 December, the Council voted unanimously that "conditions for establishing a peacekeeping operation in Yugoslavia still do not exist." At the same time it endorsed an offer by the Secretary-General to send a small group of military and civilian personnel to prepare for the deployment of a peacekeeping operation. The group was to be attached to the

mission of his personal envoy to Yugoslavia, former US Secretary of State, Cyrus Vance.

On 8 January, the Council voted unanimously to send fifty military liaison officers to Yugoslavia as a cease-fire entered its fifth day (adopted 3 January). It was the fifteenth cease-fire adopted by the warring parties. The liaison officers were posted in the military headquarters of the Serb-dominated Yugoslav National Army and the Croatian People's Guard. Among other things, the role of the officers was to facilitate communication between the two sides and help them resolve difficulties. Council members hoped that the dispatch of the liaison officers would be a prelude to a much larger operation possibly involving up to 10,000 UN troops.

### Embargo Against Somalia

On 23 January, the Council voted unanimously to impose an arms embargo against Somalia and to call for a cease-fire in the ongoing conflict. Prompted by humanitarian concerns, the action was viewed as further proof of the Council's willingness to intervene in domestic conflicts. The UN arms embargo is the fourth currently in effect. Apart from Somalia, they have been imposed against Yugoslavia, Iraq and South Africa.

### Peace in El Salvador

On 14 January, the Security Council voted unanimously to enlarge the mandate of the UN Observer Mission in El Salvador (ONUSAL) to include verification and monitoring of peace agreements. The move came on the same day that Salvadoran rebel and government leaders reached a final peace accord here during UN-sponsored negotiations. Apart from monitoring the separation of the two warring sides, the 1,098 UN personnel will ensure the maintenance of public order while a new national civilian police is created. The peace accord was viewed as another in a long string

of diplomatic victories for the UN in the wake of the Cold War and the efforts by the superpowers to resolve regional disputes.

### UNFICYP's Overdraft

On 12 December, the council unanimously extended the mandate of the UN Peacekeeping Force in Cyprus (UNFICYP) for another six months. During a speech, deputy Canadian Ambassador Philippe Kirsch warned that UNFICYP's financial problems had reached crisis proportions. Over the years, Canada along with Britain and Austria, have sought to have UNFICYP funded through assessed contributions rather than voluntary ones, but a majority of permanent members are not in favour. The result, said Kirsch, is that accumulated arrears in UNFICYP's account stood at US\$186.1 million and continue to grow.

Kirsch also said Canada was disturbed by the lack of a negotiated settlement. He warned, as Ottawa has many times in the past, that if a settlement continued to elude the UN, it would be necessary for the Council to undertake a thorough review of the long-term future of the force. The Secretary-General noted in a report to the Council that UNFICYP's financial crisis "imposes a most unfair burden on the troop-contributing countries."

### Other Council Business

On 23 January, the Council unanimously recommended to the General Assembly that the former Soviet republic of Kazakhstan be granted UN membership. This was the first non-Baltic republic to be admitted. The Council was weighing the application of four others - Armenia, Kyrgyzstan, Uzbekistan and Tajikistan.

On 29 November, the Council renewed the mandate of the UN Disengagement Observer Force (UNDOF) which has been supervising the cease-fire between Israel and Syria since 1974.

- TREVOR ROWE

## REPORT FROM THE HILL

### Foreign Policy Priorities

In a speech on 10 December, the Secretary of State for External Affairs Barbara McDougall outlined three major foreign policy priorities for Canada in the 1990s: strengthening cooperative security, creating sustainable prosperity, and securing democracy and respect for human values.

As defined by the Minister, strengthening cooperative security refers to the desirability of establishing a more cooperative world order based on the rule of law, especially through a stronger UN. Sustainable prosperity means sustaining a high standard of living through improved productivity, an attractive investment environment for industries of the future, and secure access to international markets through international trade negotiations. Securing democracy and respect for human values involves the encouraging of respect for human rights, the rule of law, democratic principles and sound government.

### McDougall's Travels

The Minister visited Kiev, Moscow and Prague for a series of important meetings at the end of January. In Kiev, she held talks with Ukrainian President Leonid Kravchuk and signed a declaration formally establishing diplomatic relations between Canada and the Ukraine, as well as upgrading the status of Canada's consulate general in Kiev to that of an embassy.

From Kiev, McDougall travelled to Moscow where she led the Canadian delegation to the multilateral round of the Middle East peace negotiations, 28 and 29 January. The meeting established five international working groups on key issues affecting the Middle East: arms control, environment, economic development, water shar-

ing, and refugees. Ms. McDougall agreed that Canada would chair the working group on refugees, which is first expected to meet in Ottawa in late April or early May.

Finally, the Minister was in Prague to attend the second meeting of the Council of Ministers of the Conference on Security and Cooperation in Europe (CSCE). In her speech to the Council, she stressed Canada's concern about nuclear non-proliferation and conventional arms transfers. A decision was taken by the Council to admit ten new republics, most of them in Central Asia and the Transcaucasus region, of the former Soviet Union.

### MPs in China

Earlier in January, three Members of Parliament found themselves embroiled in controversy during a visit to the People's Republic of China. The privately-sponsored trip, organized by Chinese-Canadian advocacy groups which have flourished since the 1989 Tiananmen Square massacre in Peking, involved NDP External Affairs critic Svend Robinson (Burnaby-Kingsway), Conservative Geoff Scott (Hamilton-Wentworth), and Liberal Beryl Gaffney (Nepean). During their visit, the MPs had aggressively pursued human rights abuses with an itinerary which included visits with the families of dissidents and a request to visit a normally off-limits Beijing jail holding many prominent political prisoners.

On 6 January, however, the MPs' van was surrounded by about one hundred armed police officers and soldiers who escorted them to the airport and forced them to board a plane bound for Hong Kong. External Affairs Minister McDougall denounced the expulsions as an "affront to the institution of Parliament."

### Peacekeeping Force in Trouble

A report of the Foreign Relations Committee of the United States Senate released on 5 Febru-

ary condemned the United Nations for failing to respond to ceasefire violations and threats by Moroccan forces to fire on unarmed British, American, Canadian and other officers acting as UN military observers in Western Sahara. It suggested that the peacekeeping operation was in jeopardy because of mismanagement and possible financial irregularities. It also stated that the peacekeepers' military commander, General Armand Roy of Canada, was on the verge of recommending that Canada withdraw its military contingent. This was subsequently denied by the Department of National Defence, but it was clear that substantial difficulties persist.

### Activity in the Commons

The House of Commons resumed sitting on 3 February, following its Christmas break. In February, the Commons Committee on External Affairs and International Trade opened a series of four weekly panel sessions on the new republics of the former Soviet Union and Canadian relations with them.

The Commons Defence Committee visited Europe from 29 January through 12 February to examine Canada's security role on the continent. The Committee, chaired by Arnold Malone (Crowfoot), held hearings on the issue before the Christmas break. It travelled to Moscow, Prague, Vienna, Berlin and Brussels.

In early December, the chair of the Commons Committee on External Affairs and International Trade, John Bosley (Don Valley West), spoke at a conference held in Prague, Czechoslovakia, organized by the Canadian Institute for International Peace and Security and the Institute for International Affairs, Prague. The conference was held to discuss and evaluate the future role of the Conference on Security and Cooperation in Europe (CSCE), and its various processes and mechanisms. Mr. Bosley reminded the participants of Canada's founding role in

the CSCE and of the government's commitment to its continued growth and evolution.

### Budget Fallout

On 25 February, Don Mazankowski tabled his first budget since becoming Minister of Finance. The government's determination to fight Canada's deficit without raising taxes had important implications for a number of organizations, including the Canadian Institute for International Peace and Security. In an effort to "streamline" certain governmental operations, a total of forty-six agencies, boards, commissions or corporations were eliminated, consolidated, deferred or privatized. Among those eliminated were CIIPS, the Economic Council of Canada, the Science Council of Canada, and the Law Reform Commission, all with headquarters in Ottawa, and the International Centre for Ocean Development in Halifax.

Bernard Wood, CIIPS Chief Executive Officer, told a 2 March press conference that the Institute would continue to exist until Parliament passed legislation to dismantle it. The Institute was created by an act of Parliament in 1984. However, Wood also said that the Institute's management must take into account "the unequivocal intention of the Government to wind up the Institute and to 'transfer the necessary continuing resources to the Department of External Affairs.'"

Another significant change announced in the budget was to advance the planned withdrawal of Canadian troops from Europe, and to end plans for Canadian involvement in a task force stationed in Europe. Although Canada remains committed to sending a brigade back to Europe in an emergency, the Finance Minister predicted that these and other changes would cut defence spending by a total of \$2.2 billion over the next five years. □

## ARMS CONTROL DIGEST

### New Reductions in Nuclear Weapons

In his State of the Union Message on 29 January, President Bush revealed that he had told President Yeltsin that if the Commonwealth of Independent States (CIS) accepted the earlier American proposal for a total ban on land-based, multiple-warhead (MIRVed) ballistic missiles, the US would reduce the number of its submarine-launched ballistic missile warheads "by about one-third," and would also convert a "substantial portion" of its strategic bombers to "primarily conventional use."

The earlier American proposal had been rejected on the grounds that it would eliminate the strongest element of the (former) Soviet missile force while leaving untouched the submarine-launched and bomber-carried weapons in which the US remains superior.

Under the new Bush proposal, the US would totally eliminate its force of 50 MX missiles with 500 warheads (the most modern element of its ICBM force), 1,000 of its Minuteman III ICBM warheads, and 1,156 of its submarine-launched ballistic missile (SLBM) warheads, as well as a "substantial" but unspecified number of bomber-delivered weapons. Each side would reduce its total of strategic nuclear warheads to between 4,400 and 5,000, in the US case approximately half the number permitted under the START Treaty (and almost 7,000 fewer than at present).

Despite Bush's characterization of Yeltsin's "early response" as "very positive," the Russian President, in a wide-ranging speech on Russian television the following day, did not directly address the American offer. Yeltsin proposed the creation of an international agency for nuclear arms reduc-

tion, eventually to control the entire "nuclear cycle" from the production of fissionable materials to the dumping of nuclear waste.

Regarding strategic nuclear weapons, he announced a series of unilateral cuts and pledged to reduce overall strategic weapons totals to START-mandated levels within three years, instead of the planned seven (or even more quickly, "if there is mutual understanding with the United States"). He also proposed the mutual renunciation of the development of new types of long-range, air-launched cruise missiles; the scrapping of all existing long-range, nuclear-armed, sea-launched cruise missiles; and ending the "combat patrols" of ballistic missile submarines. Finally, Yeltsin announced that proposals for deeper reductions, to the level of 2,000 to 2,500 strategic nuclear warheads on each side, had been prepared. Yeltsin reiterated Russia's allegiance to the ABM Treaty as "an important factor of maintaining strategic stability in the world," but also declared: "We are ready to develop, then create and jointly operate a global defence system, instead of the SDI system."

On other arms control matters, he announced that Russia intended to join the Missile Technology Control Regime; would abandon its reservation to the 1925 Geneva Protocol concerning the right of retaliation with biological weapons; and would adopt domestic legislation to regulate the export of materials, equipment, and technologies that could be used to make nuclear, chemical, or biological weapons or "combat missiles." He indicated there would be a delay in the timetable for the destruction of chemical weapons under a 1990 agreement with the US.

After meeting at Camp David on 1 February, Bush and Yeltsin announced that two summit meetings would be held later in the year. They were unable to reach agreement on any specific arms control proposals, but announced that detailed negotiations would

begin with a visit by US Secretary of State Baker to Moscow in mid-February. The following day, US Defence Secretary Dick Cheney reportedly rejected Yeltsin's proposal for deeper cuts in strategic offensive arms, stressing the importance of preserving adequate numbers of ballistic missile submarines for stability. While calling the Russian proposal for joint missile defence "a major breakthrough," he nevertheless declined to alter the US position against sharing such technology with Moscow.

### North Korea and the Bomb

Concern escalated during the fall about North Korea's suspected nuclear weapons programme. The North signed the Non-Proliferation Treaty in 1985, but had since failed to meet the requirement to conclude a safeguards agreement with the International Atomic Energy Agency (IAEA).

On 11 December, at a meeting of the two Korean prime ministers, South Korea disclosed that all US nuclear weapons had been removed from its soil and proposed simultaneous "pilot" inspections of the Kunsan Air Base in the South (where the last American nuclear weapons were believed to have been stored) and Yongbyon in the North (where a reprocessing facility was believed to be under construction). Two days later, the two Koreas signed an Agreement on Reconciliation and Non-aggression. Among other things, it called for the creation within three months of its entry into force of a "Joint Military Committee" to "discuss and carry out" various confidence-building measures and phased arms reductions.

After a series of expert meetings at the end of December, North and South declared agreement in principle not to "test, manufacture, produce, accept, possess, store, deploy or use nuclear weapons" or "possess nuclear reprocessing and uranium enrichment facilities," and to "implement inspections of installations selected by the other

side and agreed upon by both sides," following procedures to be specified by a Joint Committee for Nuclear Control to be set up one month after the Declaration's entry into force. North Korea also reportedly promised to sign and ratify the IAEA safeguards accord before the next prime ministerial meeting in February if the US and South Korea cancelled their annual "Team Spirit" military exercises (which they announced a week later they would do).

The Non-Nuclearization Declaration was signed by the two prime ministers on 20 January, and expected to enter into force (along with the Reconciliation and Non-aggression Agreement) a month later. On 30 January, the North signed its IAEA safeguards agreement, but a senior official reportedly suggested that the ratification process could take as long as six months. In direct talks with the North, the US was said to have given it a deadline (possibly April) to allow inspection of its nuclear sites or face international sanctions. Many analysts feared that a delay, especially given the Iraqi experience in successfully hiding its nuclear weapons program from IAEA inspectors, would allow North Korea to do likewise.

### UN Arms Register Created

The UN General Assembly on 9 December voted 150-0, with two abstentions, to establish a Register of Conventional Arms. The proposal grew out of an old idea, revived by Canadian Prime Minister Mulroney in February 1991, to discourage excessive arms transfers by publicizing them. The voluntary register, opened on 1 January 1992, initially applies only to transfers of battle tanks, armoured combat vehicles, large calibre artillery systems, combat aircraft, attack helicopters, warships, missiles, and missile systems. An expert group is to report next year on ways of extending it to include lighter arms, production sites, and national weapon stocks.

## REVIEWS

### **Battle Lines: The American Media and the Intifada** Jim Lederman

New York: Henry Holt and Company,  
1992, 342 pp., \$37.95 cloth

Jim Lederman's study is not so much about the media and the *intifada*, as about the way in which international protagonists, policy-makers and the fourth estate are caught in a dangerous dance of manipulation and influence. Lederman's exploration of this dynamic "information loop" raises important issues about the power and responsibility of the media in the new information age.

Lederman grounds his analysis in long field experience in the region: a foreign correspondent stationed in Jerusalem since 1966, he has worked for the Canadian Broadcasting Corporation and National Public Radio. A great strength of this work is that the analysis does not treat the media's reaction to the *intifada* as a piece of isolated history. The author deftly illustrates that the reporting that took place during the *intifada*, and the *intifada* itself, were the result of cumulative incremental changes in relationships and perceptions of the four protagonists he analyzes: Israel, the Palestinians, the American media and American foreign policy makers.

The author's desire to provide historical context to his analysis is laudable, yet in a book of such an ambitious scope, gaps are inevitable. The danger with gaps when writing on the Middle East is that they can be regarded as an indication of bias. Scholars and journalists alike have suffered attacks against their "objectivity" while treading in this political minefield.

Although no political agenda is declared, *Battle Lines* is a political book. Lederman is skilled at dishing out criticism to all of the players he scrutinizes; however, he is much less attuned to the nuances on the Palestinian side of the divide. One gap in understanding is the failure to capture the dynamic nature of the interaction between Palestinians resident in the occupied territories and those living in the diaspora. This linkage is important because it plays a principal role in creating grassroots support for the Palestine Liberation Organization (PLO) among Palestinians in the occupied territories. Lederman uncritically subscribes to the argument that there is no indigenous support for the PLO and that the PLO imposes its leadership there through cooptation and intimidation. No doubt this was one tool employed by the PLO to guard against rival leadership from time to time, however, it is only part of the story and belittles the genuine grassroots loyalty to the organization.

This same paradigm is used to negate the role of the PLO in the unfolding of the *intifada*. Lederman is accurate when describing the frustration of the younger generation of Palestinians at the corruption of the "cadillac revolutionaries." But again, this is only part of the story. The widespread Palestinian recognition of the problems in the PLO and the need for reform is more akin to airing dirty laundry than disowning the PLO entirely.

Lederman's impatient dismissal of the *intifada*'s political impact is curious given his obvious concern for history:

The PLO's inability to extricate itself from its old and bankrupt presumptions was the death knell for the *intifada*. The eventual tacit acceptance of Israel's right to exist extracted by the

United States from Yasir Arafat that autumn with such obvious difficulty was too little, too late. By the fall of 1988, one year after it began, the fate of the *intifada* had been decided.

True, the PLO was unable to fully seize the political opportunity presented by the *intifada*, but it can be argued that there has been a fundamental shift in the way in which the international community perceives the Palestinian problem. The current peace process, the leverage that the US is willing to mount against Israel, and the recognition of the centrality of the Palestinian question, is in part a function of the learning curve of an international community (especially North American audiences) highly influenced by the *intifada*.

A final example of insensitive political interpretation is the one-sided use of the word "terrorism." Lederman uses the term often to describe violent Palestinian acts against both civilian and military targets. However, many journalists working in the Middle East concur that the word "terrorism" has been so widely abused in Middle East politicking, it has become virtually meaningless. Robert Fisk, veteran Middle East correspondent, has written: "'Terrorism' no longer means 'terrorism.' It is not a definition; it is a political contrivance. 'Terrorists' are those who use violence against the side that is using the word." If the term is to be used at all, it should be applied evenhandedly, regardless of the nationality of the perpetrators.

This book's true value is that it raises important issues concerning the impact of the media on foreign policy decision making: why are some countries chosen for coverage and others not; is the reporting fair to all parties to a conflict; what is the place of the press in the modern political firmament; how much of a story is shaped by a reporter's personality and views.

In a fascinating expose of what he calls "Washington rules,"

Lederman contends that the American media are driven by the need to make highly complex problems both comprehensible and relevant to "Joe-Six-Pack." Once a simplistic story-line has become entrenched, it can distort the perception of events, preventing both journalists and audiences from acquiring new understanding. It is in the discussion of this "information loop" that *Battle Lines* makes a singular contribution.

As described by Lederman, the loop works this way: a correspondent's report on an event or conflict, together with reaction from US officials if the story is important enough, gets looped back to the local population by satellite or facsimile, shaping the perceptions and actions of the local participants. Lederman says that in the case of the *intifada*, this feed-back caused Palestinians to realize that had carried their cause to the highest echelons of the American administration, adding further momentum to the uprising. Meanwhile, television images created pressure in the US for immediate action, resulting, in this instance, in Secretary of State George Schultz's ill-fated peace mission. The media helps to make revolution in foreign lands, then walks away to leave the consequences to the local people.

While *Battle Lines* is bound to create controversy, it would be a shame if the debate focussed only on Lederman's political interpretations to the exclusion of his piercing analysis of the relationships between the media and policy-makers. — Deirdre Collings

## LETTERS TO THE EDITOR

### Why We Are In Europe

Regarding the back-to-back of articles on Canadian defence policy ("Defence Policy for Nice Country") and European security ("Waking Up to Reality in Post-Revolution Europe") in your Autumn 1991 edition: It would have been useful to have [had] an unfortunately-absent third article. Desmond Morton stated the obvious in noting the importance of examining the entrails of the past when attempting to peer into the fog of the future. We appear once again determined to undertake one of our periodic withdrawals into our North American shell while awaiting to be drawn into the next European conflict. That this has occurred twice in this century already seems of little consequence.

Very little has changed in Europe. A unified multi-polar Europe was to be the motor for a new world order. Instead, it has produced yet another conflagration in the Balkans, the disintegration of the Soviet empire, and a resurgent Germany. Hardly the recipe for a peaceful future. Canadian strategic priorities obtain from our geographic position in the world and our traditional historical relationships with other nations – strong ties with Europe, and a need to balance the overwhelming influence of the US in North America.

Unfortunately, National Defence policy planners, in constantly seeking to reinvent the wheel, seem to be no students of history. Missing the obvious connection between current events in Europe and the future of Canadian security highlights the chronic myopia of Canadian political and military decision-makers. It implies that we are doomed to distinguish ourselves once again in future battles which we should have been able to prevent in the first place.

Canadian security interests are best defended by preventing conflicts beyond our shores. Active engagement – politically, economically and militarily – in the restructuring of post-Cold War Europe is the most effective means of ensuring these security interests are met.  
*R.E. Stansfield, Aylmer, Quebec*

### Stein and Gray, Comic Relief

The articles by Janet Gross Stein and Charlotte Gray [Autumn, 1991] on the aftermath of the Gulf War in the Middle East and Canada provided welcome comic relief. Stein writes that the war was "launched to defend the principle of state sovereignty and the legitimacy of state borders," while Gray claims that "for the first time ever, in August 1990, the Security Council was unanimous."

The Security Council has come to many unanimous decisions, but some are rather instructive. Consider the Security Council's 15-0 vote on 5 June 1982 calling for a ceasefire along the Israel-Lebanon border. (Israel replied by invading Lebanon the next day.) That day a unanimous vote demanded that "Israel withdraw all its forces forthwith and unconditionally to the internationally-recognized boundaries of Lebanon." However, no steps were taken to enforce these and many other resolutions and Israeli soldiers remain in southern Lebanon.

Consider the 15-0 vote on 22 December 1975 after the Indonesian army's invasion of East Timor, demanding that Indonesia "withdraw without delay" and "respect the territorial integrity of East Timor." However, as with the votes on Lebanon, this was just a show. The

American UN Ambassador, Daniel Moynihan, had orders from the State Department to ensure that "the United Nations prove utterly ineffective in whatever measures it undertook," as he candidly explained in his memoirs. Thus Indonesian soldiers remain in East Timor. So much for the "principle" of sovereignty and the legitimacy of borders.

Stein also states "the three principal American political objectives for the post-war period": "economic redistribution from rich to poor in the Arab world, expansion of political participation, and a resolution of the Arab-Israeli conflict." She rightly concludes that "none are likely to be met." But were these the real post-war American objectives or just propaganda?

Previous strong US support for anti-democratic Arab monarchies and dictatorships (who have no interest in income redistribution) and two decades of blocking an Arab-Israeli settlement offer more than a little evidence. Stein invites us to believe that US planners are altruistic bumblerers who seek peace, democracy, and a just distribution of income for people less fortunate than themselves. They utterly fail to attain these noble goals, but apparently by accident attain for the US unprecedented power and influence. As Daffy Duck likes to say, "It is to laugh." *Rod Hill, Department of Economics, University of New Brunswick, Saint John*

### Defining Journalistic Boundaries

With regard to Jean Pelletier's "When To Speak Out, When To Keep Silent," [*Peace & Security*, Winter 1991/92] I covered the same

story from Teheran that he did – the 444-day American hostage crisis. I admired his journalism but I take issue with two of his hypotheses: "The ayatollahs knew in November '79 that in order to get their own way with the US, they would have to reach into the living rooms of America," Pelletier writes.

First, there was no cabal of ayatollahs plotting strategy against the Americans. By then, Khomeini was the single source of spiritual guidance of the largely Western-educated cabinet of Mahdi Bazar-gan. The other four grand ayatollahs had been shunted aside. Second, neither Khomeini nor the populist Islamic grassroots movement cared a whit about the West. The ones who did – Bazargan and his cabinet of westernized technocrats – were overthrown precisely because of it. Third, the hostage-taking was engineered by a few dozen angry, mis-guided students. There's no proof that the government, let alone Khomeini, had advance knowledge.

The siege did take on a life of its own, especially with increasing American media and White House attention. It was then hijacked by militant clergymen to force out the moderates and grab power. But the event certainly was not an ayatollah-ian plot to "blackmail" Jimmy Carter through TV images.

In his prescription for media reportage of hostage-taking, Pelletier writes: "The search for truth demands caution and a sense of what the boundaries are." Fine, except that he never defines those boundaries. It's one thing to bemoan, as he does, American proclivity to exaggeration – hyped-up hostage news coverage, yellow ribbons, xenophobia. It's quite another to come up with sensible guidelines for reporting hostage-taking incidents, international or local. Would Pelletier have not aired the FLQ communique, while the lives of Pierre Laporte and James Cross hung in balance?

*Haroon Siddiqui, Editorial Page Editor, The Toronto Star*

### Institute Grants and Scholarship Programmes – An Important Notice

With the winding up of the Canadian Institute for International Peace and Security, the future of its grants and scholarships programmes (as well as all its other programmes) is not known. We intend to honour existing commitments and to obtain the earliest possible indications from the Government of whether it will be possible to proceed further with existing competitions for scholarships and grants. All applicants will be advised as soon as any information is available. In the meantime, they are requested not to contact our offices on this matter.

## LETTER FROM PRAGUE BY SUSAN GREENBERG

**The pictures on the evening news were compelling, and the whole country watched. The television clip showed leading figures in the Czechoslovak parliament, radical advocates of the anti-communist "purge," displaying secret files to an American journalist to prove their point about a disputed case.**

Just a few weeks earlier, one of them, parliamentary deputy Stanislav Devaty, had denied ever meeting the journalist. His special investigating commission had allowed its evidence against fellow deputy Jan Kavan – accused of being a police collaborator – because of the need to protect state secrets.

At the very least, then, the film appeared to catch a blatant lie; at most, a criminal offence. The hunter was being hunted. The "Commission-gate" episode which ended the January session of parliament dominated the news, not least because the commission had set itself up as a guardian of moral purity. Parliament devoted hours of drawling discussion to the issue, ignoring piles of urgent legislation.

The accused commission members responded with a paranoia which typifies the current mood of Czechoslovakia; they argued that the television clip should not have been shown and denounced a plot to discredit their work. Anything which makes them look ridiculous was subversive because it made parliament and democracy look ridiculous – so the ridicule must stop.

The Kavan case is controversial, and will probably be debated for years to come. But Commission-gate was not the only thing to weaken parliament's popularity. Just a few days earlier, the session had thrown out a whole set of proposals offered by the president, arch-democrat Vaclav Havel, to prevent a constitutional crisis over Slovak demands for greater autonomy. They would have allowed him more powers to break a deadlock in parliament – for example, by calling a referendum.

It was not just a personal defeat for Havel, it was a defeat for parliament too. A constituent assembly elected nearly two years ago after the "velvet revolution" had failed in its specified task to agree on a new constitution. Havel launched the initiative two months earlier, when politicians failed again to agree on a formula to keep the country together. In dramatic speeches – including an appearance at a balcony above Wenceslas Square – he called on the public to take the matter out of the hands of politicians by showing their support for a referendum.

**"The changes, designed to make an unworkable parliament more workable, couldn't pass because the parliament was already unworkable."**

Over a million signatures were piled high on the parliament's plenum to meet his call, but the gesture meant nothing. The changes, designed to make an unworkable parliament more workable, couldn't pass because the parliament was already unworkable. A split of the country into Czechs and Slovaks is still hanging over the horizon – an ever-present worry, like having a friend with a terrible illness and always expecting the telephone to ring with news of the worst.

But now there is something to take everyone's minds off the problem – "Kuponova privatizace." In a country where the word "stock market" used to be criminal, every teacher and taxi driver discusses how to invest their coupon books and swap tips about companies. Once the sell-off begins in earnest,

probably in April, the coupon books can be exchanged for shares in the thousands of state-owned companies being sold to private hands – the biggest mass-privatization in history.\*

There have been inevitable problems and fears, fuelled by the complete lack of regulation and the growth of investment management funds. Especially to Western eyes, accustomed to gloomy stories of financial scandal, the behaviour of many local funds is alarming. Many have made risky promises of "guaranteed" high returns – at odds with the experimental nature of the programme – and others have been criticized for aggressive selling techniques. Agents of one fund were found promising food hampers to the inmates of an old people's home if they signed over their coupon books.

The funds have taken their cue from the finance ministry in charge of the whole scheme, which argued for minimal regulations. Finance

the politician is now clearly paramount. His former close friend Tomas Jezek, privatization minister for the Czech republic, has argued several times for a delay in the launch of the voucher scheme. He was concerned to encourage competing projects for each business, so the current "old structure" company managers didn't win control by default.

More recently, he has argued that people would have been encouraged to invest directly into a company as the government preferred, rather than rush to the funds, if the finance ministry had waited until a list of companies available had been made public before the scheme opened for business. Mr. Klaus has resisted any delay on economic grounds, saying it would cost the country money and give the wrong message about their determination to press ahead with quick change. But he also has a political agenda. Each voucher has the finance minister's signature on it, and he has calculated on vouchers turning into votes at the June elections.

After two generations of unfreedom, it is hard to find the right balance. Extreme mood swings – from total state control to official chaos – are all part of growing up. But it can lead to some trying moments. That's why the courts in Bratislava are frightened to risk charges of censorship by bringing charges against the Slovak publisher of the notorious anti-semitic forgery, *Protocols of the Elders of Zion*. That's why the manager of a trendy – and noisy – new disco pooh-poohs the hurt feelings of local residents, and insists that planning permission is unknown in a market economy.

And that's why the car park attendant outside my home, dreaming every night of the car that got away, screamed "Bolshevik!" when I insisted on my right to free residents' parking. □

– Susan Greenberg is the Prague correspondent for the British daily *The Guardian*.

\*Book of coupons or vouchers are purchased by Czechoslovak citizens and can be invested, singly or in multiples, into various state-owned enterprises. This can be done in two ways, directly into an industry or factory of the coupon-holder's choice, or by signing over coupons to "investment funds" which, in exchange for future returns, accumulate large numbers of coupons for investment in many enterprises. Some eight million people have purchased coupons, twice as many as was anticipated.

## LETTRE DE PRAQUE

PAR SUSAN GREENBERG

Les images aux informations du soir  
étaient convaincantes, et tout le pays  
les regardait.

On y voyait des personnages clés du

Partement tchécoslovaque, partisans

communistes, montrer des dossiers

secrès à un journaliste américain

pour étayer leur argument dans l'af-

faire. Quelques semaines plus tôt,

il n'avait nié avoir jamais rencon-

tré le journaliste. S'abritant derrière

le secret d'État, sa commission

refusait d'expliquer quelles preuves

elle détenait contre un autre député,

M. Jan Kavan, accusé d'avoir

collaboré avec la police.

Les images télévisées révélèrent

donc, pour tout le moins, un flagrant

mensonge et, au plus, un acte cri-

minel. Le chasseur était chassé.

L'épisode de la « commission-gate »

dominait les nouvelles, surtout

parce que la commission s'était

constituée en gardienne de la pureté

moral. Oubliant des piles de lois

conscrites des heures épuisantes à

débatte du sujet.

Les membres de la commission

mis en cause réagirent en faisant

preuve d'une paranoïa typique de

l'humour accablée en Tchécoslo-

vaquie. Ils firent valoir que le re-

portage n'aurait pas dû être diffusé

et dénoncèrent un complot visant à

discréditer leur travail. Tout ce qui

les rend ridicules est subversif parce

que la démocratie elle-même est

ridiculisée par contre-coup. Il faut

donc que cesse le ridicule.

L'affaire Kavan est controversée

et on en parlera probablement pen-

dant des années encore. Mais ce

scandale n'est pas la seule chose qui

fait fléchir la popularité du Parle-

ment. Quelques jours à peine avant,

des députés avaient rejeté tout un

ensemble de propositions formulées

par le 6<sup>e</sup> comblen démocraté presi-

dent Vaclav Havel afin d'empêcher

que les revenanticoes d'autonomie

accrue des Slovaques provoquent

une crise constitutionnelle. Eussent-

elles été acceptées, le président

aurait disposé de plus de pouvoirs

pour sortir le pays de l'impasse

parlementaire, en demandant un

référendum, par exemple.

Il ne s'agit pas seulement d'une

détailée personnel pour Vaclav Havel.

mais aussi d'un échec pour les par-

lementaires. Une assemblée consti-

tuante, élue il y a bientôt deux ans à

l'issue de la « révolution de velours »,

ne s'est pas acquittée de son mandat

précis, à savoir : s'entendre sur une

nouvelle constitution. Le président a

lancé l'initiative deux mois après la

van, alors que la classe politique

n'était toujours pas parvenue à con-

venir d'une formule pour préserver

l'unité du pays. Dans des discours

théâtraux, dont un prononcé d'un

balcon qui domine la place Vences-

las, scène des grands rassemblements

de la révolution, il a appelé la popu-

lation à prendre les choses en mains

en se montrant favorable à un

référendum.

Plus d'un million de signatures,

nombre important pour un si petit

pays, se sont emmassées sur le bureau

du plénum de l'assemblée en réponse

à cet appel, mais sans résultat. Les

grande opération de privatisation

II y a d'énormes problèmes et

des cratères, alimentées par une ab-

sence totale de réglementation et par

la croissance des caisses ou fonds -

ments et, idéalement, répartissent-

les risques. Les Occidentaux notam-

ment, habitués à de sombres histoires

de scandales financiers, jugent alar-

quant le comportement de nombreux

financiers locaux. On a découvert que

des employés d'une caisse promet-

taient des paniers de nourriture aux

personnages d'une maison de re-

traite s'ils leur confiaient leurs livrets

de coupons. Par ailleurs, il n'existe

rien pour prévenir des délits d'inités.

Les caisses prennent exemple sur

le ministre des Finances, respon-

sable de toute l'opération et qui prône

une réglementation minimale. Le

ministre des Finances Vaclav Klaus,

qui s'enorgueillit de favoriser les

seules forces du marché, est aussi à

la tête du plus important parti de

droite, le Parti démocratique civique.

Pour lui et pour ses partisans, règle-

mentation égale socialisme, et les

conseillers occidentaux prudents

n'ont rien d'utile à dire parce qu'ils

ne « connaissent pas la situation lo-

cale ». N'empêche, il a reconnu que

la popularité de ces caisses est une

surprise décevante et il a dû répon-

dre aux pressions du gouvernement

qui lui demandait d'accélérer la

réglementation.

Cette dernière année, Klaus l'éco-

nomiste et Klaus l'homme politique

se sont livrés bataille, or c'est ce der-

nier qui l'emporte manifestement.

Son ancien proche Tomas Jizek,

ministre de la Privatisation pour la

\* Les citoyens tchécoslovaques achètent

des livrets de coupons ou de bons qu'ils

peuvent investir séparément ou non,

dans diverses entreprises d'État. Le dé-

tournement de coupons peut soit les investir

directement dans un secteur d'activité ou

une usine de son choix, soit les confier à

des « caisses ou fonds d'investissement »

en accumulant de grands nombres dont

ils diversifient le placement. Quelque

8 millions de personnes ont acheté des

coupons, soit deux fois plus que prévu.

république tchèque, a préconisé

plusieurs fois de repousser le lance-

ment de l'échange des coupons. Il

tenait à encourager des emplois, de

currents pour chaque entreprise,

structure actuelle n'en prenait

pas la direction par défaut, et il

voulait plus de temps pour que son

ministère puisse s'acquitter du

travail supplémentaire.

Plus récemment, il a fait valoir

que, si le ministère des Finances

avait attendu qu'une liste de com-

pagnies privatisables soit publiée

avant de lancer l'opération, les gens

auraient été encouragés à investir

directement dans une société, comme

le gouvernement le préférerait, plutôt

que de se ruier sur les caisses et autres

fonds. M. Klaus a refusé tout suris

pour des raisons économiques en

affirmant que retarder l'opération

coûterait cher au pays et donnerait

de mauvais messages quant à sa déter-

mination à effectuer rapidement des

changements. Mais il a aussi un pro-

gramme politique. Chaque coupon

porte la signature du ministre des

Finances, qui fait le calcul suivant :

ces coupons se transfèrent en

voix aux élections de juin. « Tous

ceux qui ont acheté des livrets partent

en fait sur Klaus et donc sur nous »,

a déclaré un proche allié politique.

Après deux générations de musc-

lage, il est toujours difficile de trou-

ver le juste équilibre. Les mouvements

de balanciers extrêmes, soit le pas-

sage d'un complet contrôle étatique

ou au chaos officiel, font partie de l'ap-

prentissage de la liberté. En revanche,

ils peuvent causer quelques épreuves.

C'est pourquoi les tribunaux de

Bratislava craignent d'être taxés de

censure en incriminant l'édifice slo-

vaque des *Protocoles des sages de*

*Slon*, célèbre faux antisémitique. C'est

pourquoi le directeur d'une nouvelle

stationnement devant chez moi, qui

à la hantise des resquilleurs, m'a

hurlié « Bolchevique ! » lorsque j'ai

gratuité en tant que locataire. □

dante à Prague du quotidien  
britannique The Guardian.

Pourquoi nous sommes en Europe

Je suppose que présenter à la suite, dans un numéro de l'automne 1991, un article sur la politique de défense canadienne (Savor prévoir) et un autre sur la sécurité européenne («Querelles d'Europe nouvelle») était une décision stratégique visant à montrer une relation inhérente entre les deux. Il aurait donc été utile d'examiner de près cette relation dans un troisième article, malheureusement absent.

Desmond Morton parle d'évidencede lorsqu'il fait remarquer qu'il est important d'examiner les traités de la Guerre froide que l'on pourra le mieux veiller sur nos intérêts.

R.E. Stansfield, Ayliner (Québec)

Les intérêts de la défense canadienne sont mieux défendus en prévenant des conflits à l'étranger qu'en y prenant part. C'est en participant à la résolution de la crise des Balkans, nous avons fait passer de la guerre à la paix.

Les articles de Janice Gross Stein nous ont fait sourire

## LIVRES

### L'un sans l'autre

André Fontaine  
Éditions Fayard, Paris, 1991.  
372 pages, 34,95 \$

En dépit de l'avertissement fait

au lecteur qu'il ne s'agit pas ici d'un livre d'histoire, c'est bien de cela

qu'il s'agit dans ce merveilleux petit livre écrit d'une plume alerte et

toujours pertinente. Après l'annonce de la fin de l'histoire par Francis Fukuyama, on parle

de la revanche de l'histoire sur la politique. Il faut remercier Fontaine d'avoir écrit ce livre. Il

vient, à point nommé, dresser un magistral bilan des grandes lignes de l'histoire américaine, celle de l'Europe et du Japon, ainsi que celle que

l'on appelait encore hier l'URSS. Le lecteur trouvera dans ces lignes

du Fontaine à son meilleur, car il brosse à grands coups de pinceaux

historiques les réalités profondes des transformations de la

« L'un sans l'autre » se subdivise en trois parties. La première retrace les

pépites des naufrages de la planète Marx; la seconde est consacrée aux

grands bouleversements qui agitent le Sud, y compris le réveil des religions et le retour au fondamentalisme

religieux – en passant par l'hindouisme, l'islamisme et le judaïsme, sans oublier de retracer les opposi-

tions millénaires entre l'Europe et le Proche-Orient –, et la troisième situe le Japon sur le grand échiquier

international. Relativement au Japon, Fontaine insiste à bon droit sur le

fait qu'il n'est pas « d'autres exemples de civilisation qui se soit développée aussi à l'écart de l'Europe et

loupée aussi à l'écart de l'Europe et au défi de la modernité ». L'auteur, cela va de soi, reste prudent. Tout le monde sait et craint le

tourman magistral que vient de prendre l'histoire après la chute du mur de Berlin, la réunification allemande, la dislocation de l'empire soviétique,

et la guerre du Golfe dont les États-Unis sont sortis à ce point victorieux qu'on est en droit de se demander si

le monde n'est pas devenu du même coup unipolaire. Fontaine a raison de trouver l'image excessive, car « un globe ne peut avoir un seul pôle ». De toute façon, écrit-il, « la spéculation mondiale en puissance des vaincus de la dernière guerre, face à des empires fatigués pour l'un, ruine pour l'autre, relativise le poids, dans la compétition internationale, de la composante militaire ». Ceci étant dit, Fontaine ne manque pas de noter ce que les démocrates reprochent au Parti républicain de Bush : les énormes problèmes intérieurs de la société américaine. Il se pourrait même que la grande Amérique soit reploi sur elle-même. Les Américains annoncent pour 1995 « la fermeture des dix mille six cents bases à l'étranger, et la réduction de moitié – de 300 000 à 150 000 – de leurs effectifs en Europe ».

L'interrogation fondamentale de Fontaine est centrale à son ouvrage. L'Amérique n'a jamais été aussi près d'exercer l'hégémonie mondiale. Il est grand temps pour l'Europe et le Japon de se réveiller, « si elle ne veut pas que le nouvel ordre international en gestation consacre son effacement ». L'auteur évoque à juste titre la marche de l'Europe vers son

notion économique et politique. Il nous rappelle que l'histoire de la

« L'un sans l'autre » se subdivise en trois parties. La drogue, l'argent et les armes

Alain Labrousse  
Éditions Fayard, Paris, 1991.  
485 pages, 41,95 \$

Les lecteurs des diverses collections de *L'état du monde* sont familiers avec le nom d'Alain Labrousse

qui a signé, de 1988 à 1990, trois articles sur le sujet de la drogue et de la politique. Le même auteur a aussi

à son actif sept ouvrages sur divers pays sud-américains, qu'il a écrit seul ou en collaboration, entre 1971

et 1989. Alain Labrousse est aussi membre de l'Observatoire géopolitique des drogues, « association qui conduit des recherches sur les contextes militaires, politiques et sociaux de la production et du trafic des drogues ». Il était donc tout désigné pour publier une somme sur « la drogue, l'argent et les armes ».

Outre ses propres enquêtes et enrevues, Labrousse semble avoir lu tout ce qui s'est publié d'important sur le sujet au cours des dernières années. Cependant, le procédé a le défaut de ses qualités. Son livre fournit de chiffres, de noms et de dates, mais il manque d'une certaine profondeur anthropologique. Nous faisons le tour du monde de la

drogue et de l'argent pour en sortir un peu étourdi – pour ne pas dire drogué – par tant de détails et si peu de mises en perspective. Qu'on en juge par la table des matières de ce bouquin. Le prototype est une longue entrevue en argot parisien avec un jeune drogué français recouvert à l'aide humanitaire en Afghanistan. Puis nous sautons dans la première partie sur les « armes de l'héroïne », où l'auteur nous transporte en neuf chapitres du Pendjab à l'Indonésie en passant par le Liban, les Balkans, la Sicile et

visée en six chapitres, est consacrée aux « armes de la cocaïne » et elle traite de la quasi-totalité des pays de

l'Amérique latine et des Caraïbes. Enfin, la troisième et dernière partie ne comporte que deux chapitres dont l'un porte sur les États-Unis tandis que l'autre est consacré à certains pays latino-américains. Il n'y a pas de conclusion, et le lecteur est abruti par des membres et correspondants de l'Observatoire géopolitique des drogues, soit environ quatre-vingt chercheurs, journalistes et organismes rattachés au domaine. Heureusement, Labrousse a ajouté la table qui illustre bien la production, la table des tableaux statistiques

## CONDENSÉ SUR LA LIMITATION DES ARMEMENTS

### Nouvelles réductions des armements nucléaires

Le 29 janvier, dans son message

sur l'état de l'Union, le président Bush a révélé avoir dit au président Eltsine que, si la Communauté des États indépendants (CEI) acceptait la proposition antérieure de Washington d'interdire totalement les missiles balistiques mirvés basés au sol, les États-Unis réduiraient «d'un tiers environ» le nombre des ogives montées sur leurs missiles balistiques lancés depuis des sous-marins et confirmeraient une «part substantielle» de leurs bombardiers stratégiques pour «une utilisation essentiellement classique».

La proposition précédente avait été rejetée parce qu'elle aurait privé l'ex-arsenal soviétique de missiles de son point fort sans toucher aux ogives lancées depuis des sous-marins ou aéroports, domaine dans lequel les États-Unis gardent la supériorité. George Bush propose à présent que les États-Unis éliminent totalement leurs missiles MX, soit cinquante unités plus 500 ogives (l'élément le plus moderne de leur force ICBM), 1 000 des ogives ICBM qui équipent leurs *Minuteman III* et 156 des ogives montées sur les missiles balistiques à lanceurs sous-marins (SLBM), plus un nombre «substantiel» mais non précisé d'engins largués par des bombardiers. Les deux parties ne conserveraient que 4 400 à 5 000 ogives nucléaires stratégiques, soit pour les États-Unis environ la moitié moins que les y autorises le Traité START (et presque 7 000 de moins qu'actuellement).

Bien que le président Bush ait qualifié la «première réaction» de Boris Eltsine de «très positive», ce dernier, dans une allocution diffusée le lendemain à la télévision russe et dans laquelle il abordait de nombreux sujets, n'a pas parlé directement de la proposition américaine. En revanche, il a proposé de créer une agence internationale pour la réduction des armes nucléaires qui, par la suite, surveillerait tout le «cycle nucléaire», de la production de matières fissiles à l'élimination des déchets nucléaires.

S'agissant des armes nucléaires stratégiques, il a annoncé une série de réductions unilatérales et il s'est engagé à abaisser le nombre de aux seuls convenus dans le Traité START en trois ans, au lieu des sept prévus (voir plus rapidement,

«en cas d'entente mutuelle avec les États-Unis»). Il a aussi proposé que les deux puissances renouencent d'un commun accord à mettre au point de nouveaux types de missiles de croisière à longue portée et qu'elles éliminent tous les missiles de croisière nucléaires de longue portée à aéroports de longue portée; qu'elles éliminent tous les missiles nucléaires stratégiques alignés de part et d'autre, avaient été préparés. Il a répété que la Russie continuerait de respecter le Traité ABM, «facilement importun du maintien de la stabilité stratégique dans le monde», mais il a également déclaré : «Nous sommes prêts à élaborer, puis à créer et exploiter conjointement un système de défense mondial qui remplacera le système IDS.»

Toujours à propos de la limitation des armements, il a fait savoir que la Russie entendait adhérer au Régime de contrôle des technologies relatives aux missiles, qu'elle abandonnerait ses réserves relatives au Protocole de Genève de 1925 concernant le droit d'utiliser des armes biologiques en représailles, et qu'elle adopterait une législation nationale qui réglementerait l'exportation de matières, menterait l'exportation de matières de matières et de techniques pour servir à fabriquer des armes nucléaires, chimiques ou biologiques clés, les missiles de combat». Il a précisé qu'il y aurait du retard dans le calendrier de destruction des armes chimiques arrêté dans un accord conclu en 1990 avec les États-Unis et annoncé qu'en 1992, il n'y aurait pas de manœuvres militaires engageant plus de 13 000 soldats dans aucune région européenne ou asiatique de la CEI.

Après leur rencontre de Camp David, le 1<sup>er</sup> février, M.M. Bush et Eltsine ont annoncé deux réunions au sommet pour cette année. Ils n'ont pu s'entendre sur aucune des propositions relatives à la limitation des armements, mais ils ont révélé que des négociations détaillées commencent à la mi-février avec une visite du secrétaire d'État américain James Baker à Moscou. Le lendemain, le secrétaire à la Défense des États-Unis, M. Dick Cheney, aurait rencontré des premiers ministres, en février, si les États-Unis et la Corée du Sud annulaient leurs manœuvres militaires annuelles baptisées «Ebs» (pour «équilibre») ce qu'ils ont accepté, a-t-on appris une semaine après).

La Déclaration de non-nucléarisation a été signée le 20 janvier par les deux premiers ministres. Elle doit entrer en vigueur le 20 février, tout comme l'Accord de réconciliation et de non-agression. Le 30 janvier, le Nord a signé son accord de garanties avec l'AIEA, mais un haut fonctionnaire aurait laissé entendre que le processus de ratification pourrait durer six mois. Dans des pourparlers directs avec Pyeong Yang, Washington aurait fixé un ultimatum (peut-être avril) : soit le Nord autorise l'inspection de ses sites nucléaires, soit il s'expose à des sanctions internationales. Beaucoup d'analystes redoutent qu'à la faveur d'un succès, les Nord-Coréens réussissent, comme les Irakiens, à dissimuler leur programme nucléaire militaire aux inspecteurs de l'AIEA.

Le 9 décembre, par 150 voix, aucune opposition et deux abstentions, l'Assemblée générale de l'ONU a créé un Régistre des armes conventionnelles. La proposition s'inspirait d'une vieille idée, relancée en février 1991 par le premier ministre du Canada, M. Mulroney, et visant à décongréter, par la publicité qui en est faite, les transferts d'armement excessifs. Dans un premier temps, le registre volontaire, ouvert le 1<sup>er</sup> janvier 1992, répertorie les transferts uniquement dans les catégories suivantes : chars de combat, véhicules blindés de combat, avions de combat, missiles et systèmes de guerre, missiles, Un groupe d'experts doit remettre l'an prochain un rapport sur les façons d'étendre le registre aux armes plus légères, aux lieux de production et aux arsenaux nationaux, ce afin qu'il soit moins discriminatoire à l'égard des États importateurs d'armes.

# EN DIRECT DE LA COLLINE PARLEMENTAIRE

## Les priorités de la politique extérieure

Dans une allocution prononcée le

10 décembre, la secrétaire d'État

bara McDougall a défini trois grandes

priorités du Canada en matière de

politique étrangère pour les années

1990 : renforcer la sécurité coopéra-

tive, créer une prospérité durable et

garantir la démocratie et le respect

des valeurs humaines. Ces priorités

reposent sur les grandes lignes de

la politique étrangère présentées

plus longuement dans un document

divulgué à la presse juste avant

l'allocution.

Comme l'a précisé la ministre, on

entend par renforcement de la secu-

rité coopérative la volonté de créer

un ordre mondial plus coopératif

reposant sur le droit, que l'on fera

primer notamment en donnant plus

de pouvoirs à l'ONU. Prospérité

durable signifie conserver un niveau

de vie élevé en améliorant la pro-

ductivité, en offrant aux industries

de demain un contexte d'investisse-

ment attrayant et en assurant un

accès aux marchés internationaux

par le biais de négociations commer-

ciales internationales. Garantir la

démocratie et le respect des valeurs

humaines suppose que l'on encou-

rage à respecter les droits de la

personne, la primauté du droit, les

principes démocratiques et un

gouvernement sain.

Déplacements de Mme McDougall

Fin janvier, la ministre s'est ren-

massivement prononcés pour

l'indépendance de leur république.

De Kiev, Mme McDougall s'est

rendue à Moscou, où elle a pris la

tête de la délégation canadienne à la

serie multilatérale des négociations

de paix sur le Moyen-Orient, qui

s'est déroulée les 28 et 29 janvier.

Cinq groupes de travail informa-

noux y ont été constitués. Ils étudie-

ront des problèmes clés du Moyen-

Orient : la limitation des armements,

le développement économique, le

partage de l'eau et les réfugiés.

Canada présidera le groupe de travail

sur les réfugiés, qui se réunira pour

la première fois à la fin avril ou au

début mai, à Ottawa.

Enfin, la ministre est allée à

Prague assister à la deuxième réu-

nion du Conseil des ministres de la coopé-

Conférence sur la sécurité et la coopé-

ration en Europe (CSCPE). Dans son

allocution au Conseil, elle a souligné

que le Canada accordait beaucoup

d'importance à la non-prolifération

des armes nucléaires et s'inquiétait

des transferts d'armes convention-

nelles. Le Conseil a décidé d'admet-

tre dix nouvelles républiques de

l'ancienne URSS, la plupart d'Asie

centrale et de la région transcauca-

sienne. Fin décembre, le Canada avait

reconnu pratiquement tous ces pays.

## Députés en Chine

Début janvier, trois parlemen-

taires se sont trouvés au cœur d'une

controverse alors qu'ils séjournaient

en République populaire de Chine.

Le voyage des trois députés —

M. Svend Robinson (Bumaby-  
Kingsway), critique du NPD pour

les affaires extérieures; M. Geoff Scott

(Hamilton-Wentworth), du Parti

conservateur; et Mme Beryl Gaffney

(Nepaan), du Parti libéral —, était

partrainé par le secteur privé, et orga-

nisé par des groupes de pression

en Europe du 29 janvier au 12 fé-

vrier pour étudier le rôle du Canada

sur ce continent en matière de

sécurité. Le Comité, présidé par

M. Arnold Malone (PC, Crowfoot),

a tenu des audiences sur la question

avant Noël.

20 PRINTemps 1992

## Force de maintien de la paix prise à parti

Dans un rapport publié le 5 fé-

vrier, le Comité des affaires étran-

gères du Sénat américain reproche

aux Nations Unies de ne pas avoir

réagi aux violations de cessez-le-feu

perpétrées par l'armée marocaine qui

menageait de tirer sur les officiers non

armés britanniques, américains, cana-

diens et autres envoyés comme ob-

servateurs militaires de l'ONU au

Sahara occidental. Le rapport laisse

entendre que l'opération de maintien

de la paix est en danger à cause d'une

mauvaise gestion et de possibles

irrégularités financières. Il affirme

de la gestion gouvernementale.

quarante-six organismes, conseils,

commissions et sociétés au total

sont soupçonnés, regroupés, diffé-

rents. Parmi les premières

se trouvent l'ICPSI, le Conseil

économique du Canada, le Conseil

des sciences du Canada et la Com-

mission de réforme du droit, qui ont

toutes leur siège à Ottawa, et le

Centre international d'exploitation

des océans, qui a le sien à Halifax.

M. Bernard Wood, Directeur

général de l'ICPSI, a déclaré au

cours d'une conférence de presse, le

2 mars, que l'Institut continuerait

d'exister jusqu'à ce que le Parle-

ment adopte une loi le démantelant.

L'Institut a été créé en 1984 en vertu

d'une loi du Parlement. Cependant,

M. Wood a également déclaré que la

direction de l'Institut doit tenir

compte de « l'intention sans équi-

voque du gouvernement de liquider

l'Institut et de transférer au mini-

ère des Affaires extérieures les

ressources nécessaires aux activités

dont la continuité s'impose.

Un autre changement important

apparaît dans le nouveau budget. En

effet, le gouvernement entend avan-

cer le retrait prévu des troupes cana-

diennes se trouvant en Europe et ne

pas faire partie de la force opéra-

tionnelle qui y sera stationnée. Bien

que le Canada maintienne sa pro-

messe d'envoyer une brigade en Eu-

rope en cas d'urgence, le ministre

des Finances a prédit que ces chan-

gements, entre autres, réduiraient les

dépenses de défense de 2,2 milliards

de dollars au cours des cinq années

à venir. □

## À L'ORDRE DU JOUR DU CONSEIL DE SÉCURITÉ

### Nouveau Secrétaire général

Le 21 novembre, le Conseil de sécurité a élu à bulletin secret Secrétaire général des Nations Unies l'Égyptien Boutros Boutros-Ghali, jusqu'alors vice premier ministre de son pays. Il a officiellement remplacé M. Javier Pérez de Cuellar le 1<sup>er</sup> janvier. C'est par onze voix et quatre abstentions qu'il a été préféré à M. Bernard Chidzero, ministre des Finances du Zimbabwe. Son élection a été accueillie comme une victoire par l'Afrique, qui insistait pour que le successeur de M. de Cuellar soit un Africain.

### Sommet des Quinze

À la fin publiquement déclarée de soutenir le nouveau Secrétaire général et de renforcer l'organisation mondiale dans son entier, le premier ministre britannique, M. John Major, a organisé et présidé une réunion au Conseil de sécurité, qui a eu lieu le 31 janvier. M. Major, qui devrait convoquer des élections cette année et dont le sommet devrait redorer le blason, a réuni les chefs de quinze pays membres du Conseil de sécurité, les deux autres, à savoir : la Hongrie et le Zimbabwe, étant représentés par leurs ministres des Affaires étrangères. Pendant cette réunion, les dirigeants ont adopté une déclaration commune demandant, entre autres choses, au Secrétaire général de présenter au Conseil, avant juillet 1992, des recommandations visant à «renforcer les Nations Unies et les rendre plus efficaces en matière de diplomatie préventive, d'établissement de la paix et de maintien de la paix». Les chefs de gouvernement y ont soutenu, en outre, que l'analyse dans «l'identification de crises et de régions instables éventuelles». Ils proposaient également l'interdiction mondiale des armes chimiques et de grands efforts pour restreindre la

prolifération des armes nucléaires et des armes de destruction massive.

### Yugoslavie : fragile cessez-le-feu

Le 27 novembre, le Conseil s'est prononcé à l'unanimité pour exhorter les parties au conflit yougoslave à respecter un accord de cessez-le-feu signé quatre jours plus tôt à Genève (Suisse). Cependant, les combats ont continué et, le 15 décembre, il a décidé, par un nouveau vote unanime, que les conditions nécessaires à l'organisation d'une opération de maintien de la paix en Yougoslavie n'étaient toujours pas réunies. Parallèlement, il a approuvé la proposition du Secrétaire général d'envoyer un petit groupe de civils et de militaires de l'ONU préparer le déploiement d'une force de maintien de la paix. Le groupe devait être rattaché à la mission de son envoi personnel sur place, l'ancien secrétaire d'Etat américain, M. Cyrus Vance.

### Mission au Cambodge

Le 8 janvier, en prélude peut-être à une opération de maintien de la paix aussi importante, sinon plus, le Conseil a voté à l'unanimité l'envoi de 124 soldats de l'ONU au Cambodge. Leur mission serait d'abord de déminer le pays puis de former des démineurs cambodgiens. La force rejoindrait la Mission préparatoire des Nations Unies au Cambodge (MPRONUC), qui se trouve déjà sur place. La décision répond à la volonté de préparer un retour en ordre et sans danger des réfugiés et des personnes déplacées, et de fa-

### Paix au Salvador

Le 14 janvier, le Conseil a décidé par un vote unanime d'élargir le mandat de la Mission d'observation des Nations Unies au El Salvador (ONUSAL) pour y inclure la vérification et la surveillance des accords de paix. La décision intervenait le jour même où les dirigeants rebelles et gouvernementaux concluaient à New York, aux termes de négociations placées sous les auspices de l'ONU, un accord de paix final. Outre la Mission veilleront au maintien de l'ordre public le temps qu'une nouvelle police nationale civile soit créée. L'accord de paix est considéré comme une victoire diplomatique de plus pour l'ONU au lendemain de la Guerre froide et pour les superpu-

### Embargo contre la Somalie

Le 23 janvier, le Conseil a voté à l'unanimité un embargo sur les armes à l'encontre de la Somalie et demandé instantanément un cessez-le-feu dans le conflit en cours. Prise de décision apparaît comme une preuve pour des raisons humanitaires, la demande d'arrêt immédiat du conflit en cours. Prise de décision apparaît comme une preuve pour des raisons humanitaires, la demande d'arrêt immédiat du conflit en cours. Prise de décision apparaît comme une preuve pour des raisons humanitaires, la demande d'arrêt immédiat du conflit en cours.

### Condamnation des expulsions israéliennes

Le 6 janvier, le Conseil a adopté à l'unanimité une résolution «condamnant fermement» la décision d'Israël d'expulser douze civils palestiniens des territoires occupés. C'est la plus ferme langage jamais approuvé par les Etats-Unis contre Israël aux Nations Unies. La résolution a été votée alors que les délégations jordanienne, libanaise, palestinienne et syrienne annon-

### UNFICYP : mandat prolongé

Le 12 décembre, le Conseil a décidé à l'unanimité de prolonger de six mois le mandat de la Force des Nations Unies chargée du maintien de la paix à Chypre (UNFICYP).

Pendant son intervention, l'ambassadeur adjoint du Canada auprès des Nations Unies, M. Philippe Kirsch, a souligné que les problèmes financiers de la Force atteignaient des proportions de crise. Depuis des années, avec la Grande-Bretagne et l'Australie, le Canada soutient que l'UNFICYP soit financée par des contributions mises en recouvrement et non par des contributions volontaires, mais la majorité des membres permanents s'y opposent. En conséquence, a déclaré M. Kirsch, les arriérés accumulés à l'UNFICYP, qui s'élevaient à 181,1 millions de dollars américains, continuent d'augmenter.

M. Kirsch a fait savoir que le Canada regrette l'absence d'un règlement négocié. Il a prévenu, comme Ottawa l'a fait maintes fois par le passé, que si l'ONU ne parvenait toujours pas à trouver une entente entre les parties, il serait nécessaire que le Conseil étudie de près l'avenir à long terme de la Force. Abondant dans le sens du Canada, le Secrétaire général a fait remarquer dans un rapport au Conseil que la crise financière de l'UNFICYP «pénalise injustement les pays qui fournissent un contingent».

### Divers

Le 23 janvier, le Conseil a recommandé à l'unanimité l'Assemblée générale d'accorder le statut de membre de l'ONU à l'ancien République soviétique du Kazakhstan, qui est la première de la région, depuis les républiques baïes, à être admises. Le Conseil examine la candidature de quatre autres républiques de l'ex-URSS, qui sont l'Arménie, le Kirghizistan, l'Ouzbékistan et le Tadjikistan. Le 29 novembre, le Conseil a renouvelé le mandat de la Force des Nations Unies chargée d'observer le cessez-le-feu entre Israël et la Syrie depuis 1974.

# CHRONIQUE DE LA DÉFENSE

## Arsenal nucléaire soviétique

L'ancienne URSS étant en pleines convulsions politiques, le commandement et le contrôle de l'arsenal nucléaire soviétique ont dominé les questions de défense durant les mois d'hiver. On connaît l'emplacement précis des armes nucléaires stratégiques de l'ancienne URSS grâce aux échanges de données convenus aux termes du récent accord conclu entre les Etats-Unis et l'URSS en vue de réduire les armes nucléaires stratégiques (START) et qui ont fourni des informations détaillées sur leur déploiement. En dehors de la Russie, l'Ukraine, le Kazakhstan et la Biélorussie servent de base à 352 ICBM et à soixante-dix bombardiers stratégiques ainsi qu'à 3 138 ogives nucléaires servant à les équiper. La plus grande concentration se trouve en Ukraine, qui compte 176 ICBM et deux bases de bombardiers lourds. Le Kazakhstan possède une base de bombardiers et 104 des redoutables ICBM de type SS-18 dix ogives. Quant à la Biélorussie, elle a sur son sol 72 ICBM mobiles SS-25.

Contrairement aux forces nucléaires stratégiques dont le déploiement conjoint des forces stratégiques et du maintien d'un contrôle unifié des armes nucléaires et des autres armes de destruction massive» d'après l'accord avec «ses homologues des trois autres républiques doies d'armes nucléaires.

L'accord conclu à Minsk prévoit également l'élimination de toutes les armes nucléaires en dehors de la Fédération de Russie. L'Ukraine démantèlera ses armes stratégiques d'ici à la fin 1994 et ses armes tactiques, d'ici à juillet 1992. Aucun échéancier n'a été fixé pour la Biélorussie, mais dans les deux cas, l'élimination se fera avec la «participation» de la Russie. Il reste quelque-uns autres républiques qui sera régi par un accord particulier.

ambiguïtés sur les engagements des républiques en matière de dénucléarisation. Par exemple, des responsables belarusses ont fait savoir depuis que des considérations politiques, notamment la reconnaissance diplomatique par l'Occident, influent sur leur désir de se débarrasser des armes nucléaires.

Il n'est pas fait mention, dans l'accord de Minsk, de l'élimination des forces stratégiques implantées au Kazakhstan. A la rencontre de l'Armée, il semble que la tâche la plus importante du maréchal sera de garantir la suite de leur production par la suite de leur production par la suite de leur production.

Le 29 janvier, dans son message adressé à la Fédération de Russie, qui l'exercera «en accord avec» ses homologues des trois autres républiques doies d'armes nucléaires.

## Guerre des étoiles

Alors que l'on réduit les forces stratégiques, l'initiative de défense stratégique (IDS) semble prospérer. Son budget sera augmenté d'environ 30 p. 100 pour l'exercice 1993, ce qui le fera passer à 4,36 milliards de dollars. Le programme a maintes fois été révisé, mais la dernière version, datant de 1992, prévoit une réduction de 7 p. 100 par rapport à 1992.

Combiné à plusieurs autres changements dans l'évolution de l'Armée américaine, le budget de la défense proposera pour 1993 une réduction de 10 p. 100 par rapport à 1992.

- DAVID COX

nouvelles restrictions quant à l'utilisation de combustibles fossiles et de nouveaux obstacles «verts» à l'importation pour les produits qui ils vendent au Nord.

Ce qu'ils veulent, c'est que la conférence examine tout un ensemble de questions liées aux ressources nécessaires au développement (dette, chute du cours des matières premières et des denrées, accès aux marchés pour leurs produits, augmentation des fonds accordés par les organismes d'aide au développement et par le secteur privé, etc.). Car, pour une fois dans des pourparlers internationaux, les pays en développement ont l'impression d'avoir une carte à jouer, puisque aucun des grands problèmes mondiaux de l'environnement ne peut être résolu sans leur entière coopération.

Par exemple, même si les États-Unis et les autres pays industriels prennent des mesures pour diminuer les émissions d'acide carbonique, leur effort sera réduit à néant si l'Inde et la Chine poursuivent leur objectif ambitieux, qui est de construire quelques 300 nouvelles centrales thermiques au cours des vingt prochaines années. Pour reprendre les termes d'un document préparé par le Secrétaire du Sud (organisme regroupant des pays en développement) pour la récente rencontre du Groupe des 15 pays en développement à Caracas : «La CNUCED est une conférence internationale où le Nord cherche à obtenir du Sud des concessions environnementales et où le Sud peut faire de telles concessions si le Nord s'engage fermement à redéfinir les relations économiques mondiales.»

QUE PEUT-ON ATTENDRE DE RIO DE JANEIRO EN JUIN ? D'AVUCUNS PENSENT QUE la solution à ces problèmes reposera sur une sorte de «grand marché» entre le Nord et le Sud. Les pays du Nord s'engageraient à réduire considérablement leurs émissions de gaz responsables de l'effet de serre et à laisser à ceux du Sud un «espace écologique» suffisant pour qu'ils puissent augmenter leurs propres émissions pendant qu'ils se développent. Le tiers-monde insiste énormément sur ce point. Un tel engagement supposerait des transferts substantiels vers les pays en développement, de nouveaux capitaux qui serviraient non seulement à faciliter le passage à des formes plus durables d'utilisation de l'énergie et d'exploitation forestière, mais aussi à venir à bout de certains déficits sur le plan de l'alimentation, du logement, de l'eau potable et du chômage. D'après certaines estimations, il en coûterait environ 130 milliards de dollars américains par an.

En échange, les pays en développement s'engageraient à exploiter leurs forêts suivant des critères de viabilité, à réduire leurs taux de croissance démographique, à diminuer leurs dépenses militaires et à opter pour une consommation énergétique plus durable. Au mieux, on fera un timide premier pas dans ce sens à Rio.

Dans quelle mesure la CNUCED peut-elle combiner les objectifs concurrents et débouquer les sources financières ? Pour le moment, les perspectives sont incontestablement sombres. Comme le dit Maurice Strong, «jamais les riches ne se sont sentis si pauvres». Les gouvernements ont accepté de parler d'argent en mars, à New York, au cours de ce qui sera la dernière réunion préparatoire. Le bruit court que le Japon prépare peut-être une grosse enveloppe, de 10 milliards de dollars américains. Les Américains, l'Est. Les transferts de technologie sont aussi au menu de ces discussions internationales, mais les pays en développement prônant que ces transferts s'opèrent sur «une base préférentielle et non commerciale» et les pays développés se prévalant de la sacro-sainte propriété intellectuelle, on ne semble guère progresser.

La pièce de résistance de la Conférence de Rio est un ensemble ambitieux de documents appelés «Programme 21». Le tout, qui représente des centaines de pages, contient une série de plans d'action touchant à des sujets

Michael Wadlow

allant des déchets toxiques à la pauvreté, en passant par la croissance économique et l'environnement. On en mentionne aussi le prix, qui s'apparente aux milliards susmentionnés. Lors de conférences internationales précédentes, la plupart des documents de ce genre ont été «pré-négociés» par des commissions préparatoires, mais on n'a peu avancé sur les points les plus épineux du «Programme 21» et les gouvernements devront réaliser de petits mirages à New York pour qu'il soit prêt pour Rio.

Etonnamment, on semble peu presser les gouvernements de conclure des accords à Rio. Les pays en développement paraissent déterminer à n'accepter qu'une entente globale. En fait, beaucoup de leurs délégations seraient mal accueillies si elles rentraient chez elles avec un plan d'action pour les seuls problèmes du Nord. En même temps, sous prétexte qu'une telle entente coûterait des milliards de dollars et serait donc irréaliste, bien des pays industriels font la sourde oreille. L'actuel gouvernement américain, dirigé par George Bush, inquiet par une opposition néo-isolationniste décidée à l'accuser de modifications importantes dans la politique énergétique des États-Unis, essaiera d'empêcher tout réel progrès sur la question du changement climatique.

Et le Canada ? Sa délégation, conduite par MM. John Bell des Affaires extérieures et Arthur Campeau d'Environnement Canada, a constamment été parmi les mieux dirigées et les plus efficaces pendant la phase préparatoire. Cependant, à présent que la conférence entre dans sa session finale, la plus cruciale, il devient évident que le Canada offrira peu dans nombre des dossiers clés. Le contraire supposerait un engagement du Cabinet et un exemple politique de haut niveau qui ne se sont pas encore manifestés.

Lors d'autres conférences de l'ONU sur l'environnement, l'eau, les déserts et l'énergie renouvelable, on s'est concentré exclusivement sur les problèmes des pays en développement, mais cette fois, les problèmes sur lesquels la CNUCED se penchera étant mondiaux, les pays industriels devront faire les premiers pas vers une solution. Au Canada, on ne semble guère comprendre le lien entre la politique intérieure du pays et sa capacité à infléchir le cours des négociations. Le Programme 21 porte sur des thèmes très divers, dont bon nombre relèvent de la compétence provinciale. Si le Canada veut jouer un rôle positif, il lui reste encore beaucoup à faire pour définir ses priorités et consulter les provinces sur des questions essentielles comme l'exploitation forestière, les changements climatiques et les pêches maritimes.

AINSI, LE CANADA EST LE PREMIER CONSOMMATEUR D'ÉNERGIE PAR HABITANT dans les pays industriels. Bien que le gouvernement se soit engagé à geler les émissions d'acide carbonique aux quantités de 1990 d'ici à l'an 2000, il est bien connu que peu de mesures ont été prises pour y parvenir. Le Canada a mené les discussions sur l'exploitation forestière pendant la phase préparatoire; pourtant, ses politiques intérieures en la matière sont généralement jugées non durables. Le surnom de «Brésil du Nord» donné par le ministre de l'Environnement brésilien commence à lui coller à la peau. Début février, dans un geste qui donne au moins à espérer que le Cabinet est maintenant saisi du problème, le premier ministre a confié à son vice-ami M. Campeau, en plus de ses responsabilités actuelles à l'Environnement, la tâche de le représenter personnellement à la CNUCED, au rang d'ambassadeur. Néanmoins, si le premier ministre doit prendre des décisions importantes avec ses autres collègues à Rio, il leur faudra déplacer plusieurs montagnes au cours des deux mois à venir. □

# RIO : DES MONTAGNES À DÉPLACER

Nous ne devrions probablement pas attendre grand chose du  
«Sommet de la Terre», mais nous pourrions bien être surpris.

PAR DAVID RUNNALLS

**E**N JUIN, À RIO DE JANEIRO, QUELQUE SOIXANTE-DIX PREMIERS MINISTRES et présidents se pencheront sur le sort de la planète. Avant de conclure qu'il s'agira encore de bavardages écologistes alarmistes, Sommer, Si nous montrons incapables de satisfaire aux besoins de la population mondiale actuelle sans perturber inutilement l'environnement, est-il réaliste de penser que nous saurons mieux assurer un niveau de vie décent à deux fois plus de gens ?

Peu nombreux sont ceux qui nieraient que la population actuelle épuise 5 milliards et demi d'êtres humains qui peuplent le monde menacé nombre de systèmes vitaux de la Terre, pourtant beaucoup de presques relativement peu l'environnement. Plus d'un milliard et demi d'entre eux vivent dans une misère noire, dans des décharges poubliques, dans des bidonvilles ou dans des zones rurales sans ressources. Ces quinze dernières années, le nombre des pauvres a augmenté de 81 p. 100 en Afrique, de 55 p. 100 en Asie et a plus que doublé en Amérique latine. L'ONU estime que 500 millions de personnes dans le tiers-monde sont sans emploi ou sous-employées — ce qui équivaut à toute la main-d'oeuvre réunie des pays industrialisés. Parallèlement, les démographes nous disent que nous ne pouvons échapper au doublement de la population, ce qui nous mettra à 10 milliards d'habitants sur Terre d'ici la moitié du XXI<sup>e</sup> siècle, si ce n'est à 14 milliards.

Or, c'est précisément la question à laquelle s'est intéressée la Commission mondiale sur l'environnement et le développement, autrement appelée Commission Brundtland, du nom de sa présidente, le premier ministre de Norvège. Dans son rapport novateur de 1987, la Commission soulignait que l'économie du monde et son écologie étaient si étroitement imbriquées que les politiques économiques qui ignoraient cette réalité étaient vouées à l'échec. Une des clés de son programme nouveau de «développement durable», qui l'a rendue si populaire, est qu'on y a apparemment «tout à gagner». Il propose, en reliant les éléments des programmes environnementaux classiques aux éléments des programmes économiques classiques, un monde plus prospère et plus durable du point de vue écologique. Il en résulte une croissance d'une toute autre sorte qui utilise beaucoup moins d'énergie et de matières premières, qui contribue à préserver le capital écologique de la planète au lieu de l'épuiser, et qui est bien équilibrée et répartie tant à l'intérieur des pays qu'entre les pays du monde. Bien qu'une telle démarche en laisse d'aucuns très dubitatifs, elle est bien reçue par les Canadiens et Canadiennes.

La Commission Brundtland a fait de l'ENVIRONNEMENT UNE QUESTION économique au même titre que la création d'emplois et la croissance des exportations, entre autres. D'accord avec elle, le Secrétaire général de la Conférence de Rio, M. Maurice Strong, a décidé de placer la barre plus haut. Il a persuadé l'Assemblée générale de l'ONU qu'une partie au moins de la Conférence devait être l'occasion de réunir au sommet des chefs de gouvernement, dont ceux qui ont un réel pouvoir économique. Malheureusement, les délégués de l'Assemblée générale qui ont défini le programme de Rio n'ont pas tiré les leçons du Rapport Brundtland. Au lieu de planifier une conférence sur le développement durable, ils en ont préparé une qui traitera de l'environnement et du développement. D'ailleurs, elle s'appelle officiellement Conférence des Nations Unies sur

Les objectifs du Canada pour 1992, comme ceux de la plupart des pays industriels du Nord, ont principalement trait au changement climatique, à la perte de diversité biologique aux tropiques, à la déforestation et à la santé des océans. Bien que des conventions internationales soient actuellement négociées sur les deux premiers points, séparément de la Conférence de 1992, ces questions seront au centre des débats au Brésil. La Conférence de Toronto sur l'atmosphère en évolution (1988) a été suivie d'une série de rencontres devant déboucher, avant la Conférence de Rio, sur une convention cadre sur le réchauffement de la planète, mais on n'a guère trouvé de points d'entente aux dernières réunions. Les États-Unis restent farouchement opposés à l'idée de fixer des objectifs pour la réduction des émissions d'acide carbonique et la très importante délégation japonaise doit encore se prononcer.

Pour ce qui est de la deuxième convention, qui porte sur la diversité biologique, on progresse très lentement, à cause d'un différend Nord-Sud sur l'utilisation des matériels génétiques en biotechnologie. Peu de pays en développement sont disposés à consacrer davantage de ressources à la protection de leur immense réserve de matériels génétiques, sauf s'ils les industries pharmaceutiques et biotechniques du Nord. Pour l'instant, ils ne reçoivent aucun dédommagement financier pour les matériels génétiques prélevés dans leurs forêts tropicales pour mettre au point de nouveaux médicaments.

Le Sud fonde ses objectifs sur le fait avéré que la plupart des problèmes planétaires sont causés, ou du moins aggravés, par les pays industrialisés. Les pays de l'OCDE, donc du Nord, regroupent plus ou moins 20 p. 100 de la population mondiale mais produisent 80 p. 100 des gaz responsables de l'effet de serre et donc des changements climatiques mondiaux. Plus de 90 p. 100 des chlorofluorocarbures qui détruisent la couche d'ozone sont produits dans les pays industriels. Pourtant, jusqu'ici, la plupart des négociations ont été axées sur les régions en développement, plutôt que sur les mesures que le Nord doit prendre pour diminuer sa propre pollution.

Les pays en développement se méfient de ce programme depuis le début. Même si beaucoup se rendent compte que des changements écologiques mondiaux les touchent sans doute plus durement encore que les pays industrialisés, un ordre du jour consacré exclusivement à l'environnement risque d'éloigner l'attention de leurs priorités, c'est-à-dire de leur développement économique. En outre, nombre d'entre eux pensent qu'un plan d'action découlant d'un ordre du jour environnemental leur imposerait de nouvelles conditions pour l'obtention de l'aide et des prêts étrangers, de

Maroc, des affrontements sanglants ont opposé, en décembre, l'Université, les islamistes et les gauchistes, et il y a eu plusieurs victimes.

L'EXEMPLE DE L'IRAN A INDÉMENTABLEMENT SERVI DE catalyseur. Et il a été suivi au Soudan et au Pakistan. Tous ces groupes, qui adoptent des discours nationaux, ne cultivent pas moins des relations entre eux. On a même établi l'existence d'une «Internationale intégriste» mais le siège se trouve à Khartoum (Soudan). Mais l'Iran, chérie, et l'Arabie saoudite, wahabite, se livre une certaine concurrence pour s'allier ces partis intégristes, et cela, pour des raisons politiques, car sur le plan religieux, les deux paraissent une conception fondamentalement de l'islam qui refuse tout progrès et est fermée à toute ouverture vers l'extérieur.

Pour la masse des classes moyennes salariées et pour la majorité des cadres supérieurs, l'islamisme signifierait un retour en arrière, un blocage de l'évolution, un obstacle aux progrès scientifiques et technologiques. Même si le désenchânement et l'exaspération touchent toutes les couches de la population, certains hésitent à rejeter pour les «barbus».

L'armée algérienne a décidé de mettre un frein à son pouvoir islamiste, considéré comme un obstacle à son propre pouvoir et à ses ambitions. Dans un éditorial d'avril 1991, le journal de l'armée *Al Jaich* expliquait les orientations et les ambitions des militaires algériens, trahumatisés par la guerre du Golfe et soucieux de s'opposer à ce qu'ils considéraient comme le début d'une hégémonie occidentale. Et ils n'hésitent pas à dire des islamistes que ce sont des «alliés objectifs de cette stratégie occidentale». Ils tiennent à acceller l'accès aux sciences et à la technologie et à développer leur armement, sans exclure le nucléaire.

La «satanisation» de l'Occident, en particulier des Américains et des Français, condamnés pour leur attitude lors de la crise du Golfe, constitue un thème fondamental, en particulier pour les intégristes.

JUSQU'ICI, LES ISLAMISTES ONT UTILISÉ LA SEULE stratégie qu'ils aient élaborée : le harcèlement et l'action violente. En Algérie, trois semaines avant les élections, ils ont attaqué un poste frontalier de la garde nationale, ce qui a fait des morts et des blessés. L'armée nationale leur a fait la guerre et a arrêté la majorité des membres du groupe coupable. Il s'est avéré qu'ils avaient été formés et entraînés en Afghanistan. En Tunisie, le complot déjoué en mai dernier visait à assassiner le chef de l'Etat au moyen d'armements sophistiqués, particulièrement des missiles *Singer* américains fournis par les moudjahidins algériens. Auparavant, ils avaient utilisé le terrorisme, faisant exploser des bombes et lançant des attentats à l'acide sulfurique contre la population, à la sorte des bureaux pour mieux désinstaller le régime. Au

comme solutions politiques de rechange. Encore que la tendance n'est pas exclusive si l'on en juge par les derniers événements sanglants à l'Université et des étudiants islamistes se sont heurtés à des étudiants de gauche; des morts, des blessés et des arrestations ont constitué le bilan d'autres opérations qui en annoncent certainement d'autres. Qu'est-ce que l'islamisme ? Contrairement à ce que l'on pense, ce n'est pas un mouvement organisé; c'est, à l'origine, un sentiment partagé d'identification, d'affirmation de soi et de sa différence, au sens culturel du terme. Les mouvements qui se sont greffés sur ce courant sont en fait politiques. Comme le montre l'historien égyptien Mohammed Saïd Al-Ashmouni, dans son livre «L'islamisme contre l'islam», il ne s'agit pas de controverses théologiques mais bien de critiques de régimes politiques. Le Coran, quand on l'invoque, sert surtout comme substitut aux normes et aux références socio-politiques en vigueur et comme instrument de démarcation par rapport aux cultures occidentales, et non comme ressource métaphysique et religieuse. Généralement, on s'attache, non pas à une personnalisation, mais à une

Bernard L. Hoffman

griotes. Pour des raisons religieuses, bien sûr, mais aussi parce que la laïcité et tout ce qui en découle — comme la démocratie — sont honteux et menacent leur pouvoir. Les visées électoralistes ne sont pas, non plus, à exclure dans cette attitude. Comme c'est le cas pour l'Iran, le régime a besoin d'un ennemi extérieur, fixe, fixe. Les relations avec l'Occident seront, bien sûr, basées sur les intérêts économiques, mais elles seront limitées et difficiles. Dans la région, il est à prévoir que les prix des matières premières et de l'énergie (pétrole, gaz) ne seront pas stables et que les délibérations au sein de l'OPEP changeront sensiblement avec le renforcement du camp des «durs» (Iran, Irak, Libye, Algérie). Le marché maghrébin, qui représentera près de 100 millions de personnes d'ici la fin du siècle, ne restera pas longtemps une chasse-gardée française. Certains dirigeants islamistes l'ont déjà laissé entendre.

DANS CES CONDITIONS, LES RELATIONS INTERNATIONALES s'en ressentiront. D'abord, entre les Etats musulmans, car les islamistes sont essentiellement nationalistes et fort peu unitaires. Même s'ils ont tissé des liens entre eux, il est peu probable que leurs politiques soient unifiées. On peut même s'attendre à des conflits, dès lors que les intérêts nationaux divergeront. Certains pensent qu'au Maghreb et ailleurs, la question des frontières héritée du colonialisme constituera une prémière et importante source de conflit. En ce sens, la «petite» Tunisie a tout à craindre d'une Algérie gouvernée par les intégristes. Pour les raisons évoquées plus haut, mais aussi parce que son système socio-politique, que les dirigeants actuels soutiennent vers la démocratie, les libertés et le libéralisme économique, sera fortement menacé. Telles est la situation, tels sont les enjeux. Comment combattre ce qu'une partie importante de la population considère comme un danger mortel ? Jusqu'ici, les pouvoirs en place n'ont pu mater les islamistes, ni par la répression, ni par le rapprochement, comme l'a fait à ses dépens l'ancien président algérien. Alors que le souffle de la démocratie commence à toucher la région (Tunisie, Algérie), l'intégrisme promet une dictature religieuse. Et les pouvoirs s'interrogent : faut-il permettre aux «ennemis de la démocratie pour mieux l'écraser» ? L'instauration, en Algérie, d'un Haut Comité d'Etat qui livre une lutte acharnée au FIS, est fortement discutée par les puristes de la démocratie. D'autres y voient, au contraire, la seule voie vers une transition démocratique et la seule chance d'asseoir la démocratie sur des bases solides. Certains vont même jusqu'à accepter l'éventualité d'une dictature militaire, parce que le peuple peut s'insurger contre des militaires, mais il ne peut contester Dieu.

# LES «BARBUS» : UNE MENACE POUR LA PAIX ?

*La percée des islamistes aux premières élections démocratiques algériennes fait peser une menace dans toute la région sur la démocratie et les relations internationales.*

PAR ABDELHAMID GMATI

dénonce avec virulence le régime et l'Occident; dans la rue, ensuite, où les premiers «barbus» et les «voiles» (*hidjab*) font leur apparition. Le port de la barbe et du voile procède d'une volonté de libération de se démarquer d'un environnement jugé «impur».

et de l'adoption.  
Recentant dans la masse des laissés-pour-compte, des chômeurs et des jeunes désœuvrés, les islamistes avaient beau jeu pour dénoncer un régime athée, impie, incapable de résoudre les problèmes de la société, inféodé à l'Occident et asservi au diable. Le régime avait beau surcharger et déformer les exigences des islamistes (prières diffusées à la radio et à la télé, fermeture de bars, programmes d'enseignement islamique, etc.) rien n'y fit : l'agitation était permanente, rouages et toutes les institutions. Le Mouvement d'Ennahdha des 1989, pour mieux participer au débat démocratique, se développe et mène une série d'actions violentes aussi bien dans les universités que dans les centres touristiques. La réponse de l'Etat a oscillé entre la répression et les tentatives de rapprochement.

ON PEUT AFFIRMER QUE CE SONT LES RÉGIMES EN place qui ont contribué à la création et au développement du mouvement islamiste. Au lendemain de leur accession à l'indépendance, les pays du Maghreb se lancent dans une vaste entreprise de développement axée sur la modernité et la laïcité. Mais en même temps, pour mieux faire passer leurs réformes, les régimes récupèrent la religion et la soumettent à la raison d'Etat. Et à partir des années 1960, pour contre-carrer la violence des mouvements de gauche, marxistes-socialistes, ils jouent la religion contre le socialisme. Pour ce faire, ils introduisent l'enfermement religieux dans les écoles, multiplient les lieux de culte, encouragent l'enseignement théologique et développent des programmes d'arabisation et d'islamisation à outrance.

L'absence de démocratie, le monolithisme des régimes à parti unique, l'omnipotence des dirigeants, la corruption et la mauvaise gestion ajoutent aux échecs des différentes politiques économiques pour aboutir aux crises des systèmes. L'omniprésence de l'Etat favorise une classe de privilèges et crée une mentalité d'assistés dans la population. Les inégalités s'exacerbent, le chômage augmente, l'exode rural grossit les banlieues urbaines, la pauvreté augmente. Le mal-élu gagne toute une population de laissés-pour-compte. L'émigration se trouve exclue du système. La crise d'identité se profile et, en l'absence d'une idéologie motivante, le retour aux valeurs ancestrales et la religion devient l'unique recours. C'est dans ce climat d'exaspération que se développe l'islamisme. En Tunisie, d'abord, où il profite du laïcisme du régime qui avait promu- gué un *Code du statut personnel*, qui abolissait la polygamie et octroyait à la femme les mêmes droits qu'à l'homme. Ce texte de loi qui consacrait l'existence des pays arabes et musulmans pour ces dispositions juridiques du droit positif. Les autorités tunisiennes ont même dû reculer devant les pressions algériennes et saoudiennes, et abandonner leur projet de

L'exemple de l'Iran suscite l'inquiétude, exacerbée par le fait que, contrairement à ce dernier pays et à d'autres où les islamistes sont arrivés au pouvoir, les réactions ont été immédiates et alarmistes ; on estimait l'« avenir handicapé », « les libertés enfreintes et les droits de l'Homme baroques », au point qu'une manifestation monstre ait fait (le 2 janvier) plus de 300 000 personnes dans la rue, « pour sauver la démocratie ». Les membres du FIs et ses sympathisants se montrent conciliants, affirmant que « l'Algérie n'est pas l'Iran ». Qu'en est-il, en réalité ? Faut-il craindre les islamistes et leur comportement ? Ou bien leur menace pour la région et les relations internationales ?

origines du mouvement remontent au début du siècle, plus spécifiquement en Égypte, alors que les théologiens et les religieux préconisaient le fondamentalisme pour mieux lutter contre les colonialismes et sauvegarder l'identité et la culture arab-musulmanes contre les risques d'assimilation. Petit à petit, des mouvements se structurèrent et se lancèrent dans l'activisme politique, soutenant le nationalisme arabe naissant et menant de se substituer à lui à chaque échec. Même l'ancien président égyptien, Jamal Abdel Nasser, qui fut pendant un moment porte-drapeau du nationalisme et de l'unité arabes, fut des pro-blichés cernés avec ses «frères musulmans», qu'il assujettit à une répression violente. Jusq'au début des années 1970, l'islamisme se cantonna en Égypte et au Soudan et resta minoritaire, ne se manifestant que par des actions de violence. Ce n'est que vers le milieu des années 1970 que l'islamisme se manifesta dans les pays du Maghreb. Dans les mosquées, d'abord, où des concours des nouveaux *imams* devient politique et

\*Le premier tour de scrutin des élections législatives, tenu le 26 décembre 1991, donna la victoire aux islamistes du FIS, avec 24,9 p. 100 des 13,3 millions d'inscrits et 47,5 p. 100 des suffrages exprimés, ce qui est très proche de la majorité absolue (188 sièges sur 430). Le second tour, prévu pour le 16 janvier 1992, fut reporté par suite de la démission, le 11 janvier, du président de la République Chadli Bendjedid.

la théorie marxiste. Le fait que la population soit nourrie beaucoup. En plus, les efforts incessants déployés par les autorités pour attirer des touristes étrangers, source de devises qui font cruellement défaut, continuent de fruster les Cubains, que l'on tient de plus en plus à l'écart des meilleures plages, hôtels et restaurants, et qu'on exclut des «boutiques à dollars» où seuls

le meilleur juge et elle répondait en masse au cri de *Commandante en chef, ordne!* («Commandant en chef, ordonne-nous!»). À l'évidence, l'heure a sonné pour le gouvernement révolutionnaire de faire davantage confiance à l'ensemble de la population et de décentraliser son autorité.

LES MÉDIAS OCCIDENTAUX DONNENT HABITUELLEMENT une image erronée de Cuba, en grande partie parce qu'ils ne comprennent pas l'éthique révolutionnaire qui l'imprègne en profondeur. Le peuple cubain est bien un peuple révolutionnaire : entier avec ses programmes d'aide civile et humanitaire extrêmement généreux offerts partout en esprit de coopération et de partage des tâches.

Parallèlement, il est angossé par le prix exorbitant.

racisme et des soins médicaux si rose, avec le chômage, les exilés cubains n'ont pas une vie ment qu'aux États-Unis, les tant peut-être, il sait parfaite- quodienne. Tout aussi impor-

de toujours devoir se serrer un peu plus la ceinture. De plus en plus les Cubains pensent aussi qu'il est temps pour eux d'avoir leur mot à dire dans l'orientation des politiques gouvernementales et d'avoir un plus grand accès à l'information. Le monde a changé irrémédiablement, affirment-ils, et pourtant, le gouvernement, Fidel Castro notamment, suivent les mêmes démarches de base qu'il y a trente ans. Le modèle économique ne peut manifestement fonctionner, le parti communiste est nettement incapable de trouver des solutions aux difficultés nationales et un changement politique s'impose si Cuba veut se sortir de la tempête qui lui fait rage tout au long de l'année. Cependant, jusqu'ici, le gouvernement ne donne guère à penser qu'il entend opérer des changements importants.

Toutefois, il ne faudrait pas sous-estimer la population de Fidel Castro, continue en dépit des terribles difficultés économiques qu'assailent Cuba.

Le scénario le plus plausible est donc que Fidel Castro essaiera de relancer une économie d'horizon court en agissant en catalyseur de l'unité révolutionnaire. Cela a déjà marché à l'horizon n'ont jamais été si noirs. Dans sa stratégie, le gouvernement fera appel au sentiment national, alors que l'économie se désagrège impitoyablement. Entre-temps, il continue de préparer soigneusement la prochaine étape du plan officiel (après du nom sinistre mais juste de «opération zéro»). Par le passé, les convictions et le châtiment sans faille de Fidel Castro ont suffi à rallier les Cubains à la cause révolutionnaire, à les encourager à se serrer la ceinture en attendant des jours meilleurs. Cependant, ce système de punitions et de récompenses, qui a permis de faire de Cuba un pays de moins en moins de fruits et, pour la

de 1959.

Quant au Canada, ce scénario lui permettrait non seulement de garder mais d'augmenter le commerce, les investissements et la coopération scientifique et technologique, en profitant de son prestige auprès des Cubains, bien mérité après avoir maintenu des relations depuis la révolution

oblige les décideurs canadiens à évaluer différents scénarios. Il n'est pas impossible d'en imaginer un qui servirait les intérêts du Canada et conviendrait à sa politique traditionnelle à l'égard de Cuba, qui est de lui reconnaître le droit de décider de sa propre destinée. Une telle option supposerait une évolution de la démocratie électorale et l'introduction de mécanismes de marché suffisants pour permettre à Cuba de réintégrer la famille inter-américaine. Ce changement progressif se produirait dans le cadre de la révolution en s'appuyant sur ses fondations dans l'ère post-soviétique, sous une direction cubaine intérieure. Le Mexique, le Venezuela, la Colombie et le Brésil, voisins latino-américains les plus impor-

# CUBA : TOUJOURS FIDÈLE ?

Pour la première fois depuis la révolution de 1959, le charisme de Fidel Castro risque de ne pas suffire à sauver le vieux régime.

PAR EDGAR J. DOSMAN ET JOHN KIRK

AVEC LE RENVERSSEMENT DU COMMUNISME en Europe de l'Est, il était facile en 1989 de prédire qu'à Cuba, Fidel Castro ne

aurait pu être beaucoup plus gros. Pendant plus de trente ans, son gouvernement a fait fi de l'adversité, adoptant une démarche politique ultra-castriste et ignorant ceux qui n'étaient pas d'accord. Cela marchait, mais avec le filet de sécurité soviétique constamment tendu.

Même aujourd'hui, dans les difficultés omniprésentes, le *Comandante en jefe* incarne bien ces traits nationaux. Fidel est celui qui a mis de la scène mondiale à maintes occasions et qui a soigneusement nourri le nationalisme et le sentiment de dignité si importants dans l'identité cubaine — et sur lesquels les commentateurs politiques occidentaux se méprennent si souvent. Fidel Castro jouit encore d'une grande popularité personnelle à Cuba. Ses inlassables efforts au nom du peuple, ses rapports électrisants avec le public et ses qualités indéniables de communist-cateur sont légendaires. Cependant, il est vrai aussi que son assise et sa popularité s'amoindrissent lentement mais régulièrement et que d'aucuns demandent à voix basse s'il saura surmonter les problèmes posés par la chute de l'empire soviétique. L'ironie du dilemme actuel, pour la plupart des Cubains, c'est que la révolution sans Fidel cubaine doit survivre, puisque la politique habituelle, qui consiste à «vivre au jour le jour» au rythme d'appels charismatiques et par un volontarisme politique n'est plus viable.

À l'instar de son premier secrétaire, le Parti communiste de Cuba (PCC) traverse également une crise d'identité. Malgré de petits profits pour ses membres, il n'a jamais joué sur l'Élitisme comme les partis d'URSS ou d'Europe de l'Est. Les Cubains ne se précipitent pas dans la rue pour brûler leurs cartes de membres ou quitter le Parti. Pourtant, le congrès du PCC d'octobre 1991 montre clairement qu'il doit se réformer de fond en comble s'il veut conserver la loyauté du peuple cubain.

Une des grandes décisions prises en octobre a été de permettre aux Cubains d'être, pour la première fois, leurs députés à l'Assemblée nationale. Que ce premier pas indispensable ne survienne que plus de trente ans après la victoire révolutionnaire en dit long sur les raisons de la crise politique cubaine. Pendant tout ce temps, on a fait croire à la population que le gouvernement était

Le gouvernement de La Havane cherche à atténuer les difficultés auxquelles sont confrontés les Cubains en faisant preuve d'imagination. Ainsi, il a importé 700 000 bicyclettes de Chine; 1 000 000 boeufs ont été dressés aux travaux agricoles (1 000 000 autres le sont en ce moment); on se sert de nouveau de pigeons voyageurs pour livrer du courrier; on a distribué des poussins aux familles pour qu'ils les élèvent; et on s'efforce d'encourager les gens à travailler aux champs pour produire de la nourriture. Comparaisons avec l'Europe de l'Est mises à part, il reste à savoir si tout cela suffira à consolider le gouvernement Castro, ou si la population depuis longtemps soumise à des privations se rebellera contre une adversité qui n'en finit pas.

LA CAUSE LA PLUS ÉVIDENTE DE LA CRISE ACTUELLE est la mort de l'Union soviétique, dont Cuba dépendait depuis la rupture des relations diplomatiques par les États-Unis, en janvier 1961. Voici quelques chiffres qui illustrent bien la situation : Cuba était à la remorque de l'URSS pour 75 p. 100 de son commerce, 40 p. 100 de ses

DANS UN DISCOURS PRONONCÉ EN NOVEMBRE 1991 à l'occasion du trentième anniversaire de l'immense campagne d'alphabétisation lancée en 1961, qui a fait passer l'analphabétisme de 24 à 4 p. 100, le président Castro a expliqué la force essentielle du modèle révolutionnaire cubain. Il a comparé la démarche de son gouvernement dans la «période particulière» actuelle à des mesures auxquelles les gouvernements capitalistes recourent volontiers en période de crise économique. À Cuba, aucun travailleur n'a été mis à pied, aucune école ni aucun hôpital n'a fermé, aucune usine n'a été condamnée. Les approvisionnement sont réduits de manière drastique, mais il a tout à fait raison.

Le système existant dans le reste de l'ancien bloc soviétique — a manifestement favorisé cette socialiste — mais Fidel n'a pas expliqué, c'est que si, au lieu de répartir équitablement les ressources disponibles (pour mettre tous les Cubains sur un pied d'égalité), le gouvernement — et lui en particulier — s'étaient montés plus pragmatiques, le

beaucoup trop tardé à rectifier.

de l'état de fermeté.  
L'avenir immédiat de la Birmanie est peu encourageant, mais à plus long terme, il pourrait fort se révéler plus brillant. Le Japon et les démocraties occidentales sont des sources de financement importantes, comme pour l'Europe de l'Est et les anciennes républiques soviétiques, mais il sera des plus crucial que ces pays aident la Birmanie à rentrer dans le monde après bientôt trente ans d'isolement. Les amis communs par Ne Win et les régimes qu'il a encouragés ont contribué à toute une génération de Birmanis leur patrimoine. Jusqu'à tout dernièrement, aucun gouvernement étranger ne condamnait ses poli-

et le CEROL. Les voisins de la Birmanie joueront un rôle décisif dans la formation du prochain gouvernement. Les pays de l'ANASE, la Chine et l'Inde nous mènent à la stabilité. Les intriques nécessaires pour survivre à la Guerre froide diminuant, il ne serait pas dans l'intérêt des États limitrophes, qui eux-mêmes courtisent les investisseurs étrangers, chercher à attirer des millions de touristes et veulent servir d'exemple dans la région, de se faire les complices de la corruption et

économique substantielle. AUNG SAN SUU KUI EST NOVICE EN POLITIQUE ET inexpérimentée pour ce qui est de la gestion d'un pays, malgré son travail à l'ONU où, s'occupant de questions administratives et budgétaires, elle s'est familiarisée avec les grandes questions politiques. Si elle survit à l'incarcération, elle aura encore bien des tempêtes à essayer, étant donné les scissions énormes marquées en Birmanie et les problèmes énormes laissés par Ne Win

nouvelle constitution tenant en compte des minorités et pour recruter, à l'étranger et au pays, les milliers de Birmans qui possèdent les compétences pour gouverner. De nouveaux manuels scolaires doivent être écrits, les universités et le système éducatif doivent être restructurés, et les tribunaux, réformés. Les sociétés privées doivent pouvoir prendre de l'expansion loin des machinations des fonctionnaires. Une présence onusienne sera très probablement demandée, ainsi qu'une aide

tionie autour de la LND pour les élections de 1990 semble avoir volé en éclats. De plus, les multiples fractures ethniques, les intérêts économiques concurrents et la corruption endémique de la moitié de l'horizon vendue sur le marché mondial provient maintenant du Triangle d'or, dont fait partie l'Elat des Chans, donnent peu d'espoir que tout régime bien géré puisse relever les ruines laissées par le CEROL après son effondrement final. La communauté internationale doit se préparer à aider rapidement Aung San Suu Kui à réformer la LND et à remplir le mandat populaire qui lui est confié de par les élections de 1990. Il faudra du temps pour élaborer un

C'EST UNE MAUVAISE GESTION ÉCONOMIQUE À l'intérieur du pays et la cupidité des dirigeants qui mènent probablement le régime à la perte. Bien que les marchandises abondent, l'inflation mène les importations et même les aliments de base hors de portée de la plupart des gens. Même les familles des soldats, protégées de ces privations avec le CEROL, il faut lutter pour survivre. Il est vrai aussi que l'opposition qui s'est précédemment

La même financière que le CEROL reçoit de sociétés pétrolières occidentales n'est pas le moindre des paradoxes. En effet, alors que leurs gouvernements condamnent les violations des droits de la personne en Birmanie, depuis 1988, elles y déversent des millions. La chasse au pétrole et au gaz rapporte des devises vitales pour maintenir le régime à flot et, malgré une récente condamnation générale par les démocrates occidentaux, malgré une résolution unanime et sans précédent de la Troisième Commission de l'Assemblée générale de l'ONU exigeant la libération de tous les prisonniers politiques et la validation des résultats des élections de 1990, la situation reste inchangée.

avec la Birmanie en 1990. Pratiquement du jour au lendemain, l'armée birmane reçut des avions, des hélicoptères, de gros canons de campagne, des fournitures médicales, du matériel logistique et de grandes quantités de munitions. A l'automne 1991, les Karens rejoignirent avec succès leur insurrection dans le delta de l'Irawady, et les batailles rangées autour des positions retranchées sont devenues très fréquentes à mesure que les rangs de l'armée régulière grossissaient (de 160 000 à 280 000 soldats en cinq ans). Le nombre des morts a augmenté

leur appartenance dans les accablantes feroces qui caractérisaient la guerre birmann. Toutefois, ayant réfléchi à ce qui servirait le mieux ses intérêts politiques, Pékin décida de cesser d'aider le PCB. Un regain d'amitié avec l'Inde et les tensions conjuguées avec le Viêt-nam durant les années 1980 lui faisaient souhaiter une frontière stable au Sud-Est. Les Chinois cherchèrent à s'allier avec les armées de Rangoon et de Bangkok, d'importantes ventes d'armes à la Thaïlande au milieu des années 1980 furent suivies d'un marché de 1,2 milliard de dollars américains

communauté internationale a appliqué tacitement à l'encontre de la Birmanie un embargo sur les armements grâce auquel les conflits armés en-ternes sont restés circonscrits. Le Parti communiste de Birmanie (PCB) recevait de Chine des armes en quantités limitées; l'Occident – pays et sociétés privées – approvisionnait l'armée de Rangoon, tandis que les ethnies insurgées échangeaient, avec la Chine et la Thaïlande, du teck, du jade, de l'opium et du bétail contre des armes et des munitions. Peu d'armes modernes tiraient

La petite bourgeoisie locale. Assimilant le système à une pyramide géante dont on finit toujours par gravir les marches, une génération de Birmans a toléré une corruption croissante et des violations des droits de la personne de plus en plus nombreuses, mais une tragédie plane maintenant au-dessus de sa tête. Le pouvoir est à présent entre les mains de criminels-orwelliens qui gouvernent en tenant continuellement un double langage et en usant de toutes les formes d'intimidation.

LA BIRMANIE EST UNE DESTINATION TOURISTIQUE de rêve, une terre de méditation et de beauté sereine, mais comme ailleurs, la politique et l'argent y sont très liés. Alors que l'immense majorité de la population vit tout juste au-dessus du minimum d'existence, l'économie est dominée par quelques centaines de familles, d'officiers et de collaborateurs ciels qui détiennent des licences d'import-export, fixent les règles des investissements spécifiques, manœuvrent avec les tréquants et trempent en coulisse dans le commerce de l'heroiné et de l'opium. Ne Win a toujours mis un point d'honneur à protéger les officiers loyaux, qui s'enthousiasent en touchant de hauts salaires en tant que membres de l'armée et de conseils d'administration dans le civil, puis des terres de terres et d'entreprises, et ont accès à des biens étranges hors d'atteinte même pour

Ce qui est sans doute le plus effrayant pour la population birmane, c'est son association avec le renseignement militaire, dont on sait, à l'évidence, qu'il apporte et étaye les preuves de l'oppression. Selon Amnesty International, quelque 10 000 personnes ont « disparu » et des milliers d'autres croupillent en prison. Il est certes un peu romantique de voir Sанда Win comme la reine des Ténchères – réincarnation démontaque d'un conte ramayana classique –, mais l'image séduite par les partisans d'Aung San Suu Kyi qui la contre sa rivale.

Pour compliquer les choses, s'ajoute à la lutte entre le bien et le mal qui se joue entre les filles des pères fondateurs de la Birmanie moderne la réalité d'une société qui compte 41 millions d'habitants, où l'on parle une bonne centaine de dialectes ethniques et où les Birmanes représentent les deux tiers de la population; les Karens, les Chans et les Arakanais, quelques 2 millions chacun; et les autres minorités, un peu plus de 1 million chacune.

# PARADIS PERDU ?

Le prix Nobel de la paix salue la lutte politique de

Aung San Suu Kwei et attire l'attention du monde sur la

dictature brutale au pouvoir au Myanmar.

PAR JOHN BADGLEY

**E**n décembre le prix Nobel de la paix a été remis à Mme Aung San Suu Kwei, le comité de Stockholm a attiré l'attention mondiale sur elle et aussi sur le Conseil d'Etat pour la restauration de l'ordre et de la loi (CEROL), la redoutable junte qui gouverne le Myanmar. Les militaires avaient placé Mme Aung San Suu Kwei en résidence surveillée en juillet 1989, dans l'espoir de la faire plier et de dégrader le mouvement d'opposition qu'elle dirigeait. Au lieu de cela, la mesure se retourna contre eux, puisque la Ligue nationale pour la démocratie (LND) emporta 80 p. 100 des sièges lors des élections de mai 1990. En préférant un compromis pacifique à la résistance armée, Aung San Suu Kwei réussit, par sa victoire électorale, à retirer au Conseil d'Etat tout vernis de légitimité et à prouver qu'il ne s'appuyait que sur une clique armée prête à faire usage des armes.

Fidèle à la tradition des tyrans, le CEROL a cherché une Commission historique de réécriture son histoire. Il a cependant innové en prétendant respecter le droit – n'a-t-il pas organisé des élections libres ? –, mais s'est ensuite empressé de violer les mêmes codes civil et pénal qu'il jurait protéger pour permettre à ses acolytes d'amasser des sommes d'argent colossales. Depuis le coup d'Etat qui l'a porté au pouvoir le 18 septembre 1988, le CEROL justifie une oppression brutale par des décrets qui remettent en vigueur des règlements jadis édictés par les Britanniques et par des élites du premier ministre birman, M. U Nu, qui a recouru à la loi martiale "travaillant pendant son mandat.

Depuis septembre 1988, une série de traités publiés par le général Saw Maung, président du CEROL, et par le major-général Khin Nyunt, son chef des services secrets, révèle une extraordinaire xénophobie et d'incroyables déformations des faits. Témoin de leur état d'esprit, la décision de rebaptiser la Birmanie «Myanmar», nom birman de l'ancien empire. Décision qui n'est pas sans rappeler celle des Khmers rouges d'appeler le Cambodge «Kampuchéa», ou celle des nazis de ne plus parler d'Allemagne mais de «Troisième Reich».

Les troubles civils qui secouent le pays depuis son indépendance, en 1948, sont qualifiés d'«insurrectionnels». Des guerillas ethniques et idéologiques combattent l'armée de Rangoon, chacune de son côté en général, et ce, au prix de lourds sacrifices pour l'économie et pour la population birmanes. Le général Saw Maung estime qu'il y a eu un million de victimes dans la population, chiffre probablement gonflé mais plus

proche de la réalité que ceux jamais admis par le général Ne Win, l'émancipe grisé qui gouverna de fait de 1958 à 1960, puis de 1962 à 1988. Ce dernier reste influent dans l'ombre du Conseil d'Etat, tel un magicien démoniaque dans un pays qui n'est pas sans rappeler celui d'Oz et où les reines de la Lumière et des Ténébres se disputent le pouvoir.

GRÂCE AU PRIX NOBEL DE LA PAIX, LE MONDE connaît maintenant la bonne reine, Aung San Suu Kwei, fille d'Aung San. Ce dernier fonda l'armée d'Indépendance birmane pendant l'occupation japonaise, puis dirigea la Ligue anti-fasciste populaire pour la liberté (LAPFL) dans sa lutte pour l'indépendance. Ne Win, l'un de ses fidèles lieutenants, prit ses fonctions militaires lorsque Aung San devint président de la LAPFL. La tâche de celui-ci était double : négocier l'indépendance de la Birmanie, alors colonie britannique, et trouver un terrain d'entente entre groupes nationaux indociles, notamment, les deux partis communistes et les plus grandes minorités ethniques du pays. Il réussit fort bien sur

Ne Win se battit pendant des années pour faire de l'armée une force capable de mater les divers groupes rebelles afin que le gouvernement démocratiquement élu d'U Nu puisse créer un processus économique rationnel qui permettrait de moderniser tout le pays. Toutefois, le socialisme fervent du gouvernement effraya les investisseurs étrangers, déjà peu sûrs de réaliser des bénéfices dans un pays ravagé par des conflits idéologiques et ethniques. La Birmanie se retrouva peu à peu à la traîne derrière la plupart de ses voisins du Sud-Est asiatique.

En 1962, invoquant pour justifier son coup d'Etat la gabegie économique et les menaces que les minorités faisaient peser contre la structure constitutionnelle, Ne Win fit passer l'armée de la guerre à la politique. Il lança un plan de développement, en fait motivé par des craintes xénophobes à l'égard des commerçants chinois et indiens de Birmanie. Cependant, les objectifs de Ne Win étaient compromis par sa propre sottise politique et administrative. La corruption grandissante et les inspections continuaient de couvrir l'Etat, tout était en place pour une grande explosion qui conduisit à sa démission de la présidence du parti unique, le Parti du programme socialiste birman.

Deux gouvernements se succédèrent en court laps de temps. Le premier, dirigé par le général Sein Lwin, réprima par la force et dans le sang des manifestations populaires croissantes. Il ne tint que dix-huit jours. Le second, dirigé par Maung Meaung (émminent écrivain et juriste birmann), resta en place dix jours de plus, mais il fut marqué par de réelles ouvertures de paix en direction de la Ligue nationale pour la démocratie et il permit une économie de marché, la liberté de la presse et la libéralisation des déplacements. Pourant, les manifestations s'amplifièrent.

Le 26 août 1988, 500 000 personnes se rassemblèrent autour du temple le plus célèbre de Rangoon, la pagode de Shwe Dagon, pour écouter Aung San Suu Kwei s'exprimer au nom de la liberté. Elle n'était rentrée en Birmanie que depuis quelques mois après vingt années passées à l'étranger. \* L'écouait, entre autres, le Dr Sunda Win, médecin formé en Grande-Bretagne et fille préférée de Ne Win, pas moins ambiteuse que l'oratrice du jour. De voir son père défilé par Aung San Suu Kwei, elle sentit en cette dernière une autre concurrente au trône.

SANDA WIN DECIDA DE REDONNER À SON PÈRE SA place dans l'histoire. Arguant de son obsession de la sécurité, elle quitta son poste de gynécologue dans une école de médecine pour s'engager dans l'armée où sa seule fonction, au rang de commandant, serait de veiller sur la santé du vieil homme. Elle devint non seulement son médecin chef, mais aussi le passage obligé pour l'approcher. Avec l'aide du général Khin Nyunt, chef du renseignement militaire, elle le tint informé au sujet de ses ennemis.

On eut la preuve de toute la malveillance de Sunda Win pendant les soulèvements de 1988, lorsque des médecins rapportèrent qu'elle avait fourni des drogues analgésiques et supprime la peur à des agents qui furent ensuite envoyés distribuer de l'eau empoisonnée aux étudiants qui manifestaient. Ces agents furent lynchés par la foule. Des soldats birmanes capturés racontèrent dans des attaques suicides contre les armées rebelles retranchées.

\*Aung San Suu Kwei a quitté la Birmanie à l'âge de quinze ans, a poursuivi sa scolarité en Inde, puis a suivi des études d'histoire à l'Université d'Oxford, dont elle est diplômée. Après quoi, elle est entrée aux Nations Unies, à New York. Ses principaux écrits sont réunis dans Freedom From Fear, publié chez Viking Press, en 1991.

de défense remettent en cause certains des fondements mêmes de la culture nationale, au premier rang desquels figure la conscription. Enfin, plus ponctuellement, parce que la conjoncture politique intérieure — et particulièrement le programme électoral — n'est guère favorable, dans les mois qui viennent, à un effort qui viserait à long terme à résoudre ces problèmes. Contrairement à ce que l'on croit, le budget de la défense, la barre des 3 p. 100 du produit intérieur brut, la tendance actuelle semblant même converger vers 2,8 ou 2,9 p. 100. Mais le problème n'est pas seulement budgétaire : que l'on songe à l'enjeu économique et social que représente le fait de ce qui figure actuellement dans les programmes. Elles expliquent tout comme la mise en demeure de cette dernière, apparaît insuffisamment engagée, comme le confirme le retard pris par le gouvernement dans l'élaboration d'une nouvelle loi sur les programmes militaires. Toutefois, un certain nombre de tendances nouvelles se font jour depuis quelques mois, d'abord dans le domaine nucléaire : sans que l'on assiste à proprement parler à des réductions, se profile une interruption de l'expansion de l'arsenal, perspective impensable il y a seulement quelques années. L'hypothèse de l'abandon à terme de la composante stratégique sol-sol, par obsolescence des installations du plateau d'Albion (un missile mobile ayant été définitivement exclu), apparaît désormais vraisemblable. Quant à la composante mer-sol, qui devrait demeurer, grâce aux sous-marins lanceurs d'engins de nouvelle génération (SNLE-NG) qui constituent l'épine dorsale de la dissuasion française, elle sera sans doute ramenée, d'ici l'an 2010, à un maximum de quatre sous-marins. Enfin, la décision de différer *sine die* le déploiement opérationnel du missile *Hades* et la possibilité de l'inclure dans un marchandage en vue de l'élimination des armes nucléaires à courte portée en Europe conduisent très certainement le pays à renoncer à une composante nucléaire expressément stratégique. Des lors, la dissuasion française devrait, à terme, reposer exclusivement sur une simple dyade stratégique. Somme toute, c'est bel et bien au début discret d'une remise en cause de la priorité nucléaire que l'on assiste. PARALLÈLEMENT, S'ÉBOUSSE LA NOUVELLE STRUCTURE DES FORCES CONVENTIONNELLES ET, PARTICULIÈREMENT, DE L'ARMÉE DE TERRE. Forte actuellement de 280 000 hommes, celle-ci sera vraisemblablement réduite à environ 225 000 d'ici 1995. On a ramené à dix mois la durée du service militaire actif pour tenir compte de cet objectif, tandis que le renforcement des unités professionnelles de la FAR doit être entrepris. En outre, on adoptera une nouvelle structure des opérations et sur la modularité des formations, afin d'adapter les forces aux conditions futures de la gestion des crises. En matière d'équipement, la priorité est nettement accordée au renforcement des moyens de commandement et de contrôle (C3I) afin d'accroître les capacités françaises et européennes de gestion des crises. Pourtant, malgré l'amorce de tendances nouvelles, la situation de la politique de défense de la France en 1992 se caractérise par une très grande incertitude. Dans nombre de cas, les choix cruciaux restent à faire. L'exemple le plus frappant est celui de la conscription, système en crise déjà depuis de nombreuses années et répondant de moins en moins à l'exigence républicaine d'universalité; le système est mal adapté à la nouvelle situation stratégique et il ne peut sans doute plus faire l'objet, à ce stade, d'une simple adaptation. Mais d'autres décisions souvent déchantées s'imposeront sur divers plans dans les années à venir : équipement et programmes, industries de défense, doctrine nucléaire, relations avec l'OTAN et construction européenne. Jus-qu'ici, on n'a fait que les reporter. Plus grave peut-être, un véritable débat national n'a pas encore été engagé; il est pourtant indispensable pour éclairer les choix dans l'avenir et, surtout, pour susciter le consentement du pays.

quant à la troisième révolution stratégique, elle relève du devenir du conventionnel. de sa politique de défense en faveur France à rééquilibrer les priorités nouvelle donne stratégique oblige la quence de dissuasion. Il reste que la le maintien d'une capacité consé- tion nucléaire au Sud (et maintenant à l'Est) justifient incontestablement au cours du conflit en déclarant qu'il excluait le recours à cette arme dans ce niale. C'est ce que le président François Mitterrand a implicitement reconnu prédomine le nucléaire ne convient pas aux missions de police internationale. Pour les mêmes raisons, le conflit a confirmé que la posture de défense ou professionnalisation de l'armée.

marginales. La guerre du Golfe a donc révélé l'insuffisance du taux de collective, à l'exception de formules de volontariat possibles mais la conscription est incompatible avec des opérations relevant de la sécurité les intérêts vitaux du pays, mission qui justifie le recours au contingent. Bien adaptée à un outil militaire ayant comme vocation première de défendre relève d'un problème structurel plus fondamental : le système de conscription raison principale du volume limité de forces participant à l'opération Daguet des équipements ou des hommes, mais plutôt quant à la logistique. Mais la suffisance a démontré en vraie grandeur l'inadéquation des capacités conven- sienne), mais aussi et surtout au regard des ambitions de la France. Cette in- projection des forces britanniques dans le Golfe (presque le double de la qui a pourtant résulté d'un effort maximum de la part de la France, s'est ré- contestable et utile à l'ensemble des opérations. Reste que cette contribution,

qui a pourtant résulté d'un effort maximum de la part de la France, s'est ré- contestable et utile à l'ensemble des opérations. Reste que cette contribution, valoir la dimension européenne de la dissuasion nucléaire. De même, dans la mesure où se concrétisera l'entité stratégique euro-péenne, se posera pour la France la question de l'OTAN. Car si, d'un point de vue militaire, le rôle de la France dans l'Alliance apparaît pleinement satisfaisant (ce qu'a amplement démontré l'opération «Tempête du désert», première expression concrète des arrangements élaborés entre la France et l'OTAN pour le théâtre de l'Europe du Centre), il demeure un considérable enjeu politique. Tant le sommet de Rome que celui de Maastricht ont mis en évidence la nécessité d'une compatibilité entre la construction européenne en matière de sécurité et de défense, d'une part, et l'OTAN, d'autre part. Mais il reste à se mettre d'accord sur les modalités concrètes de cette compatibilité, ce qui suppose à la fois la transparence et le partage des rôles. Dans ce contexte, une plus grande participation de la France au processus décision-niel de l'Alliance apparaît indispensable (on pense, par exemple, au Comité militaire ou au Comité des plans de défense), à l'exclusion évidemment sens et que, du reste, personne ne demande. Telles sont les tendances auxquelles la politique de défense de la France, héritée des années de Guerre froide, va devoir s'adapter. La mutation de la de-fense française, tant dans ses concepts que dans ses structures, sera d'autant plus difficile à mener qu'elle s'effectuera sous une double contrainte. Contrairement de défense s'est jusqu'ici affirmé à la faveur d'un concept clair et convaincant, sous-tendu par l'idée d'un rôle et d'une mission pour la France dans le monde, lesquels sont aujourd'hui bien difficiles à concevoir. Ensuite parce que les nouveaux déterminants stratégiques qui pèsent sur la politique

# LE POIDS DE L'HÉRITAGE

Pour mesurer les enjeux de l'adaptation de la défense française à l'après-Guerre froide, il faut partir de l'héritage du passé.

PAR FRÉDÉRIC BOZO

HÉRITAGE, C'EST D'ABORD UN CADRE CONCEPTUEL, FORMÉ, DEPUIS Charles de Gaulle et jusqu'à maintenant, par un triple postulat: le postulat de la permanence et de la centralité de l'État-nation comme élément irréductible du jeu stratégique; celui de l'inéluctable transformation du système européen et mondial au-delà d'un affrontement bipolaire qui ne pouvait qu'être une parenthèse historique; celui, enfin, de la nécessaire

évolution de l'Alliance en un arrangement stratégique liant, à partir,

l'Amérique à l'Europe.

L'héritage, c'est ensuite un système de forces dont les structures et les doctrines d'emploi se sont inscrites dans ce cadre conceptuel. La priorité presque absolue donnée au nucléaire en a évidemment constitué la caractéristique principale. C'est en son nom que la France a mis sur pied, en trois décennies, un arsenal nucléaire unique en son genre, celui d'une mini-superpuissance, dotée de tout ou presque, même s'il est à la mesure, évidemment réduit à ce que peut faire une simple puissance moyenne. D'où le souci d'une réelle indépendance technologique et la volonté de disposer d'une panoplie complète de systèmes d'armes, stratégiques et préstratégiques, organisés en une triade. D'où, malgré une conception théoriquement minimale de la dissuasion, un effort constant de modernisation, d'adaptation et d'expansion de l'arsenal. D'où, enfin, un coût financier considérable, absorbant le plus souvent plus de 30 p. 100 des dépenses d'équipement militaire du pays.

Mais la priorité nucléaire des trente dernières années, ce fut aussi une doctrine stratégique bien précise, mettant plus que toute autre l'accent sur la prévention d'un conflit d'entraînement une escalade rapide et incontrôlée vers l'apocalypse nucléaire. De là l'opposition, au sein de l'OTAN, à une «rétrograde» jugée de nature à réintroduire l'éventualité d'un grand conflit en Europe. Dès lors, parent pauvre de la défense française, les forces conventionnelles ont naturellement été, depuis les années 1960, configurées en fonction du primat du nucléaire. L'idée même d'un combat prolongé en Europe centrale étant exclue par un concept stratégique privilégiant la manœuvre de dissuasion, les forces classiques ont donc été jusqu'ici caractérisées par un format, un volume d'équipement et une durabilité relativement réduits. L'héritage, c'est enfin une approche particulière de l'Alliance. Mais ce qui a été mis presque exclusivement sur le compte d'une quête de la grandeur, voire, par certains, d'une tentation de «non-belligérance», à savoir la décision prise en 1966 de rompre avec l'intégration atlantique, a été en réalité beaucoup plus subtil quant aux objectifs, et beaucoup plus pragmatique quant aux modalités. Car s'il s'agissait de restaurer une certaine souveraineté stratégique française, il s'agissait aussi et surtout d'anticiper le dépassement des blocs. Et peut-être plus encore de prendre date pour le jour où, enfin, le projet d'une Europe de l'Ouest stratégiquement autonome pourrait se concrétiser.

EN SOMME, À BIEN DES ÉGARDS, LE RETRAIT FRANÇAIS PAR RAPPORT À L'OTAN s'est inscrit dans une perspective non pas étroitement nationale, mais également européenne. Quant aux modalités de ce retrait, si la décision de 1966 a bien marqué une rupture avec l'organisation intégrée, elle a laissé la place, après les accords Ailleret-Lemnitzer en 1967, à une relation France-OTAN unique en son genre. Cette dernière était parfaitement satisfaisante du point de vue militaire au regard des engagements de la France envers la défense commune, surtout que politiquement, elle était de nature à lui rendre sa personnalité et sa solidité d'allié à part entière. Tel est, décrit à grands traits, l'héritage. Or, depuis 1989, trois révolutions stratégiques remettent profondément en cause les postulats de la politique française de défense et de sécurité et constituent pour elle un défi à long terme. La chute du mur de Berlin en 1989, la guerre du Golfe en 1990-1991

et enfin, le sommet de Maastricht en 1991 : tels sont les événements qui vont de pair avec le triptyque stratégique constitué par la désintégration à l'Est, les nouveaux désordres mondiaux, et l'intégration en Europe de l'Ouest. Désintégration à l'Est, tout d'abord. Avec la fin de la Guerre froide, la France perd un concept à la fois explicatif et organisateur de sa politique de défense. Le principal défi, pour une nation qui a constamment besoin d'une mission, sera, dans les années à venir, soit de s'en inventer une nouvelle, soit, beaucoup plus probablement, de vivre sans un concept stratégique fort. Mais beaucoup plus concrètement, la fin de l'affrontement bipolaire met en cause le système de forces et le corps de doctrines mis au point au cours de trois décennies. Constat qui s'impose en premier lieu pour l'arme nucléaire, dont la primauté comme instrument d'équilibre des tensions en Europe ne peut que s'estomper. Certes, l'atome demeure, pour la France, un ressort essentiel de la sécurité. Mais, désormais, la plupart des scénarios de conflit sur le Vieux Continent, parce qu'ils ne sont pas susceptibles d'intéresser ses intérêts vitaux (que l'on pense à la crise yougoslave) ne justifient pas, de ce fait le recours à la menace du nucléaire, encore moins son emploi effectif. En cela, l'atome devient bien, pour la France comme pour les autres, une «arme de dernier recours». Après y avoir tant investi, elle devra donc réduire la part du nucléaire dans sa politique de défense, tant pour ce qui concerne la programmation que la doctrine. La nouvelle situation stratégique oblige la France, pour la première fois peut-être, à mettre en oeuvre un régime de dissuasion réellement minimale.

DE MÊME, LE RÔLE ET LA STRUCTURE DES FORCES CONVENTIONNELLES DEVONT ÉVOLUER. Configurées pour faire face, en Europe, à une menace massive et à la perspective d'un affrontement violent mais bref, ces forces sont aujourd'hui mal adaptées au nouveau contexte européen. La participation de la France à des opérations de sécurité collective, dans un éventail de missions qui peut s'étendre de l'interposition à la coercition, requiert des forces mobiles et capables d'un engagement prolongé, loin de leurs bases, qu'il y ait ou non combat. Certes, la France a des spécificités stratégiques en se dotant de la Force d'action rapide (FAR) et en esquisant, dès 1989, un projet de rationalisation et de reconstruction ambitieux de ses armées (le plan «Armées 2000»). Mais c'est une armée beaucoup plus ramassée dans ses effectifs, mieux équipée, capable d'opérations interarmées et d'interventions lointaines en synergie avec d'autres forces nationales, qui devra émerger. D'où les enjeux des nouveaux désordres mondiaux. La nature des problèmes de sécurité du «Sud», n'est désormais plus essentiellement différente de celle des problèmes de sécurité de l'Europe orientale et balkanique, voire chimiques, tels sont les principaux ingrédients du nouveau désordre mondial avec lequel la France doit se tenir prête à compter.

La participation française aux opérations «Bouclier du désert» puis «Tempête du désert» a évidemment mis en relief les problèmes d'adaptation de l'outil militaire à ces nouvelles réalités stratégiques. L'opération «Dague», qui a fait intervenir à peine 16 000 hommes sur près de 500 000, n'a certes pas constitué un apport essentiel au dispositif, principalement américain, mis en oeuvre pour libérer le Koweït. Mais elle aura été plus qu'un simple appoint, dans la mesure où la division française, bien adaptée à son rôle sur le flanc des forces américaines, aura permis de mettre en valeur un savoir-faire in-

disent «remplaçons-la par une alliance

**M. Wood** : Votre par un mécanisme comme les conférences des premiers ministres de l'APEC [Coopération économique de l'Asie et du Pacifique] et de l'ANASE, comme l'a suggéré M. Baker.

**M. Sato** : Mais cet argument n'est pas convaincant. Tout d'abord, même en Europe, la CSCE ne parvient pas à régler les conflits régionaux, par exemple en Yougoslavie ou entre la Russie et l'Ukraine. Ensuite, en Asie, il est bien plus difficile de mettre en place ce genre d'énorme structure de sécurité régionale. Il y a peut-être l'ANASE, et une entente en qui commence la péninsule coréenne est possible, mais il est prématuré pour nous de penser à une telle structure.

nel du Conseil, par exemple, abolir le droit de veto et faire prendre les décisions par une majorité de deux tiers. Ensuite, il y a le renforcement du G-7. Il est important qu'on y discute de questions relatives à la politique en matière de sécurité et que l'on instaure à cette fin des réunions de «sherpas». Puis, il y a les institutions de Bretton Woods au sein desquelles le rôle du Japon s'accroît nettement. Au niveau régional, celui de l'Asie-Pacifique, le renforcement de l'APEC et de l'ANASE est extrêmement important. Quant aux relations bilatérales, nul besoin est de souligner leur importance.

**M. Tanaka** : Je ne suis pas certain que les Japonais soient prêts à assumer les responsabilités d'un siège permanent au Conseil de sécurité. À moins que le processus interne nippon puisse d'une manière ou d'une autre créer la structure qui permettrait au Japon de les assumer, ce serait assez irresponsable de leur part d'accepter un tel siège.

**M. Wood** : Nous avons parlé essentiellement de ce

que les pays industriels à économie de marché devraient faire. Or, la question intéressante sous-jacente, c'est de savoir comment rendre ce «nous» plus efficace. Le G-7 est une sorte de structure, encore que l'on s'interroge beaucoup sur le degré de coordination auquel on peut arriver par son biais. Votre lien traditionnel particulier avec les États-Unis est très important, mais avec la fin de la Guerre froide, le Conseil de sécurité a commencé à se montrer efficace. Comment allons-nous gérer ces problèmes de consultation politique entre démocraties industrialisées

à économie de marché ?

**M. Isomura** : Parmi ces démocraties, le Japon est le seul pays à ne pas disposer de cadre de consultations politiques dans une instance multilatérale. En conséquence, le G-7 est pour le moment la seule instance de consultations à un haut niveau à laquelle le Japon puisse participer. Or, la France s'opposant à des discussions d'ordre politique au sein du G-7, ce dernier ne sera pas une instance politique de consultations multilatérales. Le fait est, cependant, qu'on y parle un peu de sujets politiques. Côté européen, on manifeste un intérêt croissant pour une consultation politique permanente avec le Japon. Ce type de tribune devrait être élargi, sinon ..., et le problème est plus délicat. Le Japon devrait disposer d'un siège permanent au Conseil de sécurité de l'ONU. Ce qui est probablement plus difficile.

**M. Wood** : Pas d'un point de vue canadien, car nous le demandons instamment depuis des années. Pour d'autres, en revanche...

**M. Sato** : Le Japon devrait jouer un plus grand rôle aux Nations Unies et, pour encourager les Japonais à prendre de plus grandes responsabilités, les autres pays devraient accepter que le Japon siège au Conseil de sécurité. Autrement, il va être très difficile au gouvernement de convaincre la population de payer plus d'impôts pour verser une plus forte contribution à l'ONU. Peut-être pouvons-nous changer le processus de décision-...

**M. Sato** : Prenez la Chine. Quelle responsabilité assume-t-elle ? Elle n'a envoyé aucun soldat dans le Golfe et sa contribution est plafonnée à 0,77 p. 100 du budget total de l'ONU. Celle du Japon est fixée à 2,5 p. 100. Si la Chine est un membre permanent légitime du Conseil, pourquoi pas le Japon ? Le système des cinq permanents ne survivra pas. C'est l'autre facette de mon argument sur l'importance du G-7. Le G-7 est un club de démocraties riches, avancées qui a naturellement une plus grande responsabilité dans la gestion des affaires mondiales. Les Nations Unies, en revanche, accueillent tout le monde inacceptable.

**M. Imai** : Je pense que même dans l'*Asahi Shimbun*, grand quotidien de Tokyo, on publiera un éditorial en faveur de quelque arrangement. On y posera des conditions, mais on y sera, de manière générale, favorable à l'idée. Or, cela représente un changement d'opinions au Japon. En temps voulu, il faudra redéfinir quelques-unes des obligations énoncées au chapitre 7 relativement aux menaces contre la paix et la sécurité. Cependant, il faut s'attendre à une convergence de la volonté d'accepter des responsabilités quelconques, si elles sont bien définies. En outre, devenir membre permanent n'est pas seulement un problème pour le Japon, mais aussi pour l'Allemagne, parce qu'avec elle, le nombre de pays d'Europe de l'Ouest membres permanents du Conseil passerait à trois, ce que l'Assemblée générale ne manquera pas de juger

## Si la Chine est un membre permanent légitime du Conseil, pourquoi pas le Japon ?

**M. Isomura** : Pour les médias, les mauvaises nouvelles sont toujours une aubaine et il est d'accrochages avec vous. En tant que dirigeant de la télévision nationale au Japon, j'ai eu l'occasion de rencontrer des collègues du Canada. Je ne sais pas si les Canadiens sont conscients de l'homme que cela représente de jouer le rôle de lien entre différents pays. Il faut avoir conscience de l'incidence fantastique que l'on peut avoir lorsque l'on peut jouer le rôle de médiateur. Surtout après 1993, l'Europe sera beaucoup plus sur elle. Le Canada peut jouer un rôle de médiateur et nous dire quelles sont les tendances européennes.

**M. Wood** : Le Canada et le Japon entretiennent des rapports d'une qualité très différente de ceux qui existent entre les États-Unis ou l'Europe et le Japon. Il y a relativement peu de frictions entre nous, pour plusieurs raisons, et le phénomène de démigration systématique du Japon est pratiquement inconnu au Canada. L'ambassadeur Kitamura est d'avis qu'au sein du G-7, le Canada pourrait se révéler très utile au Japon parce qu'il constitue un pont logique avec l'Amérique du Nord et l'Europe et à cause de son expérience assez vaste de la diplomatie multilatérale en général, du maintien de la paix, etc. — domaines aujourd'hui importants aux yeux du Japon. J'ai l'impression que l'on n'est guère d'accord avec cette stratégie possible énoncée par un japonais et que le Canada n'est pas assez au premier plan, d'un point de vue nippon, pour être utile. Est-ce vrai, ou est-ce exagéré ?

**M. Imai** : Je vois dans le Canada quelque chose qui, pour l'Alliance occidentale, manque de plus en plus à l'Europe et que la seule superpuissance japonaise à prendre de plus grandes responsabilités, les autres pays devraient accepter que le Japon siège au Conseil de sécurité. Autrement, il va être très difficile au gouvernement de convaincre la population de payer plus d'impôts pour verser une plus forte contribution à l'ONU. Peut-être pouvons-nous changer le processus de décision-...

d'avantage que la plupart des membres du G-7 sur les relations Nord-Sud. Au Canada, nous avons beaucoup apprécié, car nous étions vos alliés naturels sur la question au sein du G-7. Depuis lors, le Japon est devenu le plus grand pays donateur d'aide publique au développement (APD) dans le monde. Vous parlez, Professeur Sato, de l'attention qui se reportait sur l'Europe de l'Est, mais le Japon ne s'est manifestement pas laissé totalement emporter par cette tendance. On a le sentiment chez vous que, dans une certaine mesure, on insiste de plus en plus pour que l'on réduise les dépenses militaires. Parallèlement, il y a presque un consensus national en matière d'APD, à savoir qu'elle devrait continuer d'augmenter. Cela dit cependant, la position du Japon par rapport à l'Asie – et j'y incluis non seulement l'Asie du Nord-Est et du Sud-Est, mais aussi l'Asie du Sud y compris le Bangladesh, le Pakistan, etc. – est que la part de l'économie nipponne dans ces immenses régions où vit près de la moitié de la population mondiale est de 70 p. 100. C'est à peu près la même part que celle de l'économie américaine dans l'hémisphère occidental, mais une part bien supérieure à celle de l'Allemagne en Europe. Bien qu'en Asie, il existe une ambiguïté innée face à l'omniprésence germanique, notre économie représente deux fois celle de l'Allemagne unifiée et il n'y a pas en Asie de grandes économies comparables à celles du Royaume-Uni ou de l'Italie. Vous pouvez donc comprendre le sentiment des Asiatiques vis-à-vis du Japon. On ne peut se sentir très à l'aise dans le voisinage immédiat d'un tel géant. En tant que Canadien, vous devez le comprendre. Bien des endroits en Asie ont été occupés et colonisés par les Japonais. Il y a donc une peur innée. La meilleure solution pour le Japon, c'est de s'unir avec les Nord-Américains et les Européens. Les autres Asiatiques en sont heureux.

## Les frustrations sont telles avec nos amis d'outre-Pacifique qu'il y a un risque de répétition de l'histoire.

**M. Sato** : Depuis la fin de la Guerre froide, au Japon comme dans les démocraties occidentales, on insiste de plus en plus pour que l'on réduise les dépenses militaires. Parallèlement, il y a presque un consensus national en matière d'APD, à savoir qu'elle devrait continuer d'augmenter. Cela dit cependant, la position du Japon par rapport à l'Asie – et j'y incluis non seulement l'Asie du Nord-Est et du Sud-Est, mais aussi l'Asie du Sud y compris le Bangladesh, le Pakistan, etc. – est que la part de l'économie nipponne dans ces immenses régions où vit près de la moitié de la population mondiale est de 70 p. 100. C'est à peu près la même part que celle de l'économie américaine dans l'hémisphère occidental, mais une part bien supérieure à celle de l'Allemagne en Europe. Bien qu'en Asie, il existe une ambiguïté innée face à l'omniprésence germanique, notre économie représente deux fois celle de l'Allemagne unifiée et il n'y a pas en Asie de grandes économies comparables à celles du Royaume-Uni ou de l'Italie. Vous pouvez donc comprendre le sentiment des Asiatiques vis-à-vis du Japon. On ne peut se sentir très à l'aise dans le voisinage immédiat d'un tel géant. En tant que Canadien, vous devez le comprendre. Bien des endroits en Asie ont été occupés et colonisés par les Japonais. Il y a donc une peur innée. La meilleure solution pour le Japon, c'est de s'unir avec les Nord-Américains et les Européens. Les autres Asiatiques en sont heureux.

**M. Wood** : Donc, l'ordre multilatéral constitue réellement une protection très importante ?

**M. Sato** : Oui.

**M. Tanaka** : Même du point de vue économique, je pense que l'on peut démontrer l'importance d'une structure multilatérale. L'an dernier, le Japon a plus exporté vers l'Asie que vers les États-Unis. Cela pour dire que le Japon a désorienté le choix entre l'Est asiatique et l'Amérique du Nord. Mais c'est une erreur économiquement parlant, parce que ces pays de l'Asie orientale dépendent beaucoup des marchés nord-américains. On ne peut tout simplement les couper en deux et considérer que le marché asiatique a la même valeur que le marché nord-américain. L'option asiatique n'est donc pas sensée du tout.

**M. Wood** : Mais l'idée d'un bloc asiatique, même comme police d'assurance, n'est pas prise au sérieux au Japon ?

**M. Isomura** : Je rentre tout juste d'un voyage en Europe, où j'ai senti que les Européens redoutaient beaucoup qu'un jour, les États-Unis, et peut-être le Canada, s'allient contre eux avec l'Asie ou avec le Japon. C'était juste avant la visite de M. Bush au Japon, pendant laquelle les gouvernements américains et nippon ont conclu un accord *de facto* d'encadrement du commerce. Les Européens n'en sont évidemment pas ravis. Notre cauchemar, c'est qu'un jour, les Américains en fassent autant avec les Européens, dont ils sont les descendants. Une fois encore, pour le Japonais moyen, on devrait au moins permettre au Japon de frapper à la porte de la maison communautaire européenne, une maison dans laquelle il y aura deux chambres d'amis. L'une pour les Canadiens, l'autre pour les Américains, mais aucune pour les Asiatiques.

**M. Sato** : Des pessimistes s'inquiètent du fossé qui se creuse de plus en plus entre le Nord et le Sud. La Guerre froide étant terminée, des pays riches du Nord négligent probablement l'impertinence du Sud. Tant que l'URSS soutenait des dirigeants radicaux du Sud, nous devions soutenir les modérés. Mais à présent qu'elle a cessé d'appuyer des mouvements de libération nationale dans le tiers-monde, nous pouvons venir en toute sécurité négliger beaucoup de pays en développement. En plus, les récessions économiques simultanées qui frappent l'Occident, y compris le Japon, découragent le renouvellement de l'aide économique au tiers-monde et l'ouverture des marchés. Enfin, les changements dans les anciens pays communistes sont si fascinants que l'attention que nous leur accordons – et qui dit attention, dit bien sûr leur accord – ne fera que creuser davantage encore le fossé entre le Nord et le Sud. À long terme, cela causera de sérieux problèmes.

**M. Imai** : L'augmentation de la consommation d'énergie dans les pays en développement est beaucoup plus rapide que dans les pays industrialisés. Très bientôt, nous nous arracherons les hydrocarbures et nous devrons décider quel type d'énergie utiliser, qui fera quoi, où et comment.

La Conférence de Rio, en juin, fera certainement ressortir les problèmes environnementaux et nous ne pourrions pas maintenir le principe selon lequel «le pollueur est le payeur». Les pays industriels avancés devront payer la note de la pollution causée par les pays en développement, dont les économies ne se redresseront pas autrement. Nous nous achèminons vers une confrontation Nord-Sud. En tirer une leçon économique, y gagner ou y perdre, dépend beaucoup des acteurs les plus puissants.

**M. Wood** : Je me rappelle qu'il y a plus de dix ans, le Japon a décidé sciemment de se concentrer

fautra modifier le discours de façon à ne prendre clairement aucun engagement mais seulement à indiquer que ... et ainsi de suite. C'est ainsi que tel est le cas, il n'y a guère de place pour des idées imaginatives et ouvertes sur l'avenir. Nous sommes impatients de voir de quelle façon la fin de la Guerre froide moulera la structure de ce que j'appelle souvent le Conseil d'administration du «nouvel ordre mondial» cher à M. Bush.

**M. Imai** : Quand j'étais dans le monde arabe, beaucoup de gens me demandaient comment faire pour reproduire avec succès la réussite de la révolution Meiji et du Japon de l'après-Deuxième Guerre mondiale. Je leur répondais que ce serait très difficile. Il faut être extrêmement chanceux pour y parvenir. Il faut évidemment travailler avec diligence, etc. Mais ce n'est pas une garantie de réussite. Avec l'époque Meiji est venu un système économique, technologique et financier complet et bien assis. C'était avant la révolution industrielle, sur laquelle nous n'avons eu un retard que de dix ou vingt ans, il n'a donc pas été très difficile de le rattraper. Nous avons assez de temps. La chance, en revanche, est quelque chose de difficile à reproduire.

À la fin de la Deuxième Guerre mondiale nous attendaient toutes sortes de nouvelles technologies moyennant redevances. Nous n'avons pas eu à refaire tout le cheminement de la recherche et de développement. Puis il y a eu la guerre de Corée, qui a relancé l'économie japonaise à l'époque et rendu son décollage possible. La encore, une chance extrême était avec nous. Mes réponses n'ont pas satisfait nombre de mes amis arabes, mais je n'en ai pas de mortel. Il faut être chanceux, et si la chance n'est pas avec vous, ne comptez pas copier la réussite japonaise.

**M. Wood** : Nous avons surtout parlé de facteurs internes, mais qu'en est-il du climat externe, du danger que des systèmes multilatéraux plus ou moins ouverts se referment ? S'inquiète-t-on à présent de ce que les Américains et les Européens se sentent si menacés et si préoccupés par leurs situations intérieures qu'en l'espace de dix ans, le protectionnisme deviendra la règle, les négociations actuelles du GATT échoueront et le système multilatéral ne sera plus ce qu'il était ?

**Sato** : On s'inquiète beaucoup, mais en même temps, on est persuadé que l'économie mondiale ne se scindera pas en blocs comme dans les années 1930, même si le régionalisme et le protectionnisme continuent de croître. Le Japon a investi si massivement en Amérique du Nord et en Europe que les activités économiques n'importe sont déjà fermement ancrées dans ces zones économiques. Elles ne pourraient pas nous exclure de toute façon. C'est l'avis des optimistes. Si les Américains et les Européens sont assez bêtes pour essayer de nous exclure, ils en souffriront.

longtemps que nous avons de l'argent, nous pouvons en acheter». C'est ce que pensaient la grande majorité des Japonais. Le sentiment de vulnérabilité propre à un pays pauvre en ressources naturelles a donc presque disparu. Le professeur Tanaka a déjà souligné le deuxième processus de changement dans le système nippon, celui déclenché par la fin de la Guerre froide et la fin de la Pax Americana. La plupart des Japonais sont convaincus aujourd'hui que les règles du jeu international ont changé, que désormais il repose non plus sur la puissance militaire, mais sur la richesse fondée sur les capacités économiques, ce en quoi nous sommes bien mieux placés.

M. Hisanori Isomura : Tous les autres participants à cette table ronde étant des universitaires ou des diplomates, j'aimerais honorer l'avis de l'homme du commun. Tout d'abord, les Japonais souffrent toujours d'un fort complexe de persécution face au monde. Encore que, comme vous le savez sans doute, le Japon ait souvent été le persécuteur par le passé, notamment de nos amis Asiatiques. Dans son histoire, le Japon a traversé trois époques de «batailles noires». La première, chacun le sait, à l'arrivée de la flottille du commodore Perry, en 1853, qui a contribué à mettre fin à l'isolement séculaire du Japon. La deuxième, à mon sens, a commencé avec l'arrivée de troupes d'occupation, pour la première fois de notre histoire, sous le commandement du général MacArthur, ce qui, naturellement, a changé le régime entier dans le Japon de l'après-guerre. La troisième, qui en train de s'éloigner, était menée par le président Bush, accompagné de dix-huit importants hommes d'affaires. L'arrivée de ce genre de bateau noir porte le nom aujourd'hui mondialisme connu de *Globalis*, la pression qu'il nous fait modifier notre cap.

Autre exemple, lorsque le président du Keidanren (Fédération des organisations économiques) a effectué une tournée en Europe l'an dernier, tous les membres de sa délégation ont été frappés de voir que les Européens se sentent effectivement menacés par la puissance économique japonaise, surtout dans des secteurs comme l'automobile, les semi-conducteurs et les ordinateurs. À écouter les dirigeants, même nos amis les plus proches sur ce continent, les Allemands, en viennent à parler comme Mme Cresson (Premier ministre français), soit à dire : «Si nous laissons les Japonais poursuivre leur expansion, un jour, ils nous conquerront.» Nous nous sentons toujours vulnérables face à nombre de pressions extérieures, mais eux considèrent le Japon comme un géant.

M. Ryukichi Imai : Il est très malheureux que, face à une puissance nouvellement acquise, l'on se comporte comme qu'un autre, mais aussi que l'on considère cette puissance si l'on veut l'utiliser. M. Wood : Dans la notion d'interdépendance, on reconnaît la puissance d'autrui, mais aussi que

## La maison commune européenne dans laquelle il y aura deux chambres d'amis ...

M. Saito : Dire que le Japon dépend de pays étrangers n'a rien de neuf. Il y a longtemps, quelque 1 500 ans, soit depuis le tout début de son histoire, que le Japon dépend de pays étrangers, que le Japon dépend de la civilisation chinoise. Au cours des 450 dernières années, soit depuis que les puissances occidentales sont venues en Extrême-Orient, nous importons des techniques plus avancées de chez elles. Être dépendant est donc naturel; pour la plupart des Japonais, cela va de soi.

À présent que de plus en plus de Japonais se rendent compte que les autres pays dépendent également du Japon, il n'y a pas de problème pour eux à reconnaître l'interdépendance que le Japon a avec les autres pays. Ce doit être plus difficile pour les Américains. Ce doit être plus difficile pour les Américains que pour les Japonais d'accepter la réalité de l'interdépendance. En effet, pour ces derniers, l'interdépendance marque une amélioration par rapport à la vulnérabilité.

M. Tanaka : Nous sommes habitués depuis longtemps à la dépendance, c'est vrai. Pourtant, je ne suis pas certain que les Japonais puissent se conduire plus ou moins naturellement dans un état de dépendances mutuelles. Il est possible qu'ils soient habitués au fait que, lorsque l'on dépend d'autrui, on se soumet à lui. Cependant, quand l'inverse se produit, certains Japonais se conduisent en êtres supérieurs.

M. Saito : Pour comprendre pourquoi il est si difficile pour beaucoup de Japonais de se conduire naturellement dans un monde qui entre dans une ère d'interdépendance, il faut considérer deux éléments. Le Japon a vécu dans l'ombre de l'Empire chinois du commencement du XIX<sup>e</sup> siècle jusqu'au milieu du XIX<sup>e</sup> siècle. Et, depuis le milieu du XIX<sup>e</sup> siècle jusqu'à assez récemment, le Japon a été à la périphérie de la civilisation occidentale. D'une part, il y a donc le sentiment largement partagé d'être victime et plus petit. Les Japonais trouvent naturel qu'on ne leur demande pas de jouer un rôle important de grande puissance. Nous n'avons pas l'habitude de franchir les règles pour la communauté internationale. D'autre part, il y a les très fort sentiment d'être uniques. Le Japon est différent de la Corée, par exemple. Comme nous sommes séparés de la Chine continentale par une mer, nous nous en sentons différents aussi. Ce sentiment d'être

## ... l'une pour les Canadiens, l'autre pour les Américains, mais aucune pour les Asiatiques.

M. Wood : Quelqu'un a dit un jour que le prix du pouvoir, c'est la prestige. Or, je me demande dans quelle mesure le prestige, ce sentiment de puissance et d'assurance et l'impression de ne plus se trouver à la périphérie sont importants maintenant aux yeux des Japonais ?

M. Isomura : Je dirais que c'est assez mitigé. Nous avons un énorme complexe de persécution doublé d'une sorte de fatalisme bouddhiste. Nous vivons dans un pays où il y a continuellement des catastrophes naturelles – séismes et raz de marée. Ezra Vogel a donc beau nous placer au premier rang, ce qui est évidemment très aimable, je ne pense pas que le Japonais moyen croie ce genre de compliments. Nous nous sentons toujours vulnérables.

M. Tanaka : Je suis d'accord, pour ce qui est de l'observation générale, mais ces cinq ou six dernières années, il m'est arrivé de sentir chez certains Japonais, notamment dans les milieux d'affaires et parmi les bureaucrates qui s'occupent de l'économie du pays, une certitude croissante que ce que le Japon a accompli au cours des quarante-cinq dernières années est correct pour l'essentiel. Ces réalisations devraient être reconnues et certains éléments de la réussite nipponne pourraient servir d'exemples àilleurs dans le monde. Les domaines dans lesquels les Japonais ont le plus confiance en eux sont, évidemment, la gestion commerciale et même la gestion des relations internationales. À propos de ces dernières, j'entends de plus en plus de Japonais qui travaillent dans l'aide économique dire que la façon dont nous menons nos programmes d'aide économique dans les pays en développement s'avère bonne pour l'essentiel.

M. Imai : Sans pouvoir définir ce qu'est exactement cette puissance, il y a un autre élément qui n'est pas vraiment reconnu ou intégré dans notre politique étrangère : le sentiment que «noblesse oblige». On continue de réfléchir au pour et aux contre, à des contre-propositions, au degré de confort, et je pense que c'est peut-être là un des points discutables, c'est la façon dont la politique nipponne est décidée au niveau interne. Pour parler franchement, les politiques sont formulées par les bureaucrates, qui les transmettent aux hommes politiques, qui s'expriment alors. Si l'on regarde le mécanisme même, lorsque le premier ministre s'exprime sur un sujet, derrière, on peut s'imaginer deux personnes qui ont fait les cent pas en demandant ce qu'il devrait dire, ce qui avait été négocié avec le ministre des Finances. Comme il n'y a pas d'argent, il

très bien vendus chez nous. Donc, les Japonais

disent que la puissance américaine décline, du

moins relativement, tandis que la puissance

nipponne augmente. Aux yeux de nombre de

Japonais, la récente visite de M. Bush reflétait

ce changement.

Nous devons aussi prendre en considération la

fin de la Guerre froide. Bien des gens croient que

Le présent article rapporte un débat qui a eu  
lieu à Tokyo le 7 février 1992. L'animateur  
en était M. Bernard Wood, Directeur général  
de l'Institut canadien pour la paix et la sécurité  
internationales.

**M. Bernard Wood** : Nous sommes réunis très peu  
de temps après la visite très entouée de publicité  
de M. Bush et les récriminations qui ont suivi. Il  
nous faut donc un peu de recul par rapport à ces  
événements pour examiner de plus près certaines  
des tendances à long terme quant à la puissance  
et aux responsabilités du Japon dans le monde.  
La première question que j'aimerais poser  
se rapporte à l'hypothèse émise de longue date  
relativement aux fondements de la politique  
étrangère japonaise. Je me rappelle que, dans les  
années 1970 encore, selon une analyse classique,  
cette politique était dictée par la vulnérabilité du  
pays — qu'il fallait sans arrêt compenser —, un  
pays pauvre en ressources naturelles, dépendant  
des marchés étrangers, de lignes de communica-  
tion maritimes sûres, etc. Est-ce que cela sous-  
tend toujours les perspectives du Japon à long  
terme, parce qu'aujourd'hui, évidemment, le  
reste du monde voit surtout la superpuissance  
du Japon ?

**M. Akihiko Tanaka** : D'une part, il y a beaucoup  
de japonais qui continuent de se comporter sui-  
vant l'hypothèse que vous venez d'énoncer,  
c'est-à-dire que le Japon est pauvre en ressources  
naturelles et à la merci des changements qui  
surviennent dans le monde. D'autre part, il y a  
un sentiment croissant de puissance. Cependant,  
bien des gens ne définissent pas cette puissance  
ni ce qu'elle entraîne. À la fin des années 1980,  
était devenu très à la mode de parler du déclin des  
États-Unis. Même avant que *The Rise and Fall of*  
*the Great Powers* de Paul Kennedy soit un succès  
de librairie, plusieurs livres similaires s'étaient  
\* Les rédacteurs souhaitent remercier Mme Yasuko Itoh  
et M. Ron Purver ainsi que Mme Mary Taylor pour  
leur aide inestimable dans l'organisation de cette  
table ronde

la nature même du système est en train de subir  
de profonds changements. J'ai l'impression que,  
dans ces incertitudes, il y a des attitudes dan-  
gereuses parmi les Japonais qui croient en une sorte  
de puissance japonaise menaçante. En même  
temps, ils négligent les responsabilités que peu-  
vent entraîner ces idées. Les déclarations de cer-  
tains hommes politiques dans ce pays après la  
visite de M. Bush traduisaient un mélange  
étrange d'arrogance et d'irresponsabilité.  
**M. Seizaburo Sato** : J'aimerais faire la distinction  
entre deux choses : la façon dont les Japonais  
perçoivent la faiblesse de leur pays et leur vo-  
lonté de jouer le rôle que de plus grandes respon-  
sabilités dans le monde supposeraient. Depuis  
les années 1970, les Japonais perçoivent très  
différemment leurs points forts et leurs points  
faibles. Après la crise pétrolière de 1973, il y a eu  
un grand consensus national sur la vulnérabilité  
du Japon. Nous étions désespérés, car 99 p. 100  
de notre pétrole venaient de l'étranger, princi-  
palement du Moyen-Orient, région qui était  
très instable.  
Puis, moins de dix ans après, Ezra Vogel a écrit  
un livre célèbre, *Japan as Number One : Lessons*  
*for America*. Mais est arrivée la deuxième crise  
pétrolière, déclenchée par la révolution iranienne,  
la raison fondamentale de cette crise, mais les  
Toujours, au milieu des années 1980, le marché  
énergétique mondial est passé d'un marché de  
forte demande à un marché d'offre abondante.  
Pour diverses raisons, et nous avons repris con-  
science dans la société nipponne que nous n'avions  
pas besoin d'y participer. Bien sûr, c'était oublier  
la raison fondamentale de cette crise, mais les  
Japonais n'avaient pas réellement l'impression  
qu'il risquait d'y avoir une crise pétrolière.  
**M. Wood** : Pas même un peu à l'idée de la  
vulnérabilité du Japon ?  
**M. Sato** : « Même si l'Irak occupe le Koweït, ils  
devront toujours vendre leur pétrole et, aussi

# L'avenir de l'Institut et de la revue Paix et Sécurité

**E**N RAISON DES CIRCONSTANCES EXTRAORDINAIRES actuelles, Michael Bryans, rédacteur en chef de *Paix et Sécurité*, m'a offert d'écrire cette page en tant que représentant de son éditeur (l'Institut), afin de com-

muniquer à nos 9 000 lecteurs quelques développements essentiels.

Dans le budget fédéral publié le 25 février 1992, le ministre des Finances annonçait l'intention du gouvernement de «liquider» ou supprimer vingt et un organismes financés par le gouvernement fédéral, dont l'Institut canadien pour la paix et la sécurité internationales.

Le Conseil d'administration de l'Institut a déclaré que la décision du gouvernement est tout à fait injustifiée, étant donné la manière dont l'Institut s'acquitte du mandat qui lui a confié le Parlement, et qu'elle risque de se traduire par une grande perte pécuniaire pour les contribuables canadiens. Le Conseil et de nombreuses personnes, au Canada et à l'étranger, ont demandé que le gouvernement revienne sur sa décision. La dissolution d'un tel organisme serait fort préjudiciable et inopportune alors que le monde connaît de véritables bouleversements et que l'Institut et ceux qui collaborent à sa compréhension, les réactions et les initiatives

canadiennes.

La décision totalement inattendue du gouvernement semble en partie reposer sur l'idée selon laquelle toutes les sociétés de la Couronne sont des organes bureaucratiques inefficaces et faisant double emploi. Or, cette image ne s'applique nullement à notre modeste organisation, qui a été taillée sur mesure pour combler des lacunes et renforcer la masse critique de capacités nationales du Canada de la manière convenue par tous les parlementaires en 1984. Le gouvernement ne peut faire preuve de la même indépendance, de la même imagination ni prendre les mêmes risques que l'Institut. Ce que ce dernier a réussi à faire en amélioration et confirmation des efforts d'universités, d'organismes non gouvernementaux et autres entités dans le pays entier risque d'être perdu, tout comme le pôle et le bureau central de ce genre de travail au Canada, pour tant connu et respecté partout dans le monde aujourd'hui.

L'éminent professeur Lincoln Bloomfield de l'Institut de technologie du Massachusetts, qui est un des membres étrangers du Conseil, estime que cette décision «donnera au monde un message extrêmement négatif quant au rôle du Canada dans cette ère nouvelle où l'exemple canadien est plus essentiel que jamais». De nombreuses réactions similaires afflueront de l'étranger à mesure que la nouvelle se répand.

Le Conseil d'administration de l'Institut a sollicité des conseils juridiques quant à ses responsabilités légales en ces circonstances extraordinaires. Ainsi que le gouvernement l'admet, l'Institut continuera d'exister, et doit continuer de poursuivre les objectifs qui lui ont été fixés par la Loi, tant que ladite Loi n'est pas abrogée

## Pour faire connaître votre opinion ...

Le Parlement devant intervenir pour concrétiser les intentions déclarées du gouvernement et l'Institut ayant bénéficié du soutien de tous les partis à sa conception, le Comité permanent des Affaires extérieures (et ou) le Comité permanent de la Défense nationale sont les instances les plus appropriées à qui les canadiens, Canadiennes et autres personnes intéressées peuvent faire part de leur intérêt, de leurs préoccupations et de leurs propositions.

En voici les adresses :

— BERNARD WOOD  
de défis incroyables. □

Cette revue, qui est respectée, occupe bien entendu une place centrale dans les travaux de l'Institut et dans le dialogue entre les communautés s'intéressant à la paix et la sécurité, au Canada et à l'étranger. Les membres du Conseil de l'Institut et beaucoup d'autres personnes sont très conscients du renom dûment acquis de cet atout et de ce qu'il faut tout faire pour que la revue survive sous une forme acceptable.

Nous espérons que ce n'est pas le dernier numéro de *Paix et Sécurité* que vous recevrez. Cependant, si tel était le cas, nous nous sentirions tous appauvris, mais pas moins tenus de continuer de nous efforcer d'approfondir les connaissances et la compréhension de ces questions essentielles dans une ère de changements et

ordinaires.

de ne pas appeler nos bureaux; et honorer tous ses engagements commerciaux

Plus précisément, l'Institut souhaite assurer l'honneur des engagements fermes pris envers les bénéficiaires actuels de bourses d'études et de recherche, de subventions et de contrats; protéger les droits et intérêts de ses employé(e)s au mieux de ce qui se fait dans les secteurs public et privé; obtenir le plus tôt possible du gouvernement qu'il précise si l'Institut pourra poursuivre des projets en cours et donner suite aux concours relatifs aux diverses bourses et subventions. Tous les candidats seront avisés dès que nous en saurons plus et nous leur demandons

En attendant, en gestionnaire prudent, le Conseil de l'Institut, qui poursuit son travail conformément à la Loi, doit tenir compte de l'intention sans équivoque du gouvernement de liquider l'Institut et de transférer au ministère des Affaires extérieures les ressources nécessaires aux activités dont la continuité s'impose.

Nous cherchons donc à obtenir des éclaircissemements sur l'intention du gouvernement et nous discutons des mesures qui seront nécessaires pour libérer l'Institut de ses engagements, pour qu'il continue d'exercer son mandat à un rythme d'activité ralenti en attendant l'abrogation de la Loi, et pour garantir que le Canada conserve et utilise au maximum les atouts extrêmement précieux constitués grâce à ses programmes et à ses membres.

Plus précisément, l'Institut souhaite assurer l'honneur des engagements fermes pris envers les bénéficiaires actuels de bourses d'études et de recherche, de subventions et de contrats; protéger les droits et intérêts de ses employé(e)s au mieux de ce qui se fait dans les secteurs public et privé; obtenir le plus tôt possible du gouvernement qu'il précise si l'Institut pourra poursuivre des projets en cours et donner suite aux concours relatifs aux diverses bourses et subventions. Tous les candidats seront avisés dès que nous en saurons plus et nous leur demandons

par le Parlement. De plus, le ministre des Finances est tenu juridiquement de continuer à lui allouer des fonds, d'un montant minimal de 5 millions de dollars par an, jusqu'à l'abrogation susmentionnée. Nul ne peut prédire avec certitude quand la nouvelle loi (projet de loi C-63) sera adoptée, bien que le Parlement l'ait examinée en première lecture le 10 mars.
